In order for the committee to understand clearly the conclusions reached later, your indulgence is requested while I outline the organized activites in this and related fields as they function in Georgia.

STATE BOARD OF PARDONS AND PAROLES

This constitutional board was first created by legislative act in 1943, which was written into the State constitution of 1945. It is composed of 3 members, appointed for staggered terms of 7 years by the Governor and confirmed by the Senate. It has plenary and unconditional power over all matters pertaining to reprieves, paroles, pardons, commutation of sentences (including death sentences), and restoration of civil and political rights. The matters of treason and impeachment are reserved to the legislature. The Governor retains 1 power, and 1 only: the right to grant a stay of execution, not exceeding 90 days, in cases involving capital punishment. Thus the Governor is relieved of virtually all duties in the practical treatment of crime in Georgia. No Governor has yet attempted to exert influence upon this board or to accomplish by indirection executive control over functions of which he has been directly relieved.

HOW THE BOARD FUNCTIONS

Theoretically, Georgia now has the ideal law regarding pardon and parole. The board has independence backed by constitutional protection. I believe Georgia is the only State in which a board of pardons and paroles has absolute and unconditional power to grant or deny commutations of death sentences. The functions of this board compare favorably with those of all other boards in the country. But we are working under heavy handicap.

There are 8,085 prisoners in the penitentiaries of Georgia. By application of our one-third rule (a prisoner serves one-third of his sentence in prison) as to eligibility for parole consideration, approximately 500 cases per month are automatically considered for parole privilege. There are 1,572 parolees now under supervision with a field staff of 24. The scope of these activities is broad, including investigative, counseling, and supervisory functions. In addition to this, the parolee may obtain psychiatric and psychological treatment by referral to private practitioners. For this comprehensive service we are understaffed. There is an urgent need for properly trained personnel with appropriate aptitudes and devotion to the social ministry of this lifesaving work. For lack of skillful workers too many parolees fall back into crime. Rates of recidivism will grow even more excessive until properly trained and numerically adequate supervisory personnel are made available.

To carry on this extremely important function, Georgia's Pardon and Parole Board operates on an appropriation of $250,000 annually, plus a contingent appropriation of $25,000 annually for operating an advisory staff of psychiatrists dealing with sex offenses. We need much more. We are now in the process of educating the legislators and citizens in general to understand the inestimable value of rebuilding broken lives.

STATE BOARD OF PROBATION

It was important to outline these functions to you because of the relationship of juvenile delinquency to penal servitudes in later years. Of the 8,085 prisoners in the Georgia penitentiary system more than 50 percent have known records as juvenile offenders. Because of the incompleteness, incorrections, and unreliability of the known records, it is probable that at least one-half of the remaining prisoners either were or should have been declared delinquent. Delinquency in youth is the seed from which later and greater crimes flourish, harming society and blighting the possibility of developing useful citizenship. In this field, we expect probation to prove its value in our fight against crime.

We must, of course, recognize that these programs now being discussed relate primarily to adults. There is no statewide juvenile program in Georgia. Georgia has no statewide system of juvenile courts in existence as a distinct and separate entity. Further discussion will be given these problems later.

The statewide probation program is the principal major progressive step Georgia has inaugurated in the general field of corrections during recent years. The board of probation was constituted by act of legislature on February 8, 1956. It is composed of the members of the State board of pardons and paroles, acting in ex officio capacity. Under the board is a specialist in probation, psychology, and sociology, who has had both undergraduate and postgraduate training, and in all practical aspects of probation directs the activities of the statewide program. The State board of probation fixes general policy, performs all the budgetary duties of this department, fosters good public relations and judicial cooperation, and sits constantly as advisers to the director and his staff. The board delegates all other administrative, inservice training and functional matters to the director. Thirty-nine officers, with adequate secretarial help, have been employed during the first 10 months of operation.

Over this 10-month period, 4,257 defendants have been given opportunity to rehabilitate themselves under terms of probation. More than 90 percent of these are thus far complying with the terms imposed and are thus far avoiding the stigma of penal servitude. Their families have been kept intact and the breadwinners have been retained in employment. Welfare agencies have escaped the burden of hundreds of additions to their already overloaded rolls. The State is in the process of salvaging first offenders and good-risk defendants from the potential degredation of a lifetime of crime and general revolt against society.

The Statewide Probation Act does not purport either to replace or bypass existing metropolitan probation programs. Those programs already existing are permitted to remain, and to each of these State-paid officers are assigned. While not posing interference with these programs, the Statewide Act provides for uniformity of operation and procedure; thus all area systems must comply with the fundamental and mandatory provisions of the act.

At this point I might well add that this program both anticipated and accomplished uniformity of operation, and that its operation without regard to ethnological considerations has become well established and generally recognized.

Permit me to emphasize the success of our statewide adult program by citing the record of our expanding prison population from July 1955, to the beginning of our program on July 1, 1956:

Prison population

July 1, 1955	7,789
July 1, 1956	8,125
May 1, 1957	8,085

The fact that crime, nationwide, has been for several years on the increase is no longer disputed. But, unfortunately, Georgia's rate of increase stands among the highest. This is partially explained by the fact that Georgia only recently adopted its statewide adult program. It is easy, however, to see the trend these statistics vividly portray. Thus it is readily and properly concluded that the probation program has brought the rise of prison population to a standstill. In the years that lie ahead, this population will continue to decrease because of the normal

functions of parole, conditional release, and limited intake accomplished through the operation of adult probation. Our anticipated juvenile and domestic relations program, which I shall discuss in detail later, will add massive numbers and sped which will result in ever-increasing impetus to this declining trend of prison population.

Our probation officers are both qualified and dedicated, a reflection adduced from the comparatively low rate of revocations. I would be amiss in the discharge of my obligations if I should not recognize the complete cooperation accorded us in this initial program by our judges. The granting or denying of probation being a judicial function, I must say that the judges have conscientiously, without exception, welcomed and supported the system, as is attested to by the record of 4,257 placed on probation during the first 10 months of operation. Furthermore, I should like to advise the committee of the unwavering support accorded this program by His Excellency, Marvin Griffin, Governor of Georgia. I am authorized to state to you that he is keenly aware of the need of implementing the program as well as the establishment of active, workable related programs.

Georgia will expend the sum of $310,000 on the State level during the first fiscal year of the Board's operation. In addition, Fulton County (Atlanta) operates on a budget of $144,695 annually for adult probation. This county represents approximately one-fourth of the population of Georgia and, of course, is fortunate enough to have the tax base for this budget, and even more. Macon (Bibb County), Augusta (Richmond County), Columbus (Muscogee County), Savannah (Chatham County), and many other larger municipalities supplement the State's program. It is, therefore, fairly accurate to state that a grand total of more than a million dollars is annualy expended by probation in Georgia.

During the next 2 years, our adult program anticipates the addition of at least 37 additional officers, along with additional secretaries, clerks and office personnel. A permanent training program will be instituted and operated on a full-time basis. All employees will be classified under the State merit system and will be part of the State retirement program by July 1, 1957. Minimum compensation for probation officers is expected to be increased from $3,600 per annum to $4,200 per annum. The average annual compensation is already in excess of this latter figure. A minimum annual appropriation of $750,000 for this program alone is anticipated by the fiscal year of 1958–59.

WELFARE, HEALTH, AND EDUCATION SERVICES

It would be an imposition on the committee's time to enter into any detailed discussion of the services rendered by the Welfare, Health, and Education Department. Let it be sufficient to state that Georgia has the usual active, dynamic, and effective programs in all of these departments. The most direct agent in ferreting out and fighting juvenile problems comes from the visiting teacher. The State department of education has in its employ 153 full-time visiting teachers who are fully qualified social workers. Their gallant work in eradicating sporadic attendance in schools, as well as the causes of lack of attendance, stands among the most effective work being done in our State.

PROPOSED DOMESTIC RELATIONS AND JUVENILE PROBATION PROGRAM

In the field of domestic-relations courts, juvenile courts, and juvenile probation, Georgia has a veritable hodgepodge and Pandora's box. In rural areas, the superior courts also serve as the juvenile courts. In the heavily populated counties youthful offenders are tried in juvenile courts. In the second place, there are only four detention homes for juvenile offenders in the entire State, and each of them is inadequate for the needs of detention because of limited capacity. In the third place, there is no statewide program of juvenile probation.

With reference to the juvenile setup, there is no provision for a separate juvenile court except in counties of 50,000 or more, where the authority is permissive, whereas in the metropolitan areas we have juvenile courts. Each setup has its advantages and disadvantages. In the latter, the juvenile is tried in one court, and yet the very cause of his problem (improper domestic conditions) was tried in another. Too often there is little or no liaison between the courts, and frequently neither knows of the actions pending or being tried in the other. In the rural areas where the superior courts try both domestic relations offenses and juvenile cases the main trouble is that liaison is precluded, but the plan is ineffective in that the superior court judge is so overworked with public civil and criminal litigation that he has no time to specialize in a program, which, rightly administered, demands specialization. Further, there is no effective supervision for juveniles in the rural areas, and there are no detention facilities except the common jail.

These special problems accentuate my firm belief that the matters concerning juvenile and domestic problems should be combined and tried by a judge specialized in these two related fields to the exclusion of any other type of judicial responsibilities.

An interim legislative committee is now studying recommendations we have made concerning the establishment of such a juvenile system in Georgia. Our plan, as recommended, is to establish 15 judicial circuits on the superior court level and to provide that a judge who is a specialist in these 2 fields serve in 2 or more of the present circuits. He would have statewide jurisdiction and in all matters be a superior court judge whose duties would be confined to matters which we are discussing.

After the establishment of such judicial circuits, it is our further recommendation that 20 State-financed homes be established, in addition to the 4 now in existence, in order that it would not be necessary to travel more than 50 miles to place a youthful offender in a detention home.

I further propose a merger of our adult probation system with our newly established juvenile probation program and the addition of qualified officers to handle these delicate problems.

It is our belief that $2 million will constitute sufficient funds to provide the necessary construction of detention homes. An appropriation of $1,250,000 to $1,500,000 annually will be sufficient to operate an effective juvenile and adult probation program on a statewide basis.

Briefly this represents the proposed plan under which Georgia expects to make a frontal attack on juvenile delinquency. Such assistance as would be provided by the proposed Elliott bill would be welcomed in Georgia. It appears that its provisions would help us best in two fields: (1) The establishment of scholarships for the training of qualified personnel; (2) the provision of funds for necessary research pertaining to causes and cures of juvenile delinquency.

I express no preference as to which Department of the Federal Government might best administer the provisions of this measure after it becomes law. I would express a preference which perhaps will appear strange to you. I prefer that the bill should retain the relatively small appropriation. It has been my experience that a bill providing for a great social need not only stands a better chance of passage if the appropriation requested is left at a minimum, but once the bill is passed and the program becomes active, obtaining additional funds does not present any monumental obstacle or even much complication. The effects of the program, having proved itself, will be sufficient to obtain an increase in appropriation as the needs of the program warrant and require.

Recommendations and conclusions

There are, obviously, many causes and still more contributing factors resulting in juvenile delinquency. You have, no doubt, heard testimony pointing to poor housing, the "gang," "bad parents," and sundry other causes and factors in the problem. But I submit to you that none of these, per se, may indisputably be considered sole causes of delinquency; one or more of them combine with one or more important weaknesses to accomplish the result. Let me be specific: Johnny doesn't become delinquent simply because he lives in a two-room shack and has an alcoholic father. Very frequently the direct opposite of delinquency is the result. But when one or more of these factors emerge and begin working on a person whose stability is subnormal or who has developed one of several types of serious complexes, there is a definite danger of, and predisposition to, delinquency.

The saying, "There are no bad children, only bad parents," has developed into a common, but not too accurate, cliché. Blaming parents for the delinquency of a child is a glib way out, but this states only the cause, if true, and not the solution. No doubt, in many cases the home life of the child may be the principal fault, but frequently there are other environmental factors over which parents have no control that contribute to the problem. Indeed, often the blame may be equally shared by the child himself or by the community.

In personality growth and development the child tests himself and people around him. He learns how to control others and himself and to channel his behavior by this testing process. He attempts to establish a way of life, and his method of control may vary from being a nice, conforming child to developing delinquent tendencies.

When parents and society do not represent firm, consistent discipline, the child is living beyond his emotional means, and he becomes fearful that his inner feelings may run wildly out of control. In the delinquent child these feelings have finally overpowered him. Since the parents cannot handle him, th child feels lonely, lost; and he struggles to balance himself.

When such a condition appears, the child weaves fantasies which are both strange and perhaps primitive. He is given to misinterpreting his parents' feelings as well as his own needs. His sensitive state makes him feel that he is more wronged, more imperiled, and less loved than is actually the case. Therefore, his emotional needs may be too much for his parents to handle. As the child's anxiety and resentment grow, so do the possibility of behavior problems. No amount of reassurance or reasoning can convince the child of his parents' love, and these unresolved feelings create disturbances resulting in behavior and personality problems, in psychopathic disorders peculiar to children. Psychiatric treatment is a must. In many more instances than not, it is my firm belief that parents will give their cooperation willingly when, and if, a competent worker takes the time to get the parent to understand the problem involved in such a situation. The vast majority of parents are suffering from anxiety in these cases, and they need the help of specialists such as you propose to provide in this bill.

There are, of course, those parents who do not make any serious effort to guide their errant offspring when the clear indications of predelinquency appear. Some of them "get a kick" out of the "smart" doings of their children. All too often this type of

child, lacking completely parental guidance and restraint, passes from predelinquency into delinquency and possibly serious crime before the parent realizes which is transpiring. A recent outbreak of robberies in Atlanta resulted in the conviction of several teen-age boys and girls. All of them came from socially prominent families. From personal knowledge, I can state frankly that one of them can be classified as above. And, although the father is grieved over the prison term given his son, he still is prone to refer to it lightly or jokingly. Such parental conduct is by no means isolated, and perhaps reflects the main cause of delinquency in this type of home.

I am frank to say, however, that I believe practically all parents wish the best for their children. Whether from hovel or mansion, parental love transcends most considerations. The problem is that some parents do not know what to do in order to cope with these problems.

We come, therefore, to the crux of this problem. We need much research because social scientists have not found a suitable program of rehabilitation applicable to the delinquent. We must offer a workable program rather than blame the parents, the school, the church, or child. Such a program is fought with serious difficulties. First, let us not isolate and desert the delinquents. When a person becomes physically ill, the family rallies around to help. Even the community commonly faces the responsibility of providing free services. What do we do with the delinquent? Why, put him away, of course; and for lack of a workable method of treatment, we let him stay confined a while and release him with a hope and a prayer. All too often relapses occur, but the soothing winds of good fortune have favored us with some degree of rehabilitation.

The greatest need of all predelinquents and delinquents is "to belong." When one can reach the real personality of this type of youth, some simplification is realized. A feeling of trust in people will lead to a possible ultimate fulfillment of the delinquent's greatest need—love and affection. If these traits are not fully developed, the delinquent will turn to the opposite—hate.

We must not lose sight of the fact that all of us were born into a delinquent world. Ever since the disobedience of Adam and Eve, sin has been ever increasing in the world. Sin is not always a crime, but crime is always sin, and the two are so closely related as to be interchangeable. The Divine Creator did endow each of use with one trait which gives us the opportunity to overcome the environment in which we were born—the power of choice. By that power, we must develop a social conscience. We must learn, regardless of the difficulties, to respect the rights of others. We must see value in developing strong character and citizenship as an end in itself.

It is my firm convicion that your bill will be a means to fight predilection to delinquency, predelinquency, and all delinquency. It will enable workers to concentrate on an early diagnosis and the preventive aspects of the problem. It will encourage the mobilization of manpower and resources at the community level. The feeling of being accepted can be greatly encouraged by such organizations as the Big Brothers, YMCA, and various community and church activities. Parents may possibly find solutions to their problems through educational sessions initiated as an objective of the legislation. By the establishment of a well-balanced and happy home, we shall be well on our way to victory over predelinquency, delinquency and crime.

The Post Office—A Business or a Service?

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. ROOSEVELT. Mr. Speaker, on April 26, 1957, I spoke to a rally of southern California postal employees deploring the attitude of "economy at any price regardless of who gets hurt." I stated then "that the public must realize that the post office is not a profitmaking business and if the public wants the best service, then they must supply the wages and benefits that will attract and keep the best kind of help."

I was happy to see that in concurrence with my views, Live Wire, the official magazine of the National Federation of Post Office Clerks, Los Angeles Chapter, recently published an article entitled "The Post Office—A Business or a Service?"—May 1957—which, under leave to extend my remarks, I include in the RECORD:

THE POST OFFICE—A BUSINESS OR A SERVICE?

Interviews with Los Angeles County Congressmen and reports from Washington indicate that a hysteria of "economy at any price" has combined postage rates and postal pay into an extremely controversial issue with respect to the postal budget.

This situation has produced unfair criticism against postal employees to such an extent that they are being charged with the need of shouldering the burden of so-called "deficits" in a manner completely nonexistent with respect to employees in other Federal agencies.

The Live-Wire contends that the question of postal workers pay, just as rates of pay for employees of other Federal bureaus, should be determined on a basis of wage standards used in private industry, for positions of comparable skill and responsibility, to provide a decent standard of living, as typified by the Heller Committee, University of California; which illustrates a wage earner-home owner family of four had a budget need of $5,849.67 in 1956.

In 1954 the Senate authorized the appointment of a citizens advisory council to settle once and for all this question: "To what extent is the Post Office primarily a public service which like other Federal departments and agencies is adjudged worth what it costs, or is the Post Office primarily a business which should take in at least as much money as it spends?"

The Live-Wire maintains that the question of postal rates should be determined solely by Congress, acting on the recommendations of the Post Office Department. The question of postal salaries is a separate and distinct subject and should not be tied in with postal rates.

The Citizens Advisory Council takes the position that the Post Office is primarily a public service and that the so-called "postal deficit" is a "misnomer." The Post Office Department challenges this position in a vigorous condemnation asserting that "the Post Office is a public utility whose costs should be paid by the users and not from general taxation."

In the ineerest of clarification the Live-Wire presents the following pertinent comments on each side of this postal public service versus public business controversy.

PUBLIC WELFARE COSTS VERSUS POSTAL DEFICIT

The Senate Advisory Council, quoting from the Post Office Department's cost ascertainment figures for 1955, states as follows:

	Millions
Total cost of public service items	$392.4
Total of so-called postal deficit	362.7
Excess cost of public service items over deficit	29.7

Included in its public service items are the following:

1. Nonpostal services ($12.4 million): FCC health service, alien address reporting, United States savings bond and stamps, civil service, documentary stamps, migratory bird stamps, official mail messenger service, custodial service—public buildings, Department of Commerce Census Bureau, miscellaneous items, other agencies.

2. No-charge items ($15.9 million): Free-in-county newspapers, free mail for the blind, free registered mail, Government agencies.

3. Preferred rate ($60.5 million): Loss on library books, loss on exempt publications, loss on books.

4. Post cards ($35.8 million): Loss on post and postal cards, loss on 1 billion Christmas cards sent unsealed (1956 estimate, $10 million).

5. Special services ($48 million): Registry paid, certified mail, insurance, collect on delivery, special delivery, money orders, postal savings, and miscellaneous expenditures apportioned.

6. Parcel post (size and weight) ($73 million): Loss from limiting the size and weight of parcel post.

7. Rural free delivery ($95 million): Free delivery to rural postal patrons.

8. Loss on post office ($51.8 million): Loss on operating cost of third- and fourth-class post offices.

CRITICISM OF POSTAL EMPLOYEES UNFAIR

Referring directly to postal employees the council stated: "We are certain that neither the Congress nor the 500,000 loyal postal employees are pleased with the criticism of the postal service. Employees of other Federal agencies would be equally concerned if reference were constantly made to Commerce Department "deficits," Interior Department "deficits," Labor Department "deficits," and so on.

"Such unfair criticism, unless countered by the truth regarding postal expenditures, could eventually create a public clamor for the elimination of needed postal appropriations on the false assumption they are 'deficits.' Indeed, needed funds probably already have been withheld from the Department because its functions and finances have been inaccurately portrayed.

"In the judgment of the council, the postal service was on a pay-as-you-go basis in fiscal 1955. Should the Congress find itself in agreement with the council and act to reaffirm and strengthen the principle that the postal service is a service to all the people and not a business, a proper understanding of postal financing will be achieved and the word "deficit," abandoned."

DEPARTMENT'S POSITION ON POSTAL POLICY

Postmaster General Summerfield and Deputy Postmaster General Stans appeared before the Senate Post Office and Civil Service Committee on March 21, 1951, to refute the report of the Citizens Advisory Council and to restate the "financial policy of the Post Office Department."

Postmaster General Summerfield, claiming "substantial areas of disagreement with the [Citizens Advisory Council] report" proceeded to present the Post Office Department's philosophy concerning the Post Office as a Public Service.

Speaking to the Senate committee the Postmaster General stated: "I imagine it is no surprise to you that the report of the Citizens Advisory Committee was a great disappointment to me.

"I regret to say, after careful study of the report, that I consider it to be unfair to the taxpayers of this country. It asks them, on incorrect premises, to continue indefinitely to carry the burden of the massive and mounting postal losses of the postwar period.

"In brief, the report makes three fundamental errors, in our opinion:

"1. It understates the current and prospective losses of the Post Office Department.

"2. It exaggerates the services that the Post Office Department renders for the public welfare, and magnifies the losses sustained through the performance of those services.

"3. On that basis, it concluded that 'no true deficit exists at the present time.' The inference is that there is no need for postage rate increases."

In further comments the Postmaster General explained "I would like to submit that the debate is irrelevant. No one doubts that the Post Office renders a public service. The point to be settled is whether it is a public service to be paid by the users or a public service to be paid by the taxpayers. If the costs of the service should be paid by the actual users who benefit from it, then deficits are intolerable because they result in assessing the wrong people, the taxpayers."

Summerfield also stated, with reference to the Citizens Advisory Council that "The majority of the seven-man advisory council are in businesses which benefit financially from low postage rates. While this conflict of interest on the part of the majority does not make objectivity impossible, it does make it difficult of achievement. The management of the Post Office on the other hand, represents no specific interest and no one segment or class of postal users. There is no reason for it to be other than unbiased and objective in its approach."

DEPUTY POSTMASTER GENERAL STANS ANALYZES COUNCIL REPORT

In his statement to the Senate committee, Deputy Postmaster General Stans objected to the report and listed areas of disagreement as follows:

1. Instead of $362.7 million postal deficit, it should be considered to be in excess of $651 million.

2. Instead of $392 million public welfare expenditures, public welfare services rendered by the Post Office Department are properly priced at about $30 million a year.

3. The council concludes that if public welfare items are taken into account no true deficit exists at the present time. We say that even after welfare items are eliminated, the postal deficit is substantially in excess of $620 million a year.

In accounting for a large part of the $300 million difference between the deficit estimate of the council and amounts which the Post Office submits ($651 million for 1958) Deputy Postmaster General Stans listed the following:

1. Public Law 68 enacted by Congress in 1955. "The result is that $191 million of this pay increase and other fringe benefits is now a part of postal costs but is not reflected in the deficit figure for 1955 used by the council."

2. 1956 amendments to the Civil Service Retirement Act will require the Post Office to pay 6½ percent of its payroll, an amount expected to be around $131 million. The council did not consider this item at all.

Stans then proceeded to give Department's detailed interpretation of each of the items listed by the council as its estimate of public welfare costs.

As an example of Stans' analysis of these welfare items, he explains:

"The council lists three categories of mail carried at little or no charge, and concludes that they represent a subsidy of $15.9 million. (Item 2 on chart.)

"The major item in this group is free-in-county delivery of newspapers, at a cost of $13.3 millions. Our measure of the public welfare in this is $800,000, since that is the amount of postage which would be received on all these mailings if they paid the regular in-county rates that would otherwise be applicable by law for second-class mail."

COST OF EMPLOYEE TURNOVER

In view of the conflicting claims made by the Citizens Advisory Council and the Post Office Department, as submitted above, the Live Wire reiterates its position that postal salaries should be treated separate and apart from postal rates. Significantly, in all the above figures there is no reference to the shocking loss for the Post Office Department occasioned by the nationwide 25 percent average turnover of postal personnel. This situation, widely prevalent during 1956–57, entailing a loss of at least $1,000 per employee in training and indoctrination expense has incurred an additional financial burden on the Department of approximately $125 million per year.

Utility Facilities Along Federal-Aid Primary and Secondary Highways

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. JONES of Alabama. Mr. Speaker, recently I introduced in the House two bills, H. R. 6987 and H. R. 6988, dealing with the relocation of utility facilities along Federal-aid primary and secondary highways. In my efforts to push the passage of these bills through the Congress, I have been greatly encouraged by certain actions taken by governors and State legislators in refusing to approve of legislation which would authorize the States to reimburse utilities for relocating facilities along Federal- and State-supported highways.

There has just come to my attention an article published in the April 1957 issue of Highway Highlights on the action of Governor Milward L. Simpson of Wyoming in vetoing a bill making it mandatory for the Wyoming highway department to reimburse utilities for relocating their facilities along highway rights-of-way. The reasons cited by the Governor in support of his veto of this bill are so cogent and meritorious that I am pleased to have an opportunity to present to the House this magazine article, The Governor Said "No":

THE GOVERNOR SAID "NO"—WYOMING CHIEF EXECUTIVE VETOES UTILITIES REIMBURSEMENT BILL

The Governor said "No."

"I am withholding my approval," wrote Governor Milward L. Simpson of a bill which would have made it mandatory for the Wyoming Highway Department to reimburse utilities for the relocation of their facilities along highway rights-of-way.

By his veto, the Governor saved his State from a loss of 69.5 miles of modern highway—or an estimated $12,267,000.

Governor Simpson was forthright in his veto message.

"It is unfair to highway users," he wrote, "for the State to expend the funds collected from them to subsidize utility companies. Such funds must be used for highway construction."

The bill would have a "disastrous economic effect," he said, because it would deplete highway funds so that they would "have to be made up by placing additional taxes on highway users by the 1959 Wyoming Legislature."

The Wyoming bill was the first of its kind to pass a State legislature this year. A round of such bills has been touched off by the provision in the Federal-Aid Act of 1956 permitting Federal money to be used for utility reimbursement where this is authorized by the State. However, because all Federal aid must be matched, State as well as Federal money is involved. It has been estimated that a general authorization of reimbursement to the utilities could take as much as $2 billion from highway construction on the Interstate System, alone.

Governor Simpson stated that reimbursement to the utilities posed a "serious threat to the future of Wyoming's highway program." Many observers hailing his early and exhaustive examination of the issue from the standpoint of his own State, have suggested that reimbursement may pose "a serious threat" to the whole Federal-state highway program.

The Governor's comprehensive veto message—in which it was pointed out that not only he, but his Highway Advisory Committee and State highway department had been unalterably opposed to this bill from the beginning"—may well set a precedent for other Governors.

Governor Simpson, a native of Wyoming, was inaugurated in January, 1955. His term expires in January, 1959. He was a member of the Executive Committee of the Governors' Conference in 1955–56 and is presently serving on the Governors' Conference Committee on Highway Safety.

A Necessary Voice

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. McCORMACK. Mr. Speaker, in the May 18, 1957, issue of the Pilot, the official newspaper of the archdiocese of Boston, appears an excellent editorial which I include in my extensions of remarks, entitled "A Necessary Voice," about Hon. Thomas E. Murray, member of the Atomic Energy Commission.

The editorial, in part, states:

His term on the AEC is at an end, now, but it will be a great pity if he is not reappointed for another term.

How true. The editorial gives reasons why Commissioner Murray should be reappointed—pertinent reasons, and there are many others.

The editorial further says:

An informed dedicated Christian gentleman who understands the spiritual implica-

tions of the atom as well as its more practical operation is needed on the Commission. Tom Murray is just such a man, and his voice must not be silenced.

In the responsible position he occupies, there is no person in public life who is more appreciated and respected than Commissioner Murray.

His reappointment would do more toward maintaining real bipartisan action than anything else the President could do, particularly at this time.

The editorial follows:

A NECESSARY VOICE

Perhaps the most terrifying aspect of living in this generation is the thought that it might very easily be the last generation of mankind. The human mind and its ingenuity has produced for our use a weapon which can wipe out vast areas of all living things and provide at the same time a radioactive fallout that will settle like a deadly mist over the remaining parts. The end result will be that those not killed immediately in the initial blast, will be slowly destroyed by bone cancer or some similar malignancy shortly afterward.

It is commonplace now to suggest that we have constructed a force which makes Frankenstein pale into insignificance and for the control of which we must seek a commensurate wisdom. It is not possible merely to think of the atom and its power in terms of science, nor in terms of military strategy, but in terms of survival. This suggests a moral note, so that above the voices of the scientists and the technicians and the strategists and even the statesmen, we must listen to the voice of spiritual wisdom as it cautions us once again to beware of the power of the product of our hands.

Fortunately for us, there has been such a voice raised again and again in our own country and indeed from a member of the Atomic Energy Commission, itself. Mr. Thomas Murray, with a full knowledge of the technical aspects of atomic development, has consistently called his fellow Americans to consider seriously the moral aspects of atomic warfare and yet to plan realistically at the same time an appropriate stockpile of atomic arms. His term on the AEC is at an end now, but it will be a great pity if he is not reappointed for another term. An informed, dedicated Christian gentleman who understands the spiritual implications of the atom as well as its more practical operation is needed on the Commission. Tom Murray is just such a man and his voice must not be silenced.

Caprice on the Soil Bank

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of Friday, May 17, 1957:

CAPRICE ON THE SOIL BANK

The surprising vote of the House to kill the soil bank after this year is a measure of the dissatisfaction on Capitol Hill with existing farm policies. It was not a deliberate act. The House Appropriations Committee had voted to reduce acreage reserve funds for 1957 to $600 million and further to restrict commitments that could be made for 1958. It is impossible to avoid the conclusion that the House sliced into this compromise because it wanted to dramatize its irritation.

There is, to be sure, nothing sacrosanct about the soil bank. It was recognized from the beginning as a stopgap measure to help farmers pull through a difficult period of mountainous surpluses and depressed prices. Congress approved it only a year ago with full understanding of its purpose. Although there no doubt have been abuses in application, the conditions which originally prompted congressional assent have changed very little since. It doesn't make sense suddenly to scuttle this venture when nothing is at hand to put in its place.

The extent of the unrest among rural Congressmen was illustrated a few days ago in the report of Representative WHITTEN for the Appropriations Committee. Concluding that flexible price supports and acreage reduction are flat failures, he called for a new farm program and hinted that it should include some variation of the two-price system. This has general support from certain farm groups; there also is the possibility of some further adaptation of production payments. But any legislation must come, of course, through the Agriculture Committee, and there is no indication whatever that it is ready to act.

In his letter to Representative WHITTEN, Secretary Benson agreed that acreage allotments have not controlled production. For some weeks he has been saying that new legislation is needed, without offering specific recommendations at this time. Indications are, however, that he would move in a direction opposite to that which seems to lure Mr. WHITTEN. His interest is running to lower price supports to avoid the creation of new surpluses. How farm income could be protected is of course the really tough question.

While the Eisenhower-Benson policies have certainly not solved the farm problem, it is naive to suppose that farmers would be better off if high rigid price supports had been retained. The WHITTEN report noted that the Government's surplus crop holdings "increased from $2.5 billion on January 1, 1953, to $8.2 billion on January 1, 1957," and charged that "this is largely due to increased production generated by reduced price supports and reduced acreage." Actually, as Secretary Benson has pointed out, all but $1 billion of this increase came in the period while farmers were operating under the high rigid supports then required by law.

Disappointing though present conditions are, it would be a grave mistake to revert to the artificial prices which helped to cause the present trouble or to abandon present palliatives while more basic adjustments are being sought.

Under Civil Rights Bill, Legal System Breached

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I include this splendid editorial which appeared in the Nashville (Tenn.) Banner, a newspaper of far-reaching influence, which I think is provocative of great thought on the part of the membership of the Congress.

The editorial follows:

UNDER CIVIL RIGHTS BILL, LEGAL SYSTEM BREACHED

If the 531 Members of Congress will read—and, more than that, soberly ponder—the minority report just released by Senators SAMUEL J. ERVIN of North Carolina, and OLIN JOHNSTON of South Carolina, the iniquitous piece of legislation known as the civil rights bill surely will be rejected.

Members of that august body are bound by oath or affirmation to support the Constitution. S. 83, the measure in question, flouts it in vital particulars—not the least of these aspects being its proposed emasculation of the right to trial by jury.

Another bald intrusion disestablishing a principle hitherto respected is—as pointed out in this minority report—provided in S. 83, that:

"The district courts of the United States shall have jurisdiction of proceedings instituted pursuant to this section and shall exercise the same without regard to whether the party aggrieved shall have exhausted any administrative or other remedies that may be prescrided by law."

In other words, regardless of State laws and provision of redress under them, these are nullified if with the powers of wholesale injunction sought the Attorney General moves to prosecute what he regards as a civil right violation.

It is, as these two Senators remind, a salutary, sensible, and long-settled rule of judicial administration that no one is entitled to judicial relief for a supposed or threatened injury until the prescribed administrative remedy is exhausted.

There is a power and authority, note it, residing in the States; established by the 10th Amendment: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

The States have not abdictated that responsibility, nor defaulted on it. It still stands as a primary principle of constitutional government; a part of the instrument, remember, to whose defense and support these Members of Congress—and all officials of Government—take oath.

The capricious character of this bill is obvious to any who will study it in the light of all the facts, and particularly in the light of the Constitution.

The minority report provides such a study. It documents the case and presents, with crystal clarity, the hazards invited with this reckless invasion of legal bypass. Its purpose justifies the exhaustive effort that has gone into it, and the aroused concern backing it by people defending the principle of a government-of-law:

"In urging the rejection of S. 83, we seek to preserve the American constitutional and legal system for all Americans or all races and all generations."

Why Punish the Farmer?

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the May 17, 1957, issue of the Des Moines Register:

WHY PUNISH THE FARMER?

Democrats in the United States House of Representatives seem to be taking out their spite on Agriculture Secretary Ezra Benson by punishing the farmer. The House voted to kill the soil-bank acreage-reserve program at the end of this year, with 154 Democrats and 38 Republicans against, and 46 Democrats and 141 Republicans in favor.

Some Members of the House got aroused by what they called loose handling of the soil-bank program in 1956. However, it was Congress that insisted on putting the program into effect late last year, over the objections of Secretary Benson. Both political parties share the responsibility for the squabbling over farm legislation that resulted in late enactment of the soil-bank plan last year.

Regardless of the loose handling of the soil-bank program last year, these facts remain: 1. Both political parties and all major farm organizations were in favor of it and wanted to see it get a fair trial; 2, the plan has not had a fair trial and will not if it is dropped at the end of 1957. It takes more than 1 year just to work out the "bugs" in administration of a new program like this.

The soil-bank program has one big thing in its favor; it provides supplementary income to farmers to offset the reduction in income they are taking from lower-price supports.

This is one way to begin to get away from price supports which have distorted agricultural production and created huge surpluses. Even if Congress is not thoroughly satisfied with Secretary Benson's administration of farm programs, it ought to at least give the soil-bank program a fair trial. We hope the Senate will use better judgment on this matter than the House.

Latest Court Edict Very Dangerous

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the Supreme Court's steady whittling away of basic constitutional concepts continues apace. Scarcely a week now passes without some new decision by that Court going to extraordinary lengths to advance the disguised Socialist "welfare state." One of the high Court's latest distortions of law is the Girard School decision described in the following excellent editorial from the Metropolitan Herald, Atlanta, Ga. I commend it to every Member of this House for study:

LATEST COURT EDICT VERY DANGEROUS

The United States Supreme Court reached a new low in making law this week by ruling that a racially segregated school in Philadelphia, operated with funds left in trust by a private citizen for "poor white male orphans," must admit Negro students.

In its latest seizure of power the Supreme Court overruled the Philadelphia orphan's court, the Pennsylvania Supreme Court, precedent of 108 years and the right of a private citizen to spend his money as he saw fit for the youth of the land.

The case involved a suit brought in the name of two Negro boys, obviously by the NAACP. They sought entrance into the school established in 1848 under the terms of a will by Stephen Girard, a wealthy Philadelphia citizen, who left $2 million in trust to set up and operate a school for poor white male orphans.

For 109 years the terms of the will had been met. The school had been operated for poor white male orphans. Since 1869 the school has been under the direction of a board of directors called City Trust, as trustees, which includes some city officials.

Because some city officials had a part in the direction of the school, as trustees, although no tax money was spent in its operation, the Supreme Court ruled that the Negroes were discriminated by the State in violation of the Court's recently amended 14th amendment.

Since the Court ruled that Negroes were being discriminated against by the terms of the will, it stands to reason that a suit brought in the name of females would result in a ruling that it also discriminated against females.

Obviously this ruling means that a person, in the future, will not be able to set up trust funds for the education of children of any particular race or creed. Its ruling, in effect, means that a person can no longer spend his or her money to assist and help with the education of any particular segment of our population. In practically every State the State board of education has some control, however limited, over private and religious educational institutions. It may be in the matter of fire safety, accreditation, etc., but regardless of how limited, such institutions would be under some control of a State agency, thus the 14th amendment, as amended by the Supreme Court, would control.

We wonder how many more illegal decisions this group of Justices will proclaim before the rank and file of American citizens wake up to the fact that our highest court is undermining constitutional government and replacing it with a system based on judicial decrees.

There's More Against Than for Federal Aid

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. GROSS. Mr. Speaker, legislation to provide Federal aid for the construction of schools undoubtedly will be brought before the House during the present session. Certainly there are arguments on both sides of this issue, and in adding up the minuses and the pluses the Mason City (Iowa) Globe-Gazette concludes in an editorial that there is a pronounced balance in the minus column. As part of my remarks, I desire to include the editorial, which appeared in the May 10 edition of the Globe-Gazette:

When we tote up the minuses and the pluses of the Federal aid to education proposition, with a realistic regard for the comparative importance of the items involved, we find quite a pronounced balance in the minus column.

The idea bottoms to a considerable extent on the "ability to pay principle." And would be just dandy were it not for one fact, namely, that this principle is already operative almost to the saturation point in the general financing of government.

Again, there are States which stand sorely in need of outside help because of wholly inadequate tax resources. Mississippi definitely and South Carolina quite likely fall definitely in this category—and we favor extending whatever help is suggested by the demonstrated need.

Still further on the plus side, most States—including Iowa—do endow the more populous and wealthy States by passing along graduates of their colleges and universities, and before that from their secondary schools. We've educated for the benefit of somebody else.

This last-named point has some real validity although our own preference would be to take the affirmative approach. Let the effort be on building up a dynamic industrial economy so that our young people will not have to look elsewhere for their career opportunity.

And now we come to what we regard as the real crux of the matter. The most disquieting fact about Federal aid to education is that it's breaking one of the last and most important barriers between the traditional American concept of local government on one hand and big government on the other.

It isn't merely that the dollar which goes to Washington always comes back materially shrunk by the round trip, although that is true and it's a consideration worthy of more than passing thought. A principle much deeper than that is involved.

Despite all the claims and verbal assurances that large-scale Federal aid does not necessarily mean Federal control of our schools, that would be the inevitable result. And it should be. To furnish the money and not to direct its spending would not make sense. It would be notorious fiscal irresponsibility.

What kind of business or logic would it be to pour great sums of the American public's tax money into the educational fund and not follow through to make sure it was being spent in an acceptable manner? Of course, there would be control out of Washington.

The possibility of Federal aid has had a deadening effect on education in many communities. "Why do for yourself what a rich uncle will come along and do for you?" has been a highly plausible question.

Let Government do some other things for us at the local level if it feels it must. But please let us manage on our own this one most important item of business in our world today, the education of our children.

Jury Trial Vital Provision of Due Process

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am pleased to include a copy of an editorial which appeared in the Nashville (Tenn.) Banner under date of May 16, 1957.

The editorial follows:

JURY TRIAL VITAL PROVISION OF DUE PROCESS

A principle as fundamental as the right to trial by jury admits of no negative speculation. The issue endangering it is positive, and the President owes it to the country to be completely informed on it—and to venture no answer, as yesterday to a casual question, that can be misconstrued.

He said simply that the dignity of the Federal courts must be upheld, and with that point there can be no disagreement. The challenge lies in the evasion of this principle proposed by his Attorney General.

He expressed that view, without elaborating on it, with reference to inclusion of this protective amendment in the so-called civil rights legislation. Regardless of sponsorship, the omission is indefensible.

It does not conform with what must be, otherwise, his respect for the principle of due process.

Regardless of his reliance on the advice of Attorney General Herbert Brownell, to whom he referred questioners, he must realize that his administration bears the responsibility for a piece of legislation so far-reaching; and he cannot lightly dismiss personal accounting for it on grounds that he is not schooled in law. It is his obligation to know the facts in the case before he lends such a measure even inferential endorsement.

The design of trial-by-jury is not to reflect upon, or derogate, any court. It does not detract from their dignity, or asperse their prestige as the judicial instrument. It does bind upon the system of justice a procedure historically related to responsibility of the judiciary in a government of law—and that binding was done most meticulously by the Founding Fathers through the Constitution, itself.

Not judicial indignity, but freedom from oppression, was the aim of this provision—as three times spelled out in the organic law. It certainly is no less vital now, nor less valid, with legal confusion the more confounded by the legislative vs. judicial struggle for the law-making function. In the present instance, emphasis understandably is laid upon it as a principle that must not be disestablished in behalf of a questionable force bill.

With regard to this project, which has aroused concern of the Constitution-minded throughout the Nation, the President obviously has been listening too closely to the United States Attorney General—who may be himself seeking a Supreme Court berth. He should be listening to some authorities who know the dangers of that drift from a basic point of law.

The idea of government-by-injunction—or intrusion on the fundamental right of trial by jury—or of the Justice Department in any of its divisions old or new, superseding the principle of due process is nowhere countenanced by the Constitution. They would constitute a bypass, and certainly could not be construed as enhancing the dignity of the court or the security of rights for which governments are instituted.

If the President will consult all the facts on due process, he cannot possibly back a suggestion so essentially and dangerously detrimental to it.

Equal Opportunity for the Older Worker

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mrs. KEE. Mr. Speaker, there is a growing awareness among business leaders, Government officials, industry and labor groups that the present premium placed upon youth at the expense of the older worker is costing the country dearly—indeed, in reaching a danger point in terms of the national economy. And in typical American fashion, there is, happily, also a growing determination to do something about it.

I am grateful to the Order of United Commercial Travelers of America for the following terse statement of the situation, which reached me in the form of a resolution unanimously adopted at its last national convention this past January:

Whereas a condition or trend has taken root in our country that places a penalty on growing old. Oldtimers are no longer considered desirable or able to carry on in everyday life. Thousands are unable to find work, regardless of how good a background an oldtimer may have and regardless of how good his health may be, he cannot find a job; and

Whereas according to statistics, Americans aged 65 and over are increasing at the rate of about 400,000 a year. Last year (1955) the total had reached a staggering 14,100,000—54 percent women and 46 percent men—of this number about 21 percent were still working in 1954, and about 73 percent had some income from pensions or social security, etc. The average income for those on either pension or social security is approximately $1,150 per year for men and $660 for women. It is estimated that social-security payments may reach $5,800 million in 1956—more than five times the amount paid out in 1950; and

Whereas this condition, if not checked, will, in time, create a burden on those employed that will be far more than they can carry; and

Whereas science has extended the span of life so that many men of 65 to 70 and 75 are no longer old or unable to carry on and it is a shameful waste of experience and know-how to permit men of ability to be placed in the discard because of age: Be it therefore

Resolved, That the United Commercial Travelers in annual session here assembled go on record as opposed to this dangerous and unfair trend toward our oldtimers, and be it further

Resolved, That we initiate a program to try to break down this trend against oldtimers and give it all the publicity possible so as to acquaint the general public with the danger of permitting this unfair condition to grow; be it further

Resolved, That copies of this resolution be sent to newspapers, Members of Congress, and to as many other sources as possible that will help to bring this condition into the limelight.

Well, here is one Member of Congress who has not only taken note of the resolution, but who has, for some time, been acutely concerned for the circumstances with which it deals.

Much of my time and attention in this session of the 85th Congress is being devoted to study and research into ways and means to ease the problems of our older citizens when they are no longer self-supporting and, at the same time, to ease the load which—no matter how lovingly assumed—the need to provide for their care places upon the new households of their children.

Old-age and survivors insurance is rapidly supplanting the public assistance program as the sole source of income for increasing numbers of men at 65 and for women at 62 years of age. But there are many who do not have and are likely never to have an opportunity to obtain insured status under the OASI program. Many of these are widows who have not worked in recent years—or who may never have had to earn their livelihoods—and whose husbands died before they had the opportunity to be fully covered under the insurance program.

Mr. Speaker, I am especially concerned for that group of women who are left widowed in their middle or late fifties. Totally unequipped to become self-supporting—and where would they find jobs at this age even if they were equipped?—they must nevertheless wait until they reach 65 before beginning to draw their survivor insurance benefits. It is my present intention to introduce a bill shortly which would amend the Social Security Act to permit this group to start drawing their insurance benefits at the time they become widowed.

But first and foremost in my mind is my determination to join efforts with those organizations and individuals—and with my colleagues in Congress—who are working to convince our fellow-citizens that the mature judgment, higher skills, and ripe experience of the older worker are priceless assets of the Nation not to be discarded but to be used in balance with the talent and enthusiasm of the younger generation. In this land of opportunity, we must adhere to one of the cardinal principles of democracy—"Equal opportunity for all."

Unions as Public Trusts

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, it is becoming increasingly obvious that something should be done about the problem of providing better regulation of union welfare funds, which handle billions of dollars contributed by members. The lurid revelations of the Senate Select Committee make daily headlines throughout the country. This inquiry emphasizes the advisability of prompt enactment of suitable legislation to restrain the misuse of these funds by corrupt officials.

Recently the Foundation on Employee Health, Medical Care and Welfare issued its first report on ways of securing more effective and economical administration of welfare funds. This committee is supported by the International Association of Machinists and United States Industries, Inc. Incidentally Al. J. Hayes, president of IAM, is chairman of the ethical practices committee of the AFL-CIO. This report discloses that millions of dollars have been wasted, through "well-intentioned ineptitude," because of the lack of the necessary technical knowledge on the part of labor-management representatives honestly seeking to provide these funds with comprehensive protection at minimum cost.

Careless handling or misuse of other people's money, whether deliberate or nonintentional, suggests the need—

among other things—for corrective legislation. Though the problems are admittedly complex, it is important that more adequate safeguards than now exist be adopted, and that millions of union members be provided with better protection against exploitation.

In this connection, I should like to include the following editorial from the Washington Post of May 20:

UNIONS AS PUBLIC TRUSTS

As the story of Dave Beck unfolds before the McClellan committee, it becomes more and more evident that he is only a symbol of grave weaknesses in the financial structure of organized labor. Mr. Beck himself is now generally regarded as being expendable. The public relations advisers of the teamsters union are reported to have recommended his ouster—a recommendation that has been coming from many other sources for weeks. But no one should suppose that the mere dismissal of the grasping and devious Mr. Beck will relieve the teamsters union of the losses and mismanagement which have afflicted it.

The basic trouble seems to be that Mr. Beck and some other teamster officials have regarded the union as a sort of fiefdom for their profit and aggrandizement. In theory this union exists to enhance the bargaining strength of its members with their employers. But Mr. Beck has used it as a means of rewarding friends and business associates and as a source of funds for his private use and for exorbitant profits to members of his family.

Roy Fruehauf, builder of truck trailers, and Bert M. Seymour, operator of a large fleet of trucks, insist that they were not under pistol-at-the-head compulsion when they lent Mr. Beck $200,000 at a time when the Bureau of Internal Revenue was investigating his takings from the teamsters treasury. But they were exchanging favor for favor. Mr. Beck had lent Mr. Fruehauf $1.5 million from teamster funds. His aids limited picketing during a strike so as to save Mr. Seymour's concern an estimated $200,000 a week. These are indicative of many favors exchanged. Obviously they are utterly incompatible with Mr. Beck's trusteeship as head of the country's largest union.

What the Teamsters and numerous other unions need is not so much new faces as new standards of conduct. The AFL–CIO has recognized this by creating its Ethical Practices Committee. Executive officials and legislators have recognized it by sponsoring measures to require unions to disclose their business transactions. Senator Kennedy has suggested also a law forbidding union officials to enter into personal business relations with companies with which they bargain collectively.

The country thus seems to be groping toward a requirement that unions function as trustees for their members. A union is not a private company and cannot properly be operated as such. As a manager of welfare funds, a union is in some respects comparable to an insurance company; as an investor of funds held in trust, it is somewhat comparable to a bank or trust company. Maybe it will be necessary to provide by law how welfare funds may be invested and to forbid all free-wheeling "loans" to union officers, their friends and relatives upon the whim of self-serving union functionaries.

It is well to remember that banking and insurance were sources of persistent scandal and exploitation until strict standards for the protection of depositors and the insured were developed. Current events certainly suggest that union members are in need of similar protection from exploitation, although care would have to be exercised to avoid any encroachment upon their primary function of collective bargaining. In the end the McClellan committee may be judged at least in part by the contribution it makes toward realization of this objective.

Expansion of Irrigation

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial by Mr. J. E. Lawrence, appearing in the Lincoln Star, Nebraska, on May 10, 1957, which I feel reflects the thinking of forward-looking people in my State and the Nation about our irrigation, reclamation, flood control, and power projects. Mr. Lawrence has long been recognized as a leader in water resources development. In 1952, the President named him Chairman of the Missouri Basin Survey Commission. In his editorial, Mr. Lawrence commends Representative A. L. MILLER, of Nebraska's Fourth District, for his plea for more funds for continuing the expansion of irrigation. Dr. MILLER has been a member of the Interior and Insular Affairs Committee for over 12 years, and is the former chairman of that committee. We cannot afford to ignore the advice of these experts. We must differentiate clearly between the current costs of running our Government and capital expenditures for the future. Looking forward, we must certainly classify water resources development as a capital investment in the future of America.

The editorial follows:

OF MEN AND THINGS

(By J. E. Lawrence)

We can go all of the way, hand in hand, with Nebraska Representative A. L. (Doc) MILLER, of the Fourth Nebraska District, in his plea for more funds for the expansion of irrigation. Nothing will contribute more to a stabilized economy in the semi-arid regions of the Great North American Plains to the west of the Missouri, including Nebraska, than the continuing expansion of irrigation.

OVER THE LONG PULL

If the United States "is able to spend $335,800,000 in irrigation and power projects from Ethiopia to Vietnam, we can afford to be a little more generous toward some of them in the United States," Representative MILLER was quoted as saying in a dispatch from out of Washington. He should say that again and again. He was on the soundest of sound ground when he said that "an irrigation project overseas pays no return to the United States, while an irrigation project in this country pays back its cost in full to the Treasury over a period of years." Unfortunately, under the Eisenhower administration and the Eisenhower partnership program, not infrequently the American people have been given a misunderstanding of the full facts. Whatever money is spent in river-basin development here at home for big dams behind which water is to be stored, water later to be used for irrigation purposes, or the generation of electricity, must be repaid in full to Uncle Sam. It is a precarious, if not impossible, development calling for the expenditure of millions of dollars when those irrigation undertakings must be met wholly out of revenue obtained through water rentals. The earnings derived from accompanying electric generation are vital to the financial soundness of these river-basin developments. From the combination of irrigation and electricity revenues, properly amortized, these undertakings pay for themselves.

Representative MILLER revealed from figures taken from an official Government agency that the United States as a contribution to international good will has financed 197 projects in 46 different countries, largely located on the continents of Asia, Africa, and Europe. There are those who look upon such action as projecting Uncle Sam in the glorified role of Santa Claus. Santa Claus, or an effort to improve conditions in regions afflicted with poverty and undernourishment, the fact remains that all discussion must rest upon long-range thinking, and because it does involve the long pull, we should be giving thought to additional funds for irrigation here at home.

NO LOSS OF MARKETS

The more Uncle Sam makes it possible for our neighbors scattered around the world to feed their peoples better, it follows there will be less demand for American-produced foodstuffs. Yet we must recognize that most or all of these 46 nations where we have been financing irrigation programs lack the means of paying for American foodstuffs. It has not been a case of actually destroying our own markets abroad. That market never existed. But a growing Nation, the United States, a Nation with a rapidly increasing population, certainly will benefit from a carefully thought out program of expanding irrigation over the next 50 years. And those States to the west of the Missouri which so frequently experience drought either will stand still, lose population, or move ahead to the extent and degree that Congress sees clearly the only type of program which will insure growth or development.

If we're going to spend hundreds of millions abroad, we can afford to spend more generously here at home for a continuing program of conservation of natural resources. More power to the Nebraskan in his struggle for more generous treatment of the West.

The Budget

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. LOSER. Mr. Speaker, on the day following President Eisenhower's address to the Nation in support of his $71.8 billion 1958 budget, the two great Nashville newspapers, published in the capital of Tennessee, spoke out in a straightforward and realistic manner.

The morning paper, the Nashville Tennessean, in its editorial stated the President's budget fight has less hopes than General Pickett's charge at Gettysburg, and the Nashville Banner editorially directed attention to the fact that proposed appropriations in the aggregate are billions too high. I am sure all Members will want to read these fine editorials and place them in the RECORD for this purpose.

The editorials follow:

[From the Nashville Tennessean of May 15, 1957]

IKE'S BUDGET FIGHT HAS LESS HOPES THAN PICKETT'S CHARGE

President Eisenhower's decision to carry his battle of the budget to the people, as he did last night, may well go down in history as something akin to Pickett's charge at Gettysburg.

It is a desperate effort to break the strong enemy front, but the prevailing opinion is that it comes too late. The blame for this situation lies largely in mistakes of judgment by the President, but it is also worth noting that some of his chief lieutenants failed him. The Congress has had time to fortify its lines, and it is backed by growing public sentiment.

There is every indication that Mr. Eisenhower did not relish this frontal attack, but there are no flanks to be turned as far as he can see.

All is confusion in the White House camp as the crucial battle is joined. The Commander in Chief has not known his own mind, and the army is milling around without restraint. In fact, a large part of it has gone over to the other side and seems determined to stay there. Significantly enough, the most embattled antibudget leaders are old-guard Republicans and once-enthusiastic Eisenhower Democrats.

There is stark disappointment for the President that in this, his second and last term in the White House, he is no longer the "Great White Father" whose merest suggestion is taken as inspired leadership.

Defense of the recordbreaking peacetime budget now is more difficult because of failure to fight for it from the beginning. Unlike former President Harry Truman, Mr. Eisenhower has not stood his ground in a two-fisted defense of his fiscal program. Instead he weakly agreed with Treasury Secretary Humphrey that "there are a lot of places in this budget that can be cut," and finally wound up by lopping off $520 million from the foreign-aid request.

Such Fabian tactics have led the Wall Street Journal to say:

"It is difficult to accept their reasoning that argues one month than $4.4 billion must be spent for foreign aid if we are to be assured safety and the next month agrees that the safety can somehow be bought now for $3.9 billion—but argues that safety cannot be secured 1 cent lower. * * * If Mr. Eisenhower can now find a way to cut $520 million from his earlier estimate, we think ways can be found to cut a great deal more out of a spending program that is far more fanciful than factual so far as results go."

Such reasoning is widely accepted, even in the official White House family. Even Mr. Sherman Adams, Assistant to the President, sees the point when he says, as he did on Monday of this week, that the budget could be cut as much as $2 billion without interfering with "the quality of services" by the Government. From Mr. Eisenhower's standpoint, that was the unkindest cut of all.

There is no foundation in an Eisenhower protest that the wave of budget-cutting sentiment is due to blind obstructionism. For the truth of the matter is that many of his critics clearly have a better understanding of the fiscal situation than does the Chief Executive. They do not constitute a wrecking crew; instead they insist, with good reason, on "more bang for a buck," in all aspects of Government.

Mr. Eisenhower is losing his most important fight—one which may sound the death knell of the new Republicanism—not only because he is now of little use to GOP politicians, but for the added reason that he has let many believing people down.

The Battle of Gettysburg was not lost until after Pickett's charge. On this occasion, however, history may recount that General Eisenhower was roundly beaten before his belated effort to capture the offensive. Commentators of the future, perhaps political counterparts of General "Monty" Montgomery, may sagely comment they would not have fought the battle that way.

[From the Nashville Banner of May 15, 1957]

BUDGET FACTS UNCHANGED: BILLIONS TO TRIM

The budget review presented by President Eisenhower last night as installment 1 of his appeal on that issue to the people does not alter the fact that spending proposals in the aggregate are billions too high.

To state that is not to differ with him on the point of necessity, stated again and again, of adequate security expenditures. But even in these departments, grouping enterprises of foreign aid and information, there is equal necessity of combing such costs thoroughly and trimming where possible.

It is not an operation, note it, to be conducted by political motivation. Fiscal welfare is not safely to be subjected to partisan ax grinding. For that reason, popular preference centers in the salutary efforts of capable men like Senator HARRY F. BYRD, spurning partisanship in his decades-long campaign to restore rudimentary economic principle to the Federal budget system.

The President's review was calmly given, and notably absent was any tinge of vituperation, a quality foreign to any responsible stewardship. He assessed a lot of facts pertinent assuredly to the phenomenon of rising costs, many of them inherited, accumulated, and fixed by law. In fairness to him it must be conceded that these are inescapable; they constitute a substantial portion of the annual outlay.

He was right, too, in his reminder that Congress itself has magnified the encumbrance with pet projects; and that regionally there are entries in the cost sheet backed by pressure groups. "Usually each group wants the Government to spend for its pet project, but to economize everywhere else."

Of course, there are cost factors that are in some department irreducible; for example the financing of the public debt—an interest outlay (that cannot be defaulted) running to some $7 billions. As another example the pensions and welfare of veterans.

There are items—such as national defense, taking the bulk of the budget—which are not safely to be arbitrarily cut. As the President observed, the sacrifice entailed in that is less than the one that would be exacted should the enemy, capitalizing on weakness, strike a blow for which we were unprepared.

There are, nevertheless, nonessentials in this budget that can and must be reduced; some of them involving domestic operations the country would be better off without—as the public school subsidy for classroom construction.

Inflation must be curbed, beginning with the enormous outlays of Government that have over the years contributed to it. The debt must be reduced, and the budget kept in balance. To that end the administration has been dedicated, with responsible treatment by such fiscal agents as Treasury Secretary George Humphrey.

The Banner observed 4 months ago, when this budget first was submitted, that "the alarm bell is ringing. It's time to stop, look, and listen." It is time, this newspaper said, to take a keen, uncompromising, analytical look at the fiscal operation of all governmental units; for a reappraisal of Government spending as such.

The President's review put some facts candidly on the table—for all to see. That study does not preclude the necessity, however—or diminish it—of screening this budget at every point and reduce it by every million or billion that can be safely cut out of it.

The Office of Secretary of Defense

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am submitting for inclusion in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Post-Dispatch, Friday, May 17, 1957, entitled: "For Any Post But One." This is a very thoughtful discussion of the importance of insuring civilian control over our Military Establishment. I am hopeful that the press reports to the effect that the President might be contemplating asking Congress to waive this requirement in the Military Establishment Act, is in error.

The editorial follows:

FOR ANY POST BUT ONE

If President Eisenhower appoints Gen. Alfred M. Gruenther Secretary of Defense, it will be the second time in 10 years that the law which was meant to insure civilian direction of our military forces has been set aside.

A law twice overridden in such a brief period is in peril of becoming a dead letter.

Because civilian control of the defense forces is a cardinal American principle which ought to be preserved, the Post-Dispatch believes that President Eisenhower should reconsider his reported decision to appoint General Gruenther as Charles E. Wilson's successor. Congress would have to enact special legislation to make General Gruenther eligible for the post.

By almost universal consent, General Gruenther would make a superb Secretary of Defense. The Post-Dispatch concurs in that opinion of him. We think President Eisenhower could not easily find a better man for the job.

And yet principles are more important than people. And principles that are worth keeping at all are worth keeping when it is easy to justify breaking them.

The fact that General Gruenther could ably serve as Secretary of Defense does not in itself warrant setting aside the principle written into the Military Establishment Act that this post shall be filled by somebody who has not for the preceding 10 years been on active duty as an officer of the Armed Forces.

Congress had strong and sufficient reasons for writing that provision into the law when the Military Establishment Act was adopted in 1947.

One reason was respect for the American tradition of civilian control of the Armed Forces.

Another was apprehension that opening the secretaryship to military men would encourage political jockeying among officers.

Another was a desire to balance the Joint Chiefs of Staff—which many people feared might become a Prussian-style "general staff"—with assured civilian supremacy at the top of the Defense Department.

President Truman asked Congress to make an exception to the rule when he appointed General Marshall Secretary of Defense in September 1950. That was a time, however, of dire emergency. The Korean war was raging and nobody knew whether it might not at any time be expanded into a world war. General Marshall occupied a unique position. His appointment in the special circumstances of the time was generally approved.

Though Congress willingly changed the law to make General Marshall eligible, the

need for maintaining the principle of civilian control was not forgotten even then.

One of the principal authors of the Military Establishment Act, Senator RICHARD RUSSELL of Georgia, now chairman of the Armed Services Committee, said he would not favor changing the law for anybody except Marshall or for any circumstances except those of September 1950. Senators HILL and SPARKMAN of Alabama indicated they shared that view.

Should Congress now be asked to make a second exception, and to do so in a period of peace when no emergency offers compelling reasons for it? No doubt Congress, holding the same high opinion of General Gruenther that we do, would be reluctant to reject his appointment in view of his strong personal qualifications. If the principle of civilian control of the Defense Department is to be preserved, then, it is up to President Eisenhower to preserve it.

Of course it can be argued that since the President himself is a military man, the essential control of the Defense Department will not be changed very much by appointing his good friend and former Chief of Staff to head it as the President's deputy. But the question is not how the Department might be run during this particular administration. Under General Gruenther it would probably be run exceedingly well. The question is whether the long-range interest of the Nation will be served by undermining the principle of civilian control of the Defense Department.

This much is certain. That principle, if violated a second time in 10 years, inevitably will be undermined. And a principle violated on behalf of a good general becomes so much the easier to violate on behalf of a bad general.

The Post-Dispatch believes President Eisenhower would be justified in appointing General Gruenther to almost any position in his Cabinet except that of Secretary of Defense.

California Rural Electric Cooperative Association Opposes P. G. & E. Trinity Partnership Proposal

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. ENGLE. Mr. Speaker, the California Rural Electric Cooperative Association has gone on record as opposed to the proposal of the Pacific Gas & Electric Co. to construct the Trinity project power facilities. A resolution to that effect was adopted at a regular meeting held in San Bernardino, on May 6, 1957. The resolution further states that the association favors construction of the power facilities by the Federal Government in order that the power and energy may be marketed under the power-preference provisions stated and restated by the Congress may times over the last 50 years.

Mr. Cone Hunter, president of the California Rural Electric Cooperative Association, stated that the association realized that the proposed partnership arrangement would sound a death knell to the Federal-preference law in the State of California. He pointed out that for all practical purposes the REA's in California, with one exception, are already at the mercy of the private utility and that the Pacific Gas & Electric Co. already has a dictatorial hold over the State of California, without this additional advantage being given to it.

The resolution follows:

RESOLUTION OF THE CALIFORNIA RURAL ELECTRIC COOPERATIVE ASSOCIATION ADOPTED AT A REGULAR MEETING HELD AT SAN BERNARDINO ON MAY 6, 1957

Whereas the California Rural Electric Cooperative Association is interested in supplying electric energy at the lowest possible cost to the farmers, ranchers, and rural areas of the State; and

Whereas the association is strongly in favor of the preference provisions of the Federal laws under which cooperatives, public utility districts, and municipalities, as nonprofit institutions, have preference for the purchase of electric power at cost from projects financed by the Federal Government; and

Whereas the Federal Government is building a dam on the Trinity River in northern California which will provide for the generation of a large amount of electric power; and

Whereas such power should according to the well-established policies of the reclamation laws of the United States be made available to the public at cost without the intervention of private profits: Now, therefore, be it

Resolved, That the California Rural Electric Cooperative Association earnestly opposes any partnership arrangement between the Federal Government and any private power company and it is strongly in favor of the Federal Government building both the dam and the generation facilities at the Trinity River project.

Dr. John A. Feaman

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to make a few remarks for the RECORD in connection with the passing of an outstanding American and Chicago resident who has served his country, his State, and his people well for a half a century. I refer to the passing of Dr. John A. Feaman, 4729 South State Street, Chicago, on May 18 in Billings Hospital.

Dr. Feaman was given the recognition he so richly deserved in January this year when the Chicago Tribune printed a story of Dr. Feaman's endeavors for the betterment of his people through the years.

I would like to quote from Dr. Feaman's letter to me after learning that I had inserted the Tribune story in the RECORD, January 31:

DEAR EMMET: I am deeply impressed with the honor you have seen fit to confer upon me. Your very thoughtful letter, accompanied by the January 31 issue of the CONGRESSIONAL RECORD was most gratifying. I am sure that I do not deserve so much honor, but I wouldn't be entirely truthful if I didn't say to you, I am glad you did it.

I could have never met the obligations imposed on me if I had not had friends like you, friends who gave me a push, friends who had confidence in my ability, and friends who helped by giving their time and money to causes that I fostered.

I don't believe any man reaches the top of the perpendicular ladder of success without a push by good wishes on the horizontal bars. Let me thank you for a push.

Sincerely,

JOHN FEAMAN.

Armed Services Day Speech of Hon. John C. Stennis

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. COLMER. Mr. Speaker, on Saturday last—May 18—on the occasion of Armed Services Day, the Honorable JOHN C. STENNIS, Senator from Mississippi, made a most impressive, thought-stirring, and logical address on the observance of this important day at Keesler Air Force Base, Biloxi, Miss.

Senator STENNIS, a member of the important Armed Services Committee of the United States Senate, in my judgment logically and appropriately pointed out that our Military Establishment is a two-edged sword. It can destroy as well as protect us. In the words of this able Mississippian:

The cost of maintaining the military preparedness necessary to insure our freedom can destroy the very freedom we seek to protect.

Again, he said:

We, as a nation, must learn to build and maintain our Military Establishment within the limits of our economy to absorb its frightening cost.

Mr. Speaker, at a time when the country is most conscious of the necessity for cutting unnecessary expenditures and at the same time obtain some relief from an all-peacetime-high taxation program, we think these sentiments are sound. Moreover, as we have repeatedly pointed out during the past decade, "Russia neither wants war nor peace." She is following the doctrine laid down by Lenin that the way to destroy the United States is to make it spend its way into bankruptcy.

Therefore, Mr. Speaker, we commend the statement of this outstanding Mississippian and express the hope that the Congress can and will make reasonable and justifiable cuts in this lion's share of the budget along with the other cuts that are being made. We think it can be done without in any wise weakening the Nation's defense.

Senator STENNIS' speech in full is as follows:

TWO STRIKING TRUTHS

First, I want, for myself, for Mississippi and the Nation, to commend the Army, Navy, Marine Corps, and the Air Force; the career men and the inductees; the officers and the enlisted men; the Reserves of each branch of the Service and our National Guard. In keeping with the finest traditions of Ameri-

can military service, they are doing their job in a manner in which all of us are rightfully proud. Our faith and trust in them is well placed; their record is the best. They are unequaled in courage, willpower, self-discipline and honor.

We, the people of America, who have the most at stake, owe them more than does any other country, in gratitude and appreciation. All the free world's people share this debt of gratitude, for our servicemen are the vanguard and the guardian of the world's peace and freedom.

Armed Forces Day is the day specifically set aside for them. No day of national recognition and acclaim is more deserving. When their sacrifices are considered, it is small homage indeed. I want to assure them here and now, however, that the heartfelt thanks of the American people are no less sincere on the other 364 days of each year.

The task they face is that of being the front line of world leadership.

This position, world leadership, neither sought nor wanted, was thrust on us—the youngest major power in the world. As a result of the catastrophic losses suffered by Great Britain and France in World War II, we suddenly found ourselves in a position we were not prepared to meet. We emerged from that war as the leading and most powerful nation in the world. We did not ask for this role, nor fully recognize its awesome responsibilities when it came. We are not accustomed to carrying its burdens; we do not have the centuries of diplomatic experience nor the trained personnel to meet this problem with assurance. Our way may have been faltering, but it has had no selfish motive. We have no aggressive aims to be furthered by its continuance.

It is to our credit, as the youngest major world power, that we realized the situation in time to salvage freedom and to protect ourselves. We have rapidly and soundly built the necessary military strength to meet the requirements of this new position in world affairs.

As a measure of the results we have achieved, and as a note of reassurance, let me give you the following outline of our striking power:

For the Army, the next year will see a strength of about 1 million officers and men, organized into 17 divisions, 9 regimental combat teams, 127 antiaircraft battalions, and a number of newly organized atomic support units; the Army Reserve will number 297,000 men in 1958.

Current plans for the Navy provide for 675,000 officers and men who will be assigned to 1,000 ships. A shipbuilding program includes construction of a nuclear-powered aircraft carrier and guided missile ships, 15 nuclear-powered submarines. Some 150,000 men will be included in Naval Reserve personnel.

The Marine Corps will have its 3 marine divisions and 3 air wings for a total of 200,000 men, equipped with a variety of atomic weapons.

By 1958 the Air Force will have its 128 wings. The B–36 bomber wings are being rapidly replaced by all-jet B–52 bombers. The KC–135 jet tanker production program will be continued. To man these planes there is a strength of 925,000 officers, enlisted men and cadets, with 80,000 Air Reserve personnel and 73,000 Air National Guardsmen. We have extensive radar warning networks.

The Air Force will be 50 years of age August 1 of this year, and in that period has grown from the initial order for a 3-man group "to study the flying machine and the possibility of adapting it to military purposes" to an organization requiring $17.7 billion annually for operations.

On January 16, 1957, three B–52 bombers completed nonstop flights around the world in 45 hours and 19 minutes, refueling in flight. They conclusively demonstrated that they can range to any target assigned anywhere in the world. This bomber can climb to over 50,000 feet and fly more than 650 miles per hour. The world's first supersonic bomber will soon be added as a member of the Strategic Air Command bomber team.

New research aircraft afford a glimpse of the manned aircraft of tomorrow. The X–1A has obtained a speed of over 1,650 miles per hour and flown an altitude of over 90,000 feet.

The guided missile, which I shall not undertake to discuss in detail, forecasts more perhaps than any other single weapon what the Air Force of the future will be like. The era of manned aircraft is not over, but the era of the unmanned missile in warfare is very much at hand.

What is the practical effect of this program in a world daily threatened by the inroads of international communism? Threats of a war in the Formosan area were not stopped by mere passage of a congressional resolution. That resolution gave the approval of Congress to the continuous patrol of that area by two Navy aircraft carriers; deterring a new "brush fire war" by Communist aggressors in that troubled part of the world. All is quiet on the Formosan front.

The presence of the Sixth Fleet in the Mediterranean Sea, fully powered with all modern weapons, is the strong, silent force which has brought some stability to the Middle East. Without the presence of such a force, and the firm declaration by the United States in the Middle East Resolution, that area would probably already have been taken over by our adversaries.

From these instances in recent history, it is apparent that the United States has to maintain a strong military program—stronger than any other nation—and inferior to no combination of powers in the world.

So long as the international situation continues to be tense we must continue to be the mightiest military power. At the same time, to allay the fears of the neutrals, we must reemphasize that we build purely for the defense of freedom—never for aggression. Our granting the Philippines independence and conferring Commonwealth status on Puerto Rico have underscored this. No free nation need stand in fear of the United States.

This, then, is our obligation to ourselves and to the world: To maintain freedom's strongest arm.

But the cost of maintaining the military preparedness necessary to insure our freedom can destroy the very freedom we seek to protect.

For the year 1958, Congress has been requested to appropriate $38.5 billion directly to the Department of Defense for our largest peacetime military budget in history. This is more than 50 percent of the entire budget and does not include amounts for atomic energy development, foreign military aid, and other defense-connected items.

To illustrate the full impact of the increased cost of our vast military machine, the B–17 bomber used during World War II cost $250,000; the B–36 in use in the 1940's cost $3 million; the B–52 approaching use today costs $8 million. A World War II fighter cost $50,000; the present jet fighter costs from $700,000 to over $1,000,000. For a modern bomber there must be a stockpile and maintenance list of 46,000 line items, compared with 6,400 similar items in World War II, and $800,000 worth of ground equipment, as compared with $78,000 worth previously.

A modern submarine costs over $44 million, eight times as much as a World War II type. The largest World War II aircraft carrier costs $80 million; today's atomic carrier will cost over $300 million.

In the radar-atomic-missile age, all unit costs are continuing to soar.

This military striking power can be our downfall—not by any abuse of the power of its force—not by the corruption of our national or military leaders—but by the simple operation of basic laws of economics. We, as a nation, must learn to build and maintain our Military Establishment within the limits of our economy to absorb its frightening cost. This challenge extends to us all.

I want to lay side by side two striking truths which we must face and adjust to in the years ahead.

1. Russia's primary attack on us is not by war but in forcing us into spending programs beyond the capacity of our free economy, and in causing us to squander our great natural resources. They have succeeded in straining our national economy through excessive Government spending.

Since the Russians completed their first atomic explosion in 1949, we have appropriated money for military programs in an atmosphere of fear. Our responsible military leaders lean all too far toward the attitude of asking for all that they can get. These two approaches must be stopped.

2. Our military appropriations have reached their peak. Increased preparedness in terms of more planes, more tanks, more carriers, more missiles, more atomic weapons, better training, better equipment, and better careers for personnel are all going to depend on the leadership shown by our military themselves in careful planning and a more efficient spending of available funds. It is their duty and their responsibility.

Congress has been told and the people have been told year in and year out that reductions in military spending cannot be made without wrecking the Nation's safety and security.

This simply is not true.

Every veteran who has served in our Armed Forces, and there are about 22,500,000 now living, was appalled at the waste involved in military operations. They know this waste continues. They know a better job can be done—defense wise—when this waste is eliminated.

The Congress has a degree of responsibility in connection with the overall cost of the military program. But they must rely on our responsible military leaders in learning what is actually needed.

The President has a high degree of responsibility, but even President Eisenhower must depend on the recommendations of admirals and generals.

So the professional military man, the career officer, has a special and peculiar responsibility with regard to economy and efficient planning. They have not fully accepted this phase of their obligations.

The Department of Defense has not fully accepted its responsibility for economy. Any department of Government asking for $38 billion a year must assume the primary and principal responsibility for maintaining a balanced economy in our Nation.

It is of little value to criticize without giving constructive examples or suggestions. Here are some examples of vast savings which can be planned only by professional military men:

1. At least some of the evils of useless duplication could be eliminated by military leadership through further unification of the three major branches of the military services. This duplication, the opposite of unification, is illustrated by our missile program. Each branch of the service has stoutly insisted on a vast program of its own, regardless of the vast expense involved in such duplication. The services bid against each other in this narrow and specialized field for the expensive materials, the limited number of industrial plants, and the small number of top-notch scientists who have become specialists in missiles. In this bidding against each other, they are running costs up for all.

These references do not discredit our professional military personnel, but they and the public must become aware of their new responsibility in this vast Military Establishment that will be our burden for the foreseeable future.

2. We now have 2,800,000 men under arms in all of the services combined. The total cost of salaries and maintenance for this force is $10.5 billion per year. Substantial savings can come through an expanded and extensive system of active Reserves for all branches of the service. Under the active Reserve program, prior military training can be utilized and further training continued through operation of Reserve units near the homes of the men. The per-man cost is war less than in the active service.

The times demand that our professional military leaders come forward with a strong and better Reserve program. This continuing challenge has not yet been met by our military leaders.

3. As a part of this personnel plan, I think we must go even further in establishing a system of permanent military careers extending from the lowest noncommissioned rank to the 5-star general. Through spreading the general popularity and appeal of such a career, we would eventually be able to abandon the peacetime selective service program.

These, in brief outline, present some of the serious major problems for which some effective solution must be found.

We realize, however, that real and permanent peace can never be the fruits of any military program, even though we must maintain the level of military preparedness necessitated by world conditions. I hope the Communist threat is ebbing because of the disillusionment of its unhappy people behind the Iron Curtain.

But the real hope for peace rests—not in armed might—but with the opportunity of freedom loving people everywhere to be free.

Newly independent nations, assuming their rightful places in the family of nations—the world community—must have the protection to keep that freedom. Their people, through the increased economic opportunities of an independent government, must have the experience of breathing freely.

Through independence, economic and political opportunities, and national respect, the desire for peaceful existence will become universal. On that day permanent peace will become a reality. This, as Americans, is our goal.

"It's Great To Live in Michigan"

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mrs. GRIFFITHS. Mr. Speaker, with great pride and immeasurable pleasure I invite all of my colleagues to join the 7,516,000 people of the State of Michigan in the observance of Michigan Week during May 19 to 25, 1957.

This week has been set aside so that the people of this great State may reflect for a moment and realize that truly "It's great to live in Michigan."

GOVERNOR'S PROCLAMATION

Michigan is blessed with God-given resources and scenic beauty which have made it the "Water Wonderland." The 7 million citizens of Michigan are proud of their heritage, the spiritual foundations of our institutions, and of our many advantages in agriculture, industry, education, culture, and recreation.

The people of Michigan have gained wide recognition for their contributions to a better life and their leadership in all fields of endeavor. Our citizens are moving forward progressively with the spirit of our Founding Fathers in the creation of new frontiers that will enhance the livelihood of our people in years to come.

Two long cherished dreams, the St. Lawrence seaway and the Mackinac Bridge, will soon be realized, opening new vistas of our Commonwealth for economic development. All of us should be proud of our achievements, and in that pride should find strength to make ours an even more wonderful State.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim the week of May 19 to 25, 1957, as Michigan Week in Michigan, and appeal to all of our citizens to join the celebration starting with the observance of our spiritual foundations on Sunday and concluding with recognition of our new frontiers on Saturday, so they will more fully appreciate our two beautiful peninsulas which are so abundant in human and natural resources and unlimited opportunities.

Given under my hand and the great seal of the State of Michigan this 1st day of May in the year of our Lord, nineteen hundred and fifty-seven, and of the Commonwealth the one hundred and twenty-first.

G. MENNEN WILLIAMS,
Governor.

House Concurrent Resolution 16

Concurrent resolution urging the people of Michigan to take part in the observance of Michigan Week from May 19 to May 25, 1957

Whereas Michigan people have a very deep feeling of pride in our State and in the communities which make it great; and

Whereas we are blessed with a beautiful State of unparalleled resources, and with a people of ability, energy, and imagination to develop these resources for the good of all; and

Whereas Michigan Week is a special time set aside each year to focus attention on Michigan—its heritage, its wealth, its spiritual, cultural, and material values; and

Whereas investments in new plants and equipment have been greater than in any other State, thereby indicating industry's faith in the future of our State; and

Whereas Michigan is the hub of the greatest concentration of population and industrial markets in the United States; and

Whereas in the fields of medicine, education, social work, religion, and science Michigan has produced leaders who have contributed to the betterment of man throughout the world; and

Whereas Michigan workers have made the State a leader in skills and productivity, with Michigan leading the Nation in the value of manufactured products per worker; and

Whereas Michigan ranks first in the production of many industrial and food products; and

Whereas Michigan's farmers have made the State one of the most self-sufficient food producers in the Nation, the leader in many agricultural products, and have made Michigan's agriculture the most diversified in the Nation; and

Whereas many of Michigan's cities are nationally and internationally known for the products they make; and

Whereas Detroit is the most prosperous big city in America, with a median income of $5,700; and

Whereas Michigan has the world's largest supply of fresh water for industry and is a water vacationland bordered by 4 of the 5 Great Lakes, has the country's longest shoreline, contains more than 11,000 inland lakes and more than 36,000 miles of streams; and

Whereas Michigan is the fastest growing State in the north-central United States with a population estimated at 7,516,000; and

Whereas the world-famed Mackinac Bridge scheduled to be completed this fall is another testimonial to progress in Michigan and will be an impressive gateway to the Upper Peninsula, which is rich in tourist attractions, timber, iron ore, copper, and numerous other important minerals: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the members of the Michigan Legislature urge all people of Michigan to take part in the observance of Michigan Week, May 19 to May 25, 1957, a period in which residents of our State and of other States may become better acquainted with Michigan's boundless advantages and opportunities in industry, natural resources, agriculture, recreation, and culture.

Adopted by the senate April 10, 1957.

FRED I. CHASE,
Secretary of the Senate.

Adopted by the house February 14, 1957.

NORMAN E. PHILLES,
Clerk of the House of Representatives.

Report on Visit to Poland

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following text of my complete report on my recent visit to Poland during the congressional recess. A condensed version of this report is contained in the report of the Special Study Mission to Europe, which was released last week, of which I was a member. I also wish, at this time, to include my own recommendations on the question of economic assistance to Poland on which negotiations have been underway for some 3 months:

REPORT OF REPRESENTATIVE ALVIN M. BENTLEY, REPUBLICAN, OF MICHIGAN, ON HIS VISIT TO WARSAW, POLAND, APRIL 25–28, 1957

I. QUESTIONS AND ANSWERS

I arrived in Warsaw on Thursday evening, April 25, and departed Sunday morning, April 28. During the period April 26–27 I saw and interviewed all available officers of the American Embassy; all major Western newspaper correspondents; representatives of the Polish press; prominent members of the Polish Parliament (Sejm); as well as high-ranking officials of the Ministries of Foreign Affairs, Foreign Trade, and Agriculture. In all, 32 people were interviewed, and in virtually all cases the following questions were asked:

1. If American assistance is provided for Poland, how can we be sure that this assistance will benefit the Polish people?

2. How can we be sure that such assistance will remain in Poland and not be siphoned off elsewhere?

3. If assistance to Poland is successful in helping Poland to achieve its economic objectives, will this in turn have a contagious

impact on other Eastern European countries?

4. What will be the most likely consequences if no assistance is provided?

5. What will be the effects of American assistance on Poland's political development?

6. How can aid to Poland be justified in terms of the national interest of the United States?

A variety of more detailed and technical questions was asked of Embassy and Polish officials. The answers to these will be reflected under my general observations, following a composite response to each of the above six questions which I believe are of major importance in considering the issue of aid for Poland.

The answer to the first question was, generally, that it was not possible to separate the benefits of assistance to the Polish Government from benefits to the Polish people themselves. Assistance from the West, specifically from the United States, is necessary to reduce Poland's dependence upon the East for essential iinports. Western aid is also necessary to increase Poland's internal levels of economic activity in a way which will improve consumption standards, especially for the urban worker; and which will permit gradual decontrol by the State of important sectors of the Polish economy without exposure to unmanageable inflationary pressures. Poland does not command the resources to accomplish this alone; it cannot depend upon Eastern countries to satisfy these requirements in the interest of the planned reforms; it can therefore look only to the West.

In response to the second question, all sources gave the unqualified answer that the arrangements concluded last November 19 with the U. S. S. R. provided a measure of independence for Poland which would insure that aid would not be compulsorily siphoned out of Poland. Insofar as the Polish Government is concerned, United States assistance through long-term credits is clearly an important factor in increasing domestic production, improving the standard of living, and thus contributing to internal political stability.

The consensus in respect to the third question was that if Poland is able to strengthen her economic ties with the West, and thereby is able to continue with the relatively significant political and economic reforms already under way, other Eastern European countries would attempt to follow its course.

The query on denial of aid produced responses which differed in degree but not in substance. It was generally acknowledged that the Polish economy is in a very shaky state. There is a critical shortage of investment goods. The Government is having difficulty in making a rational distribution of available food supplies. There is a chronic shortage of consumer soft goods, and consumer durables are particularly scarce. Coal output has fallen sharply in the last 2 years, and there is widespread discontent among urban workers, which manifests itself at the plant level by sporadic slow-downs and strikes. By responding to political pressure and putting wage reforms into effect before the supply situation warranted, the Gomulka regime is also facing the likelihood of serious inflation.

What is needed, therefore, is a fairly sizeable and immediate injection of outside resources into the economy.

In view of the number of factors involved, of which American aid, though economically important, is only one, it is understandable that responses to the question of "no aid" varied from statements that denial of aid would be the direct cause of the collapse of the Gomulka regime to statements that this would cause widespread discouragement and apathetic resignation to the fact that renewal of ties with the most important Western nation was not possible. It was clearly not feasible, in the brief time available, to probe more extensively into the question of how far public opinion in Poland has really seized upon the aid issue as an important psychological symbol, the denial of which would have repercussions out of proportion to its true economic significance. American sources considered that the psychological factor was of considerable importance; many Poles thought it of crucial importance.

It was explicitly agreed among Americans and newspaper correspondents and implicitly suggested by many Poles that unless economic deterioration can be halted and unless Gomulka can push through his agrarian and industrial reforms, the regime is in considerable danger of collapse, possibly by late fall of this year. In view of the overwhelming superiority of Russian forces, there is little likelihood of an uprising such as occurred in Hungary, although revolt obviously cannot be fully discounted. On the other hand, the collapse of the regime would very clearly signal the end of the Polish experiment in relative freedom and the reimposition of a Stalinist regime with its concomitant apparatus of Soviet control.

Concerning the effects of American assistance on Poland's political development, there was general agreement that Poland has already reached the outer limits of political independence from the Soviet Union; and that, barring any shift in Russian policy, there would be no significant progress in the foreseeable future. It was also reaffirmed repeatedly that there was no intention of abandoning socialism; nor was there any likelihood that the authority of the Polish Communist party would be displaced. The only alternative is a Soviet-dominated Communist party.

The sixth question was asked only of Poles. The responses varied from descriptions of generalized benefits to suggestions of particular economic advantages to the United States as a consequence of extending economic assistance. In general it was pointed out that there is more individual freedom in Poland today than in any other Eastern European country. It was suggested, for example, that for the first time in modern Polish history no one is in prison on account of his political beliefs. It was stressed that it was in the United States interest to encourage this development wherever possible, since to the extent that political and economic stability were restored in Poland, Poland would in turn be in a stronger position to influence the maintenance of peace in the general Eastern European area.

More specifically, it was suggested that it was in the United States interest to expand our commercial markets in Poland, and that in strengthening economic ties with Poland we would inevitably open the door to wider cultural contacts.

II. GENERAL OBSERVATIONS

In my view, recent developments in Poland represent an unanticipated and courageous evolution toward national economic and cultural independence within the limits imposed by the geographical circumstances that Polish territory is a line of communications between two Soviet Armies. Poland must, therefore, during the indefinite future remain within the Soviet orbit.

I am also of the opinion that the Polish regime is convinced that post-World War II Soviet hegemony in Eastern Europe, with its imposed police regimes and imposed Soviet economic doctrines, was primarily in the interests of future Russian security. It is on the basis of this conviction that the Gomulka regime is attempting to meet public pressures to liberalize domestic, religious, political, and economic life; but always in accordance with the premise that the United Workers Party (Communist) is the chosen political instrument and that the ties with the Soviet Union are for some time to come indissoluble.

On the international front this means no neutrality for Poland, and cotinued adherence to the Warsaw pact. On the domestic front this means a program for the abandonment of forced collections from the farms, the restoration of private shops, the introduction of quasi-private enterprise incentives in manufacturing, and the redirection of investment to provide a more sensible balance between heavy industry and consumer-goods industry.

In restoring the agricultural sector to a market economy, the Poles are making a drastic departure from Soviet economic doctrine. If the Gomulka experiment is successful, and is permitted to succeed, it will be historically important for the western democracies as well as for all Eastern European satellites carefully to evaluate, in the light of their respective national interests, the development in Poland of an independent economic system operating partly on the basis of private enterprise and individual incentives, and partly on the basis of state ownership and control. This development is reported to be extremely disturbing and embarrassing to the Soviets, but the Poles appear to be convinced that Soviet intervention is unlikely as long as their military security ties with the U. S. S. R. are kept intact. Ultimately the Poles seem to see the possibility of a new era of peaceful coexistence,, with Poland assuming a leading role as arbiter between Eastern and Western Europe.

Following are some brief observations based on discussions relating to specific economic problems:

1. Agriculture: The Gomulka regime is committed to discontinue forced collections of farm commodities. It is also committed to de-collectivise farm lands, encourage cooperatives, and develop a method for returning farms to private ownership. Abandonment of forced collections is the most critical political requireemnt, but in order to accomplish this the Poles estimate that they will need a 4-month reserve of wheat in order to discourage speculative hoarding and inflation, and to ensure essential consumption requirements. Ministry of Agriculture officials told me that this reserve should amount to 1.6 million metric tons, and that bread grains were probably the highest priority item in the negotiations for American credits. They also said that the Government needed a 6-month lead-time from the acquisition of the reserve to the announcement of discontinuance of forced collections. Thus, if the reserve was complete by next January, they could make the announcement in July and dismantle the collection administration. There was some difference of opinion as to when Poland would again be self-sufficient in wheat production, but there was general agreement that imports would be necessary for several years.

There is also a requirement for feed grains. During the past several years an imbalance has developed between the hog and cattle populatjons. Before the war the number of cattle exceeded the number of hogs; now the ratio is reversed. Feed grains are required to restore the ratio to normal and to reduce the reliance of hog farmers on bread grains for feed. If successful in this field, the Poles expect not only to improve the domestic protein diet but also to increase their exports of meat, meat products, poultry and dairy products to Western Europe and England.

2. Coal mining: The export from this basic industry has been falling off sharply. In 1955 it was 25 million tons; 1956, 19 million; and this year is expected to drop to 14 million. Output has also been reduced due partly to the abandonment of required overtime and Sunday shifts, partly to the movement of labor away from the mines, and

partly to obsolescence of equipment and the necessity of opening up new mines.

Mining equipment is needed for modernization of old mines and for construction of new mines when current exploration has been completed. This year approximately 50 percent of Polish exportable surplus will go to Eastern Europe and 50 percent to the West.

If the modernization program is successful and future coal production meets expectations, domestic consumption and exports will increase. The Poles maintain that present levels of exports to the East will remain about the same since Eastern Europe has not been able to satisfy Polish requirements for producers durables, and that exports should increase to Western Europe since the latter is the main assured source of these requirements.

3. Cotton textiles: This is a sick industry, especially in the Lodz area where there is serious underemployment and social unrest. The Poles estimate that their industry can utilize up to 120,000 metric tons of cotton annually. At present they are almost solely dependent upon the U. S. S. R. for imports, which have been amounting to about 95,000 tons a year, with 70 to 75,000 coming from the U. S. S. R. and the remainder coming from Egypt as long-staple cotton and therefore unsatisfactory for their purposes.

Again, cotton is a high-priority item in their stated requirements from the United States, and in order to insure their independence from Soviet supply, they need to augment their inventory at once and will have, in addition, an annual recurring requirement for United States cotton for a long time to come.

With an improvement in the output of cotton textiles, the Poles are anxious to increase their exports of low-cost textiles to Africa and southeast Asia in return for essential raw materials imports.

4. Foreign trade: In general, there has been a shift in Poland's trade relationships since 1954. Before World War II, Poland's trade was predominantly westward. But by 1954, two-thirds of her trade was with Eastern Europe, 30 percent of which was with the Soviet Union. By 1956, however, 30 percent was with the Soviets, 30 percent with Eastern Europe, and 40 percent with the West. Poland is determined to increase her trade with the West, since this is the main reliable source of supply for the modern industrial equipment she needs.

III. GENERAL IMPRESSIONS

Based upon my experience as a Foreign Service officer in Budapest in 1949, I can affirmatively report that there is now a definite "thaw" in Warsaw. There is extensive evidence of this. In 1953, for example, I was refused a visa to enter Poland. In 1957 my visa application was filed in Washington, approved by Warsaw, and picked up in Vienna in less than a week's time. Passport and customs clearance at the airport was rapid and courteous.

In Warsaw itself, the reconstruction effort has been, and is, impressive. Between 1939 and 1944 the city was 70 percent destroyed. Of the destroyed sections, 75 percent has now been rebuilt. Reconstruction has been guided by one plan: To reproduce the prewar city exactly as it was. Even the medieval section has been duplicated as exactly as possible. This example of the depth and tenacity of Polish traditionalism and culture is interrupted by the freakish Soviet-built skyscraper, the Palace of Culture. The Poles resent this geological extrusion, but there is nothing that can be done about it. I was told, however, that the most popular event ever held in its largest auditorium was the time Glenn Miller's orchestra played for a capacity audience of 3,000 plus hundreds of standees.

Unlike other Eastern European capitals, including East Germany, there are no visible evidences of Soviet or of Communist Party propaganda, no red flags, no propaganda slogans across building fronts, no statues of Stalin, and no flag-decked superphotos. Even the Boy Scouts and Girl Scouts (much in evidence) have switched from red to green neckerchiefs.

Russian forces are nowhere in evidence, although I saw an occasional Polish unit marching in the streets. I was told that the Poles are about to abandon the Russian prototype uniform and return to the traditional Polish army uniform. In general, I was told that the army was loyal to the regime even though the deputy chief of staff and other general officers are still Russian. All Russian officers have been eliminated from the navy and air force. The army, I was informed, cannot be considered as a military asset to the Russians; on the contrary, in the event of trouble with the West, it would be a liability. Any independent Polish action against Soviet pressure, however, is limited to a period of about 2 weeks because of obsolete World War II equipment and Russian control of Polish logistics.

Uniformed civilian police are in evidence but only with small sidearms. If security police are present in force, they are not identifiable. I was told that, since the thaw, Polish reaction against earlier police practices is such that it is difficult for police to effect routine arrests without running the risk of being stoned.

The Parliament (Sejm) building has been reconstructed as it was before. Here again there is no evidence of Communist Party control. The only emblem, in the Sejm, behind the speaker's desk is the traditional Polish eagle. While the United Workers Party is in complete control when the Sejm votes, I was told that there is considerable multiparty give-and-take in closed sessions of parliamentary committees. The Poles also repeatedly expressed satisfaction with the newly won independence of their judiciary system.

There was no reticence on the part of Polish officials about meeting me. On the contrary, the Embassy was able to arrange an impressive number of meetings on very short notice. Generally, the Poles were cool at first, but seemed genuinely friendly as discussion developed. I assume that our conversations were recorded, but aside from an obvious correctness in their references to the Soveit Union, they were quite willing to discuss substantive issues. They are uniformly anxious to improve their cultural ties with the West and especially with the United States; and satisfaction was always expressed in the new Ford Foundation student-exchange program. They are also anxious to retain the support of Communist China, and of Nehru. Both China and India fully backed their independence effort last fall by implication and they feel that this backing continues to constitute a powerful offset to more active Russian intervention in their affairs.

I should judge, however, that their cultural orientation toward the West is paramount. More than once, it was pointed out that Poland regained from Germany one-half of the territory lost to the U. S. S. R., thus moving the entire country westward and providing it with a much more homogeneous population than was the case prior to World War II.

If the Poles have demonstrated their attitude toward Russia by successfully withstanding the imposition of Soviet cultural patterns, they are also still very bitter toward Germany, although there is some evidence of relaxation in respect to East Germany. In response to a question, one high official said that, in his view, there was no solution to the German problem.

On several occasions I inquired specifically as to the feasible extent of United States official representation in Poland in connection with possible American economic assistance. The answers were always the same: Poland is seeking medium term, hard currency credits, repayable in dollars. Her repayment record has in the past been good, and will be again. It would be extremely embarrassing internationally and politically difficult internally, to admit the typical USOM and technical assistance teams. Because of the nature of the loan request, and their intentions for its use (i. e., they have no intention whatsoever of reexporting the loans to the East) there was no need for, nor could they tolerate politically, numbers of end-use checkers roaming around the country. They all agreed, however, that technicians required for the practical implementation of their machinery and equipment import programs would be welcome.

Finally, I should mention that Poland's reserves are at an all-time low, possibly $15 million. This is extremely low for a country with a total volume of trade of better than $2 billion per year. The dollar drought is so severe that I was informed that any desire to reopen Polish consulates in the United States would be inhibited by their inability to provide the necessary dollars. In this connection, I inquired about possible plans to attract American tourists by improving their hotel and transportation facilities. Most Poles admitted that tourism could be an excellent source of dollars, but they also admitted that their hotel standards and transportation facilities were still far below acceptable Western standards and that it would be some time before they could devote an adequate share of their resources for tourist facilities.

RECOMMENDATIONS

The question of economic assistance to Poland and (hopefully) to the other captive nations when circumstances permit must not be treated as an isolated example or even a series of such. It is foolish and shortsighted to think of repetitions of the present program for Poland which involve a process of scratching around and using several different existing authorizations to tot up funds sufficient for the contemplated purposes. Rather, there should be a separate Polish program of economic assistance which should be refended on its own merits and should stand or fall on the same. This would hold true for any other captive nation that was enabled to achieve a comparable degree of economic freedom.

To the question: Should there be economic aid for Poland? the answer must be: Certainly, to a limited degree. This opinion comes from one who has generally opposed foreign aid in any and all forms. It also comes from one who has always adhered to the policy of liberation, whether by evolutionary or revolutionary means, and who has advocated a policy by this Government of assisting either means by any and all resources at its disposal.

To return to the specific question of Poland, the desired aid is in two general forms: credit for the purchase of our surplus agricultural commodities, specifically wheat and cotton, and a transfer to the Export-Import Bank of sufficient funds to enable the extension of a line of credit for the purchase of modern mining machinery and other articles intended for increasing industrial and agricultural production. Authority for the second part already exists under the President's special fund; authority for the desired amount of the first part will exist when the Congress completes favorable action on the pending $1 billion surplus commodity legislation.

In spite of the fact that the Poles, due to their own 5-year plan, have requested credit on at least a 3-year basis, the present extension should be on a year-to-year basis, subject to termination by either party with the minimum of notice. The tenure of the present Polish Government is extremely

uncertain, due to deteriorating economic conditions, and a successor to the Gomulka regime could conceivably be a customer with whom it would not be in our best interests to do business.

The important thing to remember is that we are not necessarily trying to bail the present government out of difficulties and problems caused by practices of its predecessors but rather to show the Polish people themselves that they are not forgotten by the West and that they can count on us for a limited amount of economic assistance. It is significant that the Polish press has only discussed the current negotiations in the most general of terms and the average Pole has little, if any, idea of the amounts under consideration. The mere announcement of American aid, whether of $100 or $300 million would serve as a tremendous morale booster. That is the effect that we want to have on the Polish people who are after all, our chief concern.

There should be certain conditions attached to the program. Long-range problems, such as claims and pre-war debts, can be deferred until the existing atmosphere improves. However, it would not be unreasonable to request the Poles to establish a counterpart fund of zlotys or, at least, if the credit is to be repaid partially in zlotys, to earmark a part for local expenditures by our Government. Such a fund could be used to improve the very drastic housing problem that faces American personnel in Poland today. It could be used to assist local expenses of a student exchange program and other costs of any expanded cultural interchange policy (which the Poles allege they are most anxious for). Another condition might also be the maintenance of a favorable exchange rate for American tourists, provided that accommodations and transportation are expanded sufficiently in this direction. There could and should be a definite agreement for the importation of private relief packages (regarding customs duties) from this country into Poland. There might even profitably be some settlement of the troublesome matter of dual nationality claims which have prevented the emigration of large numbers of Poles claiming American citizenship.

It is not believed that the Poles would agree at this time to the presence of numerous American personnel in connection with a program of economic aid. It is felt, however, that there would be no objection to the sending of qualified technical experts in connection with the coal-mining machinery and similar importations. This should definitely be a part of the final agreement reached.

Aid to Poland is definitely in the nature of a calculated risk. For this reason, the initial amount should be relatively small and subject to immediate stoppage. But the possibilities of the moral impact on the Polish people cannot be overestimated. Moreover, the obvious anxiety of the Polish government to free itself from economic subservience to the Soviet Union represents a trend that should only be encouraged. At worst, we will have gambled and lost $100 million. At best, we will have exploited a chink in the Soviet armor that could be more advantageous to us than even Tito's rift. It was generally agreed that other satellites would attempt to follow Poland's example, if successful.

The question is often raised regarding economic negotiations and general questions of trade between Poland and Communist-dominated countries of the Far East, such as Red China and North Vietnam. The actual amount of Polish trade with these two countries is relatively small and consists of Polish exports of manufactured products in exchange for the same agricultural commodities which Poland is now endeavoring to obtain from the United States. To the extent that the United States can supply alternate sources of supply of these commodities, it will relieve Poland's dependence on the Communist bloc for these vital commodities.

It is also a favorite question as to why we should, through aid to Poland, relieve the Soviet Union of any economic burden on the Soviet bloc which the Poles may have represented in the past. Rather than say that the Poles were a drain on the Soviets, the converse would be more correct. Because Poland was forced to sell coal to the Soviet Union at a price considerably below the world market and, as a consequence, suffered a loss of natural resources exceeding $600 million during the last several years. The Poles now appear to have achieved a much greater degree of economic independence in this respect and it would appear to be in our best interests to assist them to maintain this position.

Our policy of liberation suffered a near-disastrous setback last fall by our failure to assist the Budapest rebels. We can do little or nothing to assist liberation by revolution. We do have an opportunity, in Poland, to assist in a policy of liberation by evolution. We may gamble and lose but it is worth the risk. If we remain passive in the face of the present trend in Poland, limited as it is, we might as well discard the entire concept of liberation and accept the idea of coexistence between the free and slave worlds. It is for the foregoing reasons that I would support a program of economic assistance to Poland, subject to the foregoing conditions.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD I include a copy of the letter I received from the president of the Frederick County Board of Education. This letter was addressed to the President of the United States and contains information of which I am sure many Members of Congress have not been aware.

The letter follows:

FREDERICK COUNTY BOARD OF EDUCATION,
May 14, 1957.

MY DEAR MR. PRESIDENT: I listened with great interest to your television broadcast, May 14. One statement I heartily agree, there is a need for Federal aid to education, not money, but in the procurement of steel for school building.

We have here in Frederick County $2 million in funds which would pay for a junior-senior high school. Steel for this building was ordered in May 1956. To date the structural steel has still not arrived, throwing completion of building at least a year behind schedule. We were informed by Dietrich Brothers, of Baltimore, Md., supplier of steel, this is no exception as it is taking place all over the country. Our situation was further aggravated by the fact that Government orders, some even nonessential, have taken priority over all private shipments, even schools. Among the private orders, race tracks, grocery stores, and others who pay cash premiums for steel have been allowed to take precedent over school needs, where public funds cannot be used to pay premiums.

Mr. President, here is the real need for Federal aid, first restrict indiscriminate use of Federal priority, and secondly creating a priority system for school construction above that of private commercial enterprises. I personally feel that money aids to education are unsound and unwise and if you want to help, the aforementioned is very desirable.

Respectfully submitted.

JOHN F. RHODERICK,
President.

The Budget

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am submitted for inclusion in the CONGRESSIONAL RECORD an editorial which appears in the St. Louis Globe-Democrat, Thursday, May 16, 1957, entitled: "Ike Is Persuasive—But Not Enough." In my judgment this is an excellent discussion of the problems involved in considering the proposed Federal budget.

The editorial follows:

IKE IS PERSUASIVE—BUT NOT ENOUGH

The President's appeal to the Nation in behalf of his record $71.8 billion budget was a calm, sincere, and impresive performance. It was shorn of politics, at times eloquent. Yet Mr. Eisenhower was not suasive enough to accomplish his purpose.

The budget cutters in Congress will not be deterred by the White House speech. Nor is the President's budget exposition likely to curb public insistence for a brake on the new Federal spending spurt.

The immediate comment of Capitol Hill leaders, Democrat and Republican, showed the same lines of cleavage that existed before the Eisenhower talk. Democratic chiefs are determined to reduce the huge spending schedule; so are many members of the GOP, including Senate Minority Leader KNOWLAND.

The reason for this opposition to the Ike budget is not because he went to the people over the heads of Congress. It is because Members of Senate and House recognize a wide demand among constituents for a halt to bigger vistas of new and expanded Federal costs.

Mr. Eisenhower concentrated most of his argument upon costs for defense, which total some $41 billion under the budget program. This was to be expected.

United States defense is a policy no one wants or should dare to imperil. It is, therefore, the best talking point to bolster the budget. Also it is the area in which heavy cuts could most easily be made. There is obvious danger in this, as the President cogently noted.

The price of peace, as he warned, is high. No prospect looms for immediate relaxation of international tensions between the Communist East and the free West. The country grievously erred before in slashing its military. Said Mr. Eisenhower: "A good defense is not a cheap defense."

No intelligent American wants to jeopardize the Nation's defenses, whether such action be a fearful or a needless gamble. The country is with the President to a man in that policy.

But Mr. Eisenhower did not touch on the fact that every knowledgeable person in Washington knows exists in the Defense Es-

tablishment—its wastes, extravagances, duplications, failure to unify.

Certainly bombers, nuclear-fueled subs, and jet fighters cost more than outdated implements. And we must have the best.

Yet in more than 4 years the administration has done little or nothing to unify the extravagant purchasing systems of the different military arms, which the Hoover Commission said long ago could save $4,500,000,000.

The President made no mention of support for the administration's own Cordiner Committee report, which outlined ways of curtailing the costly turnover in military manpower and predicted a saving of $5 billion a year within 5 years.

Perhaps firm backing for such programs would not materially lower the military budget for next year. But a uniform procurement program could help much within the next 18 months.

White House pledge to cut back these wasteful practices could have given evidence the mushrooming, needless costs of defense would be stopped. The new budget for the military and other defense purposes is in excess of $2 billion above this year's.

The military is not the only category in which Washington expenses could be subjected to savings. Of 22 major categories in the budget, aside from military functions, every department and office has got a hiked allotment of from $1 million for the President's office to $470 million for health and welfare—except 4, and 1 of the 4 is the Post Office Department for which budgeteers anticipate a $654 million postal rate increase.

After listening to Mr. Eisenhower on Tuesday night, millions must have been convinced that while he is worried about hazard to defense allotments, he is disturbed himself about the size of this budget.

Congress should be careful with its paring knife, but it will and should use it on this distended budget.

Tax Relief for Professional Men

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the Reverend Robert F. Drinan, S. J., dean of the Boston College Law School, which appeared in the May 11, 1957, issue of America:

TAX RELIEF FOR PROFESSIONAL MEN
(By Robert F. Drinan)

Ever more frequently, employers and employees are entering into insurance arrangements under which both parties pay a designated amount into a fund which bears interest and in due course provides an annuity to the retired employee. Even our dreadfully underpaid college professors participate at some universities in retirement plans to which the institution and the professor each contribute annually 5 percent of the latter's salary. This contribution is deductible as a business expense to the employer and is nontaxable to the employee—until of course, he actually begins to receive income from the plan.

While some 20 million American employees share in various plans like this, the 10 million self-employed persons in America have no such benefits. The absence of a pension plan is especially disadvantageous to self-employed physicians and lawyers, whose income begins relatively late in life, rises to a peak rather quickly and then tends to decline. These individuals must pay high Federal income taxes on their peak income in the years when it is received, with no possibility of investing 10 percent of it annually in a tax-exempt pension plan.

To achieve the same tax status for the Nation's self-employed as for those who are employed by others, Representatives EUGENE J. KEOGH, Democrat, New York, and THOMAS A. JENKINS, Republican, Ohio, have introduced H. R. 9 and 10. These proposals would allow every self-employed individual to place 10 percent or $5,000, whichever is less, of his annual income in an approved trust fund and have this sum tax-free until withdrawn. There would be a lifetime maximum contribution of $100,000 and some special concessions for those who are over the age of 55 when they begin to contribute to a pension plan.

The American Medical Association and the American Bar Association, along with many other professional groups, have gone on record in favor of the Jenkins-Keogh bills. These organizations feel that there is a serious inequity in our present tax laws, in that self-employed persons cannot establish retirement savings programs that will enjoy the same tax exemption as qualified plans established by employers for employees.

Indeed every one seems to be in favor of the Jenkins-Keogh proposals except the United States Treasury Department. In its drive for all available funds the Treasury is understandably reluctant to bless a scheme which, according to various estimates, will cost the Government from $100 million to $320 million a year in revenue. Treasury officials have admitted, however, the tax disadvantages of the self-employed under existing law.

President Eisenhower in his 1952 campaign stated that the self-employed had been forgotten and pledged his support to legislation that would allow a reasonable tax deduction for money put aside by them for their own savings.

In May 1956, England abolished the discrimination against the self-employed by allowing such persons to contribute annually 10 percent of their income, but not more than £500 each year, to a tax-exempt retirement fund. Self-employed pharmacists, architects, physicians, dentists, accountants, and many similar groups in this country are seeking from our Government the privilege accorded to their opposite numbers in England. Their request deserves our sympathetic consideration, the principle behind the Jenkins-Keogh proposal merits endorsement.

Speech of the Honorable Ben F. Jensen Before the 44th National Convention of the National Rivers and Harbors Congress, May 17, 1957

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me before the 44th national convention of the National Rivers and Harbors Congress, May 17, 1957, Mayflower Hotel, Washington, D. C.:

Mr. President and fellow Americans, I consider it an honor to speak to the members of this organization who do so very much for the development of America through the protection of our natural resources.

The proper development of our great river valleys, such as the great Missouri Valley, is a national must, but it must be done in such a way as to assist in the perpetuation of our American way, and for the benefit of the people everywhere, and without infringement on our private enterprise system of government, which has made our country great.

I was asked to talk about public works appropriations, and I most certainly will do just that, but possibly in a different light than most of you might expect. Nevertheless, the things I will point out will, I am sure, have a great and constant bearing on the amount of funds Congress will appropriate for public works in the future.

The term "public works," as you know, covers a great many important Federal activities, navigation and harbor improvements, hydroelectric power dams, irrigation, reclamation, flood control, and atomic energy, for both war and peace. Therefore, the manner in which all these important activities of Government are handled might well determine the future of America. Hence, my responsibilities, and yours as members of this fine organization, cannot and must not be taken lightly. As good Americans, there are certain guideposts that must be followed to make sure that we achieve the desired results in all our doings.

You may ask what exactly does all this have to do with public works. My answer is "everything," for unless the American people are satisfied with the way public works are administered and paid for, the day will come when the people will demand of their servants in Congress that public works appropriations be cut to the bone, and remember that what the people want they generally get. I don't have to tell you that the great majority of the thinking American people today are economy minded, hence they will demand genuine national values for the money we spend for public works, along with all other expenditures of their tax dollars. And believe me, no one is more aware of that fact today than are the servants of the people, and which I am glad to say is having good effect.

HARBORS AND NAVIGATION

Now let us get right down to cases. First, let us take a good look at harbor improvements for which we are spending hundreds of millions of dollars annually for the improvement of dock facilities and for the dredging and deepening of harbors to accommodate barges and large ships for the benefit of wealthy, foreign water-carrier companies, as well as our own, and without $1 of reimbursement and little tax return into our Federal Treasury, while our railroads build, improve and maintain their own rights-of-way, rails and facilities, and pay a heavy county, State, and Federal tax, and our truckers pay heavy licenses to use the highways. So, to my way of thinking, this is a glaring example of inequality, and the time will surely come when the American people will demand that either we cut such expenditures to the bone, or that water-carriers pay at least a part of the expenses for navigation and harbor improvements.

HYDROELECTRIC POWER

Having been a member of the House Appropriations Committee for 15 sessions of Congress, which first acts on requests for funds to build hydroelectric and multipurpose dams, I feel that I have a pretty good idea as to where such dams should be built in order that the greatest benefit can be realized for the dollars expended. During that time I have personally inspected most of the proposed dam sites, along with other

members of the Committee, before Congress appropriate funds for actual construction, in order to ascertain the feasibility of such posed projects by personal contacts with the opponents and proponents of the proposed project.

I hasten to give due credit to the United States Army Engineers and the Bureau of Reclamation by saying that generally speaking we found the information given to the committee by the officials of these two Federal agencies to be accurate and factual. While it is true that most of the tax dollars we spend for hydroelectric production are returned to the United States Treasury over a period of years, which term is normally 50 years, very often private utilities are ready, willing and able to build such facilities with their own shareholders' money, and like all other private businesses, they pay heavy State and Federal taxes, which lightens the tax burden of all the people and squares with our private enterprise system of government. No tax of any sort is paid on revenues from federally build dams.

We must be mindful of the fact that about 4 million good American citizens own all the private utilities in the United States, and that they pay almost $1 billion in Federal income tax into our United States Treasury annually, and over half a billion dollars in local, county and State taxes annually from power revenues. Of course, every user of privately produced electric power pays his share of this tax when he pays his electric power bill. But let us not forget that it comes back to him in helping pay for schools, roads, etc., and that private electric rates have increased much less in cost than any other commodity, due primarily to the enormous increase in electric consumption, modernized facilities and efficint management.

During the past several years much has been said and written pro and con about Hells Canyon, which is a current issue. Let us take a quick look at the facts.

The proponents of the high Hells Canyon Dan want Congress to spend several hundred million dollars of all the American taxpayers' money to build a hydropower producing dam, so that the people in that area might have tax free, hence cheaper electric power, at all the American people's expense. The Idaho Power Co., a company owned by thousands of American people in every walk of life wants to build three lower dams, and in fact has already started with its own money under a Federal license by the Federal Power Commission, to build the lower dams, which will produce almost as many kilowatts of power as the high dam. And it is reliably estimated that they will pay Federal taxes into your United States Treasury, during the 50-year period, over $240 million.

Now why do I talk about that controversial issue here today? Simply because it pinpoints my contention that unless we keep private taxpaying enterprise in business, the day will come, and possibly sooner than some people expect, when our United States Treasury will be so completely empty that few dollars will be available for river and harbor development, or flood control, or even to pay old-age and veteran pensions, to say nothing about paying other necessary Federal obligations. After the Fabian Socialists of England, who masqueraded as the Liberal Party, got control of most of the electric energy in England, the rest of the socialization of England was a push-over, for he who controls the electric power of most any nation in this electric age can control that nation completely, and make no mistake about it. I am sure, however, that because of the good sense of the American people, that will not happen here, but let us be sure.

IRRIGATION AND RECLAMATION

Even though I represent a district outside of the 17 western reclamation States, I long ago took the position, after seeing the parched deserts of the Western States, that water was indeed liquid gold to the people of that great area. And because Federal appropriated funds for irrigation and reclamation are over a period of years paid back in annual installments to the Federal Treasury, and because the records will show that after such projects are in full operation, Federal taxes from the irrigators' profits run into the hundreds of millions of dollars annually, and because the crops raised on such irrigated lands have contributed less than 2 percent to our farm crop surpluses, I am sure that my support of irrigation and reclamation projects has been fully justified. I may say, too, that were it not for the vegetables raised on such irrigation projects, our vegetables would be costing us at least twice what they are today.

FLOOD CONTROL

Because every section of America has now, or has had in the past a flood problem, appropriated funds for flood control are not reimbursable, however, municipalities and counties do furnish land, build bridges, etc., in all cases where the Federal Government spends the taxpayers' money for flood-control projects, when such projects directly benefit the people of a respective area, and often local participation amounts to a considerable sum. In fact, I am happy to say that quite often the local governments will contribute more than is required of them in order to prove the need for Federal aid, which shows good faith and appreciation. May I say here and now that where such is the case, those projects receive special and sympathetic consideration by the members of the Appropriations Committee, for most of the members of the committee try to save the taxpayers' dollars wherever and whenever it is proper and possible to do so. May I suggest that your organization pass out that word to your people.

How well I remember the terrible devastating floods which occurred almost annually on the Missouri River before the dams were built upstream and before the farmers in that great watershed, one-sixth of the area of the United States of America, contoured and terraced their tillable land. I am sure that never again will such floods occur on that river. The Army engineers, the Bureau of Reclamation, working in cooperation with the Soil Conservation Service, will eventually solve all or most of our flood problems. Their efforts and accomplishments have already almost completely solved the flood problems of many river valleys, such as ours in the Missouri River Valley. Your organization has greatly assisted in this important task, and has given other organizations like yours inspiration and guidance.

ATOMIC ENERGY

Possibly atomic energy has not as yet been discussed to any great degree by your organization, but nonetheless, all of you as Americans are vitally concerned with its potential as an instrument of good or evil. To most Americans it is a baffling, unknown quantity, so to speak. However, we all know of its frightening destructive power as a weapon of war, and we are gradually learning of its use as a useful commodity for the development of power, and for many other purposes, including possible cures for human ailments. It has great possibilities for peaceful purposes.

As I sit in Public Works Committee hearings and listen to members of the Atomic Energy Commission and their scientists explain quite in detail to us, and mostly off the record, as most of their testimony is classified, which means highly secretive, I like every member of the committee am impressed to say the least by their keen knowledge of every phase in the meticulous preparation of manufacturing and harnessing the atom, always conscious of the great responsibility which is theirs, not only for the safe and speedy development of a war bomb, but to a greater degree for all of us as a blessing to humanity as a peacetime commodity. Were it not for the unbounded trust I have in the ability and integrity of these great and devoted patriotic Americans, I would shudder to contemplate the ultimate results. Like a ferocious, wild horse in the hands of a tenderfoot, it is a dangerous article; but in the hands of experts it can be tamed and trained to serve its master.

Our Atomic Energy Commission and their scientists are thoroughly schooled and trained in the art of nuclear sciences, and I say to you again, I trust them to carry on effectively, safely and sanely for the benefit of all our peoples who have it in their hearts to be free. But here again we find people in high places who advocate and contend that the Congress should appropriate several hundred million dollars annually to build every kind of atomic reactor for peaceful uses, especially for the generation of mechanical power to eventually replace hydro and steam electric power, and again such plants would be free of Federal taxes, in spite of the fact that private taxpaying industry is ready, willing and able to build the atomic reactor plants for peaceful purposes, the revenues from which would be taxable, if the Government will underwrite all after the first $60 million of accident claims, with full Federal cooperation and supervision by the experts of the Atomic Energy Commission.

FEDERAL TAX-FREE BUSINESS

In spite of the fact that our United States Constitution provides that taxation shall be uniform, tax free—and in some instances interest free—business institutions, supported with Federal funds, have driven and will continue to drive Federal taxpaying, private competitors to the wall. This situation must be corrected to ward off the evil day of national bankruptcy and its customary aftermath of national socialism.

How long, I ask, for example, could the farmers of one State stay in business if the farmers of a neighboring State were furnished by the Federal Government all the money needed to buy farms, stock, and equipment, interest free and tax free? The result, of course, would be that the taxpaying, interest-paying farmers would soon be driven to the wall by being forced to sell their products at a far below cost price at the marketplace. If that should occur, even present farm prices would look high. So, again I plead with every good American to think twice before he or she supports any program which will cripple Federal taxpaying, private enterprise—from the farmer to the corner grocer to industry—whose revenue is so desperately needed by our United States Treasury, if for no other reason.

In conclusion may I say with all the sincerity and force at my command, that it will take the combined efforts of every American who wants to preserve our free institutions—our American heritage, if you please—to be ever on guard to see that taxpaying, private enterprise continues to operate here, always remembering that the power to not tax is also the power to destroy.

And so I beg of you to realize fully that unless great care is exercised in line with the warnings I have here so humbly and sincerely expressed, it may not be too far in the distant future when the peoples will no longer have the funds to carry on the much needed public works in which you are so greatly and properly interested. Thank you.

Special Charge to Grand Jury Delivered by Judge Henry Ellenbogen

EXTENSION OF REMARKS
OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. EBERHARTER. Mr. Speaker, I am sure many Members of the Congress will remember former Congressman Henry Ellenbogen, of Pennsylvania, who voluntarily retired from the Congress in 1938 to become judge of the Court of Common Pleas of Allegheny County, Pa.

To add to the good record he had as a legislator, Judge Ellenbogen has since through the years gained an extremely excellent reputation as a jurist. His extraordinary sense of justice, good judgment, and tolerance have been evident again and again.

I am certain the Members of the House will be glad to know that Judge Ellenbogen has recently put his energies toward bringing an end to the terrible afflictions caused by the traffic in and sale of narcotic and habit-forming drugs, and I would like to call attention to the special charge to the May term grand jury convening Monday, May 6, 1957, delivered by Judge Ellenbogen on this subject.

Under leave to extend my remarks in the RECORD I include the text of this charge to the grand jury as it appeared in the Pittsburgh Legal Journal of May 13, 1957:

SPECIAL CHARGE TO THE MAY TERM GRAND JURY CONVENING MONDAY, MAY 6, 1957

(Delivered by the Honorable Henry Ellenbogen, judge of the court of common pleas of Allegheny County, Pa.)

DOPE: THE CRIME OF ALL CRIMES

I want to call your special attention to the crime of all crimes, the traffic in and sale of narcotic and habit-forming drugs, generally called dope.

I will not repeat here today what I have said to the April term grand jury, but will bring to your attention other features which illustrate the great evil of dope and the great danger that it presents to our young and adult population, and to society in general.

A subcommittee of the Committee on Foreign Relations of the Senate of the United States, under the chairmanship of the venerable Senator George of Georgia, stated, on July 9, 1956, that "it was surprised and shocked at the extent and far-reaching effect of the illicit dope traffic in the United States, and concluded that narcotic addiction and the dope traffic constitutes one of the most serious problems facing the Nation."

It is important that you should know these matters in connection with the cases that will come before you.

COMMUNIST CHINA IS THE SOURCE

Since the Communist revolution in China, subversion of the Western World through dope addiction is an established aim of Communist China. The Chinese Communists are deluging the Western World with heroin. They have reactivated the narcotic plant at Mukden, Manchuria, which is the world's largest narcotic plant. The Mukden plant alone can produce 50 tons of heroin a year. They have also opened other plants manufacturing heroin in China.

According to statistics compiled by the United Nations, about 11,500 tons per year of opium are distributed every year through illegal channels.

The aim of Communist China is twofold. It is (1) to obtain dollars and other foreign exchange, and (2), to undermine and demoralize susceptible individuals in the Western World.

The special target of the world dope traffic is the United States. The United States has more narcotic addicts, both in total numbers and in percentage of population than any of the other countries in the Western World. In fact, the United States has more drug addicts than all of the other western nations combined.

SIXTY THOUSAND DRUG ADDICTS IN THE UNITED STATES

The most reliable estimates are to the effect that there are today a total of at least 60,000 drug addicts in the United States.

The illicit narcotic traffic feeds on the truly fantastic profits which it brings. It has been estimated that heroin purchased today in the illicit markets of Europe or Asia for $2,000 may bring as much as $600,000 when finally cut, packaged, and sold in the United States.

As regards marihuana the profits are equally fantastic. Marihuana can be bought for between $10 and $15 on the Mexican market. When rolled into cigarettes, it retails on the illegal market for about $1,200, at the price of $1 for each cigarette.

The total illicit traffic in narcotics is estimated to be about $600 million a year.

DRUG ADDICTION AMONG THE YOUTH

A minimum of 13 percent of the addicts in the United States are less than 21 years of age. It is difficult to ascertain the exact number of juveniles concerned, because juvenile courts, as a rule, do not report to the United States Bureau of Narcotics. But it is certain that in the larger centers of population the percentage of juvenile addiction is far greater. For instance, a survey conducted in Chicago in 1952 revealed 5,000 known addicts, of which one-third or more were under the age of 21 years.

Ninety percent of those under 21 years of age are addicted to heroin.

The number of arrests of juveniles for violation of the narcotic-drug laws has been steadily increasing. The Uniform Crime Reports for the United States, issued by the FBI, show 160 arrests for narcotic-drug violations of juveniles under 18 years of age in 1954; 249 such arrests in 1955; and 292 such arrests in 1956—an increase in that age group of 82½ percent in 3 years. In the case of juveniles under 21 years of age, there were 802 such arrests for the year 1954; 881 such arrests for the year 1955; and 980 arrests for the year 1956—an increase of 20 percent in that age group in 3 years. If we consider persons under 25 years of age, we find 2,391 such arrests for 1954; 2,477 such arrests for 1955; and 2,692 such arrests for 1956—an increase of 12½ percent in that age group in 3 years. As you can see, the greatest increase is in the youngest age group. Children of the tender age of 11 years have been found to be addicted.

In 1954 and 1955 the percentage of persons under 25 years of age, arrested for violations of the narcotic-drug laws, remained stationary, to wit, 30 percent. But in 1956 there was a 1-percent (0.9) increase in this age group.

In Pittsburgh there were 135 arrests for violations of the narcotic laws in 1956; 85 arrests for investigation on suspicion of violation of the narcotic laws. Forty-seven persons were arrested as peddlers or pushers of narcotics. For the first 3½ months in 1957, up to April 18, 1957, there were 46 arrests in Pittsburgh for violations of the Narcotic Act; 7 arrests were for investigation; 12 were arrested as peddlers or pushers.

DRUG ADDICTION IS LIKE A CONTAGIOUS DISEASE

The most dangerous aspect of the problem of narcotics and habit-forming drugs is that it is comparable to a contagious disease. There is conflict about some of the phases of narcotic addiction between the law-enforcement agencies and some medical experts. But there is no conflict on that point. All medical authorities agree that one of the worst features of drug addiction is the fact that addicts addict others. It is generally believed that every addict eventually infects at least four other persons, usually among his friends and associates. Once addicted, permanent cures are difficult and infrequent. Of those treated at Federal institutions, only 15 percent remained free of drugs. Eighty-five percent sooner or later returned to the drug habit.

The cost of drug addiction is fantastically high. The average drug addict must spend from $50 to $100 per week to obtain the drugs to satisfy his craving. Since few individuals can afford such sums, most drug addicts eventually resort to crime. Male drug addicts will commit burglary, robbery, holdups, and many other crimes, including murder, to obtain the funds that they need to buy dope. The female dope addict usually becomes a prostitute.

It is startling to read the reports of the experts on the number of crimes caused by drug addicts. Some authorities estimate that as much as 50 percent of all crimes are attributable to the illegal traffic in narcotic and habit-forming drugs. A more conservative estimate, and, we believe a more correct estimate, is that such traffic is responsible for perhaps as high as 25 percent of all crimes committed.

Whatever the percentage may be, there can be no doubt that any substantial reduction in the dope traffic and in the number of drug addicts would bring about a substantial reduction in crime.

Drug addiction causes very definite changes in the nervous system and in the body and brain of the addict. If continued, it eventually wrecks his body and destroys his personality.

MURDER ON THE INSTALLMENT PLAN

The narcotic traffic has been aptly described as murder on the installment plan, and the pusher or peddler of dope, as a killer on the installment plan.

I have given you these facts in order to acquaint you with the serious problems created by the illegal traffic in narotic and habit-forming drugs. With the aid and assistance of the April term grand jury and the district attorney, I have initiated certain measures, such as the requirement of substantial bail bonds, the immediate trial of those indicted, and the imposition of severe sentences in proper cases, which have had their effect in stamping out much of the illicit narcotic traffic in Allegheny County.

It is important that these measures be continued and be made a permanent part of law-enforcement agencies and of the administration of justice in our courts.

As the grand jury for the May term of court, you have an important part to play in this program. As grand jurors, you are charged with the high duty of guarding the safety and the health of the people of Allegheny County.

I direct that you give special attention to the cases in which a violation of our narcotic laws is charged, and that in all proper cases you return a true bill.

INDICT REPEATERS

I further charge you that after you have found a true bill on an indictment charging a violation of our narcotic laws, you shall inquire of the district attorney or of his assistant in attendance, whether the defend-

ant in that case has previously been convicted of any narcotic violation. If the answer is in the affirmative, if he has been previously so convicted of a narcotic violation, either in this State or any other State, or in a Federal court, I direct you to indict such defendant also as a second, third, fourth, or subsequent offender, as the case may be, by reciting the fact of such previous conviction or convictions in the indictment. By doing so you will enable this court, in case of a conviction, to apply the increased statutory penalty for repeaters.

If the district attorney does not have the necessary information at hand, a notation should be made on the indictment, so that the defendant may be properly so indicted as a second, third, or fourth offender, as soon as the information is received.

I am asking you to comply with these instructions concerning narcotic violations. In doing so you will perform your duty, and protect our people against the nefarious activities of dope sellers, dope pushers, and dope peddlers.

I charge you, too, to give special attention to the repeat offenders in all classes of crime. These are the habitual criminals who have proven that they cannot be reformed. They constantly endanger the safety and well-being of our people. They are confirmed enemies of society, and must be dealt with accordingly.

The Legislature of Pennsylvania has wisely provided for severe punishment in the case of criminals who are guilty of a second, a third, or a fourth commission of criminal acts of violence, after having been convicted of similar acts before.

SECOND, THIRD, AND FOURTH OFFENDERS

The criminal code provides that persons having been convicted of the crimes of treason, murder voluntary manslaughter, sodomy, buggery, burglary, entering with intent to steal, robbery, arson, mayhem, kidnaping; sales of narcotics, perjury, abortion, pandering, incest, or any offense committed or attempted to be committed with the aid of a deadly weapon, may, upon conviction of any such crimes for a second offense, committed within 5 years after the first offense, be sentenced to double the punishment prescribed for the first conviction of such crime.

In the case of third or fourth conviction of such offenses, the court, in its discretion, may sentence the offender to imprisonment for life.

INDICTMENT OF REPEAT OFFENDERS

If you determine, that the evidence presented to you, justifies the finding of a true bill, I direct you to inquire of the district attorney, or of his assistant in attendance, whether the defendant in that case has previously been convicted of any of the crimes that I have just enumerated. If the answer is in the affirmative, if he has been previously so convicted, I direct you to indict such defendant also as a second, third, or fourth offender, as the case may be, by reciting the fact of such previous conviction or convictions in the indictments. By doing so, you will enable the court, in case of a conviction, to apply the increased statutory penalty for repeaters.

If the district attorney does not have the necessary information at hand, a notation should be made on the indictment, so that the defendant may be properly indicted as a second, third, or fourth offender, when such information is received.

MAINTAIN OUR GAINS

If you will follow the instructions as I have given them to you, you will maintain the great gains which we have made in stamping out the illicit traffic in narcotic and habit-forming drugs and thereby in the reduction of all crime in Allegheny County. By doing so, you will perform your high duty, protect the people of Allegheny County, and promote the public health and safety.

Bind Wounds or Prevent Them—A Foreign Policy for Americans

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. GWINN. Mr. Speaker, I am submitting for inclusion in the RECORD a speech delivered by my constituent, Alfred Kohlberg, of Bronxville, N. Y., before the convention of Association of American Physicians and Surgeons at the Hotel di Lido, Miami Beach, Fla., on April 25, 1957.

It sets forth a sound foreign policy for Americans:

BIND WOUNDS OR PREVENT THEM—A FOREIGN POLICY FOR AMERICANS

It is indeed a privilege to speak to this audience of distinguished medical men. More than 15 years ago I had the honor of serving as a member of the executive committee of the American Bureau for Medical Aid to China, with a group of dedicated doctors and medical scientists, all of whom had seen service in China.

That was back during the Sino-Japanese War, both before and after Pearl Harbor. I refer to that service because it opened my eyes to the nobility of the men of the medical profession, both in America and China.

Many of you may remember Mme. Chiang Kai-shek's triumphal wartime trip here in early 1943, during which she was a guest in the White House, and addressed a joint session of the Congress. Disturbing rumors of corruption in China began to be heard at the same time. As these spread I was asked to go to China again to investigate.

While waiting for Air Transport Command priority via South America, Africa and India (then the only route open), I was called to Washington by one of President Roosevelt's administrative assistants, the Honorable Lauchlin Currie. He told me of reports of the hopelessness of the Chinese National Government and its armies; the lack of will to fight, the corruption, etc. I listened with my mouth open, I am sure. I had never before been honored with a briefing by so high an official.

For years I considered myself a complete dope for swallowing that pap, until just recently Josephine Truslow Adams, descendant of both John Adams and John Quincy Adams, but a Communist courier, testified that President Roosevelt asked her at that time to find out from Earl Browder if these same rumors were true.

CONSPIRACY IN CHINA

When I arrived in Chungking I heard the same reports. So I set out on a 6 weeks' trip through 5 provinces by truck, ambulance, rail, airplane, and muleback to check on the spot. Even after all these years, my 3 days on muleback remain vivid. To skip the details, I checked only the reports in my own field of competence, principally physical condition and accounting, and found all untrue. Just a tissue of lies. I was horrified. I returned to Chungking with fire in my eyes, to find my factual reports received with hostility in our Embassy, and in United China Relief circles.

To me is smelled like treason because I couldn't see anyone benefiting from these lies but the Japanese. The possibility of Communist motivation had not occurred to me. I came home, reported the facts as I found them, and then tried to get the doctors of ABMAC to break it wide open, and demand an investigation of the liars.

I feared that the American and Chinese lives unnecessarily lost by lack of cooperation, due to American lies and Chinese resentment, would be so many that we had a duty to violate all taboos, and speak out. My doctors found it impossible to believe my reports, so I resigned to start my own fight.

That was December 1943. By May 1944 I found that I was on the wrong track. I was complaining about liars, whereas the core of the trouble was Communists; principally American Communists in our Embassy, in our Army, in the OWI, and in our news services. And all were following a line of lies originally put in circulation by the Institute of Pacific Relations on whose finance committee I sat, and whose real boss was also the real boss of United China Relief. After a 2½-year fight in the IPR they threw me out, instead of the Communists.

But little by little the truth came out and was believed. After lengthy hearings the Senate Judiciary Committee, by unanimous vote, found that "during the period 1945–49, persons associated with the Institute of Pacific Relations were instrumental in keeping United States policy on a course favorable to Communist objectives in China."

That report was issued July 2, 1952, just 7½ years too late.

MILLIONS SLAIN

Meantime, China had been turned over to the Communists and we were fighting in Korea. Our Korean combat terms were influenced by Communists still in high place in our Government, in the U. N. and in allied governments. Among them were the head of the American section of the British Foreign Office, Mr. Donald Maclean, and the liaison man in the British Embassy in Washington, Mr. Guy Burgess. You may be sure that for every Burgess and Maclean, and Currie and Hiss that is exposed, there are dozens, maybe hundreds, still concealed in our Government and in all the allied governments.

The recent suicidal jump of Canadian Ambassador to Egypt, E. Herbert Norman, to whom attention was originally called by my Institute of Pacific Relations charges; and the jumps of U. N. General Counsel Abraham Feller, originally mentioned in my magazine, Plain Talk, of October 1947, and of Laurence Duggan, likewise originally mentioned there, have given me pause. But when I think of the testimony of American generals returned from Korea as to the loss of both American and Korean lives by Chinese Communist advance knowledge of our battle plans, I realize that we are engaged in a world struggle for keeps. If men involved in questioned activities lose their mental balance and fear to face the music, we must, nevertheless, keep our sense of proportion, and our dedication to our Nation's security.

I am sure that if I knew as much about Eastern Europe as about China, I could tell similar tales of past American cooperation with the Kremlin in Poland, Hungary, Bulgaria, the Baltic States and elsewhere.

How did we go so wrong? How could these relatively few traitors and their more numerous dupes so mislead us? Where can we look for guidance?

Those are the questions the congressional committees are slowly probing despite the fifth amendment takers. Meanwhile, maybe we can find answers sufficient for us if we just go back to American first principles, and start our thinking all over again.

BACK TO GEORGE WASHINGTON

One hundred and sixty-one years ago a great American laid down every principle of a sound foreign policy in 1,400 words of his Farewell Address. That policy was our guide for 102 years. We departed from it first in 1898 and have lost our way ever since.

We cannot follow Washington's advice in every detail today. The world has shrunk while we have grown. But its principles can still be our guide. Washington's Farewell Address is so often referred to and so seldom read today, that the extremists of both right and left have combined to discredit it.

The little Americans, ostrichlike, tear a few words about "entangling alliances" out of context and use them to justify their refusal to think through our difficulties. The extreme one-worlders, hoping to prevent consideration of the broad principles Washington presented, join in labeling him an "isolationist."

Here are Washington's own words:

"It is our true policy to steer clear of permanent alliance with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maximum no less applicable to public than private affairs, that honesty is always the best policy * * *

"Taking care always to keep ourselves by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies."

So far were Washington's principles from isolationism that during the 102 years that we followed his advice, we sent the Marines "From the Halls of Montezuma to the Shores of Tripoli;" we proclaimed the Monroe Doctrine protecting 20 foreign nations; we threatened Great Britain, France and Austria under it; and we pushed Spain, France, Mexico and Russia out of the present area of the United States.

So much for isolationism under George Washington's foreign policy.

Out of his 1,400 words Washington used 800 of them to stress that "permanent, inveterate antipathies against particular nations and passionate attachment for others, should be excluded." Or, as Thomas Jefferson wrote from Paris to John Jay: "* * * no circumstances of morality, honor, interest or engagement are sufficient to authorize a secure alliance on any nation."

Yet today we seek the favor alike of the illiterate masses of Asia and Africa, the absolute monarchs of Araby, and the uncertain Neutralist Socialists from India to Israel, from Abyssinia to Zanzibar. We are even attempting to rebuy the friendship of the Communist dictators of Eastern Europe, on whom we have previously lavished more than 2 billions of our money since V–E Day.

In fact, much of the 56 billion of foreign aid since 1945 has been squandered to no purpose; for the very simple reason that we have never stopped long enough to try to figure out what our purposes might, or ought, to be. The untrue argument that the Soviets might play Santa Claus if we didn't beat them to it, will not bear examination. Moscow's blandishments are such as the spider lavishes on the fly. Until we have such motivations, we need not play that game. In fact, about half the Foreign Aid is based on the false theory that forced or slave labor is more efficient than free labor. And so we must help the free countries or they cannot compete.

As a business man with 42 years of international trading behind me, I do not hesitate to call our foreign aid policies a form of financial insanity; and most foreign business men, even those on the receiving end, agree with me. Government financing of foreign developments is the road to international disaster. Overlook the fact that it is in part carried out by incompetents, as Vice President NIXON just reported. Just look at the reverse of the picture. Suppose British investments in American railroads a century ago had been governmental, instead of private. What would the Queen's government have been tempted to do when we destroyed them during the War Between the States?

Wherever free nations establish a suitable climate for foreign investment, there will be plenty of American capital for development. Wherever they insist on business by government, the groundwork is being laid for seizure by strong-armed dictators.

Exceptions to these foreign-aid principles may be justified for political reasons, but such reasons should be clear and conclusive.

WE REJECT IMPERIALISM

One hundred and nine years ago we completed the conquest of the uninhabited lands to our west. Thereafter by purchase, and by vote of the inhabitants, we annexed Alaska and Hawaii. In 1898 we stubbed our toe and started haltingly down the road to imperialism. Less than 20 years later, by the end of World War I, we had changed our minds by common consent, and were the only one of the victorious allies to reject aggrandizement.

Since 1899 we have freed Cuba, the Philippines and Puerto Rico, our imperial mistakes of 1898. We have also freed France, Italy, Morocco, Belgium, Holland, Luxembourg, Germany, Austria, Japan, Thailand, Indonesia and Korea, and, I almost forgot, Monaco, all of which we conquered during World War II.

So we stand, today, something unique in all history: the world's first dominant military power to reject conquest, and seek no aggrandizement by war.

What we seek of the rest of the world is only the opportunity to maintain our independence "in harmony and a liberal intercourse with all nations" as Washington advised—in peace, if possible. But maintain it in peace or war, we will. Keeping in mind continued independence as our objective, sound policies become simple.

THE END OF BOLSHEVISM

I see but one power strong enough to threaten our secure independence. That is the Soviet dictatorship. It is pledged in a thousand documents and by its atheistic, materialistic faith to subjugation of the whole world.

As John Foster Dulles' uncle (Wilson's Secretary of State), Robert Lansing, reported in 1919 to Henry Cabot Lodge, grandfather of our present U. N. ambassador: "The purpose of the Bolsheviks is to subvert the existing principles of government and society the world over. * * * They have built up a political machine, which, by the concentration of power in the hands of a few and the ruthlessness of its methods, suggests the Asiatic despotism of the early Tsars."

The Bolsheviks have confirmed this every day, and every month, and every year since then. So successful have they been in their beastliness, so many uncounted millions has their mere suspicion sent to execution, that one can only consider Lansing's comparison an unwarranted reflection on Ivan the Terrible and Genghis Khan.

Using the atheistic ideology of Marx, organized in a ruthless conspiracy of the utmost cruelty, they now rule more than one-third of mankind. They are well on their way to the seizure of a second third who live in south and southeast Asia and the Middle East.

Yet, we have the better ideology. Without propaganda and without conspiratorial organization, it flourishes in the hearts of the oppressed. Under extreme provocation it drives the unarmed farmers of China to turn on their oppressors, tear them limb from limb, and then flee to the guerrillas in the mountains. Under provocation, it drove the supposedly indoctrinated teen-agers of Budapest to attack Russian tanks with bottles of gasoline.

Just today the New York Times has another of its reports from Hong Kong quoting the Chinese Communist press as greatly concerned by growing "internal unrest and dissension."

When we somehow find leadership equally inspired by love of freedom, faith in man, and believe in God, our ideology will be irresistible. The evil dictatorships of Moscow, Peking, and the other satellites will vanish. A new world will arise from the wreckage.

When that happy day dawns Harold Stassen may relax from his labors. With fears removed, excessive armament will be discarded.

Then, more than ever, we will need courage and wisdom to enforce that international law and order which alone can clear the way for reconstruction, and permit us and the world to live without the constant alarms of war.

PAX AMERICANA

To accomplish this we must insist that all nations observe certain minimum standards of law and equity in their international relations. When these are infringed, we must insist on adjudication of the developing disputes before the International Court. And we should be ready to enforce compliance with its decisions either alone or in cooperation with other nations willing to accept our leadership.

To turn from such a statement of general policies to the unpleasant realities of the present, what would this policy have meant in Poznan? In Budapest? In Suez?

It would have meant previous contact with and armed aid to the rioters of Poznan, and the fighters of Budapest.

Does that sound like a big order? Just bear in mind that the Soviet Union sent arms, money, and direction to Communist rebels all over the world. Did it get Moscow into war? Quite the contrary. Just as we did not retaliate with nuclear war when we found Moscow rebels in Guatemala, or shooting Madame Quezon near Manila, or even in our own State Department, so a little counteraction on our part will not make the cold war hotter. In short, in this cockeyed world, aid to rebels is not the road to war.

Next, what would it have meant in Suez? It would have meant the insistence on submission of all—repeat all—disputes in the Near and Middle East to the International Court. We would inform recalcitrant nations that if they refused adjudication, they would find themselves lined up against their neighboring enemies plus us. It would mean our President could attend to business instead of wearing himself out trying to play Solomon between all the many pressures, including, not least, our own Jewish voters, and our "oilionaire" campaign contributors.

Solomon was too wise to suggest that there was any easy solution for the then thousand-year-old hates of the Mideast.

While it is true that most international problems are settled by negotiation, there remains a residue in which extreme emotion or cupidity prevents compromise. For those problems the alternatives to negotiation have always been either adjudication, or war, or continued disagreement. By introducing the politically composed and politically motivated U. N. as a new alternative, we seem to have enlarged the number of nations involved in each dispute, thus increasing the difficulty of a just settlement. Secretary Dulles' speech last Monday to the Associated Press luncheon in New York was an encouraging, though modest, step toward principle and away from expediency, compromise, appeasement, and betrayal. Unfortunately, he proposed implementation by the politically inspired, log-rolling, Alger Hiss-designed, U. N.

Adjudication, that is submission to arbitration or the International Court, has been the American tradition toward civilized nations. Especially should it be the first course of John Foster Dulles, former chairman of the Carnegie Endowment for International

Peace, set up for that purpose. Toward the Soviet dictators we should exhibit unyielding firmness.

Commenting on Prime Minister Macmillan's formal abandonment of the "Empire on Which the Sun Never Sets" and his planned 50 percent cut in military forces, the editor of the New York Times said a week ago Sunday: Either we follow Britain's example ("planned suicide" he called it) or a new deal with the Kremlin ("planned surrender" as he did not call it). Failing to see any alternatives other than to be an atomic sitting duck or to be rooked again by the Reds, he begged Washintgon * * * (for) plans * * * strong and simple. Maybe he will like my sum up.

First, we must aim to destroy the Soviet dictatorship by means short of war, if possible. Let us therefore break relations with the Communist tyrannies and offer our friendship to their 900 million subjects.

Then we must move to neutralize Soviet power by isolating it from the free world, and by creating troubles for it that will drain its power and weaken its grip on the masses it enslaves.

At the same time we must destroy its fifth column everywhere, starting here at home.

Success in the above measures would be the surest preventive of all-out war.

As a further preventive we must leave no doubt that we wish to avoid war but will fight, rather than surrender piecemeal.

In this first phase of our policy—the weakening and eventual destruction of the Soviet dictatorship—we should form alliances for the duration of that emergency only, in accordance with Washington's precepts. Because we are already involved in 42 alliances of one sort or another, we must, as George Washington said, fulfill them. That is, so long as our allies do likewise, and only so long.

In this prosperous world of 1957 we should regard with the utmost skepticism those so-called Allies who cannot pay their way, or whose reputation is so bad that they can neither borrow in the markets of the world, nor attract foreign enterprise. Let's get our Government out of the business of taxing the American people to lend, or give, to socialist dictatorships abroad; or even democratic peoples who will neither tax themselves, nor raise the armed forces needed for their own defense.

THE AMERICAN VISION

Because we covet the land of no other nation, nor its people, nor its property—not even its oil or its wives—Washington's admonition "that honesty is always the best policy" in public as in private affairs, still applies. Secret promises, secret betrayals, secret diplomacy are not for us.

As Washington said, we can offer "Harmony and a liberal intercourse" to all nations, except those who prefer to be our enemies. In such cases we should still offer that friendship to their people, including the people behind the Iron Curtain, whom we should help to overthrow their tyrants.

Washington said that because of "our detached and distance situation * * * the period is not far off when we may defy material injury from external annoyance * * * when we may choose peace or war, as our interest guided by justice, shall counsel."

That period arrived, as he predicted, after the War of 1812. It lasted until the Wright Brothers flew a Kitty Hawk.

There are no more "distant situations;" certainly not on this planet. And, maybe soon, not on the moon. We can thank God that Washington was right; that our strength came first before "distant situations" were abolished. Let us pray for wisdom and courage in using that strength, and in exercising the world leadership which is ours, whether we wish it or not.

In such a world as I have suggested, with American leadership dedicated to the cause of justice, the U. N. can serve a useful purpose. It should be a town meeting of the world; nothing more. In other words, the organized "opinions of mankind" to which Thomas Jefferson addressed himself.

BACK TO GEORGE WASHINGTON AGAIN

All this that I have outlined, is a shortened form of the foreign policy statement of the Citizens' Foreign Relations Committee, a group of Americans of diplomatic, military, and foreign affairs backgrounds.

It is a return to the advice of George Washington; modified by the fact that the farthest spot in the world is today closer to our Capital than New York was in his day, or than Mexico was when Monroe proclaimed his doctrine.

I do not suggest that an agreed-on set of national objectives and overall policies for their gradual attainment, is all we need. Of course, we need intelligent, competent, even brilliant, and, above all, dedicated Americans to carry them out. But no amount of competence, intelligence, or even dedication can save us from eventual disaster unless all work as a team toward stated goals, with unified efforts.

With wisdom to match our strength, and courage to match our traditions, we may now turn from binding wounds to preventing them. We are the first people in history to be offered this opportunity. Do we have the vision to grasp it?

Resolution of New York State Federation of Chapters No. 13, National Association of Retired Civil Employees

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. KEATING. Mr. Speaker, on the first day of this session I introduced a measure to increase the annuities payable to people who have already retired from the civil service. This introduction was prompted not only by a fine presentation of the problem by a group of retired civil-service employees in my home city of Rochester, N. Y., but also by the increasingly clear fact that these people who have already left the service of their Government are not receiving a decent income.

My bill, H. R. 273, provides percentage increases based on retirement dates, and will go a long way toward assuring fair treatment for these people. In the last session of Congress we passed a measure for those still working for the Government. Surely, we owe just as much to those who have already retired.

This is a sound and just measure which deserves passage in this session of Congress, and I hope the committee will see fit to hold hearings on this and related proposals in the near future.

Under leave to extend my remarks, I include a resolution adopted by the New York State Federation of Chapters No. 13, National Association of Retired Civil Employees, at their convention held in Rochester, April 24 and 25. I am grateful to President George J. Sullivan of the association for sending me this resolution.

The resolution follows:

RESOLUTION 5, NEW YORK STATE FEDERATION OF CHAPTERS, NATIONAL ASSOCIATION OF RETIRED CIVIL EMPLOYEES, ROCHESTER, N. Y., APRIL 24–25, 1957

Whereas the highly respected publication, the U. S. News & World Report, in its issue of August 3, 1956, carried a very informative and detailed analysis of inflationary trends and showed the factual and statistical increases receive by numerous groups in the national economy, after allowances for taxes and changes in the dollars value; and

Whereas according to this report, after an analysis of 35 groups which represented approximately 95 percent of our population, it was found all these groups, based on 1939 incomes, were receiving larger real incomes, the increases ranging from 4 percent to 107 percent. However, the report carried the further shocking figure that civil retirees were down 13 percent or, in other words, were receiving 13 percent under the 1939 level, the report stating with reference to these retirees:

"People living on pensions are in trouble, unless their pensions are increased as the cost of living rises. This rarely happens. Payments to retired Federal workers, for example, are adjusted by Congress only occasionally. Last year, these payments were increased an average of 10 percent. But this still left such retired workers worse off than in 1939"; and

Whereas civil retirees have suffered greatly and out of all proportion to other groups due to rapidly rising prices, which would represent even greater losses as of this date; and

Whereas 147 bills have been introduced in the House and the Senate during the 1st session of the 85th Congress to increase the annuities of civil-service retirees: Therefore be it

Resolved, That all Members of Congress from the State of New York are urged to use their powerful influence to have early hearings scheduled by the Senate and House Post Office and Civil Service Committees on this legislation and early action on same by the Senate and the House of Representatives and that we express our appreciation to the New York Members of Congress for their past interest in our welfare; and be it further

Resolved, That copies of this resolution be sent to the 2 New York State United States Senators and the 43 New York State Representatives in Congress.

Adopted unanimously at Rochester, N. Y., this 25th day of April 1957.

GEORGE J. SULLIVAN,
President.
ELIZABETH DEEGAN GREEN,
Secretary.

Junking of Soil Bank Could Result in Greater Evils

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. CRAMER. Mr. Speaker, hereafter follows a very wise and well-reasoned editorial in the Tampa Morning Tribune of May 18 in which is very effectively pointed out the necessity of giving the soil bank a chance to work, to determine its weaknesses and attempt to

cure them before advancing a new program and, to be aware of the risk in flying from known shortcomings of present farm policies to the unknown, but possibly greater evils, of other programs.

Before junking a relatively new vehicle on which less than a year's mileage has been run it would seem wise to have the mechanics diagnose the shortcomings and advise as to needed repairs, and even wiser to have the right garage—the Agriculture Committee—and not the wrong one—the Appropriations Committee—service the vehicle, and the right dealer—the Agriculture Committee—advise the House as to what new model is available as a substitute and how much it will cost.

The editorial follows:

NEW LOOK AT FARM POLICY

Anyone who has ever lived on a farm knows that it is sometimes easier for a cat to get up a tree than to get down again. Once out on a high enough limb, the cat may know it must come down but it is terrified to let go.

Secretary of Agriculture Benson, who is himself a farmer, ought to have a good deal of sympathy for this predicament. For it is quite like the situation in which he finds the Government's farm program.

Mr. Benson is up a tree because (1) many farmers are not sharing fully in the current national prosperity and (2) overproduction and the resulting surpluses of farm commodities, which were pushed higher and higher through the continuation of high, rigid price supports after World War II, brought in their wake elaborate experiments in Government control of the farmers.

The Secretary of Agriculture has worked earnestly to reduce the surpluses. He wants a farm program that will cost the taxpayers less money. He sincerely hopes the farmers can eventually be returned to a free market.

Yet, at the same time, Secretary Benson is quite nervous over the prospect of these things happening too fast. And well he might be. Past actions have put the farm situation so far up the tree that no one can be sure just what will happen when it starts to come back to the ground.

There is, for example, Mr. Benson's fear as to what will happen should the Senate follow the House in voting to junk the major part of the Eisenhower administration's soil bank program.

The Secretary undoubtedly is aware of the loopholes in the program. Surely he has listened to the charges that millions have wasted in its operations without materially reducing production. He realizes that the House action is the first step toward reducing the heavy cost of the farm program.

Nevertheless, he criticized the House move as false economy. He said the soil bank plan had not been given a real test and warned there would be a further pileup of costly surpluses if the program was eliminated in haste.

The official who is presiding so ably and courageously over the Department of Agriculture has a point there. But he offers an even more important one in advising the Nation to be alert to the dangers of flying from known shortcomings of present farm policies to the unknown, but possibly greater evils, of other programs.

Thus, while Secretary Benson may be nervous at the thought of letting go, he at least realizes the Nation cannot stay forever on the dangerous limb.

Certainly it is wise to survey the chief weaknesses in the program now in effect. If Congress will also take a hard look at agricultural realities and the extent to which farmers have become dependent upon Government aid, some hope of working out more lasting and more economical adjustments may emerge.

The Scarlet Symphony

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following chapter from the book Blood in the Streets, by Albert C. Hicks, a book which chronicles the life and tyrannical rule of Generalissimo Trujillo of the Dominican Republic:

THE SCARLET SYMPHONY

Up in the north where the mountains and valleys roll gracefully through the lands of the Dominicans and the Haitians, there winds the long Massacre River, so-called because in the 18th century a gang of buccaneers was caught by Spanish troops with its loot and slaughtered along its banks. Here Massacre River serves admirably as a natural boundary between the two countries.

Border towns, Dominican and Haitian, dot the area: Ouanaminthe in Haiti, Dajabon in Santo Domingo just across the way, and Banica, also Dominican, are the principal outposts, all connected by scores of small and large settlements.

In September 1937 border incidents were becoming more numerous, and Trujillo's troops were massing. Now and then they were catching a Haitian, hungry, penniless, stealing across the border at night and laying felonious hands upon Dominican cattle, a donkey, or produce. They were killed as thieves, and then there were the thousands of invited Haitians who worked the American-owned sugar plantations, and at countless other pursuits, since the boom days of 1918. They had been increasing in number ever since. By now more than 200,000 Haitians lived in the Dominican Republic, most of them near the border or on the great plantations in the provinces of Monte Christy and Santiago. But there wasn't enough work for all. The price of sugar had long since crashed and the boom had spent itself. What to do with these Haitians who were no longer an asset? The benefactor of the Fatherland had not yet given an official answer. But meanwhile the Dominican troops could with impunity kill a Haitian now and then.

Rafael Trujillo had made a trip or two along the border area. In Dajabon he heard good news. During the past few weeks many Haitians had been killed in the area. It was a start in the right direction, but there must be several hundred more.

That pact of eternal friendship between Haiti and Santo Domingo, signed in 1935 by Trujillo and Vincent—had the dictator forgotten it? Probably. There is no evidence that Trujillo had signed the pledge for any other reason than to force the return of the exiled Dominicans, and the maneuver had not forced them back. It had only scattered them through Latin American countries.

Not so with President Stenio Vincent. He remembered it. Well enough to recall it later.

October came, and with it, many rumors. More than the usual number of Haitians could be seen crossing the bridge over the Massacre River at Dajabon early in the evening. They had heard of mass murders in the town of Banica. But there was no panic. There were those who said that Dominican soldiers had stabbed and macheted dozens of Haitians. Perhaps 8 or 10 or a dozen or 15—but dozens. Absurd. But as absurd as it sounded, there were those Haitians who preferred the safety of their soil across the river. And by dusk the trickle across the bridge at Dajabon had grown into a steady stream of black humanity.

In the town of Dajabon there was great activity in the church. Small and large Dominican flags were being placed around the room used for social gatherings. Someone carefully dusted the portrait of the Benefactor of the Fatherland, Generalissimo Rafael L. Trujillo Molina, the President of the Dominican Republic. For there was to be a dance the next night and the guest of honor would be the President.

Rumor of sudden death in Banica spread through the night and gained momentum through the following day. During the night hundreds had been killed, according to the rumor. Hundreds. Haitians arrived in Dajabon to tell of it. And the exodus of blacks increased.

That night, the night of October 2, people crowded into the church. Others, swarming outside, stood and waited and listened to the music within. Many in the crowd were Haitians. The rumor of death in Banica had dissipated itself. And they stood with Dominicans in the crowd waiting outside the church. Soon the moment for which they waited came. A caravan of automobiles pulled into the road and came to a halt before the church. A squad of soldiers came quickly to attention before the familiar Packard. As El Generalissimo stepped out there was much saluting, the crowd of curious gave way, murmuring, and Rafael Trujillo, smiling broadly, hurried into the church.

The dancing came to a halt. The President stood before the assembled Dominicans, and before those outside crowding round the windows. Trujillo, on this occasion, had no long-winded speech to make. It was brief and very much to the point.

"I came to the border country to see what I could do for my fellow countrymen living here. I found that Haitians had been stealing food and cattle from our farmers here. I found that Dominicans would be happier if we got rid of the Haitians." God's partner, the savior of the Republic, paused, stamped his foot, and raising his hand added slowly, throwing great emphasis on each of his words: "I will fix that. Yesterday 300 Haitians were killed at Banica. This must continue."

Elsewhere throughout the country, soldiers of El Generalissimo's army had already received their orders.

In an inland town an army captain and his senora laid their napkins down as they finished the first course of their evening meal. Their servant was no longer young. She had been with the family for several decades. Her hair was gray against her black face. She entered the dining room to clear the table. The captain rose from his chair, picked up the carving knife and before the gray, old woman realized what her master was doing, the captain had sunk the blade into her breast. The piercing cry that stabbed the night air came from the throat of the horrified senora. The servant, at her feet, had made only a few gurgling sounds and had died. For a considerable period after that day the captain's wife had to live locked in a room in a sanatorium, a raving maniac. She couldn't understand that her husband was simply acting on orders from El Generalissimo.

In every town and every village in the Provinces of Monte Cristy and Santiago, Negroes were dragged from their homes, lined up in streets and hacked at with machetes. Seldom were guns used. The machete looks like a butcher's instrument. Its blade is 2 to 3 feet long. Used primarily to fell brush and cut the sugarcane, it is rarely finely sharpened. It tears rather than cuts.

Here and there gunfire was heard above the cries of the Haitians. But most of the shots were killing mutinous Dominican soldiers. Great numbers were refusing to obey the orders of the "benefactor of the fatherland."

Soldiers and Dominican farmers were stationed up and down Massacre River, and were bunched at bridges. As the panic-stricken, defenseless Haitians sought the safety of their own land, machetes flashed through the night. The President had hurried on after his few words in the church at Dajabon, and now the bridge there was rapidly piling high with bodies. Officers barking commands sent some soldiers to clear the bridge of mangled blacks. They were thrown into the river or along the river's banks. And the piles of blood-soaked blacks at the entrance to the bridge grew higher and higher.

The soldiers' arms were growing weary swinging machetes, and as dawn approached it was becoming increasingly apparent that great numbers of Haitians were gaining asylum across the river. So the soldiers threw their machetes away and used their rifles. As dawn came and they could take aim, they stood along the banks of the river and knocked off the fleeing Haitians. Their Krag rifles were scorching their hands well before the sun was high in the sky.

Outside the town of La Vega there is a hill called Santo Cerro, and on it is the church of Santo Cerro. The Italian-born pastor of the church, Father Francisco Fantino, lived in an adjoining house. He was well along in years and greatly venerated by Dominicans. He had come to Santo Domingo as a young priest. As the years advanced he gave materially as well as spiritually to all persons, whatever their color or faith. Once he took under his care two small, forlorn abandoned Haitian boys who grew up in his household as healthy youngsters. One was 10 and the other 12 when Trujillo's soldiers arrived at Santo Cerro to carry out their orders. It was late in the afternoon. The boys were busy preparing dinner for themselves and Father Fantino.

When the padre saw the soldiers coming he was not surprised. He had been fearing that moment. He met them a short distance from the church. He pleaded with them not to take the boys. They explained they had their orders. He, too, had his orders, God's orders that "Thou shalt not kill." But there was "God and Trujillo" and the soldiers had Trujillo's orders. They must. With apologies they swept Father Fantino aside and took the two boys. Father Fantino entered his church, but before he could reach the altar he heard first one and then a second shot ring out.

For a few hours through the heat of midday the slaughtering came practically to a standstill.

Bodies were strewn up and down the banks of the river, and the ravines scattered through the hills were almost leveled by black corpses. Trujillo's soldiers, rounding up groups of Haitians, had tied them together, had decapitated one at a time with machetes, and had thrown the headless torsos into the nearest ravine. Blood-smeared heads lay in heaps alongside the roads.

Though during the day the pace of the killing had slowed, had almost come to a standstill, all through the land Haitians were still being rounded up. In the city of Santiago, northern metropolis, 1,900 Haitians had been herded into a courtyard surrounded by Government buildings. They were in groups of 10 and 30 and 50, shackled together, their hands secured behind their backs.

When the executioners were ready to carry out their orders it was late in the afternoon. If they could have set machineguns up and turned them on the massed Haitians, the worst would have been over in a few minutes and the executioners home in time for dinner. But Trujillo had given orders to use guns only in an emergency, to rely upon the more primitive weapons, and for a very good reason, as we shall see presently.

The soldiers chosen for the Santiago job were a picked squad of sadists. They entered the courtyard gripping great and small clubs, jagged clubs, smooth clubs, iron bars. The cries of the Haitians rose up out of the courtyard and filled the city. Despite the heat, many residents of Santiago closed their doors and shutters to shut out the horrified cries of more than a thousand terrorized Haitians screaming for help. Some of the 1,900 Haitians knelt in silent prayer, but others were too terrified to utter a sound.

Out of the courtyard and into the night a long line of trucks and wagons filled with the horribly mangled bodies of the 1,900 Haitian citizens moved through the streets of Santiago and out into the country. Ravines in the hills nearby were piled high with the dead.

Behind them the trucks and wagons left a trail of blood, from courtyard to ravines.

"This must continue." The benefactor of the fatherland, the latter half of the partnership of "God and Trujillo," had said. And it did, into its second night.

In the cities located near the sea these same macabre caravans continued through the night and on into the next day. Then they loaded small and large fishing boats, stuffing holds and cabins with black, mangled bodies, and piling them high on decks. During these first October days in 1937 in the waters about Santo Domingo, the sharks did not go hungry for want of human flesh.

By the morning of October 4, the massacre had spent itself. Tales of the horror immediately spread through the Dominican Republic and Haiti, tales of brutalities unequaled in modern history. Groups of Haitians here, groups there, hacked to death with machetes, stabbed to death with knives, shot with Krag rifles. Haitian homes raided, whole families wiped out, babies beaten to death against trees and sides of houses, tossed on bayonets.

The tales were endless and investgations several weeks later proved them all to be true.

On the Haitian side of Massacre River, and in Ouanaminthe in particular, homes and hospitals and churches and schools were filled with wounded and dying—filled with little girls and little boys, grown men and women, with legs or arms chopped off, with heads split by machetes, bodies with gaping, torn wounds, or the neatly sliced wound of a knife, or a fine round hole drilled by a bullet.

Immediately following the massacre, the number of Haitian dead was unknown. For several days each district thought it alone was the victim of Rafael Trujillo's soldiers. Reports, like election returns, drifted in. Three-hundred-odd bodies counted here, eight-hundred-odd in another place, 50 in a small village, more than 5,000 in the Monte Cristy and Santiago areas, some 3,000 in the city of Dajabon. The exact number will never be known, but with time it has been possible to name a minimum figure of 12,000 dead, and a maximum figure of 20,000, although estimates have run as high as 25,000 dead. And all within the brief space of 2 nights and 1 day.

Now Stenio Vincent could see—in his sleep as well as his waking hours—the great piles of bodies of his brutally mangled countrymen. President Vincent told Quentin Reynolds, on the scene later to make a report of the ghastly events for Colliers, "What can we do? We are not a warlike people."

The President's dilemma was understandable. The Haitians aren't warriors. Nor was Haiti geared for war in any other manner against the highly organized totalitarianism of the tyrant Trujillo.

Rafael Trujillo was wise enough to want to keep the facts of the massacre secret. He quickly clamped on a censorship that extended over the whole of Haiti as well as the Dominican Republic. How he succeeded in keeping President Vincent and the Haitian press wordless on the subject is still a secret. Certainly this was the moment for Vincent to cry the facts to the world. But his lips were sealed.

No doubt Rafael Trujillo told Vincent what he was later to give as an official explanation:

A deplorable incident, one he greatly regretted. But his soldiers did the killing—No, his soldiers did not. The killings were done with machetes and knives by angry Dominican farmers. His soldiers use rifles.

But rifles were used. Bullets from Krag rifles were found in Haitian bodies. And the Dominican Army used Krag rifles. A lie. The Haitians were all killed by machetes and knives in the hands of Dominican farmers angered by Haitians who had been stealing their livestock and their produce.

That speech of Dajabon? Rafael Trujillo did not make it, reports to the contrary notwithstanding. But later there were scores of affidavits to prove he made the speech, and all the witnesses agreed on what he said.

All of Us Are the State Department's Constituents

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. JUDD. Mr. Speaker, both Houses have cut the State Department's budget too deeply, in my opinion, at the very time when our hopes for peace depend largely on the adequacy of our diplomacy. And only as the State Department succeeds in getting solutions to our complicated international problems will it be possible to get real economy in our national budget through then being able safely to reduce spending for our Defense Establishment.

Under leave to extend my remarks, I include the following recent editorial from the Minneapolis Star:

IT'S OUR DEPARTMENT

Not too long ago, a school of international relations was established in an eastern college. The idea was that its graduates would serve the United States Government and American business overseas.

To date, no graduate has gone into Government service. All, with shrewd young eyes on the future, have accepted private business offers of better pay, more chance for promotion, longer (often fully paid) home leaves, etc. Other, similar schools have seen the same thing happen to their graduates.

Yet the future, continued success of American business overseas, and even the security of this Nation, depends on the loyalty, dedication and efficiency of our official representation abroad.

Congress should be appropriating money to offer bonus incentives to Foreign Service officers for learning additional foreign languages. Instead the House has slashed the funds for the Foreign Service Institute, which is charged with foreign language training.

Congress should be appropriating funds to enlarge the Foreign Service personnel so that—among other good reasons—men may be occasionally detached from active duty for further advanced training. Instead the House would provide less than half as many

recruits as the State Department has modestly requested.

And so on.

The State Department is by no means perfect. It has only belatedly given priority to the language matter, and in many of its transfers it still shows too little regard for the language qualifications of the men involved.

But now that the Department is making an effort to improve its situation, it should be encouraged rather than rewarded with the kind of treatment it is now getting in Congress.

Someone has suggested that State Department and foreign-aid budgets get rough handling from Congress because they have no constituents. There are no State Department contractors intervening with lawmakers as is the case with the military budget; there are no local partisans writing Congressmen on behalf of State Department funds as they write on behalf of local bridges, post offices, Federal courthouses, etc.

If this is true, it's time—past time—that Americans in every part of the country realized, and let their Congressmen know they realize, that we are all the State Department's constituents and all have a vital stake in its budget.

NAACP Lobbying on United States Property

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 17, 1957, issue of the Shreveport Journal:

NAACP LOBBYING ON UNITED STATES PROPERTY

Federal law specifically prohibits use of Government property by any lobbying group for assembly to exert pressure in efforts to achieve legislative objectives.

Time and again, however, the NAACP—one of the most powerful and influential lobbying organizations in the Nation's history—has been able to obtain permits to assemble in Federal auditoriums and on Government grounds in Washington to howl for its objective of total racial integration.

For 3 hours today all traffic avenues in the vicinity of the Lincoln Memorial at Washington are being roped off to permit some 50,000 Negroes and interracialists to assemble and "ask God's help" in passage of pending force bills, which they refer to as "civil rights" legislation.

Thanks to the efforts of a determined southern leadership in Congress, dedicated to the preservation of States rights and constitutional Government, chances are that the NAACP's "March on Washington" will not succeed this year.

It is nevertheless puzzling to law-abiding people as to just how the NAACP is able to prevail upon Washington's bureaucratic brass hats to violate the law and give the organization permission to assemble on Federal property for lobbying purposes.

The situation inspires the question:

What would the custodians of Washington assembly halls and grounds do with an application from the citizens councils to stage a rally on Federal property?

Pay Increase for Postal Clerks

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from the National Federation of Post Office Clerks, Local 125, Minneapolis, Minn., signed by its president, Patrick J. Nilan, and Raymond R. Mattson, legislative chairman, regarding a salary increase for post-office clerks.

The letter follows:

NATIONAL FEDERATION OF
POST OFFICE CLERKS,
LOCAL NO. 125,
Minneapolis, Minn., May 13, 1957.

To Our Friends in the United States Congress:

We have taken the liberty to make a few brief statements as to the reasons the post-office clerks are now asking for a salary increase and hope you will find time to help us in securing the salary bills now before the committees in Congress.

Postal employees have a right to a wage that is at least fairly comparable to wages paid in private industry for people of equal skill, intelligence and training, and to conditions which the Federal Government itself requires private industry to establish and maintain for its employees. That is the core of our requests, it is the basis for the bills that have been introduced in the Congress, and it is the objective for which we strive. The salary bills are H. R. 2474 in the House and S. 27 in the Senate.

In the last 6 years, we have received one small salary raise and that came with the reclassification bill with biweekly pay periods, showing no increase in the paycheck. Our people in the postal system are required, by necessity, to work part-time jobs, have our wives work, our children are forced out of schools and colleges, all in order to provide our families with a bare minimum existence, which is not possible now with our present paychecks. The salary legislation now before Congress would recognize the inadequate salaries paid all post-office employees within the service. Dollarwise, post-office clerks in 1939 were the highest paid among 33 groups included in a survey from the Bureau of Labor Statistics, United States Department of Labor, Earnings and Hours Series. Today, in 1957, they rank 22d among this same group and only 11 of those included in the survey have a smaller gross weekly wage. The 33 groups referred to in this survey are a representative cross-section of the working population and does not include the building trades, whose work is regarded as seasonal.

Postal workers have fallen far behind during the last 8 years in salary adjustments and now get from $1,000 to $2,000 less a year for work requiring similar skills. During the last 3 years post-office personnel has been increased by only 3 percent, while the volume of work has increased 11 percent in the same period.

Recruitment of personnel has also become a major problem due to the inadequate salaries. The new man, or "sub" as he is referred to, comes into the Post Office with high regard to the caliber of position he has, and, for a while, working 11, 12, or more hours a day, earns a decent wage. However, upon being promoted from a "sub" to a "regular" clerk or carrier he no longer can work the unlimited hours as before, and he now takes a salary drop, enough to make him leave the service after he has just about become a qualified clerk or carrier. His basic salary upon becoming a regular employee is $3,660 per year, which leaves him $120 every 2 weeks for a family of 3 after deductions, not including any State taxes or bond deductions. The great turnover of postal people results from the low salary paid when a man or woman gets the "regular" status. Now, in many offices it is difficult, if not impossible, to recruit the high caliber of post-office employee that is desired for the safe and proper handling of the United States mail, because of the inadequate salaries.

May we bring to your attention the salary resolution approved unanimously by the Minnesota State Legislature and signed by Gov. Orville L. Freeman on March 8, 1957. To shorten this we will give you the resolves:

"Now, therefore, be it

"*Resolved*, That the House of Representatives of the State of Minnesota (with the Senate concurring) endorses a salary schedule for the postal employees commensurate with that of private industry and which will give adequate recognition of the increased productivity of postal employees; and be it further

"*Resolved*, That a copy of this resolution be transmitted to the Presiding Officers of the Senate and the House of Representatives and to each Member of Congress from the State of Minnesota."

This demonstrates our Minnesota Legislature recognizes the need for a salary adjustment to meet the increased cost of living and increased productivity of postal employees.

Also let us add, from the remarks of Congressman EDWIN H. MAY, JR., of Connecticut, in the House of Representatives on Wednesday, March 20, 1957:

"Within the memory of man now living, the postal service was a career that men entered proudly, and carried on with unflagging devotion. But times have changed. Wages have lagged and working conditions have either deteriorated or remained static. And that once splendid morale has also begun to disappear. That is the priceless ingredient that makes the difference in postal service. The Postmaster General who first recognizes this fact will be a great one."

Now, morale is a great factor in employment, be it on a beach in Normandy or in the post office in Minneapolis. We can tell you that we do not have that factor in our office in Minneapolis, simply because so many have regretted even entering the service and now living with an eternal struggle to try to get by. Our office in Minneapolis never had so many complaints about unpaid debts as are coming in now, and the Postal Manual, section 744.434 states, "Employees shall meet their obligations promptly so there will be no cause for embarrassment or criticism." But, in the face of our present salary we have no alternative but to be subject to criticism under this article. Last month the Government reported that the cost of living had reached an alltime high for the sixth consecutive month. Postal employees are caught in the middle, on static salary and no "bargaining rights." The President requested the Heller Associates to make a survey in a large midwestern city in 1955, the purpose being to find out how much money is required for a family or four to live comfortably. The report showed the salary to be $5,440 a year. Top grade post office clerks, level 4, now get $4,410 or $1,000 less a year than it took 2 years ago to live comfortably.

If we may continue, we would like to illustrate a few items from the Minneapolis Star-Journal and the Minneapolis Morning Tribune that have been printed in recent weeks.

These statements refute the argument that we (postal employees) are starting a new round of inflation, which some people in Washington are suggesting:

"CONTRACTORS REACH ACCORD WITH EIGHT UNIONS

"As of yesterday, the Associated General Contractors agreement provides for a 15-cent hourly increase with additional 15-cent increases May 1, 1958, and May 1, 1959. It put the following wage scales into effect: Carpenters, $3.15 an hour; cement masons, $3.25 an hour; laborers, $2.40 an hour, etc.

"PAY BOOST AVERTS CITY MILK STRIKE

"Inside workers and drivers will receive pay increases of 13 cents an hour. Rates of inside workers will go to $2.53 an hour.

"DISTRICT 89 TEACHERS GET $200 HIKES

"District 89 is the Golden Valley independent school district, located just west of the city of Minneapolis.

"PAY BOOSTS OF 15 CENTS SET FOR PLASTERERS

"The increase effective now brings their scale to $3.25 an hour, with similar boosts of 15 cents each May 1 during the 3 years of the contract.

"PAY INCREASE ORDERED FOR SERVICEMEN

"This is a direct result of the study made by the Cordiner committee.

"FOUR HUNDRED COUNTY EMPLOYEES VOTED PAY HIKE—CITY RECOMMENDS 15-PERCENT PAY INCREASES FOR LABORERS AND TRUCKDRIVERS

"Laborers effected now are making $2.25 to $2.93 an hour, drivers $2.30 an hour before this increase will take effect."

In the light of all these recent pay increases, only since May 1, 1957, in Minneapolis, how can anyone state, with any authority, that the proposed raise for postal employees will start a new round of wage increases, and start a new inflation spiral. We are barely hanging on and would like to get an increase, to bring us up to where we can pay our just debts.

Very truly yours,

PATRICK J. NILAN,
President, Local 125, NFPOC.
RAYMOND R. MATTSON,
Legislative Chairman, Local 125, NFPOC.

Millers Ferry Dam: Alabama-Coosa Rivers, Ala. and Ga., Alabama River

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. BOYKIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following hearing before the Appropriations Subcommittee on Public Works, House of Representatives, 85th Congress, 1st session, May 20, 1957, relating to appropriation for planning funds Millers Ferry Dam: Alabama-Coosa Rivers, Ala. and Ga., Alabama River:

STATEMENT OF ROBERT F. HENRY, PRESIDENT OF THE COOSA-ALABAMA RIVER IMPROVEMENT ASSOCIATION, INC.; ACCOMPANIED BY GEORGE L. CLEERE, EXECUTIVE VICE PRESIDENT OF THE ASSOCIATION; HON W. A. GAYLE, MAYOR, CITY OF MONTGOMERY, ALA.; ROBERT J. STALL, JR., INDUSTRIAL DIRECTOR, CHAMBER OF COMMERCE, MONTGOMERY, ALA., AND OTHERS

Mr. Chairman and members of the committee, I am delighted to appear before your committee today and have the opportunity to express the views of the membership of the Coosa-Alabama River Improvement Association, Inc., as well as the views of a majority of the political subdivisions, business and industrial firms, and many individual citizens throughout one of the greatest undeveloped river basins remaining within this nation—namely, the Alabama-Coosa River system.

It can be stated that the various interests throughout an area of approximately 23,000 square miles within the river basin, comprising the States of Alabama and Georgia, are now requesting that the development of this great river for navigation, production of hydroelectric power, and flood control be accomplished at the earliest practical date. We are asking today for approval of an appropriation in the amount of $150,000 for plans on the Millers Ferry Dam, located in Wilcox County, Ala., a part of an authorized project on the Alabama River.

In order that the members of your committee may have knowledge of the importance of this great river system, it is necessary that we here outline briefly the physical characteristics, water development needs and opportunities, and program to date.

The basin: The Alabama-Coosa River drains a long basin which extends from the Blue Ridge Mountains of southeast Tennessee and northwest Georgia diagonally across the State of Alabama to where the Tombigbee River joins it to form the Mobile River 45 miles north of Mobile, Ala. The basin, approximately 350 miles in length and averaging 70 miles in width, covers an area of 22,800 square miles. Topography varies from flat to gently rolling coastal plains in the south through broken hilly land in the north central and upper regions of the basin. There are extensive areas of wooded swamps along the lower Alabama River. The soils of the basin range in character from red clay in the Piedmont Plateau and heavy dark clays of the Black Belt area to sand-clay types in the lower coastal plains. The soils are generally highly productive with good management.

Forest: Approximately 30 percent of the land in the basin is in forests. Hardwood forests predominate in the headwater area and in the stream bottoms with pine and other softwoods in the southern part of the basin. Despite the reduction in forest resources, rapid growth has sustained a high output of timber products, proving the inherent productivity and the great recuperative powers of the Alabama-Coosa River Basin. The present rate of timber growth can be tripled if the growth capacity of the land is utilized. The forests of the basin can grow an average of 300 board feet of saw timber per acre per year. Alabama ranks third in the production of lumber in the southeastern region and the greater percentage of high-grade timber produced within the State is grown in this river basin. Within the basin there are great quantities of wood for use by the expanding pulp and paper industry.

Agriculture: Agriculture is a major activity throughout the basin area although only 25 percent of the land is cultivated and this is growing smaller each year. Another 12 percent is in grass and pastureland, and as previously stated, 60 percent of the area is in forest. Cotton and corn have been the principal farm products, but an increasing acreage has been and continues to be converted to grazing lands and other types of farming. Located in the basin, Montgomery, Ala., is the largest terminal livestock market east of the Mississippi and south of the Ohio Rivers. Farms are small and many are too small to serve as economic family units.

Minerals: Deposits of valuable minerals in commercial quantities are located within the river basin. Among these are: Petroleum, iron ores, coal, limestone, clays, glass sand, graphite, mica, manganese, bauxite, barite, marble, lignite, selma chalk, fullers earth, slate, tin, asbestos, gravel, sand, and others. Some of these have been mined for many years, others would be developed if the river system is made navigable.

Population: Based on the 1950 census there are approximately 1,400,000 people living in the Alabama-Coosa River Basin. In addition, the great cities of Birmingham, Ala., and Atlanta, Ga., lie just outside its boundaries. Birmingham is only approximately 30 miles from the Coosa, the main tributary of the Alabama River.

Approximately 75 percent of the people live in rural areas. The major centers are: Rome, Ga.; Anniston, Talladega, Montgomery, and Selma, Ala. These cities have had a substantial growth during the last 6 years and today it is estimated that the total population will exceed 284,000 people. There are 9 additional cities within the basin with a combined total population of approximately 86,000. In addition, there are 18 towns within the area that have a population in excess of 2,500 people each. There are also numerous small towns and communities throughout the entire basin. The major cities and towns are fairly evenly distributed.

Manufacturing: Certain types of manufacturing were established in the basin soon after the turn of the last century while others have had a longer history. Manufacturing has developed rapidly in the basin within the last two decades. The major industries are: iron and steel production and fabrication, textile and apparel manufacture, processing of wood products, fertilizers, industrial chemicals, electrical equipment, farm machinery and equipment, pulp and paper industry, food processing and confectionary products. There are many other products manufactured in the area, and industry has and continues to operate successfully. Many plants have been expanded in recent years, and new industry is moving into the basin. However, the fact that we do not have water transportation is retarding the growth and location of certain industries as evidenced by the factual data in the files of organizations throughout the river basin. As evidence of this fact we herewith recite the statement of the industrial division of the Chamber of Commerce of Montgomery, Ala., and it reads, as follows:

"It is our firm belief that the development of the Coosa-Alabama River system for navigation, flood control, power generation, recreation, and other benefits would greatly enhance our chances to attract new industry. We base the foregoing statement on the following:

"1. According to the best research among organizations such as the American Industrial Development Council and the Southern Industrial Development Council, water sites are becoming more and more important in plant location analysis. It is estimated that the availability of water, whether for transportation or processing, will be the No. 1 factor in all plant locations.

"2. Many location experts believe that transportation costs offer one of the few remaining opportunities for substantial savings in industrial production (1957 Site Selection Handbook Edition of Industrial Development magazine). It is a matter of record that transportation costs are less where water transportation is available. The availability of such transportation would, therefore, enable the entire Coosa-Alabama region to offer new and existing industries opportunities for increased savings.

"3. In 1936, there were 570 industrial-plant locations selected on waterside sites, an increase of 90 over 1955 and 124 over 1954 (Coosa-Alabama River Improvement Association, Newsbulletin, April 1957.)

"4. The illustrations given below have been purposely disguised as we are continuing to

promote Montgomery as a future location with these (and many other prospective industries), and confidential handling is of paramount importance. Records are on hand, however, to substantiate these remarks.

"(a) A national chemical concern: This company recently located a $20 million plant in the Southeast. On inquiring as to their reason for the location finally chosen, we were told by a company representative in October 1956 that water-transportation facilities was one of their main considerations. We were also told that 'had Montgomery had water-transportation facilities, considerably more attention would have been given to the possibility of a Montgomery site.'

"(b) A national mining and processing concern: This concern indicated a strong desire to be kept advised of river development in our area. Although no plans are known at this time for actual expansion, it was given to us that their future planning takes such eventualities as the need for water transportation into account.

"(c) A midwestern chemical concern: For the first time in over 40 years this concern is known to be embarking on an expansion program outside its home area. By the nature of its activities, it is easily seen that water transportation would be an important factor in any of their planning. This company also has requested that we keep them abreast of our river-development situation.

"(d) A leading chemical concern: During a recent discussion of their site, purchased a few years ago, it was brought out that the eventuality of water transportation was one of the considerations leading to their decision to buy a large site located on the Alabama River in our general area. It is felt that definite plans to proceed with development of the Alabama River from Montgomery to Rome might very well have considerable influence on the company's ultimate plans for this site.

"(e) A national automotive products manufacturer: Representatives have visited Montgomery on several occasions and definite interest has been shown in one site out of nearly a dozen possible. This site is on the river.

"NOTE.—The records pertaining to 4 (a) through 4 (e) are on file in the industrial division of the Montgomery Chamber of Commerce, Montgomery, Ala.

"5. Montgomery is blessed with a good network of railroads which many communities far larger cannot equal. Yet Montgomery has often been eliminated in location studies because of high transportation costs.

"These brief references provide, we believe, definite evidence that the future industrial growth of Montgomery and the entire Coosa-Alabama region depends in largest measure on the development of the Coosa and Alabama Rivers as proposed by the Coosa-Alabama Rivers Improvement Association."

Water development needs and opportunities: The development of the water resources of the Alabama-Coosa River Basin is a problem that must be recognized for its value, first, to the States of Alabama and Georgia, and then to strengthen this great Nation. The needs of the basin are great, because of the large number of people who must find employment in some endeavor other than agriculture if the production per man in farming is to increase enough to permit satisfactory living standards for many of the people. Harnessing this great river system promises to create opportunities for employment because water is abundant and the many good reservoir sites make possible the storage of large quantities of water which can be controlled to generate power, and to a great extent eliminate flood conditions. The dams would provide for water transportation that is needed now.

I am sure you gentlemen of this committee are fully aware of the great change in farming methods that has taken place in this Nation within the past few years. As stated heretofore, many farmers by virtue of the small acreage owned or rented cannot today produce sufficient income to properly sustain themselves and their families and many of the farmers throughout the basin fall into this category.

The larger farmers have mechanized their farms, thereby releasing labor heretofore required. The production of agricultural products per man has more than doubled in the past 5 years. More and more acreage each year is being taken out of cultivation and converted to grazing; this change is releasing large numbers of people from employment in agricultural products pursuits, thereby forcing them to seek employment in services or industry.

The development of the Alabama-Coosa River system would enable this area to secure additional industry that requires ample power and water transportation, thereby opening the way for these small farmers to retain their homes and supplement their incomes by employment in industry.

The major problem of the Alabama-Coosa Basin is the provision of adequate economic opportunities for its people. Two broad approaches to the basic problem of the area are apparent. One is to provide additional employment opportunities, the other is to make possible higher incomes for the people who remain in agriculture by improved land use. The latter is now being accomplished to some extent and the trend of better land use is definitely beneficial. The other problem remains but could be rectified to a great degree by development of this great waterway for navigation and other purposes to permit the expansion of industrial activity throughout the basin.

Incidentally, government reports have stated: The southern Appalachian Mountain area is the largest source of undeveloped water available south of the Great Lakes. The Alabama-Coosa River headwaters rise in these mountains and is the second largest river from that source. The Tennessee River is the only one that exceeds it in volume. To date no start has been made on a congressional authorized project after 20 long years of waiting patiently for 2 multiple-purpose dams and 1 navigation dam to be constructed on the Alabama section of this great river system. Again repeating, we are here today to respectfully request an appropiration of $150,000 for planning and design of the Millers Ferry Dam by the present session of Congress. The need for this waterway improvement is urgent.

The tributaries of the Alabama River at the present time have six water-use structures that are now in operation. The Alabama Power Co., a private utility, owns 6 hydroelectric plants, 3 on the Coosa River, and 3 on the Tallapoosa River: One Federal owned hydroelectric plant (Allatoona) is located on the Etowah River in the State of Georgia. The privately owned plants generate less than 25 percent of the potential power of the river system.

In 1945 the 79th Congress, 1st session, enacted Public Law 14 which reads in part:

"Alabama-Coosa River, Ala.: Initial and ultimate development of the Alabama-Coosa River and tributaries for navigation, flood control, power development, and other purposes, as outlined in House Doucment No. 414, 77th Congress, is hereby authorized substantially in accordance with the plans being prepared by the Chief of Engineers with such modifications thereof from time to time as in the discretion of the Secretary of War and the Chief of Engineers may be advisable for the purpose of increasing the development of hydroelectric power; and that for the initiation and accomplishment of the ultimate plan appropriations are authorized in such amounts as Congress may from time to time determine to be advisable, the total of such appropriations not to exceed the sum of $60 million. The aforesaid authorization and approval shall include authorities for all powerhouses, power machinery and appurtenances found to be desirable by the Secretary of War upon the recommendation of the Chief of Engineers and the Federal Power Commission."

The authorized project referred to above consists of 2 multiple-purpose dams and 1 navigation dam on the Alabama River, namely, Claiborne, Millers Ferry and Jones Bluff. The latter two are the multiple purpose dams. Originally the authorization included one multiple purpose dam on the Coosa River at Howell Mill Shoals. The dam on the Coosa River was eliminated from the Corps of Engineers, United States Army, plans and the authorized project by reason of application for license by the Alabama Power Co. to construct four hydroelectric dams on this river as set out in Public Law 436, chapter 408, 83d Congress, 2d session. The action by Congress in enacting Public Law 436 in no way effects the three dams authorized on the Alabama River as set out in section 13 of Public Law 436 herewith quoted:

"SEC. 13. Nothing in this act shall be deemed to affect in any way the authorization of the development of the Alabama-Coosa River and tributaries other than that portion of the development involving projects on the Coosa River or the authority of the Federal Power Commission to issue a license for the complete development of the Coosa River by States or municipalities under section 7 (a) of the Federal Power Act or to find under section 7 (b) of said act that the development should be undertaken by the United States itself."

House Document No. 414, 77th Congress, 1st session, paragraph 7 and 8 is herewith quoted in part;

"7. The Board[1] recognizes that the Alabama-Coosa Basin is one of the country's greatest reservoirs of rich natural resources, that the Alabama-Coosa River system contains many dam sites that are highly desirable for the development of hydroelectric power in connection with the improvement of its rivers for navigation, and that the basin is potentially a great industrial area. * * * It is logical to expect that the industrial expansion and the general economic improvements noted in the basin and its adjoining areas over the past several years will be accelerated by the trend of industry to seek the moderate climate of the Southern States and by the industrial activity resulting from the rearmament program. The Federal Power Commission has stated, with respect to proposed modifications of the district engineer's comprehensive plan with a view to increasing the development of hydroelectric power, that a total expenditure for that plan very substantially in excess of the district engineer's estimates would be justified. The Board, therefore, believes that the surveys and studies that have been completed by the department are sufficient to indicate that a comprehensive plan for the ultimate development of the water resources of the Alabama-Coosa River system for navigation, hydroelectric power, flood control, and other purposes should be authorized at this time, to be accomplished step by step over a period of years, and that the work thereunder should be prosecuted at such rates as may be determined by Congress. It is also believed that for the initiation and partial accomplishment of the ultimate plan the construction of the navigation dams on the Alabama River, including the development of the maximum hydroelectric power

[1] The Board refers to the Board of Engineers for Rivers and Harbors.

feasible * * * should be approved at the present time.

"8. The needs and demands for the development of the Alabama-Coosa Basin are continually increasing, and in the present emergency the changes are much more rapid than in normal times."

The 84th Congress made available an appropriation in the amount of $180,000 for the fiscal year 1956 for a survey of the Coosa-Alabama River by the Corps of Engineers, United States Army:

First phase: An interim report which included an economic analysis to determine justification of navigation to Rome, Ga., via the Alabam-Coosa Rivers. It included traffic and costs studies for locks in existing and proposed dams to be constructed by the Alabama Power Co. on the Coosa River.

Second phase: Will be a comprehensive report—primarily a basinwide plan. The studies of developments will be on streams tributary to the Alabama and Coosa Rivers.

The authorized plan was adopted for the Alabama River. The license plan by the Alabama Power Co. would be the adopted plan for the Coosa River. The comprehensive report would augment main river developments by tributary storage developments.

The first phase of the report was received by the Chief of Engineers Office earlier this current year. The second phase of the report is scheduled to be finished by the District Office of the Corps of Engineers by July 1, 1957.

The Coosa-Alabama River Improvement Association was recently advised by the Chief of Engineers office of the review of the traffic study for the Alabama River below Montgomery, Ala., contained in the interim report. This review indicates that the present authorized development continues to be economically justified. The information attached to the communication received by the association is set out below:

"Project: Alabama-Coosa Rivers, Ala. and Ga. Alabama River.

"Authorization: River and Harbor Act of March 2, 1945.

"Description: The initial development will provide a navigation channel 9 feet deep from the mouth of the Alabama River to Montgomery by means of a low-lift lock and dam at Claiborne, two higher dams with locks and power installations at Millers Ferry and Jones Bluff, and supplemental channel works on the Alabama River below Claiborne. Pertinent data on the structures are given in the following tabulation. Planning to date is based upon the initial power installations. However, preliminary studies indicate that it may be desirable to install the entire ultimate installation initially. The power installation will be considered further and firmed up prior to initiating construction.

Project	Jones Bluff	Millers Ferry	Claiborne
River mile	246.8	142	82.9
Normal pool, elevation	125	80	35
Reservoir area at normal pool, acres	12,000	22,000	5,700
Lock:			
Dimension, feet	82 by 450	82 by 450	82 by 450
Lift, feet	45	50	25
Power, initial installation, kilowatts	51,000	57,000	———
Primary energy per year, 1,000 kilowatt-hour	116,000	136,000	———
Average annual energy, 1,000 kilowatt-hours	301,000	353,000	———
Power, ultimate installation, kilowatts	68,000	76,000	———
Average annual energy, 1,000 kilowatt-hours	335,000	394,000	———

	Initial power	Ultimate power
Estimated federal cost:		
Jones Bluff	$54,534,000	$58,368,000
Millers Ferry	46,783,000	50,870,000
Claiborne	15,761,000	15,761,000
Channel improvements	1,670,000	1,670,000
Total	118,748,000	126,669,000

"Order of development: At such time as the project is undertaken, the work should be programed so that the navigation and other benefits would accrue as elements of the plan are completed. On this basis the work should be programed as follows: (1) Resume preconstruction planning of Millers Ferry with concurrent review costs of other elements of the plan; (2) initiate construction of Millers Ferry; (3) resume planning and initiate construction on Claiborne and on the channel improvements so that they could be completed at the same time as Millers Ferry, and (4) resume planning and initiate construction for completion of Jones Bluff as soon as practical after completion of Millers Ferry.

"Justification: There is a prospective commerce for the 9-foot waterway to Montgomery of about 2 million tons a year consisting of agricultural products, petroleum products, nonmetallic minerals, metals and metal products, chemical and fertilizer materials, and miscellaneous items. The improvements will also provide initially 108,000 kilowatts of dependable hydropower capacity which can generate an average of 654 million kilowatt-hours annually, and ultimately 144,000 kilowatts of dependable capacity which can generate 729 million kilowatt-hours annually.

"Benefit-cost ratio: The latest indicated benefit-cost ratio for the development of the Alabama River to Montgomery is 1.02, for the initial power installation, and 1.07 for the ultimate power installation. The costs will be further firmed up in the preconstruction planning. The annual benefits for the development are estimated to be $6,133,000 for the initial power installation (navigation $2,360,000, and power $3,773,000) and $7,075,000 for the ultimate power installation (navigation $2,360,000 and power $4,715,000). The navigation benefits are based on an extensive traffic survey made during the fall of 1956."

Gentlemen, we have endeavored, in brief form, to outline to you some of the problems confronting approximately one-third of the population in the State of Alabama and a large percentage of the population in northwest Georgia. We have also outlined to some extent some of the assets of the river basin and if time permitted we could, I believe, convince you that additional assets of this great river basin justify your favorable action in making an appropriation of $150,000 available in the current budget.

We cannot refrain from bringing to your attention a few other matters of importance. The labor supply available in the basin during the latter part of 1956 for employment in industry was approximately 40,000, based on applications in the files of the Industrial Relations Department of the State of Alabama. Percentagewise the State of Georgia would, no doubt, have a corresponding number of industrial workers available for employment from the area in the upper basin. Most of these are small farmers seeking supplemental income; we have mentioned before the transition of farming methods that brings this situation about.

Today we must recognize that the farm problem is acute. In a period of 6 years Federal Government spending to aid farmers has soared from $1.2 billion in 1951 to $5 billion by June 1957. For this same period farm surpluses have grown from $1.8 billion to $8.3 billion, prices for farm products are down 23 percent, income per farm is down 19 percent, and the farm debt has increased 58 percent—all in a 6-year period (source: U. S. News & World Report, May 17, 1957).

One of the solutions of this problem is the prompt development of the natural resources of this great Nation; one of the most important of these is the Alabama-Coosa River water.

The present administration has established a policy that the development of waterways should be accomplished by cooperation between the Federal Government and local interests. This has been or will be accomplished when the Alabama Power Co. constructs the 4 dams, heretofore mentioned, on the Coosa River at an expenditure estimated to be approximately $110 million. The final hearing on the issuance of their permanent license is being held this date. The Federal Power Commission, no doubt, will soon give final approval to the application of the power company. The Coosa is the main tributary of the Alabama River and a definite part of the overall development plan.

As previously stated, the industrial activity in the area is expanding. One of the larger steel companies has just expanded their plant and installed the largest electric furnace in the South. Plans are now under way to install the second electric furnace. It is generally known that more soil pipe is manufactured in the basin than in any other similar area. Selma, Ala., has a large magnesium plant locating there and the potential development of the Alabama River influenced the officials in the selection of this site. (Letter on file Coosa-Alabama River Improvemnt Association.)

Montgomery, the capital city of Alabama, has in the past several years had several new manufacturing plants locate in the metropolitan area. Several of the smaller towns are enjoying industrial expansion.

We would also like to direct your attention to the cost of construction of the authorized projects on the Alabama River. An estimate was made in 1953 by the Corps of Engineers on the cost of construction of the three dams and the necessary dredging, this amounted to $98,775,000. Information recently received from the Corps of Engineers on the same project gives a cost figure of $118,748,000—this is a difference of $19,973,000 or better than a 20-percent increase in cost. Are we going to continue to defer the construction of this badly needed project in view of rising costs?

Gentlemen, time will not permit the submission of additional facts, consequently we direct your attention to the attached letters and resolutions from the Governor of Alabama, the State legislature, and other organizations and individuals endorsing the project and requesting your consideration. We desire to express to each of you our appreciation for the courtesy extended to us and we earnestly request your approval of the $150,000 appropriation for planning and design of the Millers Ferry Dam on the Alabama River.

MONTGOMERY, ALA, *May 14, 1957.*

Honorable Members, Subcommittee on Public Works, House Appropriations, Washington, D. C.

GENTLEMEN: You have kindly extended an invitation to a group of outstanding citizens of Alabama and Georgia to appear before your honorable committee on May 20 to request an appropriation of $150,000 for planning and design of the Millers Ferry multiple

purpose dam located on the Alabama River.

As Governor I have personal knowledge of what it would mean to fully develop this river for navigation and other purposes. In my contacts with industrialists, one of the first questions asked, generally speaking, Is there ample industrial water and are the rivers navigable? Alabama needs additional industry to strengthen its economy and certainly the Nation's economy would be increased by the improvement of this great waterway. This river system is the greatest undeveloped asset in the bounaries of the State. This project has been authorized for more than 12 years and the development should begin now.

Representing the citizens of the State of Alabama and specifically the people in the basin of the Alabama-Coosa River system, I respectfully request that you approve at this session of the 85th Congress the appropriation requested.

Thanking you for your approval, I am,

Yours very truly,

JAMES E. FOLSOM,
Governor.

ALABAMA POWER CO.,
Birmingham, Ala., May 13, 1957.

Mr. ROBERT F. HENRY,
President, Coosa-Alabama River Improvement Association, Inc., Montgomery, Ala.

DEAR MR. HENRY: It is my understanding that you and the secretary of the Coosa-Alabama Rivers Improvement Association, Mr. George L. Cleere, are to be in Washington soon appearing before one of the committees in behalf of an appropriation for the planning and design of one or more of the dams on the Alabama River.

It is quite important that we look well ahead on the whole subject of the Coosa-Alabama Rivers system. As you know, we hope to have a license soon under which we may begin construction of the first of the Coosa River dams now authorized by Congress. While this program will take a period of at least 10 years, the people of the valley will not realize the full potential of this work until there is navigation all the way from Rome to the gulf.

Your suggestion for funds to go forward with continued preparation in behalf of the dams on the Alabama River is quite in order as part of the long-range program.

Wishing you every success, I am,

Yours sincerely,

THOMAS W. MARTIN,
Chairman of the Board.

Whereas the prompt complete development for all purposes of the Coosa-Alabama Rivers from Rome, Ga., to Mobile, Ala., is of inestimable value to the State of Alabama and to the Nation; and

Whereas the 79th Congress, 1st session, authorized a project on the Alabama River to consist of three dams, said project including the construction of one of said dams at Jones Bluff, Ala.; and

Whereas an appropriation for advanced planning and design of the said Jones Bluff Dam should be made by the present Congress in order to avoid further unnecessary delay in the development of the river; and

Whereas a further postponement of this development involves a continuing loss to our State and Nation of great proportions: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Congress of the United States be requested to go forward with the enactment of legislation leading toward the complete development of the Coosa-Alabama Rivers and that it be memorialized to appropriate immediately sufficient funds necessary for the advance planning and design of the contemplated Jones Bluff Dam, and further, that a copy of this resolution be forwarded to our Senators and Representatives in Congress and that they be urged to sponsor all needed legislation necessary to insure the complete development of the rivers and that they exert every effort to secure, at the present session of Congress, an appropriation for the advance planning and design of the Jones Bluff Dam; and further, that a copy of this resolution be transmitted to the President of the United States.

I hereby certify that the above and foregoing is a true and correct copy of Senate Joint Resolution 4, adopted by the senate on May 7, and concurred in by the house of representatives on May 10, 1957.

J. E. SPEIGHT,
Secretary of Senate.

NOTE.—You will note resolution refers to Jones Bluff Dam; the resolution was sponsored by 14 members of the senate and the majority of this number stated emphatically that the resolution would still have passed had Millers Ferry appeared in the body rather than Jones Bluff. Information received from the Corps or Engineers indicating Millers Ferry Dam would be first in order of construction was received after the resolution was enacted.

RESOLUTION NO. E–11, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION ANNUAL MEETING, 1957

From: Power and generation committee.
Approved by: Resolutions committee.
Subject: Alabama-Coosa Basin.

Whereas the Congress has heretofore authorized construction of the Millers Ferry and Jones Bluff multipurpose projects in the Alabama-Coosa Basin, these projects having a combined proposed capacity of 144,000 kilowatts; and

Whereas there is an urgent need for electric power which will be produced at these projects, as well as for resulting flood and navigation benefits; and

Whereas construction of these projects has been pending for a number of years, without any funds being provided by the Congress: Now, therefore, be it

Resolved, That we petition the Corps of Engineers, the Bureau of the Budget, and the Congress to take such steps as are necessary to secure an immediate start on both of these desperately needed projects.

Whereas the development of the Coosa-Alabama Rivers will mean a great deal to the prosperity of the people of the State of Alabama; and

Whereas this development is now being urged by the Coosa-Alabama River Improvement Association, Inc.; and

Whereas such development would make the Coosa-Alabama Rivers navigable from Mobile, Ala., to Rome, Ga., and would also provide flood control, hydroelectric power, and recreational facilities for the people of Alabama; and

Whereas such development would be a great incentive for the expansion and location of industry along said rivers; and

Whereas such development would make possible transportation by water to every point on the river system and open up to the inland towns and cities on the rivers, trade and commerce with the world; and

Whereas new industries and payrolls would result therefrom: Now, therefore, be it

Resolved by the Alabama Junior Chamber of Commerce (in meeting assembled):

1. That we hereby wholeheartedly endorse the work, objects, and purposes of the Coosa-Alabama River Improvement Association.

2. That we lend our support and efforts toward the complete deevlopment of the Coosa-Alabama Rivers for navigation, flood control, hydroelectric power, and the other industrial developments which would result therefrom.

3. That we urge the Federal authorities and the Congress to appropriate necessary funds for the completion of this development and do any and all things necessary for the immediate development of said rivers.

4. That we feel it is a vital necessity to the people who live along the river basin, and all people of Alabama, that said rivers be developed to their fullest potential.

5. That the secretary be and is hereby directed to forward copies of this resolution to the Members of the United States Congress from Alabama.

Approved at Gadsden, Ala., January 5, 1957.

BEN BUTLER,
President, Alabama Junior Chamber of Commerce.

The following resolution was unanimously adopted at the regular meeting of the Cherokee County Board of Revenue held on May 13, 1957:

"Whereas Alabama Power Co. proposes to develop Coosa River; and

"Whereas it is necessary that the Federal Government appropriate funds with which to construct locks at each of the proposed dams; and

"Whereas the construction of said locks at an early date will provide water transportation from Mobile, Ala., to Rome, Ga., and materially aid in the industrial expansion of Cherokee County, Ala.; and

"Whereas it appears necessary to first design and construct a dam at Miller's Ferry, Ala., south of Montgomery, in order to make said river navigable from Mobile to Montgomery, Ala., and the immediate construction of said dam would aid in a more orderly sequence in the development of said river: Now, therefore, be it

"Resolved by the Cherokee County Board of Revenue, That Congress be implored and urged to appropriate sufficient funds for the immediate construction of said locks along Coosa River; be it further

"Resolved, That Congress be implored and urged to appropriate sufficient funds immediately for the plans and the design of the Miller's Ferry Dam in order to immediately proceed with the proper development of the required facilities to make said river navigable."

Done this 13th day of May 1957.

STATE OF ALABAMA,
Cherokee County.

I, J. A. Shamblin, clerk of the Board of Revenue of Cherokee County, Ala., do hereby certify that the foregoing resolution was unanimously adopted at a regular meeting of said board held on May 13, 1957, and that the same is a true and correct and compared copy thereof, said resolution being recorded in Board of Revenue Minute Book No. 6, page 254.

Witness my hand this 13th day of May 1957.

J. A. SHAMBLIN,
Clerk.

MAY 10, 1957.

Mr. ROBERT F. HENRY,
Coosa-Alabama River Improvement Association, Montgomery, Ala.

DEAR MR. HENRY: I wish to convey to you and all of the fine people of this section of our great State the interest that the members of the Montgomery County Board of Revenue have in the efforts put forth by you and many others toward the development of the Coosa-Alabama River region. Also I wish to convey to you the full intentions of the members of the Montgomery County Board of Revenue to continue their interest and full support in this great project.

It is our feeling that the development of the Coosa-Alabama River region would do more toward the development and acquisition of new industry in this State than any other possible program.

May I sincerely urge that you call upon us at any time that we might be of service to you and your coworkers.

With every good wish.

Sincerely yours,

W. TOM JONES,
Chairman, Montgomery County Board of Revenue.

Whereas the Congress of these United States has authorized the development of the Coosa-Alabama River system; and

Whereas the traffic and economic survey of the Coosa-Alabama River system by the Corps of Engineers, United States Army, is partially completed; and

Whereas this development will mean accelerated acquisition of new industry and spectacular economic benefits to all citizens of the area and,

Whereas the citizens of the area have been deprived of these benefits by the lack of action on the part of Congress: Now, therefore, be it

Resolved, That the Montgomery Chapter of the Alabama Society of Professional Engineers urge Congress to appropriate what funds are necessary for planning and design of the Millers Ferry Dam immediately; and be it further

Resolved, That the Montgomery Chapter of the Alabama Society of Professional Engineers stands ready to assist in any way the continuation of this development until its complete and entire fulfillment.

Adopted and unanimously passed at the regular monthly meeting of May 10, 1957.

HENRY R. HUDSON,
Secretary, Montgomery Chapter, Alabama Society of Professional Engineers.

RESOLUTION, STATE OF ALABAMA, COUNTY OF MONTGOMERY

Whereas many individuals members of this association are already contributing members to the Coosa-Alabama River Improvement Association; and

Whereas the future growth and prosperity of the home-building industry in Montgomery, Ala., seems to us to be in direct proportion to the growth and prosperity of our great State of Alabama; and

Whereas we are convinced that the development of the Coosa-Alabama Rivers into a continuous navigable waterway from the Gulf of Mexico to Rome, Ga., would result in the greatest economic boon to the economy of Alabama and Georgia, and consequently to the Nation: Now, therefore, be it

Resolved—

That the Montgomery Home Builders Association does hereby endorse, approve, and pledge its support and assistance to the Coosa-Alabama Improvement Association in its efforts to bring about the development of the Coosa-Alabama River into a continuous navigable inland waterway system from the Gulf of Mexico to Rome, Ga.; and further

That the entire membership of the association will be urged to give their individual support, financial and otherwise, to the efforts of the Coosa-Alabama River Improvement Association; and also

That the association will urge Alabama's congressional delegation to support and promote poper legislation in the Congress of the United States to bring about said development.

MONTGOMERY HOME BUILDERS ASSOCIATION,
THOMAS A. MOODY,
President and Chairman of the Board.
Adopted January 31, 1957.

Importation of Crude Oil

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. ROGERS of Texas. Mr. Speaker, I insert herein a resolution of the House of Representatives of the State of Texas which has been transmitted to the President of the United States and to each Representative in the Congress of the United States from Texas. The resolution is self-explanatory in pointing up the serious danger relative to the importation of crude oil into the United States and certain practices regarding these imports:

House Resolution 379

Whereas the Railroad Commission of Texas has been compelled to reduce the April allowable for Texas crude production by over 224,000 barrels per day from the March figure, thus reducing revenues available to this State by more than $20 million during the coming biennium; and

Whereas the cut in Texas allowable production reflects the imminent opening of the Suez Canal which will free an uncontrolled flood of foreign oil into this country; and

Whereas the United States Bureau of Mines has stated it must withhold its determination of domestic market demand until the flow of Middle East oil through the Suez Canal and Middle East pipelines may be gaged; and

Whereas the uncontrolled flow of foreign oil into this country in competition with domestic production restricted to market demand, results in domestic production taking what is left of the domestic market after imports; and

Whereas the international companies producing such foreign oil are constantly increasing the amount of imports into the United States, and such imports are now far above the maximum set by the President's Cabinet Fuels Policy Committee as the import amount safe for our Nation's security; and

Whereas the international oil companies importing oil into the United States are receiving substantial subsidies from the United States including (1) direct Federal cash payments to the rulers of these Middle Eastern nations, (2) tanker subsidies, including $475 million in tax writeoffs on 52 tankers, and (3) diplomatic and military support to protect the fields owned by these importing companies; and

Whereas our Federal tax statutes have been used by these international importing companies to obtain United States tax credits for amounts paid by them to foreign rulers, thus obtaining assistance in foreign development at the expense of domestic production; and

Whereas development of new domestic oil reserves has lagged due to the tax credits and subsidies granted these companies for foreign development; and

Whereas the international importing companies guarantee certain amounts of oil production to rulers of Middle Eastern countries, while restricting domestic production to make this possible; and

Whereas the operation of Texas pipelines by affiliates of international companies provides a devious but effective means of choking crude oil in the interior of the State, through failure to make needed pipeline extensions and enlargements; and

Whereas importing company members of the Middle East Emergency Committee, given broad powers and antitrust immunity by the Federal Government and charged with the responsibility of increasing the oil lift to Europe, failed to divert their United States imports to Europe, reduce their refinery runs to free crude oil for export, or change their refinery yields to produce needed fuel oils; and

Whereas these international importing companies are either franchised to do business in Texas or have operating affiliates in this State, yet their action in importing excessive amounts of foreign crude suspends the operation of Texas conservation laws, discriminates against domestic producers, and penalizes the revenues and thus the services of this sovereign State: Now, therefore, be it

Resolved, However, that all petroleum imports from Canada shall be exempt in determining the ratio of imports of crude oil and residual fuel oil to domestic production of crude oil. Petroleum imports from Canada shall be excluded. All for the following reasons: (A) from the standpoint of national security, the Government of the United States should treat crude oil reserves in Canada as domestic reserves for the reasons that Canada is our friendly land neighbor to the north and such crude oil reserves should be available to the United States by pipeline in the event of enemy attack; (B) Canadian crude oil reserves and our domestic crude oil reserves are a part of the common defense program between the United States and Canada as is evidenced by "a statement of principles for economic cooperation" entered into by Canada and our Government in 1950; (C) Canadian crude oil is the only economical source of crude oil for many domestic refining facilities and the underground pipeline facilities tied to them which are important strategic facilities from the standpoint of national security on the northern border of the United States, useful for air defense in the event of enemy attack on this country coming over the poles and the investments of the stockholders in such refining and pipeline facilities would be placed in jeopardy or wiped out and private contracts in connection therewith would be violated in the event the flow of Canadian crude oil into the United States is restricted or interrupted; (D) United States domestic investments geared strictly to transportation, refining, and marketing of Canadian oil under long-term contracts consistent with existing foreign trade policies of the United States should not be impaired or wiped out or otherwise discriminated against in favor of domestic investments geared to domestic crude oil; (E) Canada is a net importer of petroleum products from the United States and, (F) Trade relations and diplomatic relations with our excellent land neighbor to the north should not be further strained; and be it fourther

Resolved by the House of Representatives of the State of Texas, That the President of the United States be urged to limit imports of foreign oil to the percentage set by his Cabinet Fuels Policy Committee as the maximum possible without endangering the security of the United States; and be it further

Resolved, That the clerk of the house be directed to transmit a copy of this resolution

to the President of the United States and to each Member of Congress from Texas.

WALLING.
ANDERSON.
WILSON OF YOUNG.
WILSON OF POTTER.
WAGGONER CARR,
Speaker of the House.

I hereby certify that House Resolution 379 was adopted by the house on April 17, 1957.

DOROTHY HALLMAN,
Chief Clerk of the House.

What Will the United Nations Do About India's Defiance of It?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

PROBLEM OF KASHMIR STALEMATED IN U. N.
(By Edgar Ansel Mowrer)

If the Secretary General of the United Nations, Dag Hammarskjold, cares as much about international law and morality as he showed when supporting Egypt in the Gaza strip, he must be losing a lot of sleep. For India remains in full contumacy in the matter of occupied Kashmir.

Years ago, the U. N. Security Council recommended that India and Pakistan consent to an objective plebiscite to determine the choice of the Kashmiris as between India and Pakistan.

Pakistan has always been willing. India has stalled. India has gone ahead and formally annexed the larger part of Kashmir, which its soldiers hold in defiance of the Security Council.

India's representative at the United Nations, the endlessly eloquent Krishna Menon, has tried to defend India's viewpoint—and succeeded only in boring his hearers. India's Prime Minister, Mr. Nehru, has stated publicly India is not compelled to obey the United Nations on any point that is not in India's interests.

Technically he is right—for the moment. The U. N. Security Council could, of course, take strong measures to enforce compliance on India, but only if all five permanent members agreed. Under present conditions India can count on a Soviet veto.

MAJORITY DOUBTFUL

The U. N. Assembly can by a two-thirds majority recommend that its members take action against India. But with the present Assembly packed with small, backward states sympathetic to India, and Communist states bent on making trouble, it is doubtful if a majority can be found to recommend action. Even if it could, it is more doubtful if anybody would try to compel India to comply.

To logical people this merely makes more glaring the sickness of a world organization whose members are ready to coerce Britain, France, and Israel, but afraid to take steps against openly defiant India.

No doubt some could be found to applaud a town marshal ready to move against boy car thieves and pickpockets but afraid to tackle mean horse thieves and murderous highwaymen. Better some law and order than none. Most people cannot see it that way.

To salve its conscience and make the scandal somewhat less visible, the U. N. recently sent Gunnar V. Jarring of Sweden to Kashmir on a mediation mission. He has had no cooperation from India. Now, however, Pakistan, strong in its belief the Kashmiris prefer union with it, has suggested that the United Nations send a full-fledged factfinding mission to the area.

NO REASON FOR MISSION

There is, of course, no reason for any such mission since the facts in the matter are painfully clear. India obviously does not believe it has a case since it opposes submitting the dispute to the world court. But India, as the fortunate possessor of most of Kashmir, including the famous Vale, relies upon its own force to keep it—exactly as Israel might have done to keep Sinai and the Gaza strip.

Israel got out. India remains.

Pakistan is, however, unlikely to allow matters to remain as they are. If Pakistan again brings the case before the U. N., it is hard to see how the United States, as the champion of peace and legality against its own closest allies, can refuse to vote for action against India. Such a motion may—as I suggested—well be defeated by the large pro-Communist, antiwhite minority in the United Nations.

Even so, it would serve a useful purpose. It would compel every member government to stand up and show its colors, be counted on the side of "equal justice under law" or on the side of selective injustice—the conception that former colonies have rights which old and established states cannot claim.

Such a revelation would certainly clarify a lot of things.

New Hope for Hells Canyon

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, one after another the ruses and excuses of the administration for putting private-power interests ahead of the interests of the people fall like tenpins before an expert bowler's ball. The facade of modern Republicanism is certainly being eroded by the administration's own—and open—actions. In granting Idaho Power Co. a fast tax writeoff the administration has certainly destroyed the last of the feeble arguments it managed to muster for granting the license to Idaho Power Co. to nibble away at a site which every reason and every voice of conscience dictates should be a part of the comprehensive development to benefit all the people of this country.

I request permission to insert the following pertinent remarks of the Public Affairs Institute, May 3 issue of Washington Window, New Hope for Hells Canyon:

NEW HOPE FOR HELLS CANYON

That inviting, dreamlike picture painted by the private utilities, the administration, and most of the Nation's press, that private power provides the citizenry with electrical energy at no cost to the taxpayers, has just been shattered. The shattering was done not by the proponents of low-cost, public power but by the picture painters, themselves.

The Office of Defense Mobilization did this neat trick in announcing that it has issued to the Idaho Power Co. a multi-million-dollar tax writeoff for the two private dams near the Hells Canyon site on the Snake River along the Idaho-Oregon border.

The official Government release announcing the tax writeoff declared: "ODM emphasized that the accelerated tax amortization certified by the agency represents the investment of private capital and does not involve investment of Government funds."

Judging by the loud outbursts from Senators ranging from WAYNE MORSE, Democrat, of Oregon, to HARRY BYRD, Democrat, of Virginia, the ODM announcement fooled no one. It adds up to the undeniable fact that the Treasury is being denied tax receipts, thus putting additional burden on other taxpayers.

"I am not surprised by this additional act of favoritism by the administration," declared MORSE. "As I predicted many times, the taxpayers would end up paying for the Idaho Power Co. dams. Supposedly, 'private enterprise' at Hells Canyon was to pay its way. Now the administration is giving the company a tremendous handout for underdeveloping the peoples' resources."

BYRD called the action of ODM "utterly indefensible" and said he planned to open hearings on his bill to repeal authority to grant tax writeoffs similar to that received by Idaho Power.

What ODM did was to permit Idaho Power to write off in 5 years 65 percent of the estimated $65 million cost of the projected Brownlee Dam, and to write off 60 percent of the $36 million estimated cost of the Oxbow Dam—a total tax benefit of $65 million.

The belief is that the estimates of costs used by Interior and ODM are far too low. But even on their figures it will save Idaho Power $29 million in the next 5 years and add that much of a burden to the taxpayers.

This is only part of the story. In 1953 the Federal Power Commission characterized these tax writeoffs as follows: "This has the precise effect of a grant by our Government to a certificate holder of an interest-free loan."

On the most conservative basis, a 50-year loan of $29 million at 6 percent is worth $326 million.

"In very simple terms, Idaho Power Co. is being permitted to avoid millions of dollars of tax payments during the next 5 years," declared Morse on the Senate floor. "This means shifting the burden of that tax loss plus interest payments to other taxpayers."

The Oregon Senator could not resist pointing out that "the repeated acts of favoritism to the Idaho Power Co. bring to mind the series of questionable actions to put across the Dixon-Yates deal."

He added that the Hells Canyon Dam is urgently needed for flood control—for low-cost power production to avert a serious shortage. It is urgently needed as the only major multipurpose dam that can assure full downstream development. It has the tremendous advantage of imperiling no conservation values; indeed it will be of positive value for recreation, while other administration-favored projects imperil fish, wildlife, and wilderness.

The ODM tax writeoff and resulting developments are charging the proponents of low-cost public power and development with new hope. Last month when the United States Supreme Court, in a strictly procedural ruling, refused to review the Federal Power Commission's licensing of three Idaho Power Co. dams, public power advocates saw dark days ahead.

Now a startling change in the entire atmosphere is in evidence. MORSE has introduced a new Hells Canyon bill, and already it has been favorably reported out of the

Senate Interior Committee. The stage is now set for a new private versus public power debate. This time, though, there are some new elements added which were not in existence in 1956 when Hells Canyon was voted down by the Senate, 51 to 41.

For one thing, it is doubtful that the full-page ads in national magazines declaring the private dams on the Snake River would save the taxpayers money will carry any weight, even if repeated.

Secondly, new power groups are adding their weight to the fight for Hells Canyon. They are the conservation groups, the wildlife people, the sportsmen, the parks and forestry people, and those dedicated to saving our national resources.

As columnist Thomas L. Stokes wrote recently: "It is getting a little hard to sit here and watch the rape of our natural resources—and at the expense of us taxpayers."

H. R. 6771: Assistance for Schools of Public Health

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, last month I introduced H. R. 6771, a bill to amend section 314 (c) of the Public Health Service Act, so as to authorize the Surgeon General to make grants-in-aid for the support of public or nonprofit educational institutions which provide training and services in the fields of public health and in the administration of State and local public health programs.

This legislation is the outgrowth of my participation in the annual meeting of the Association of Schools of Public Health in February. Congressman BILL NEAL, of West Virginia, and I attended the meeting as representatives of the Health and Science Subcommittee of the House Interstate and Foreign Commerce Committee. In the discussions of the public health educational needs at this meeting, I was impressed by the scope and importance of this program, the difficulties with which the school administrators are faced, and by their sincere devotion to the humanitarian objectives of the public health program.

Of the 11 schools of public health, 5 are publicly owned and supported—University of California, Berkeley; University of Michigan; University of Minnesota; University of North Carolina; and University of Puerto Rico. The remaining 6 schools are private non-profit institutions—Columbia, Harvard, Johns-Hopkins, Pittsburgh, Tulane, and Yale Universities. This years' combined enrollment is 1,152 graduate students and 536 undergraduate students. The largest single group of the graduate study group consists of physicians. The undergraduates are mostly public-health nurses.

The problems of obtaining adequate financial support of these schools are extremely difficult. A large percentage of the students at the individual schools are from out-of-State or from other nations, making it difficult for publicly supported schools to secure adequate operating funds from the State legislatures. Since most of the graduates of all these schools enter the public service at Federal, State or local levels, it has been almost impossible to obtain the usual degree of financial support from alumni.

In discharging its responsibilities in the field of public health, the Federal Government relies to a considerable extent on the teaching and research activities of the schools of public health. It therefore has a direct and important interest in the adequate functioning of these schools. While the grants provided for in H. R. 6771 will not completely solve the critical financial problems facing the schools of public health, they would provide much needed assistance to permit more effective operation of the public health educational program.

Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the text of a letter which I addressed to the deans of the schools of public health, inviting their comments on the objectives of H. R. 6771. I would also like to include the texts of letters received from the various deans, expressing their views on this important legislation, including a copy of a letter written to the subcommittee chairman, Congressman JOHN BELL WILLIAMS, of Mississippi:

APRIL 18, 1957.

DEAR SIR: As a result of our discussions for the need of schools of public health at the meeting in San Juan and subsequent negotiations with Dr. Stebbins, of Johns Hopkins University, I have introduced the enclosed bill, H. R. 6771.

The measure would provide up to $1 million to enable the Surgeon General to make grants-in-aid for the support of public or nonprofit educational institutions, providing training, specialized consultative services, and technical assistance in the fields of public health and in the administration of State and local public health programs.

H. R. 6771 has been referred to our health and science subcommittee of the House Interstate and Foreign Commerce Committee. While the subcommittee has not yet scheduled hearings on the bill, I am hopeful that it will receive prompt consideration as soon as the views of the Public Health Service are received.

We will welcome any suggestions or comments which you may wish to make on this important matter.

Sincerely yours,

GEORGE M. RHODES.

THE JOHNS HOPKINS UNIVERSITY,
SCHOOL OF
HYGIENE AND PUBLIC HEALTH,
Baltimore, Md., April 22, 1957.

The Honorable GEORGE M. RHODES,
Congress of the United States, House of Representatives, House Office Building, Washington, D. C.

DEAR CONGRESSMAN RHODES: This will acknowledge your letter of April 18 in which you state that you are introducing a bill, H. R. 6771, incorporating the basic principles of the proposal which the Association of Schools of Public Health submitted to you.

As I stated in my previous letter, we appreciate, more than we can tell you, your real and continued interest in the problems of the schools of public health. The proposal which we submitted to you, as I pointed out in my letter of March 28, does not by any means solve all of the problems of the schools of public health, but it will go a long way, if properly implemented, in solving the immediate problems of the schools. We all feel that it is imperative that the Federal Government recognize in some way, not only the present contribution of the schools of public health, but the potential contribution of these schools in the training and development of the services so urgently needed in our country.

As we pointed out to you in our meeting in Puerto Rico, at the present time the schools of public health are, in a sense, subsidizing the Federal Government in that we accept each year hundreds of students who are being trained for public service. The schools bear the major part of the financial burden of training these students. The cost of training in schools of public health is not significantly different from the cost of training students in schools of medicine, and as in the case of the schools of medicine, the tuition charged by the schools of public health is a small fraction of the total cost of training these students, all of whom, or at least a major proportion, go into public service, many of them in the Federal Government, and the rest in State and local health services.

Under present conditions, the privately endowed schools find themselves in the position of being no longer able to bear this added expense, and as you know, the State schools are constantly threatened with the reduction in appropriations because of the small proportion of students enrolled, who are from the State in which the school is located.

My colleagues in the schools of public health join with me in expressing our very deep appreciation for your interest and your energy in forwarding the movement for aid to the schools of public health. We want to assure you of our willingness to assist you in any way in supporting the legislation which you have introduced. We have had meetings with various groups of the Association of State and Territorial Health Officers, with many groups of public and private health agencies, and, insofar as we can determine, there is universal support for this type of legislation.

If, in your opinion, there is anything that the representatives of the schools of public health could possibly do to assist you in advancing this program, please let us know. I can assure you of the availability of the deans of the schools, or of other members of the faculty to assist you in any way that you might consider appropriate in the further support of these very important measures for the improvement of public health.

Very truly yours,

ERNEST L. STEBBINS, M. D.,
Director.

UNIVERSITY OF PUERTO RICO,
SCHOOL OF MEDICINE,
SCHOOL OF TROPICAL MEDICINE,
San Juan, P. R., April 22, 1957.

Mr. GEORGE M. RHODES,
House Office Building,
Washington, D. C.

DEAR MR. RHODES: Many thanks for your letter of April 18 including copy of bill H. R. 6771 introduced by you to the Congress. I am sure all the schools of public health, as our own does, appreciate your efforts to assist them in doing their job as efficiently as it can be done.

We are already admitting students for next year's class. If financial help as proposed in your bill becomes available, many of our worries as to how we are going to operate next year and how we are going to improve and expand our program in some areas of public health will be relieved in no small part.

Sincerely,

GUILLERMO ARBONA, M. D.,
Head of the Department of Preventive Medicine and Public Health.

UNIVERSITY OF PUERTO RICO,
SCHOOL OF MEDICINE,
SCHOOL OF TROPICAL MEDICINE,
San Juan, P. R., April 24, 1957.

Congressman GEORGE M. RHODES,
Committee on Interstate and Foreign Commerce, House Office Building, Congress of the United States, Washington, D. C.

DEAR CONGRESSMAN RHODES: I hope you can appreciate how grateful we in Puerto Rico are for your broad vision in introducing H. R. 6771. It is quite apparent that you quickly grasped the special needs of schools of public health and have proposed a simple legislative amendment which will make a modest beginning toward solving the enormous economic problems of such institutions.

Our university has been relatively generous, in comparison to its many requirements, in initiating graduate programs in public health. However, had we not received the temporary support of ICA, we would never have undertaken the curriculum leading to a master in public health. At least 50 percent of our public health students come to us from outside Puerto Rico—principally from Latin America. This is not a unique characteristic of our particular school but an indication that public health in the United States has assumed world leadership.

Your bill H. R. 6771 would provide economic assurance which would help to stabilize the development of our school. While I am confident that $1 million will not meet total requirements of all the schools of public health, it will make a noble effort and give great encouragement to university presidents who have frequently had mixed feelings in apportioning their meager funds for graduate professional education.

Again let me remind you of what a great pleasure it was to have you, Congressman NEAL, and Mr. Borchardt here in Puerto Rico for an all too brief visit.

Cordially yours,
E. HAROLD HINMAN, M. D.,
Dean.

UNIVERSITY OF CALIFORNIA,
SCHOOL OF PUBLIC HEALTH,
Berkeley, Calif., April 23, 1957.

The Honorable GEORGE M. RHODES,
Fourteenth District, Pennsylvania, House Office Building, Washington, D. C.

DEAR MR. RHODES: Thank you for your letter of April 18 informing me of your farsighted and energetic steps to aid our Nation's public health. As a member of the executive committee of our Association of Schools of Public Health, may I express our deep appreciation for your introduction of H. R. 6771. This bill clearly presents the pathway for critically necessary aid to schools of public health in their national and natural setting. They are truly meeting national (and international) public health needs in training, consultation, and technical assistance as you and your fellow committeeman, Congressman NEIL, discussed in our Puerto Rico meeting.

In order that I may seek our university's full support, would it be possible for me to have 10 copies of H. R. 6771?

With kind regards.

Very sincerely,
CHARLES E. SMITH, M. D.,
Dean.

TULANE UNIVERSITY,
SCHOOL OF MEDICINE,
New Orleans, La., April 24, 1957.

Mr. GEORGE M. RHODES,
Congress of the United States, House of Representatives, Washington, D. C.

DEAR MR. RHODES: I appreciate very much your letter of April 18, 1957, with attached copy of H. R. 6771.

We enjoyed very much our meeting with you in San Juan and appreciate your deep interest in the financial needs of schools of public health in the United States.

If I may be of any service to you, please do not hesitate to call on me.

Yours sincerely,
W. L. TREUTING, M. D.

COLUMBIA UNIVERSITY,
April 29, 1957.

Representative GEORGE M. RHODES,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE RHODES: Thank you very much for your letter of April 18 and the attached bill H. R. 6771 regarding grants in aid to assist schools of public health. Speaking for myself and for the vice president of the university in charge of medical affairs I want to say that we are very grateful that you have taken this initiative. Schools of public health essentially produce people for public service and not for private practice and large income. As schools which occupy this rather unique position we nevertheless find ourselves in financially difficult positions to maintain the size of class or the quality of instruction we wish. Any assistance which can be forthcoming will be used constructively and will not replace money now being invested by the university. We thank you for your interest and hope that something will come of your efforts.

With kind regards,

Sincerely yours,
RAY E. TRUSSELL, M. D., M. P. H.,
Executive Officer, School of Public Health and Administrative Medicine of the Faculty of Medicine.

THE UNIVERSITY OF PITTSBURGH,
GRADUATE SCHOOL OF PUBLIC HEALTH,
Pittsburgh, Pa., May 1, 1957.

Hon. GEORGE M. RHODES,
House of Representatives,
Washington, D. C.

DEAR MR. RHODES: Please pardon my delay in not responding earlier to your kind letter of April 18 with a copy of H. R. 6771, which you were good enough to introduce.

I shall keep in close touch with Dr. Ernest L. Stebbins and shall be most anxious to do whatever I can to promote hearings by your House Subcommittee and otherwise.

I know that as a result of your discussions with the Deans of the Schools of Public Health in San Juan in February, you are keenly aware of the precarious financial situation which faces these schools. They are unique among educational institutions, both in training for public service and in rendering specialized consultative services and technical assistance to State and local health departments. Your interest in this important matter is deeply appreciated.

With personal regards, I am,

Sincerely,
THOMAS PARRAN, M. D.,
Dean.

YALE UNIVERSITY,
DEPARTMENT OF PUBLIC HEALTH,
New Haven, Conn., May 6, 1957.

The Honorable GEORGE M. RHODES,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN RHODES: We enjoyed your company and suggestions, and those of your associates, while we were in Puerto Rico for the annual meeting of the Schools of Public Health. Thank you for your good letter of April 18, 1957, and for the assistance of the bill H. R. 6771 which you introduced.

You have indicated by this step your recognition of the urgent needs of the schools and the importance of this great program of so much significance to so many of our people.

We will do our best with the tools at hand and we appreciate the interest and understanding of you and your committee.

Sincerely yours,
IRA V. HISCOCK,
Chairman and Past President, American Public Health Association.

HARVARD SCHOOL OF PUBLIC HEALTH,
Boston, Mass., May 8, 1957.

The Honorable JOHN BELL WILLIAMS,
The United States House of Representatives, House of Representatives Office Building, Washington, D. C.

DEAR CONGRESSMAN WILLIAMS: As dean of 1 of the 11 accredited schools of public health in the United States, I write in behalf of H. R. 6771 which has been introduced by Congressman RHODES of Pennsylvania. It is my belief that this bill deserves the most serious consideration and active support which you and your subcommittee can give to it.

You are, of course, familiar with the data submitted by the Association of Schools of Public Health documenting (1) the shortage of public health personnel in this country; (2) the fact that the graduates of the schools of public health enter the public service in many States throughout the country; (3) the fact that the schools of public health are seriously in need of funds, particularly for teaching and for general operations.

Federal aid to schools of public health is clearly justified because the schools are in no sense regional. They provide public health personnel for the Nation as a whole. For example, 9 graduates of the Harvard School of Public Health presently serve in Mississippi. Among them are 3 division heads of the Mississippi State Board of Health.

I respectfully urge you, as Chairman of the Health and Science Subcommittee, to schedule hearings on H. R. 6771 at the earliest opportunity. I hope this important measure will have your personal support. Please let me know if members of our faculty and I can help in any way.

With best wishes,

Sincerely yours,
JOHN C. SNYDER, M. D., *Dean.*

UNIVERSITY OF MINNESOTA,
COLLEGE OF MEDICAL SCIENCES,
Minneapolis, May 11, 1957.

Hon. GEORGE M. RHODES,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. RHODES: Thank you for your recent letter with reference to House Resolve 6771, which you have introduced. I am enclosing a copy of a letter which I have sent to the chairman of the Health and Science Subcommittee of the Interstate and Foreign Commerce Committee. I sincerely hope that your proposal will meet with success.

It was a real pleasure to meet with you in Puerto Rico and to have the opportunity of presenting to you and your colleagues some of the critical needs of the schools of public health. I know that we are all greatly indebted to you for the interest that you have taken in these problems.

Very truly yours,
GAYLORD W. ANDERSON, M. D.,
Mayo Professor and Director, School of Public Health.

The Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. BERRY. Mr. Speaker, I wish to call the attention of the House to the fact that today is the 21st birthday of the Rural Electrification Administration. The act was signed into law by the President 21 years ago.

REA has truly become of age. Loans to borrowing cooperatives now exceed $3¼ billion of which borrows have actually drawn over $2.75 billion. Repayments by borrowers have exceeded $621.2 million of which $377.8 million is principal and $243.4 million interest. A total of 761 borrowers have made advanced payments of $95,870,361.

REA Administrator David A. Hamil reports that 94.2 percent of the Nation's farms are now electrified. Nine hundred and eighty energized system have been financed by REA operating over 1½ million miles of rural line and serving over 4¼ million customers.

Based on an average family of 4 people, this means that approximately 15 million people are benefiting from the Rural Electrification Administration program.

Congress passes the laws and establishes programs like REA. The successful operation of these electric cooperatives is dependent on devoted and capable leadership among the local communities in the Nation.

In South Dakota many of our leading citizens serve on boards of directors and in other similar capacities. Our REA managers put in long days to meet the problems which arise in connection with operation of an REA cooperative.

Our South Dakota situation must be exemplary of the national picture for electric cooperatives have flourished to the point where the net worth of debt-free ownership nationally is now $404.7 million.

The State of South Dakota has shared in the benefits of the REA program. Total REA loans in our State amounted to $92,524,862 to 34 different cooperatives. This total amount represents 212 separate loans, and it provided service to 75,540 consumers.

We are justifiably proud that South Dakota REA's are meeting their repayment obligations and meeting them in time. No South Dakota loans are in arrears. In fact, of the $10,846,629 which have been repaid on the principal, $3,175,182 have been paid in advance of the due date. Interest payments to date are $5,566,733.

I was interested in receiving information from the REA Administrator the other day that in 1945, just before the Rural Electrification Administration was established, only 10.9 percent of the farms in the United States were electrified and in South Dakota only 3.5 percent enjoyed the benefits of electrical service. A moment ago I mentioned that 94.2 percent of the Nation's farms are now electrified, and in South Dakota the figure is 86.7 percent. South Dakota has made a tremendous percentage increase during this 21-year period, going from 3.5 percent to 86.7 percent. It is well to note that private power companies have counted for some of this increase and have worked jointly with cooperative in making power available and otherwise assisting with the phenomenal development.

In South Dakota, as in every State, REA development has not only been of great benefit to the farmer and rancher, but has also provided great economic value for the mainstreet businessman. The consumer of REA power finds that he can increase his production or work more efficiently, which provides him with additional purchasing power. This results in an economic boost that is felt throughout the community. The REA consumer purchases appliances, plumbing, wiring, electric motors, and many other items which benefit both the farmer and the businessman.

A listing of the REA electrification loans in western South Dakota alone during recent years is an indication of how the rural electrification program is continuing to move forward. I am attaching a table listing the recent REA loans in the Second Congressional District.

West River Electric Association, Inc., Wall	$274,000
Butte Electric Cooperative, Inc., Newell	390,000
Lacreek Electric Association, Inc. Martin	750,000
Moreau-Grand Electric Cooperative, Inc., Timber Lake	390,000
Grand Electric Cooperative, Inc., Bison	975,000
Cherry-Todd Electric Cooperative, Inc., Valentine, Nebr	540,000
West Central Electric Cooperative, Inc., Murdo	340,000
Rushmore G. & T. Electric Cooperative, Inc., Rapid City	3,500,000

Breathing Space—The Plight of the Man in the Middle

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, the business and professional man in the middle-income brackets is very hard hit today. So is the small-business concern, not protected by accumulated reserves and subjected to multiplying and constantly increasing State and local taxes, in addition to Federal taxes.

In the area of Federal taxation the small-business man needs tax relief badly and would benefit from a real revision of the tax laws to give him the benefit of an increased surtax exemption, more realistic allowances for costs and depreciation and the right to elect whether to make his returns as a corporation, partnership, or individual.

Likewise, the average middle-income business and professional man, unable to increase his charges adequately to compensate for the increased costs piling up on him from all sides, should be the object of special consideration in any new tax-reduction legislation which may become possible in the event of a surplus of Government receipts over expenditures.

Mr. Speaker, I made some suggestions for tax relief to these hard-pressed groups in a recent speech at Sunbury, Pa., which, under leave granted, I include herewith:

BREATHING SPACE—THE PLIGHT OF THE MAN IN THE MIDDLE

(Speech of Representative HUGH SCOTT, Sixth District, Pennsylvania, before Sunbury Chapter American Institute of Banking, May 1, 1957)

In recent months, two of the great English-speaking countries took a long look at the hardest-hit area of their body politic—the middle-income group, the great unorganized, the free-enterprising, white-collar people. A Conservative government in Great Britain and a Liberal government in Canada faced up to the fact that the initiative-takers, the business and professional people who provided most of the pot of gold at the end of the government's tax rainbow were getting pretty fed up. They were providing most of the initiative, churning up most of the revenue. At the same time, they were being shaken loose by hungry governments of all too large a share of the fruits of their initiative.

Like the farmer's pigs in France, they were rooting up the truffles only to be rapped on the snout and deprived of the enjoyment of their diggings. They were growing increasingly snoutsore. Result: There was a rising tendency to forego initiative, to pass up opportunities, through initiative, to increase their earnings.

Great Britain and Canada decided to redress an unfair situation, before the full consequences of their tax policies confronted them, with a law no Parliament could repeal—the law of diminishing returns.

They enacted new revenue laws extending substantial reductions to the middle-income groups. They acted in the sound belief that this increased incentive will, in fact, increase their national revenues. I think they were wise and I think what they did was just.

We in the United States must put our fiscal house in order and prepare to do the same thing. If there is a surplus, then proposals for tax reductions will gain momentum.

How can we manage to assure a surplus?

What should be done with such a surplus?

What tax-cut incentives would supply impetus to the sorely pressed men in the middle?

A surplus exists when we spend less than we take in. We are headed toward our third successive balanced budget. This is as many times as the budget was balanced in the entire preceding 25 years.

We are faced with a $24 billion carryover in spending authorized by the previous 84th Congress. They failed to enact legislation to put the Federal budget on an annual accrued expenditure basis as recommended by the bipartisan Hoover Commission. Because of the default of that Congress, economy can only begin belatedly by cutting in advance the future backlog of carryover authorizations, by returning to the Treasury unexpended funds where possible and by extreme care in commitment to new authorizations.

The House of Representatives has already cut new appropriations by $1.2 billion.

Forthcoming action on agriculture, defense and American aid abroad will permit further substantial cuts. The President has already approved a $254 million cut in soil-bank funds and a $500 million reduction in Army appropriations. If the Senate holds the line—and there are now some indications to that effect—the new budget will have lost some water, and gained in economic realism.

The recipe for a surplus, like the recipe for rabbit stew, properly begins with "first catch your rabbit." Receipts have been estimated at about $73 billion. If the economies above suggested can be made to stick and if receipts justify estimates, then we shall be entitled to consider what should be done with the resulting surplus.

Government, in good conscience, should treat a surplus as a trust for two purposes: to reduce its debts and to enable its citizens to retain as much of their earnings as possible.

There are many views as to the priorities, as between public debt reduction and tax relief.

I have introduced a bill, H. R. 7635, which reflects my judgment as to a fair method of dealing with a Federal surplus when it is achieved.

My bill requires that an established surplus be applied one-half to the reduction of the national debt and one-half to the reduction of personal income taxes. This tax reduction formula would extend the same percentage of tax relief as the proportionate reduction of taxes bears to the total income tax receipts of the previous fiscal year. Thus, if the one-half of the surplus so applied equals 7 percent of the total personal income tax receipts, a 7 percent tax reduction would be authorized in the upcoming income tax returns.

Other tax proposals by like-minded members approach the problem of tax relief in varying ways, all of which warrant serious consideration.

These suggestions include relief from double taxation of dividends, increase in exemptions for dependents, lowering capital gains taxes, permitting full deduction of capital losses, relief to corporations.

There is also the problem of greatly needed relief to small business. Here I believe the formula of Andrew Mellon would operate most effectively: a reduction of taxation upon small business should work actually to increase tax revenues and it would certainly reduce the number of small business failures.

My own bill (H. R. 6033) to assist small and independent businesses, is similar to proposals offered by several other Members of Congress.

These proposals include, among others, provision for a normal tax rate of 20 percent with an increase in present surtax exemption, provides certain growth, expansion, and modernization exemptions, and authorizes more rapid amortization of property utilized for the production of profit.

This bill also provides credits for losses incurred through investment or loans to small and independent business enterprises. It also permits the small or independent businessman an election, in filing tax returns, for corporations to file as individuals or partnerships, and vice versa.

The present House Ways and Means Committee has steadfastly refused to consider any relief to small and independent businessmen and unless this attitude alters, needed relief in this important quarter of our economy will continue to be denied.

I submit that if your Congress achieves the much desired surplus over expenditures, the area of incentive tax cuts to encourage renewed initiative can be located at least in part, among the foregoing suggestions.

The constant squeeze upon the man in the middle aggravated by increased, new and multiplying State and municipal taxes, has made him more tax conscious than ever before in his life. And let it not be forgotten that the percentage of increase in taxes on the State and municipal level is far outstripping the Federal tax level. Fortunately, some counties, such as yours, are competently administered and some States have legislatures to put some sort of brake on governors who like to think big and spend bigger.

Returning to the Federal Government, it is unfortunate that two-thirds of our annual fiscal burden bears heavily upon us because of "the bear tht walks like a man"—one Khrushchev by name, one huge menace by intent—who does not yet give believable evidence of willingness to cooperate in mutual reduction of armaments.

The nucleus of our dilemma lies in the fantastic cost of our nuclear deterrents.

As the President said in his state of the Union message, we know that "a sound and safeguarded agreement for open skies, unarmed aerial sentinels, and reduced armament would provide a valuable contribution toward a durable peace in the years ahead."

Until the auspicious opportunity for peaceful solutions genuinely presents itself, we must confront armed and godless atheism with the strength of our truth and the truth of our strength.

As Shakespeare says in Measure for Measure: "Heaven grant us its peace, but not the king of Hungary's."

Here within our homeland's bounds your Government owes you a duty to pursue policies supporting a healthy, growing economy capable not only of providing the resources to keep the Government in forward motion, but also to give us ever greater scope to better our own lot.

As free men plan and execute their plans, as they find incentive to take risks and to earn rewards, they create an economy increasingly marked by equality of opportunity for all.

It has been well said, by a percipient observer, that the greatest of our American resources is to be found in the vigorous spirit of self-reliant men and women interested not only in receiving incomes but in earning them.

And on that note, may I leave with you a quotation from Goethe: "That which we have inherited from our forefathers, we must earn again in order to deserve."

Our Separate Rights

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a prize-winning essay titled "Our Separate Rights," prepared by Donna McCay, Charleston, S. C. Mr. Speaker, I consider it a great privilege to include this essay. I have known this young lady all of her life. She recently won the first prize for the entire State of South Carolina in a contest sponsored by the Sons of the American Revolution. She is a very smart young lady and should become one of our outstanding Americans.

The essay follows:

OUR SEPARATE RIGHTS

(By Donna McCay, St. Andrew's Parish High School, Charleston, S. C.)

The Constitution of the United States created a federation, that is, a Government in which there are two levels of authority—a central Government and a local government—with the citizens subject to the laws of both. Each exercises final authority in specified areas. The Federal Government exerts power principally on external matters, and the States are supreme in their internal affairs. In a federation, where the powers are thus divided, the Federal Government and the States preserve their integrity, give strength to each other, act as checks upon too much centralization or too much localization, and cooperate in carrying out their authority.

There has been and continues to be much disagreement over this balance of power. This is largely due to overlapping authority in some matters because of the vagueness and contradictory nature of two clauses in the Constitution. The first is the necessary and proper clause, which is the basis for the implied powers doctrine of the Federal Government. The second clause is that which reserves to the States any power not delegated to the Federal Government. Between the two there is a border line of uncertainty.

Since the adoption of the Constitution there has been a tendency to increase the authority of the Federal Government at the expense of the States. This shift in the balance of power has taken place gradually. Twice the Constitution has been amended to increase Federal authority, and frequently the doctrines of implied powers has been expanded to this end. Judicial interpretation of the intentions of the framers of the Constitution has generally upheld or broadened Federal power. Another effective method of security additional control is that of Federal aid to States for some project which the State is financially unable or unwilling to undertake. In accepting this aid the States usually accept Federal supervision of the work.

The greater efficiency of the Federal Government as compared with that of State government has been responsible in part for this increase in centralization of power. The chief reason, however, has been the broadening scope of modern civilization bringing a need for more centralized management for its great social and economic problems. Today there is a slight countertrend as many express concern over the rapid expansion of Federal power. The Eisenhower administration advocates restoring some of the States' authority, but the steps it has taken indicate only a mild breeze of reaction to the headlong centralization of power.

The State is still fundamental to the very operation of the Federal Government because in the exercise of its functions the Federal Government must rely upon the States to discharge their duties. Otherwise, a general breakdown would occur, no matter how efficiently Federal officials might try to fulfill their obligations.

The expansion of Federal power should not be permitted to increase indefinitely, lest it prove a menace to popular government. The United States has a population of 170 million and an area equal to three-fourths of all Europe; it has metropolitan centers, farmlands, deserts, mountain peaks where snow never melts, and valleys where snow never falls. Among the people there are differences of color, customs, and creed. The 48 States are too diverse to be fitted into an absolutely uniform mold. No Central Government, however efficient, can solve all their problems. It must also be remembered that an overburdened National Government may become unresponsive to the wishes of the people.

There is a vital need for cooperation among units of Government to work together harmoniously, and the States have proved their value as partners of the Nation in a great variety of cooperative enterprises.

Appendix

Massachusetts Spokesman on Need for Federal Leadership

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mrs. GREEN of Oregon. Mr. Speaker, yesterday, before the Subcommittee on Special Education of the House Committee on Education and Labor, Mr. John D. Coughlan, chairman of the Massachusetts Youth Service Board, testified on the need for Federal leadership to State and local efforts to prevent and treat juvenile delinquency. Mr. Coughlan's statement showed great knowledge of the subject matter before the subcommittee, as well as deep thought concerning the proper role of the Federal Government with respect to this far-reaching problem. I was very much impressed with what Mr. Coughlan had to say and the many cogent points he made as to the need for farsighted and knowledgeable leadership on the part of the Federal Government in the field of juvenile delinquency. I ask unanimous consent, therefore, Mr. Speaker, that Mr. Coughlan's prepared statement be printed in the CONGRESSIONAL RECORD.

The statement follows:

STATEMENT OF JOHN D. COUGHLAN, CHAIRMAN OF MASSACHUSETTS YOUTH SERVICE BOARD AND DIRECTOR OF THE DIVISION OF YOUTH SERVICE, CONCERNING FEDERAL AID TO ASSIST IN COMBATING JUVENILE DELINQUENCY, MADE AT THE CONGRESSIONAL HEARING BEFORE THE SUBCOMMITTEE ON SPECIAL EDUCATION

Those of us who have official responsibilities for combating delinquency and crime have become increasingly alarmed in recent years over the dangerous increase in offenses against the law committed by juveniles. A recent analysis of the situation by Dr. Martha May Eliot, longtime Chief of the Children's Bureau, indicates that juvenile delinquency has risen 70 percent since 1950. J. Edgar Hoover, a month or so ago, presented startling figures showing not only a national increase in crime but also a shocking percentage of serious crimes committed by persons under the age of 21.

One of the most significant aspects of this situation is that the increase is not confined to any section or State or group of States, but extends throughout the whole Nation. It is reasonable to say that juvenile delinquency is no longer contained by State boundaries and that it is no longer exclusively a State or local concern. Scarcely a week goes by that we in Massachusetts are not arranging for the return of one of our delinquents or for sending one back to another State. In California, I am informed, a special train is operated periodically to return runaway and delinquent boys and girls to their home States across the Nation. Add to this wiping out of boundaries the alarming increase both as to number and to seriousness of offenses, and the problem can be clearly seen as no longer one of infected local areas but rather as a serious and growing contamination of the whole Nation's youth. As such, therefore, it has become not only a problem for the States and the local communities, but also a problem of Federal concern because it directly affects the national welfare.

Juvenile delinquency is like a disease—almost a plague in our times. It spreads from individual to individual, from group to group, from generation to generation.

It is my considered conviction that unless a nationwide effort is made in the present year and those immediately ahead to solve this social problem, or, if not to solve it, at least to arrest the increase, the consequences to American youth will be devastating. At present spreading rates, if unchecked, it is horrifying to think that this Nation may well have 2 million juveniles arrested annually by the police by 1967, only 10 years from now.

The implications of this for national defense are obvious. We are all familiar with the necessity for maintaining our manpower reserve. Let me point out that 2 million corrupted youths represent a serious lessening of that manpower because they make poor citizens and unreliable soldiers. Contrary to general belief, the armed services do not, except in some individual cases, reform serious delinquents. In fact, recognition of this has led to a policy of rejection by the services of those with juvenile records.

Let me point out, also, that adult criminals are largely recruited from the ranks of juvenile delinquents and that the nationwide control and prevention of crime in this and succeeding generations will depend to a large extent on the development of effective measures in the prevention and control of the antecedent condition of juvenile delinquency.

Four years ago I was placed in charge of the Massachusetts delinquency control program. As each year has passed, I have become increasingly convinced that the great challenge of our times in the field of crime and delinquency is the challenge to prevention.

It is at this point that the place of the Federal Government in the total effort becomes significant.

Since the national welfare is certainly involved, the participation of the Federal Government is imperative. There is, in my opinion, an obligation to supply leadership and stimulation to the States and the localities, as well as the kind of coordination of effort and research that only the Federal Government can provide—and has in other fields provided so well.

One outstanding example of Federal action is the recent episode of the Salk vaccine to prevent poliomyelitis. I have no doubt that the efforts to validate, to distribute, and to inoculate would still be sporadic, varied from State to State, and relatively ineffectual if the Federal Government had not assumed the obligation of leadership and coordination. I submit to you that children throughout the Nation turning to crime, menacing society, corrupting others, and at 15 or 16 becoming wanton killers or themselves falling before police guns should be equally the concern of the Congress. It is an historical fact that the decline of the great republics and democracies of the past did not result from decrease of physical prowess, but from moral degeneration.

The Federal leadership and coordination has been notable in many other areas also—in research and setting of standards for food and drugs; in the field of mental health; in the control of narcotics; in the improvement of agriculture; in the training of clinical psychologists to handle the problems of veterans, to mention only a few.

In all these areas, the leadership of the Federal Government, recognizing the national interests involved as a justification for participation, has given direction and purpose to development and improvement, and has resulted in major accomplishments that at best would be long delayed or indifferently accomplished if left to the States alone, or, at worst, would not have taken place at all.

I am not referring here to direct operational subsidy or Federal handouts, but rather to limited funds directly tagged for service and research for the accomplishment of purposes that cannot be provided by the States acting alone or independently.

It appears to me, for example, that one important area of activity with respect to crime and delinquency for the Federal Government would be to aid the States to set up pilot projects in key areas in delinquency prevention and control that would serve to provide information that would become available to other States on what methods have validity and success and what are likely to be ineffective. It might well be that such projects would help to replace outmoded ineffective methods and programs and develop programs better adapted to meet modern needs.

I am sure, also, that, like Massachusetts, there are some other States where new type programs are having a real impact on delinquency, but which are only partially effective because they must be financed by private funds, or because State funds are limited as to amount and use.

Such projects require the hiring of highly trained professionally qualified workers for whom adequate salaries must be provided. Generally speaking, rigid State salary schedules and personnel practices do not allow sufficient latitude and flexibility to hire such persons. At least, this is true in Massachusetts. It will be a long time before such State limitations can be eliminated, if ever. In the meantime, the problem grows more and more serious, and the national welfare is increasingly jeopardized. Long established policy and Federal practice, on the other hand, allows sufficient flexibility in approving grants for such projects to enable them to be effective.

Another great need in the field of delinquency prevention and control is the development of more trained workers. This need is acute in Massachusetts, as I am sure it is throughout the Nation. Unfortunately, State money cannot be used to provide stipends and scholarships or to set up adequate collaborative training with universities, and we must look to the Federal Government to meet this national need.

This is entirely consistent with Federal aid and assistance programs—for example, in the training of clinical psychologists, training of registered nurses for supervisory positions, and the training of professional workers in the area of mental and public health.

In this connection, I wish to call the attention of the committee to the fact that funds provided for the National Institute of Mental Health can, under certain circumstances, be obtained for use in programs combating delinquency. While I recognize the need for research to be carried on by Mental Health and feel that the National Institute of Mental Health and State mental health authorities will play an important part in future development of delinquency control programs, I must insist that a substantial part of Federal moneys directed at delinquency should go to those public agencies whose primary responsibility is delinquency itself, not a single aspect of many and varied responsibilities. Let me make it clear that I favor continued Federal aid in the field of mental health. I am disturbed, however, over what appears to be, so far as Federal aid funds are concerned, a tendency to regard delinquency as an exclusive province of mental health authorities.

In Massachusetts, the youth service board is an integrated State agency set up in 1949 to attack the problem of delinquency, including not only rehabilitation of those offending, but also its prevention. With some 2,500 delinquents under its jurisdiction in any given year, it seems to me most unwise and undesirable for such an agency to obtain Federal funds or benefits from Federal funds only on a hat-in-hand basis by going either to the National Institute of Mental Health or even, in some cases, to private agencies, through which Federal funds are being channeled. Such procedure not only limits the amount available, inasmuch as the mental health agencies will obviously take care of their own needs first, but also, it operates to bar the use of Federal funds in those instances where a legitimate delinquency prevention and control project is not slanted as a mental health project. What I am saying here is that it is time, now that delinquency is becoming so serious, for the Federal Government to recognize in its aid program law enforcement and other public agencies directly concerned with delinquency, instead of confining the Federal Government's program to the mental health field.

Recently, the Massachusetts Youth Service Board surveyed the communities of the State with respect to areas of activity where State and Federal funds could be used to greatest advantage in the attack on delinquency. As a result of that survey, we learned that our police departments are eager to provide special training for officers dealing with juveniles and to set up juvenile police bureaus within their departments.

I will recall to your mind the police training programs of the FBI and their value to State and local police in the effort to combat crime.

With Federal help, I believe that training programs of similar value could be set up in all the States to assist local police in their concerted efforts to handle the juvenile program. I believe that such programs set up in each State would have national value and important impact on the situation we face. The police are still a first line of defense in the attack on delinquency and everything possible must be done to enable them to coordinate and improve their efforts.

Fundamentally, my plea to your honorable committee is for favorable action on any one of the several bills before you, including that of the administration, or on a synthesis of the best features of all of them.

I want to make it clear that the amount of money provided in these bills is an extremely small amount in the total Federal budget, but the benefits will be large because they will mean the extra effort and the additional stimulation needed in the States in coping with this problem.

It must be understood, also, that I do not seek or favor large Federal operation grants or handouts. In Massachusetts, during the past 5 years, we have almost doubled our appropriations. We are, therefore, quite willing and able to do our full part in discharging ourselves of our State responsibility.

There are certain limited areas indicated in these bills, however, namely, demonstration, intensification of existing effort, and training of workers, where Federal participation is necessary and desirable. I am sure, also, that if this is true of Massachusetts, it must be doubly true of other States without a youth authority where the attack on delinquency is not nearly so structured and organized.

With substantial deterioration of an important segment of our youth certainly and demonstrably facing us, I cannot but feel that your honorable committee and the Congress itself will give favorable action to the proposal that the Federal Government assume a position of leadership in solving this growing social problem and by limited and reasonable financial aid, as provided in the bills before you, furnish the stimulation and the help for an improved national attack.

The Publishers and Mr. Dulles

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared May 11 1957, in the Daytona Beach Evening News, Daytona Beach, Fla., relating to the freedom of the press:

THE PUBLISHERS AND MR. DULLES

Newspaper publishers and managing editors from all over Florida are here to attend the spring meeting of the Florida Daily Newspaper Association and the Associated Press Association of Florida. These men and their wives, while all fiercely loyal to their own communities, tell us they love to come to Daytona Beach; find a congenial holiday atmosphere here that relaxes them. They like our informality and the picturesqueness of our broad beach and our green girt river.

And, needless to say, we love having them. We like entertaining guests in Daytona Beach; pride ourselves on having a flair for it. And to have such knowledgeable, and hence critical guests as the newspapermen of Florida, presents a challenge that delights us.

As in all conventions, much talk will be passed among the visitors about matters concerning their business and profession (for it takes both to make a newspaper). They will doubtless shake their heads over rising costs and narrowing profits, over the price of newsprint—now, economic law to the contrary notwithstanding, in good supply yet at higher cost—powwow about possible legislation that might make their lives still more complicated, discuss problems of mechanical processes and accounting and distribution.

It may be doubted that they will devote a great deal of their conversation to John Foster Dulles. They might be wise if they did.

For John Foster, the master of tactless diplomacy, coiner of such reckless phrases as "brink of war" and "master of retaliation," has achieved his alltime masterpiece in a matter of such deep concern to the newspaper world that nobody who has anything whatever to do with the dissemination of news can fail to take note and suffer keen alarm.

In a letter to publisher Arthur Hays Sulzberger of the New York Times in reply to his protest against restricting the number and activities of American newsmen who might be allowed to find out for us what is going on in Red China, Dulles wrote:

"The constitutional freedom of the press relates to publication, and not to the gathering of news."

Therein is joined a vital issue. "Surely," the Times said editorially, "Mr. Dulles must realize that the right to publish news depends on the prior right to have access to it. If access is arbitrarily limited, as in the present case, the right of publication is interfered with to exactly the same degree. Would Mr. Dulles contend that freedom to produce a blank page is 'freedom of the press'?"

Editors and publishers must face the fact that the basic concept of press freedom, so hard and so long fought for, is in jeopardy, if, indeed, the Dulles viewpoint is allowed to prevail—even if it is merely permitted to be widely concurred in.

The public's right to know is the heart of "press freedom," not merely the right to publish. To know what? To know the truth, as deeply as we can fathom the truth. And to fathom the truth, we cannot stop with hearsay. We have to see with our own eyes, hear with our own ears—yes, smell with our own noses—and report what we see and hear and smell. Can truth ever damage the United States of America?

This latest booboo of John Foster Dulles can set the purposes of the American press back 200 years. And publishers and editors should be thinking and talking about it along with the problems of the back shop and the accounting room.—H. M. D.

Historic Friendship of Jews and Arabs

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. TELLER. Mr. Speaker in the present unfortunate conflict between the State of Israel and its Arab neighbors, it is well to bear in mind that firm foundations of friendship exist historically between Jews and Arabs which give hope that friendly peace may be worked out in the Middle East by men of good will.

Therefore, I introduce for the record a paper delivered by Rabbi Dr. Bernard Bergman, honorary chairman of the Religious Zionists of America, formerly national president of Hapoel Hamizrachi of America, the religious labor movement of Israel.

The paper was delivered in New York City on May 6, 1957, on the occasion of ninth anniversary of the founding of the State of Israel. In my view, Dr. Bergman's learned address has great current significance in showing the historical friendship which has existed between Jews and Arabs and the consequent possibilities of peaceful and mutually beneficial coexistence of the people of Israel and their Arab neighbors.

The paper follows:

HISTORIC FRIENDSHIP OF JEWS AND ARABS

(By Rabbi Dr. Bernard Bergman)

Insidious propaganda has managed to persuade large numbers of Americans that the

problems of the Middle East are insoluble because Jews and Arabs are prevented from working together by an inveterate hostility toward one another. It is not up to us to say how the Arabs feel in this matter, they have their own spokesmen, both Arab and American. But we feel in duty bound to issue the strongest possible denial from the Jewish side. It is simply not true that the Zionists who embarked upon the resettlement of the Holy Land against seemingly impossible odds were animated by a hostile attitude toward the Arabs. The Zionist attitude toward the Arabs has always been, and still is, friendly; Zionism has extended toward the Arabs a helping hand, and this helping hand is still welcoming a handshake whenever the Arabs are ready.

The following pages have the task of presenting to the American public conclusive evidence of how the Zionist pioneers, men like Weizmann and Ben-Gurion, were eager to avoid any conflict with the existing Arab population of Palestine. They made desperate efforts to obtain Arab agreement to Jewish settlement and even when they failed, they continued their efforts to improve the economic and cultural conditions of the Arab population, among whom the Zionist settlers have lived. Moreover, this positive attitude of the pioneers has been fully maintained by the state of Israel, which is spending vast sums of money to better the living conditions of its Arab citizens. This applies also to the Arab refugees, whom the Jewish state had tried to keep contented within its borders.

THE BALFOUR DECLARATION

The Balfour Declaration of November 2, 1917, was officially proclaimed by Lord Balfour on behalf of the British Government. It contains a guaranty of Arab rights in Eretz Israel in the clause: "It being clearly understood that nothing shall be done to prejudice the civil and the religious rights of the existing non-Jewish population of Palestine." The Arabs had not asked for such a guaranty, but the Zionist leaders, Chaim Weizmann, Nachum Sokolov, and Louis D. Brandeis proposed the Arab rights.

EARLY ZIONIST OVERTURES TO THE ARABS

In December 1917, the Zionist Organization made a public appeal to the Arabs to negotiate with the Jews and to come to a political agreement with them. This appeal was supported by all the Zionist leaders, and Dr. Weizmann, issued the following public statement:

"There is the old Arab problem. The Arabs are not strangers, they have lived in the country for centuries. They are a primitive people and they do not wish to leave Palestine as we enter Palestine. We say: there is room for both of us. You shall benefit by our coming, and we shall benefit by the friendly relations between you and us. We cannot go into the country like junkers; we cannot afford to drive out other people. We shall be the last people to drive the fellah off his land. We shall establish normal relations between them and us. The Arabs will live among us. They will not suffer, they will live among us as Jews live here in England. That is our attitude toward the Arabs." (Zionist Policy, English Zionist Federation, September 21, 1919.)

There could be no clearer proof of the humane attitude of the Zionists toward the Arabs than this statement by a man who was at that time, and remained until his death, the undisputed leader of world Zionism.

THE WEIZMANN-FEISAL AGREEMENT

The Arab spokesmen were, at that time, ready to come to an agreement with the Zionists, especially Feisal, later king of Iraq. The famous Col. T. E. Lawrence, who did as much as any man to free the Arabs from the Turkish yoke and who sympathized with both Jews and Arabs, acted as an intermediary between the Jewish and Arab delegates then gathered in Paris for the Versailles Peace Conference. After some talks, a treaty of friendship was signed on January 3, 1919, by Weizmann and Feisal, on behalf of Arabs and Jews.

The preamble of the treaty states that "mindful of the racial and ancient bonds existing between the Arabs and the Jewish people, and realizing that the surest means of working out the consummation of their national aspirations is through their closest collaboration and in the development of the Arab State and Palestine * * *." Article VII provides that "the Zionist Organization will use its best efforts to assist the Arab State in providing the means of developing the natural resources and economic position thereof."

Confirming the treaty, Feisal wrote to Felix Frankfurter, one of the Jewish delegates then in Paris:

"We feel that Arabs and Jews are cousins in race, have suffered similar oppression at the hand of powers stronger than ourselves, and by a happy coincidence have been able to take the first step toward the mutual attainment of their national ideals. The Arabs, especially the educated among us, look with deepest sympathy on the Zionist movement. Our deputation here in Paris is fully acquainted with the proposals submitted yesterday by the Zionist Organization to the peace conference as we regard them as moderate and proper. We will do our best, as far as we are concerned, to help their attainment and we will offer the Jews a hearty welcome home."

ARAB RESPONSE TO JEWISH OVERTURES OF FRIENDSHIP

The Palestinian Arabs reacted to the Jewish overtures in a very different manner. Already on November 3, 1918, they made a formal protest to the British military authorities in Palestine against Jewish immigration which was practically nonexistent at that time.

In April and May 1919, Arab mobs began a series of attacks on Jewish settlers, and only the intervention of British troops and police stopped serious damage.

On March 1, 1920, Captain Trumpeldor, Jewish war hero and prominent Zionist leader, was killed by Arab marauders at an isolated farm in Galilee.

Finally, in April 1920, the Arab mobs got out of hand and overwhelmed British and Jewish resistance. Serious pogroms started in Jerusalem and spread from the holy city to other parts of Eretz Israel. There were 60 Jewish dead before order could be restored. No Arab casualties were recorded.

JEWS CONTINUE CONCILIATION POLICY

In June 1921, Sir Herbert Samuel arrived in Palestine as the first British High Commissioner under the mandate. He came to the country in the wake of a new wave of pogrom which had started in Jaffa in the previous month. Nonetheless, he announced a program intended to win over the Arabs. He offered them a series of concessions, including a share in governing the country through a legislative council, in which the Arabs would be in the majority (there were to be 8 Muslims and 2 Jews among the elected members). In 1922, Samuel put his signature to a white paper on Palestine which made a mockery of the declaration that "Palestine is to become as Jewish as England is English" and practically nullified the Jewish aspiration for a national home by interpreting the Balfour Declaration as promising not the whole of Palestine as the national home for the Jews but merely the establishment of a Jewish national home in Palestine. On June 22, 1918, the world Zionist organization accepted this limited concept of the Jewish national home. (Colonial office, Palestine, correspondence with the Arab delegation and the Zionist organization, HMSO, command 122.)

In August 1921, the first Zionist Congress to be held after World War I, passed a resolution affirming the determination of the Jewish people to live with the Arab people on terms of unity and mutual respect and, together with them, to make the common home into a flourishing community, the upbuilding of which may assure to each of its peoples undisturbed and successful development.

The same feelings were expressed by the Zionist leaders working on the spot in Eretz Israel, irrespective of factional differences.

Chaim Arlosoroff made it clear: "It is generally recognized today, if not heretofore, that the future economic life of Zionist enterprise is bound up with the Arabs." Shortly after Arlosoroff made this statement, he was killed by the Arabs.

Vladimir Jabotinsky, chief of the revisionist faction that was generally considered most hostile to the Arabs, spoke the same kind of language: "There is not one Zionist who really dreams of ousting the existing rural population of Palestine."

David Ben-Gurion affirmed in the 1920's, when he was one of a number of Socialist leaders, the same friendly attitude as now when he serves as Prime Minister of the State of Israel: "In our policy toward the outside world, an agreement with the Arab people is our decisive political task." This he said after the Jaffa pogrom of 1929, which added another bitter Jewish memory to the fatal month of Ab.

Jewish political and social organizations were formed with the avowed purpose of fostering Jewish-Arab amity.

PRACTICAL JEWISH HELP FOR PALESTINIAN ARABS

The Jewish settlers in Palestine helped the Arabs not only with words—which are cheap—but also with deeds. It is largely due to the many-sided Jewish efforts that the Palestine Arabs reached in so many ways a level infinitely superior to their compatriots in countries where the Arabs ruled themselves.

One clear sign of progress is the natural increase of the Arab population, due to the decrease in the death rate. While their leaders complained of being displaced by the newcomers, the Arabs increased from 673,000 in 1922 to 940,000 in 1935, an increase very much larger than the Jewish gain by immigration.

The Arab death rate fell very largely because of their contact with the Jewish settlement. It was the Jews who introduced modern hygiene into Palestine, who drained the malarial swamps, did research in tropical medicine, pioneered in inoculation work, halved the Arab infant mortality rate from 186/1,000 in 1922 to 90/1,000 in 1946. It was the high taxes paid by the Jews that provided the money for the health and social service activities among the Arabs whose tax yield was exceedingly slight. The selfless and devoted work of numberless Jewish men and women, whose fight against disease, filth, bad housing, etc. did not stop at any national boundaries. Jewish hospitals, to take but one example, have always been open to everybody—a proud tradition still maintained in the State of Israel. (The Arabs in Israel, Israeli Government Office of Information, Jerusalem, 1952.)

But welfare depends to a very large extent on economics, and here, too, Jews helped Arabs considerably. The mainstay of Palestine agriculture is the growing of citrus fruit, an activity started by Jewish settlers and adopted by the Arabs who directly benefited from Jewish agricultural research and the citrus marketing scheme to which they were admitted as full members, and which provided them with a steady income beyond anything they previously enjoyed.

Arab workers in cities and on the land were employed by Jews, while Jewish capital was instrumental in starting Palestine Arabs on the way to industrialization. Nascent Arab

industries also benefited from the internal market expanding through Jewish settlement.

The Jews also tried to protect the Arabs from the almost inevitable abuses of industrialization. Already in 1922, Jewish unions obtained from the mandatory government a prohibition of child labor, restriction of work of women and youths in specially exhausting, dangerous, or unsanitary kinds of work, and a workmen's compensation scheme. This is still the position in Israel today and thousands of Arab workers have benefited from the very important position that Israel has managed to achieve for itself. A special Arabic newspaper, Ittihad Al Amal (Workers' Unity) caters for Arab workers and keeps them in touch with Histadruth activities.

Nor were the cultural needs of the Arabs neglected. Jewish taxes largely financed the expansion of Arab education which boosted the percentage of school-going children to 48 percent (70 percent for male children), created Arab secondary education almost from scratch, and sent hundreds of young Palestinian Arabs for higher education abroad. This situation can be usefully compared with the 90-percent illiteracy rates of Egypt, Syria, and Iraq.

But perhaps the most unbiased testimony to what the Jews have done for the Arabs in the period of the mandate, comes from the British: "The general beneficent effect of Jewish immigration on Arab welfare is illustrated by the fact that the increase of the Arab population is most marked in urban areas affected by Jewish development." (Report of the Palestine Royal Commission of 1937.) To appreciate this British tribute to Jewish constructive work at its fullest, it must be remembered that it comes from the report of a Commission investigating a full-scale war fought by the Arabs against the Jewish settlers and coming to general conclusions that pleased the Arabs and horrified the Jews.

TWENTY YEARS OF ARAB AGGRESSION (1928–48)

The 1920's were marked by a truce in Arab-Jewish relations, the last peaceful period between the two peoples. There were all kinds of reasons for it. Jewish immigration to Palestine was slight because Jews from Russia were imprisoned by the Communists, those of Central and Eastern Europe were still putting their hopes in the short-lived democratic development of their respective countries and those of Western Europe and America felt even less like pulling up their roots and emigrating to Israel than they do now. Palestine was then enjoying an economic boom, and Jews and Arabs were busy consolidating their positions.

It was the Arabs who broke the truce by the Wailing Wall incident of August 1928. An Arab mob attacked Jews praying at the Wailing Wall. It had been incited by totally unfounded rumors spread by Arab nationalist agitators, to the effect that the Jews intended to take over the Arab holy places in Jerusalem.

A year later, on September 23, 1929, came the alarming Jaffa pogrom, followed by bloody disorders throughout the country. The British appointed a number of commissions of investigation, whose work culminated in the Passfield white paper of 1930 which gave British backing to the Arab case. The economic depression of 1929 and the coming of Hitler in 1933 brought a new spurt of Jewish immigration that the Arabs were determined to resist at all cost. They consolidated their leadership under the Mufti of Jerusalem and the Arab High Committee, and the Arabs who favored an agreement with the Jews were terrorized into accepting the new leaders.

The Arab nationalist agitation bore fruit in the Arab rising which started in 1936 and continued to flare up periodically until 1939. At first the Jews suffered tremendous losses and the Arabs felt themselves near their proclaimed objective of driving the Jews into the sea. But the organization of Jewish self-defense forces turned the scale. The Mufti and his military henchman Fawzi Kaukaji had to leave Palestine and went to find refuge with their natural leader and friend, Adolf Hitler.

The 6 years of World War II, 1939 through 1945, were not marked by any serious disorder in Palestine. The British were fighting for their lives and grudgingly accepted the help the Jews offered them. Together they policed Eretz Israel and kept it at peace. But it was an uneasy peace—the Arab leaders bided their time and waited for the end of the big war to start a war of their own.

The ingathering of the remnants of the Jews murdered at the orders of Hitler and Stalin provided the spark that ignited the flame. The Arabs were determined to stop it. Britain referred the matter first to the United States, then to the United Nations, then washed its hands and let Palestine move from Jewish-Arab civil war to Jewish-Arab international war.

THE ESTABLISHMENT OF ISRAEL AND THE ARAB REFUGEES

The number one argument of Arab propaganda against Israel is the Arab refugee question. The Jews are said to have heartlessly expelled 1 million Arabs from their Palestine homes to make room for Jews and to make the establishment of the State of Israel possible. Although this happened less than 10 years ago, the facts have been so buried under an accumulation of propaganda that the average American newspaper reader is totally ignorant of them. What actually happened in Palestine in 1948 presents a picture very different from that offered to the world by Arab propaganda.

The Jews were fighting for their lives. The Arabs openly and shamelessly announced a war of extermination against them. On the very day of the foundation of Israel, Azzan Pasha, secretary general of the Arab League, said over the Egyptian radio: "This will be a way of extermination—a momentous massacre which will be spoken of like the Mongolian massacres and the Crusades." Fawzi Kaukaji, leader of the Arab Army of Liberation had already told, 4 months earlier, the Arab newspaper As-Sarh (quoted in Le Monde, Paris, February 16, 1948): "The Jews cannot be regarded as a nation like the Americans and the Chinese; they are highway robbers to whom international rules of war do not apply."

The Arabs not only announced a war of extermination: they practiced it, too. In all too many cases, they gave no quarter and took no prisoner. This applies especially to the cutthroats of Fawzi's Army of Liberation. The Jews of the old city of Jerusalem and of settlements like Kfar Etzion, Ataroth, and Neve Yaacov, were wiped out.

The Jews could well have repaid in the same coin. But, to their eternal credit and honor, they did not. Extremists committed some terrible deeds; but, from Deir Yassin to Qibiya, the Jewish responsible leadership expressed its regret for what had happened. There is not a single declaration of Arab regret for all the massacres and pogroms.

Moreover, the Jewish leaders tried their level best to persuade the Arabs to stay put and not to leave their homes. The evidence is overwhelming. Already in December 1947, leaflets were distributed among the Arabs asking them to remain in their homes, to trust the Jews and to refrain from hostile actions. These leaflets were signed by the Vaad Leumi, governing body of Jewish Palestine and the nucleus of the future Jewish government. These appeals were reinforced by daily broadcasts in Arabic.

When the Arab exodus actually started, the Jews did everything they could to stop it. The Jewish community councils of Tiberias, Safed, Haifa, and other cities asked the Arabs not to leave.

This has been confirmed by a high British police officer of Haifa who reported to the British police headquarters in Jerusalem on April 26, 1948: "Every effort is being made by the Jews to persuade the Arab population to stay and carry on their normal lives, to keep their shops and businesses open, and to feel sure that their lives and property would be safe." Two days later, the same officer reported "the Jews are still making every effort to persuade the populace to remain and to settle back in their normal lives in the town." (These documents are given in photostats, The Army of Israel, New York, Philosophical Library, 1950.)

Another British source not particularly friendly to the Jews gives the same testimony: "During the subsequent days, the Jewish authorities who were now in control of Haifa urged all Arabs to remain in Haifa and guaranteed them protection and security. (The Economist, London, Oct. 2, 1948.)

Yet, in spite of all the Jewish efforts, 5,000 only or 6,000 of the Arab Haifa community remained in the city, and the story was more or less repeated all over the country. Why? There is no question that the Arabs were afraid and left in a panic. But this fear and panic were less caused by what the Jews did to them than by what their leaders told them would happen to them. These leaders told them that the Jews would kill the men, rape the women, and take their children away from them. They told them that any Arab who remained under the Jews would be considered a traitor and would be suitably dealt with by the returning victorious Arabs. They said returning victorious Arabs would also see to it that all Jewish property would be distributed among selected Arabs.

What actually happened is that these leaders were the first to run away. The Arabs left leaderless, and followed them more in the manner of sheep than men.

Some Arabs kept their heads and remained in Israel. The Al Heib tribe of Bedouins in Galilee even joined the Israeli Arr y in its fight against the thugs of Fawzi's "liberation army." The Druze and Ahmadiyya religious communities also remained. Christians proved themselves more levelheaded than Moslems. Eighty percent of the latter fled; but only less than 50 percent of the former.

THE RETURN OF REFUGEES TO ISRAEL

Even less known that the reasons why the Arabs fled is the fact that Israel actually accepted considerable numbers of returning Arab refugees. These refugees had good reasons for returning. Their Arab brothers received them with anything but open hands. They all took good care not to let the refugees settle among them and start new lives—that would have upset too many Arab vested interests. Nor would they move a finger to help them—that would cost good Arab money. When the British writer Cecily Makworth asked the Jordan Minister of Interior what social-security measures he intended to introduce for the benefit of the refugees, he answered indignantly: "Madam, we have nothing to do with bolshevism." (Quoted in André Falk, Israel, Terre Deux Fois Promise.)

The Arabs let the United Nations assume the charge, and the cost, of the refugees. All that they would hand out to them were appeals like the following broadcast by Baghdad radio on July 25, 1948: "These people (i. e., the refugees who return to Israel) should be shot as spies. The Jews will make slaves of you if you return to them, they will feed you on bread and water, they will make you sleep on the naked ground without as much as a cover, they will take your wives and daughters. You must prefer death to returning to the Jews. Words are cheap, they cost nothing."

To these words, Israel replied with deeds. Twenty-four thousand Arabs who recrossed

the border were allowed to stay in Israel and had their status legalized. Another 20,000 Arabs who were caught by the Israeli advance in Arab territories where they had sought shelter were allowed to stay. The majority of these returning refugees were offered resettlement in Israel, with U. N. aid. Also, steps were taken to legalize the property status of Arabs who had moved because of the war to different parts of Israel. Finally, a number of Arabs were readmitted to Israel under the family reunion scheme.

THE ARABS IN THE STATE OF ISRAEL: RECONSTRUCTION

The Arabs who remained in the new State of Israel were like a body without a head. Their leaders had left them. Many, if not most, had lost their means of livelihood. They were in a state of almost traumatic shock. While they regarded their leaders as traitors, they had no love for Israel. A few waited for the "second round," but a more common reaction was just to wait, with fingers crossed, for something to happen. Their fatalism, their belief that whatever happens, happens because "maktub" (it is so written), was not conducive to self-help and bestirring oneself on one's own behalf. The Government of Israel had to do many things for the Arabs that, by right, the Arabs should have done for themselves. This is especially true of the first months. Later things improved.

Reconstruction measures for the rural Arabs included, in addition to the aid given to all Israeli farmers both Jew and Arab, special loans to Arab farmers, employment on public works for the village measures. The area under Arab cultivation, both dry farming and irrigated, rose considerably; the production of vegetables by Arabs tripled between 1948 and 1951; the production of tobacco increased by six times in that interval.

Urban reconstruction measures included the raising of Arab wages to the Jewish level, which has been largely achieved. (It is Arab firms that are prominent in paying their Arab workers lower wages.) Arab Government employees were reinstated, and employment was created for many of those who were not.

HEALTH AND WELFARE

Again, special measures in favor of the Arabs were taken in addition to the general health and welfare work; 29 special clinics for Arabs were opened in the first 3 years of the new state, 20 food centers providing 3,000 children with daily meals, an Arab old-age home, and an arts and crafts school. In addition to the Government, the Arabs are taken care of by the trade unions, who provide the usual benefits for their 11,000 members.

EDUCATION AND CULTURE

The Jewish state actually spends more money on educating an Arab child than on a Jewish child; that is, of course, due to the Arab educational lag that the State of Israel is determined to wipe out for its Arab citizens.

While 1 of every 15 Arabs was at school under the mandate, the State of Israel has reduced the margin to 6½. In 1952, 67 percent of Arab children of school age were actually at school, the proportion rising to 71 percent if the Bedouin children are left out of account. New elementary schools were opened in 35 Arab villages. Girls provide 37 percent of the pupils. Kindergartens and coeducation are among the educational reforms introduced for Israeli Arabs by Government action.

In secondary education the lag is greater, since the Government of Israel leaves it to private enterprise. But it has helped Arab education by organizing extension courses on a secondary level, teachers' courses, and state examinations allowing entrance to college, and Arabs studying at the Hebrew University of Jerusalem.

Other Arab cultural activities include the publication of daily newspapers and two weeklies and the Arabic language broadcasts of Kol Israel, the Voice of Israel; very important in a community still considerably illiterate. The daily broadcasts include readings of the Koran, political talks, special programs for women, and a message service for Arabs with relatives abroad.

The Arab central library in Jaffa has 80,000 books, and there are branch libraries in other centers.

The Israeli Ministry of Religious Affairs takes care of Arab Moslems and Christians by special departments devoted to their welfare. The Government pays Moslem religious officials from special funds and has financed the preservation of mosques and religious manuscripts. Moslem lay councils have been created. Christian and Moslem Arab divines are regularly consulted by the Israeli Government on any legislation affecting their creeds.

POLITICAL AND MILITARY ACTIVITIES

The Arabs of Israel are exempted from the conscription which puts every Jewish man and woman into the Israeli Army for the considerable period of 2 years. This does not, however, mean that Arabs are excluded from the Israeli Army on ground of any discriminating. Loyal Arabs can and do serve in it; such are the cavalrymen of the Al Heib Bedouin tribe and the special Druze units incorporated in the army.

The Arabs of Israel have the same political rights as their Jewish fellow citizens. Arabic is one of the official languages of the Government of Israel (Hebrew is the state language), and Israeli coins, banknotes, and stamps are inscribed in Arabic as well as in Hebrew. The Official Gazette is published in the two languages. Arabs have the right to use their language in dealings with Israeli courts and other Government organizations. Arab deputies address the Knesset in Arabic and there is a system of simultaneous translation there.

The Arabs also enjoy full freedom of association. They have some 70 religious, social, political, economic, and cultural associations of their own. The most important is the Arab Labor League, affiliated with the Histadruth. But the Histadruth has no monopoly of organized Arab labor. There is also an independent Arab Workers' Congress with 22 branches and 2,500 members.

None of these Arab rights in Israel has any counterpart for Jews living in Arab countries. This is even more true for the right of political organization. No Jewish political party is tolerated in any Arab countries. This is even more true for the right of political organization. No Jewish political party is tolerated in any Arab state, but the Arabs put up no less than five parties of their own in Knesset elections, in addition to the Communists who, for reasons of their own, have a Jewish-Arab membership. In 1951, 83 percent of Arab voters actually voted, a larger percentage than of Jews. In the 1955 Knesset, five Arab deputies represent the Arab Farmer and Development Party, affiliated with Mapai. (Comdr. Hutchinson Violent Truce, New York, Devin-Adair, 1956; Frank Gervasi, New York Post, February 15–21.)

AGRICULTURE AND ARAB INDUSTRY IN ISRAEL

The Israeli Government and individual Jews have been trying to help the Arabs to go into industry and so reap, as the Jews have done, the benefits of industrialization. Also, such aid has been given to modernize Arab crops. Here are some highlights of these efforts:

The Arab olive presses have benefited from the general improvement of the olives grown in the 70,000 dunams of land held by Arabs in Galilee and the Little Triangle. Yields have soared from 20 kilograms per dunam to 120–150. Pruning of trees and improved fertilizers under the auspices of the Ministry of Agriculture are responsible. The owners of olive fields also receive loans and expert advice.

The Arab owners of olive presses have been helped by loans, introduction of modern machinery from Italy, and the services of Italian experts serving under the United Nations Technical Assistance and assigned to the Israeli Government.

Oriental tobacco grown by Arabs has increased from 6,000 to 60,000 dunams since the foundation of Israel. Loans and services of experts, both arranged by the government have helped. In manufacturing there is the remarkable example of Jewish-Arab partnership in the firm of Karaman, Dick and Salti near Kfar Hassidim. The firm has a capital 250,000 Israeli pounds, and employs Jewish and Arab workers. There is also an Arab cigarette company at Nazareth.

The Karamans, an Arab family, also own a flour mill. Arab industries also include soft drink factories, soap factories, coffee mills, printing works, chocolate factories, potteries, etc.

Special care has been taken by the government to help and develop Arab crafts. A vocational training center for Arabs was opened in Nazareth 2 years ago. (Gideon Weigert, Arab industry in Israel, the Israel Export and Trade Journal, February 1957.)

GAZA STRIP 1956, AND THE NEW ARAB REFUGEES

The Israeli occupation of the Gaza strip permitted free access to qualified journalists and allowed them to reconstruct what happened.

The Egyptians had kept the strip isolated from Egypt and treated the local Arabs and the refugees as conquered people. The Jews opened up the frontier, did not molest anybody and started a number of improvement schemes which were interupted by Nasser's return, the most important being the extension of Israel's citrus marketing scheme to Gaza and the reconstruction of its harbor.

The Arabs accepted the Jewish occupation, which was marked by no disturbance whatsoever. When the Israeli forces left, 600 Arabs asked to go to Israel with them, 25 Arab families were actually moved to Israel with the army.

Since then, the news from Gaza is of almost daily murder and violence. Hardly a day passes without some Arab crossing the strip border into Israel, in fear of his life. Israel has thus acquired a considerable new body of Arab refugees. Commentaries are surely superflous.

Private Ambassadors

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, I was very much impressed by a suggestion made this week by the Honorable David E. Kaufman, former United States Minister to Bolivia and Thailand, in which he discusses the great opportunity which every American traveler has to become a good will representative for his country. I understand that air and ship lines are planning to put into effect

this idea with posters at United States ports of embarkation.

Under leave granted, I include here the letter from Ambassador Kaufman to the Philadelphia Inquirer on May 18, 1957:

PRIVATE AMBASSADORS

To the EDITOR OF THE INQUIRER:

The very interesting feature page of the Inquirer recently contained a column by Roscoe Drummond in which he suggested that President Eisenhower appoint every citizen preparing to travel to a foreign land a private ambassador of the United States.

Based on my experience as United States Minister to Bolivia and to Thailand, I can give Mr. Drummond's suggestion my heartiest endorsement. As he says, the impression which millions of persons around the world have of America is the impression obtained from meeting individual Americans abroad. Each American traveler is a representative of America, whether he realizes it or not.

As far back as 1929, during my mission at La Paz, Bolivia, I made recommendations similar to Mr. Drummond's. When I was about to leave my post in Bolivia, I asked each member of the American colony there to act as an individual and unofficial Chargé d'Affaires for the United States. I believe it would be most helpful if each United States embassy and legation abroad would distribute cards denoting "Private United States Ambassador" not only to every American tourist but to every American resident in a foreign country.

These citizens are our foremost contacts with the people of other lands whom we want as our friends and allies. Their behavior is regarded as representative of America. This responsibility should be brought home to them.

DAVID E. KAUFMAN,
Former United States Minister to Bolivia and Thailand.

PHILADELPHIA, *May 15.*

Cotton Comment

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Memphis Commercial Appeal:

COTTON COMMENT: LIFE COMES UP WITH A CONCLUSION, BUT IT IS BASED ON MISCONCEPTIONS AND SOME STRETCHING OF FACTS—WHY NOT SAME TREATMENT FOR WHEAT?

(By Gerald L. Dearing)

"Our Government's Farm Madness Pays a Successful Industry To Wreck Itself."

The caption on the editorial page of Life magazine this week is a reflection of a condition that has been obvious to thinking cotton leaders for some time.

If the editors of Life were aware of what is going on in the world, they would know of the efforts that have been made, are being made, and will be made to return cotton to a free market, to competitive pricing, and to expanded production.

ATTEMPTS TO JUSTIFY

After reaching a conclusion it appears from reading below the caption, Life has attempted to justify it by half-truths, innuendoes, and misleading questions.

We have no argument with the conclusion—only Life's justification.

We have been pointing out for many years that the price support policy could lead only to loss of markets, increasing competition abroad, and the rise of the synthetic industry within the United States and in foreign countries. But we've tried to stick to the facts.

However right Life may be in its conclusions, there are many points in its reasoning that cannot be accepted.

PROPOSITION SET UP

If Americans, who pride themselves on their commonsense, were told the following, Life proclaims:

"That a big industry, one of the Nation's most important, is so successful in its operation that it gets twice as much product out of the same material as before, and has perfected its whole technique so skillfully that it is almost completely automatic from start to finish and so efficient that it could undersell any similar product made anywhere else on the globe. * * *

"That the Government, far from regarding this success as proof of the industry's ability to look after itself, insists on meddling in its affairs, giving it huge subsidies which it does not need, forcing it to produce too much—and at the same time holds its price so artificially high that the industry cannot compete with the rest of the world but is foundering in its own over production. * * *"

WOULD IT MAKE SENSE

"Would Americans say this makes sense, or would they say the whole thing is crazy as a bedbug?"

The above is the preamble to the editorial.

We think it is based on gross misrepresentation.

We don't believe that the production of cotton is anywhere near the automatic stage, nor that, at the moment, it can undersell the low-cost countries such as Syria, Pakistan, Turkey, Uganda, Mexico, Brazil, and many others. We think Life would recognize this if the editors looked at facts and not opinions.

After a general attack on the farm subsidy program, Life singles out cotton as presenting the most absurd example, and asks some "do you know" questions:

"The technology of growing cotton has been so perfected that the man-hours required to grow a bale of cotton have dropped since 1930 from 260 hours to 108 and the average yield per acre has risen from 157 pounds to 409 today?"

SOME OTHER FIGURES

Assuming that Life is correct with its figures, their presentation does not justify Life's conclusions. Life is an exponent of minimum wages, higher living standards, etc. The average price of cotton this year has been about $165 a bale. If the minimum wage of $1 is applied to the 109 hours used in producing cotton, it provides a labor income of $109. Certainly Life would use the minimum wage in its calculations. On top of this there would be such things as land rent, tractor fuel and depreciation, taxes, insecticides, fertilizer, and all the other charges that go into a bale of cotton.

When these are considered there seems little left for that important factor—profit.

"The most efficient producers—mechanized farms on flatlands ideally suited to irrigation and cotton culture, as in Arizona—can produce up to 1,108 pounds to the acre."

Granted. The Pruitt brothers in Mississippi produced 51 bales on 10 acres, or 5.1 bales to the acre, better than 2,500 pounds.

It will be a long time before even the most efficient producers approximate this yield.

WONDERFUL PICTURE

"From start to finish, cotton culture is now chemically or mechanically controlled—high-yield seeds chemically treated to resist molds and insects are machine inserted into ground prepared by soil looseners and nutrients, nourished by a dozen varieties of chemical fertilizers; the sprout fed with nitrate pellets, and sprayed with insecticides and the boll defeafed with chemicals."

Easy, isn't it? But it isn't completely so. There are mechanization and chemicals, but it's not the robot operation Life leads one to believe. There is the problem of weather and the need for planting and replanting. The menace of rains which prevent cultivation and require tedious hours of hand labor. Even in the nearly ideal situation in Arizona, which Life uses for an example, there are moments when the mechanization fails and the man with the hoe must take over.

"Cotton culture is so successful and efficient that 17.5 million acres now yield more production (14,725,000 bales in 1955) than was grown on 43 million acres in 1930."

COST STABILIZED

Conceded. Yet does Life realize that in the past 10 years the cost of producing a pound of cotton has merely been stabilized? The farmer has been able to increase his efficiency only enough to meet the rising costs of labor, machinery, chemical supplies, fertilizer, insecticides, taxes, and the like. We are dealing in averages and not, like Life, in the exceptionally efficient. We know farmers who have successfully grown cotton for many years at a cost under 14 cents a pound—but the industry is far from that level on the average.

"To get rid of surpluses the farm-bloc Congressmen, who swap their support for one another's favorite subsidies, have required the Government to dump this cotton overseas at prices far below the artificially frozen domestic price."

What should have been done with it? Could it have been sold at the loan price? The cotton-export program, if Life had cared to look, was the first step in the direction of all the things that Life proposes to accomplish. It made American cotton competitive with other cottons and with synthetic fibers in the foreign markets. It was the first step to make for the lifting of production controls and the elimination of price supports.

MUST HAVE MARKETS

Life must realize that to sell cotton there must be markets. To have markets prices must be competitive. When the export-sales program was inaugurated American exports were down to 2 million bales. The forecast was that by 1958 they would be down to zero.

The surplus cotton was offered for sale in an effort to regain markets and to hold them until that time when production could be increased, prices reduced, and cotton could compete on its own.

What Life has failed to realize is that the acreage restrictions of the farm program have increased the costs per unit of cotton and that only through expanded production can the cost level be reduced. What would Life have thought if, when there was a 14 million bale surplus, the restrictions had been lifted on production and supports had been abruptly pulled out on price? Or didn't it care?

Think of the chaos that would have created, the upsetting of the economy. It has taken the cotton farmer 25 years to climb to the difficulty in which he now finds himself. He must retrace his steps and he knows it.

JUMP OFF CLIFF

Life argues that having made a long climb up the mountain, the quickest way to the bottom is to jump off the cliff. True, but probably fatal.

"The original purpose of cotton subsidies—to help the distressed small farmer—no longer makes sense," Life concludes.

Wrong again. The original purpose was to set a floor to prevent disaster to all cotton farmers.

"It keeps the marginal, uneconomic, hillside patch farmers turning out poor cotton that isn't needed anyway."

Only partially right. The original program was a hedge against disaster. It was not until later that the percentage of parity supports were lifted to the level to make the loans a welfare program. It does not follow, either, that the hillside farmer turns out poor cotton. Uneconomic cotton perhaps, but usually of moderately good quality since it is hand picked. The poor quality cotton comes from some of the mechanized areas which Life praises so highly and is grown chiefly for the loan.

"It keeps them at it when, if left to their own devices, they could go to town and work on a useful job."

WHAT JOBS?

We wonder if Life has stopped to consider that the average age of the small farmer of the type it speaks is about 55 years. That in most instances he is unacceptable to industry. That most of the younger farm people who are adaptable to industry already have left the farm.

More realistic thinkers than the editorial writer for Life have given much time and great thought to the problem. They have made progress.

It is admitted that if the cotton supports were $1 a pound most of these small farmers could not make a living comparable to even the most modest modern standards. But is their existence to be abruptly taken from them without permitting a period of adjustment?

The rural development program of the Department of Agriculture is attempting to solve the problem. It is striving to bring about the consolidation of farms into workable units that can be economically justified as the oldsters move out of farming either through the lure of social-security payments, or old-age benefits. Or death.

There is no doubt that there is no place for the uneconomic unit in today's farm picture. But does Life suggest that they be destroyed with some swift action? Would it not be better to make an adjustment gradually and as painlessly as possible?

SOME COULD SURVIVE

"The really successful cotton farms—the big mechanized ones and the good medium-sized farms would still produce most of our cotton—could surely get along without help, eventually, if the industry were basis of free competition and our prices left to find their own level. The business would quickly thin down to efficient operators who could produce all the cotton really needed and at a profit."

The word "eventually" makes this paragraph make sense.

"Yet the Government, last year, laid out $1.4 million in crop loans to one of the biggest of all these corporate cotton industrialists, Mississippi's Delta & Pine Land Co., a British stock company."

Misrepresentation again. The money was loaned and paid back as a market stabilizing device. At that, it was only about one-tenth the postal subsidy Life received from the Government.

"This program is causing cotton to strangle itself."

Life is so right.

INFLAMING PUBLIC

The rest of the editorial is an effort to inflame the public against the farmer, an expression of sympathy to the small farmer and a conclusion:

"If enough Americans squawk, something will be done to stop this silly business."

It's easy to solve problems from the heights of an air-conditioned ivory tower. It is much more difficult to solve them at the working level.

There is no question that cotton, if it is to survive, must turn to the direction of unlimited production and free prices. But how do you do it?

We could explain to the omnipotent editor of Life, the distress that an abrupt change would bring to thousands of small farmers, the damage would come to larger growers whose machinery and other obligations have been hitched to the high level of prices; the disruption of the textile industry during the transition period.

WOULD ASK QUESTION

And having told him, we might ask him to provide an answer to the question: "How can your objectives be attained with the least damage to the economy?"

We don't think he has an answer. We don't think he wants an answer.

We would like to point out that, before Life had its idea, the Secretary of Agriculture, the American Farm Bureau Federation, the American Cotton Producer Associates, and the thinking leaders in Congress had recognized the problem for what it was.

They were trying to solve it.

Life is in the position of the man who stood on the dock and watched the man struggling in the water, then walked off, ignoring the lifebelt at his feet, with the comment: "He'll drown if he doesn't learn to swim."

Perhaps we are naive, but we would like to ask: Why pick on cotton? The wheat export subsidy is greater percentagewise than that for cotton. The Government losses in wheat are as great as for cotton. The money invested in wheat is greater than for cotton.

Or does Life consider cotton a more vulnerable and less dangerous target to shoot at?

Discrimination Favoring East Coast Shipyards as Against Pacific Coast Shipyards

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the Oregon State Legislature recently adopted House Joint Memorial 17, calling upon the executive departments of the Federal Government to cease discrimination favoring east-coast shipyards as against Pacific-coast shipyards.

Oregon has the capacity for building and repairing ships. Oregon wants no special favors in the granting of contracts for the repair and construction of ships. It asks only that it be permitted to seek contracts without unfair discrimination. That request should be honored by every department of the executive branch of the Government.

Under unanimous consent, I include the full text of the Oregon House Joint Memorial 17 in the CONGRESSIONAL RECORD immediately following my remarks:

House Joint Memorial 17

To the Honorable Senate and the House of Representatives of the United States of America, in Congress Assembled:

We, your memorialists, the 49th Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas one of the most vital national defense needs is a ready reserve of experienced shipyard personnel and the preservation and development of fully equipped and operating shipbuilding facilities on both east and west coasts; and

Whereas the Pacific coast shipbuilding industry and the people dependent upon it are in a comparative depression condition; and

Whereas favoritism practiced by the Federal Government in the assignment of shipbuilding and repair contracts has substantially contributed to this condition; and

Whereas current Federal allocation policies are not giving the Pacific coast shipyards enough repair and conversion work to keep their personnel resources in all skill categories up to the level of minimum needs; and

Whereas the Nation is being placed in increasing jeopardy relative to national defense due to these allocation policies; and

Whereas the Portland area and other important areas within the State of Oregon which are equipped and capable of conducting full-scale shipbuilding and repair and conversion operations are suffering economically as a result of these policies; and

Whereas the Navy's program of ship repair and conversion has discriminated against Pacific coast interests; and

Whereas as an example of this discrimination, two mothballed cruisers recently departed from the Pacific coast for conversion at a cost of approximately $14 million at booming east coast shipyards, while Pacific coast shipyards, which the Navy is pledged to support under legislation enacted by the Congress last July, remain relatively idle, and the Navy has acknowledged that this transfer will cost the taxpayers $426,000, in addition to the cost of the conversion of these two ships, irrespective of which yard carries out the conversion; and

Whereas a continuation of these policies of discrimination will pyramid the competitive advantage enjoyed by the east coast shipyards at the expense of Pacific coast shipyards and will eventually threaten the existence of Pacific coast shipbuilding altogether: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That the President and the Congress of the United States be memorialized to see that every effort of the Federal Government be expended to cease discrimination favoring east coast shipyards as against Pacific coast shipyards in matters of shipbuilding and ship repair and conversion and that intervention by the Federal Government through the awarding of contracts and the establishment of policy be such as to encourage the continued existence and the further development of the Pacific coast shipbuilding industry; and be it further

Resolved, That copies of this memorial be sent to the President and Vice President of the United States, and to all members of the Oregon congressional delegation.

Adopted by house April 30, 1957.

Adopted by senate May 8, 1957.

[SEAL] EDITH BYNON LOW,
Chief Clerk.

PAT DOOLEY,
Speaker of House.

BOYD R. OVERHULSE,
President of Senate.

Discharge Petitions

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. CHAMBERLAIN. Mr. Speaker, discharge petitions have been the subject of much discussion here in the

House during recent weeks. Under leave to extend my remarks, I would like to define briefly my personal position with reference to such petitions. To me, an important legislative principle is involved.

While I am not opposed to the rules of the House providing for discharge petitions, I do believe the taking of legislation from the consideration of the properly designated committee disrupts the orderly functioning of the legislative process. For this reason, I am presently of the opinion that I will adhere to a policy of not signing any discharge petitions. Mr. Speaker, I have confidence in the committees of the House. Although they may not always act the way I might wish, nor as rapidly, nevertheless, our committee system has served the legislative branch of the Government well.

Presently, discharge petitions are on the desk in connection with the civil rights bill and also a bill providing increased salaries for postal employees. I have stated publicly before, and I wish to state again, that I will support the civil rights legislation as recommended by the President. However, I do not propose to sign such a discharge petition, as I do not believe it is sound legislative policy.

Likewise, I am sympathetic with respect to the problems of the postal employees and believe there is merit in their request for a salary adjustment, in some amount. Again, I do not propose to sign the discharge petition for the reasons that I have just stated.

I make this statement in order that my position may not be misunderstood by either the supporters or the opponents of the pending legislation that I have mentioned.

One Hundred and Twenty-fifth Anniversary of the Democratic National Convention, May 21, 1832–May 21, 1957

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. METCALF. Mr. Speaker, today is the 125th anniversary of the Democratic National Convention. On the third Monday in May in 1832, May 21, at the hour of 11 in the morning, there assembled in convention at the old Athaeneum in Baltimore the first real national convention of a political party.

This convention was called in June 1831 by the Democratic members of the New Hampshire Legislature numbering 169—all friends of democracy and President Andrew Jackson.

The keynote speech of this first convention was delivered by the Honorable Frederick A. Sumner, of Charlestown, N. H. Gen. Robert Lucas, of Piketown, Ohio, was chosen the convention's permanent chairman.

The ringing words of Mr. Sumner's great speech give us the postulates of the many great Democratic conventions that were to follow. He told the 283 delegates assembled from 23 States:

The proposition for calling a general convention of delegates, to act on the nomination of a candidate for President, and to select a suitable candidate for the office of Vice President of the United States, originated in the State of New Hampshire, by the friends of democracy in that State; and it appears that the proposition, although opposed by the enemies of the Democratic Party, has found favor in nearly and perhaps all the States in the Union; so that we find collected at this time and place a greater and more general delegation from the people than was ever before assembled upon an occasion of the sort.

The object of the representatives of the people of New Hampshire who called this convention was not to impose on the people, as candidates for either of the two first offices in this Government, any local favorite, but to concentrate the opinions of all the States.

They believed that the great body of the people, having but one common interest, can and will unite in the support of important principles; that the operation of the machinery of government confined within its legitimate sphere is the same in the north, south, east, and west; that although designing men, ever since the adoption of the Constitution, have never ceased in their exertions to excite sectional feeling and sectional interest, and to array one portion of the country against another, the great and essential interests of all are the same.

They believed that the coming together of representatives of the people from the extremity of the Union would have a tendency to soothe, if not to unite, the jarring interests which sometimes come in conflict from the different sections of the country.

They considered the individuals who might be selected as candidates for office to be of much less consequence than the principle on which they are designated; they thought it important to ascertain the fact, whether the people themselves, or those who would frustrate the voice of the people, should succeed in our elections.

They believed that the example of this convention would operate favorably in future elections; that the people would be disposed, after seeing the good effects of this convention in conciliating the different and distant sections of the country, to continue this mode of nomination.

Third Anniversary of the Supreme Court Decision Outlawing Segregation in the Public Schools

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HILLINGS. Mr. Speaker, this third anniversary of the Supreme Court decision outlawing segregation in public schools is an appropriate time to survey our progress in the field of civil rights and to renew our efforts toward achieving the goal of equality in practice, rather than merely paying lip service to this great principle upon which our Nation was founded. At a time when we are trying so diligently to make friends with the peoples of Africa, Asia, and the Middle East, we cannot afford to do anything to impede the elimination of racial prejudice in our own country. We must set a true example of tolerance and respect for the integrity and dignity of all individuals here at home before we can convince other nations that we truly want them as equal partners in the battle to achieve a peaceful world based upon democratic principles.

President Eisenhower and Vice President NIXON have helped to show the way for all Americans by their forthright stand in support of the action of the Supreme Court in striking down segregation in our public schools. It is now my hope that Congress will act during this session on civil rights legislation similar to that which I introduced early this year. There is absolutely no place in our country today for laws which would prevent any citizen from voting because of racial or religious prejudice. The time to act is now.

Trend Seems To Favor United States Aid to Education

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to a recent release by Elmo Roper & Associates as the result of a nationwide survey to determine the sentiment of the average American on the proposal to make Federal grants-in-aid for needed school classroom construction.

In addition to pointing out that a majority of the American voters favor direct Federal grants-in-aid in meeting this classroom shortage, the article dwells extensively with the problem of financing school construction. A surprising discovery is that a majority of the American people favor not only school-construction aid, but Federal aid for teachers' salaries.

The article follows:

THE PUBLIC PULSE: TREND SEEMS TO FAVOR UNITED STATES AID TO EDUCATION

(By Elmo Roper & Associates)

There is no more tremendous subject in the United States today than education. We are in a twofold crisis. In the first place, our population has been increasing so fast that by 1970, the number of students seeking admission to college will be at least double what it is today. All over the country right now, high schools and grammar schools are bulging with students for whom there are not enough teachers, not enough space, not enough of anything. Nothing can keep this situation from getting worse before it can get better.

As if this were not enough, there is another nation in the world which has staked everything on developing the greatest educational program in the world. This nation is Russia.

In recent months, more and more American educators are getting into Russia and coming back home goggle-eyed at what they have seen there, because it is so good. In Russia, college professors are the highest paid professionals in any walk of society, and 50 percent of all Russian graduates of higher education become teachers. We in America are falling seriously behind the procession.

Is public-school education something that only local communities, or the various States, should provide? What about the role of the Federal Government in helping out the public schools? The newspapers have been full of this discussion, and much of what you read would make you think that it is downright dangerous for the Federal Government to take any part in financing public-school education at all.

FINANCING PROBLEM WIDESPREAD

Recently, we finished a nationwide study of public attitudes toward this question, and the orators who declaim against too much Federal aid to education are in for a shock—the public does not agree with them. Here was the way we put a three-part question:

Our public schools are having a hard time finding funds so that they can keep up with our population growth and maintain high educational standards. Which of these statements best expresses your feelings about how this problem should be solved?

Public schools should depend entirely on local financing.

Federal aid for building new schools should be provided, but teachers' salaries and everything else should be paid for with local funds.

Federal aid should be given for building new schools and paying teachers' salaries.

The answers are startling. They reveal that the public is strong for more and more Federal aid—not just for school buildings but for schoolteachers' salaries, and for whatever is needed to keep us abreast in our race for knowledge. Here are the figures:

	Percentage agreeing
Local financing entirely	16
Federal aid for school building programs, but nothing more	30
Federal aid for building programs and teachers' salaries	43
Don't know	11
Total	100

The news here is not just that the "local only" believers are so heavily outnumbered, but that the American people as a whole give their biggest vote, quite clearly, to what many local, State, and Federal officials secretly believe, but are afraid to say because they think the public will be against it.

But the public is not against it. The public is for it, and so clearly for it that if such a program were to begin tomorrow, the biggest number of people would be for it in any category you wanted to pick.

Take the question of age, for example, which has more bearing on education than it has on many another question, since it is youth that is directly involved. People between the ages of 21 to 25, recent products of our American system, vote for inclusive Federal aid by a majority, 51 percent in favor of it, 30 percent in favor of Federal aid "for building only," and no more than 10 percent in favor of "local only." As you go up the scale in years, the preference for inclusive Federal aid gets smaller, but it always wins.

FEDERAL AID MEETS FAVOR

You cannot even stir up much of a quarrel on this vital issue among the political parties. True, the Democrats are more federally minded than the Republicans, but the trend of the vote among Republicans, and the trend of the independent vote, too, is the same. Only the size of the figures differs, as this shows:

	Republicans	Democrats	Independents
	Percent	*Percent*	*Percent*
Local only	18	15	19
Federal building only	35	27	29
Inclusive Federal	37	49	42
Don't know	10	9	10
	100	100	100

In short, if the Federal Government were to take its courage in both hands and decide tomorrow morning that our crippling educational shortages were something for which it must now take a heavy measure of responsibility for the first time in the history of our Republic, the heavens would not fall. More people favor such a course than favor any other single one.

Northern California Electrical Workers Conference, AFL-CIO, Endorses Joint Development of Trinity River Project

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. SCUDDER. Mr. Speaker, the joint executive conference of Northern California Electrical Workers, IBEW, AFL–CIO, has passed a resolution calling on Congress to approve partnership development of the Trinity River project in California.

In taking this action, the electrical workers conference of northern California has gone on record in support of H. R. 6997, the bill I introduced to provide for joint development between the Federal Government and the Pacific Gas & Electric Co.

The conference represents IBEW local unions from Salinas to Eureka, an area embracing a considerable portion of the State of California. A copy of the resolution was sent by the conference to all its affiliated local unions, with the intent that they take similar action.

Mr. Speaker, this resolution speaks for the laboring men who would do the work in constructing, operating, and maintaining the power facilities of the project. They prefer private enterprise over Federal control.

For the information of my colleagues, I desire to include with my remarks the following resolution adopted by the conference at its semiannual meeting on May 11:

RESOLUTION ON TRINITY PROJECT BY JOINT EXECUTIVE CONFERENCE OF NORTHERN CALIFORNIA ELECTRICAL WORKERS OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

Whereas the construction of the Trinity River project has been authorized by the Congress; and

Whereas there is pending legislation which would provide for private development and operation of the power facilities in connection with the project; and

Whereas the construction, operation and maintenance of the powerhouses plus the generation and distribution of the power is of vital interest to the members of the IBEW: Therefore be it

Resolved, That the joint executive conference of Northern California Electrical Workers of the International Brotherhood of Electrical Workers, AFL–CIO, go on record in favor of the "partnership plan" for joint public and private development of the Trinity River resources; and be it further

Resolved, That the conference go on record in support of H. R. 6997, 85th Congress, which would provide for joint development of the project by the United States and the Pacific Gas & Electric Co.; and be it further

Resolved, That copies of this resolution be sent to the congressional Representatives of northern California and the affiliated locals of this conference with the intent that they take similar action.

Adopted this day May 11, 1957, at Vallejo, Calif.

W. H. DIEDERICHSEN,
Secretary.

SAN MATEO, CALIF.

The Agricultural Adjustment Act

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an open letter written by Mr. John Donaldson and carried in the Ashland Times-Gazette, Ashland, Ohio. Mr. Donaldson sets forth some very important facts relative to the Agricultural Adjustment Act and I hope the Members of Congress will read his article:

LETTERS TO THE EDITOR: CITIZENS' RIGHTS ABROGATED BY FARM LAW, DONALDSON SAYS

DEAR EDITOR: That a farmer, under the Agricultural Adjustment Act, has lost certain rights of property is apparent to most farmers although people in the towns and cities are generally unaware of the situation.

A farmer may plant only that acreage of wheat which the Department of Agriculture allows him. He is penalized for exceeding this allotted acreage. Furthermore he must obtain permission in the form of a wheat marketing card from the Department in order to be able to sell his wheat crop. The farmer has no freedom of choice in the matter. If he grows wheat, he automatically comes under these restrictions.

However, many farmers are as yet unaware that other equally important rights of citizenship have been abrogated by the Agricultural Adjustment Act. The recent Federal court decisions in wheat penalty cases have clarified the situation and are therefore of great significance not only to farmers but to all citizens since they may establish a precedent for other departments of Government.

These wheat penalty cases were tried under the Federal Rules for Civil Procedures. By so doing the courts considered that the procedures authorized under the Agricultural Adjustment Act had already established the farmer to be guilty of a wheat quota violation and to be in debt to the Government. This accounts for the denial of a jury trial. The court reasoned that since the farmer's guilt was already established, there was no need for a trial by jury.

The question will arise as to how a court can ignore that basic tenet of American justice that a person is presumed to be in-

nocent until proven guilty. The judicial decisions cite the following clause from section 367 of the Agricultural Adjustment Act: "No court of the United States or of any State shall have the jurisdiction to pass upon the legal validity of any such determination" (determination of an Agricultural Soil Conservation Review Board). Thus the courts recognized the Agricultural Soil Conservation Committees and Review Boards as having exclusive judicial powers to determine guilt of farmers in wheat quota violations.

This premise taken by the Federal courts places the American farmer entirely at the mercy of the quasi-legal, "drumhead" procedures authorized by the Agricultural Adjustment Act in which the Department of Agriculture acts as both prosecutor and judge. Furthermore there is no provision in these procedures for that great safeguard against judicial tyranny, the right of trial by jury, as expressly guaranteed in the seventh amendment to the United States Constitution.

One has every right to question whether these procedures which deprive a farmer of his property in the form of a penalty can be called the due process of law guaranteed in the fifth amendment.

It would seem that, as of the present, the American farmer no longer lives under the protection of the Constitution. This view is supported by a recent news item on wheat penalty cases in the Toledo Blade: "These hearings are preposterous," United States District Judge Frank L. Kloeb remarked, adding he intended to uphold the law of the land and refused absolutely to go into the question of constitutionality.

JOHN DONALDSON.

A Program To Help the Depressed Poultry Industry

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. BASS of New Hampshire. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a statement made by me before Subcommittee No. 6 of the Select Committee on Small Business of the House, which is investigating the present production crisis in the poultry industry. The survival of this industry is of vital importance to the people of my district in New Hampshire, and I call this problem to the attention of the Members of the House:

STATEMENT OF HON. PERKINS BASS, UNITED STATES REPRESENTATIVE, SECOND DISTRICT OF NEW HAMPSHIRE, BEFORE SUBCOMMITTEE NO. 6, SELECT COMMITTEE ON SMALL BUSINESS, HOUSE OF REPRESENTATIVES

Mr. Chairman, the poultry industry is a very important part of the economy of the Second District of New Hampshire which I am privileged to represent in Congress. Just less than 50 percent of all of our agricultural income in New Hampshire is derived from this key industry and this industry is sick. It is sick because tremendous overproduction of poultry products has brought prices in the broiler, egg, and hatchery markets down to an all time low. Scores of once healthy poultry businesses in New Hampshire have thereby been destroyed or imperiled.

For some months, I have investigated in detail this problem and I am pleased to offer to the committee for its earliest consideration and possible recommendation a seven point program of executive action. This is an emergency program dictated by the severe poultry crisis. My program attempts to provide an immediate Government assist to the poultrymen in the form of direct Government and related purchasing programs. However, at the same time it attempts to restrict other Government agencies from extending credit where such credit would expand poultry production. This degree of coordination is essential if we are to constructively attack the overproduction problem. In addition to programs of purchasing and credit restrictions, I believe we must increase our present efforts to stimulate consumption of poultry products at home and abroad.

And finally, Mr. Chairman, I believe we need a detailed investigation of integration and its effects. Integration has been charged with much of the difficulties that the poultry industry is experiencing. A detailed investigation by the Justice Department is important if we are to take constructive remedial action, and this investigation could do much to clear the air.

My program is as follows:

1. The President of the United States shall direct the various credit agencies of the Government to cease granting loans to poultrymen where such loans are for the purpose of expanding egg and broiler production. This ban to continue until the Secretary of Agriculture shall decide that present acute overproduction has ended.

2. The Congress shall direct the Attorney General to conduct an investigation of the operation, effect and possible violation of antitrust legislation of the so-called integration system of poultry production and marketing and that the Attorney General shall report his findings to the Congress by January 1, 1958, and take what other steps are required.

3. The Secretary of Agriculture shall continue and expand the present research programs to stimulate the consumption of poultry products.

4. The Secretary of Agriculture shall encourage procurement officials of the military services and other Federal agencies to expand the purchasing and use of poultry products.

5. Government purchases of poultry products to the fullest extent possible shall be made locally.

6. The Secretary of Agriculture should utilize his authority to the fullest extent possible to distribute poultry products through the school lunch program and other authorized outlets. He should also encourage the local school lunch procurement agencies to purchase and utilize poultry products.

7. The Secretary of Agriculture should utilize under Public Law 480 the authority to increase sales of poultry products in foreign markets.

Mr. Chairman, the poultrymen of New Hampshire need our help. In the past, Congress has not failed other small farmers and businessmen. Let us not fail the poultrymen.

No Grounds for a Veto

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the May 21, 1957, issue of the Chicago Daily Sun-Times:

NO GROUNDS FOR A VETO

If logic and reason prevail, a new Federal law should be enacted soon permitting an increase in the diversion of Lake Michigan water into the Illinois Waterway.

In recent years Congress has twice enacted such legislation, and it has twice been vetoed by President Eisenhower. However, the reasons that the President cited for his action no longer seem to exist.

Thus, if Congress enacts a diversion bill this year, as now seems likely, the President should logically sign it into law.

Tomorrow, the House is scheduled to debate and probably pass a bill by Representative THOMAS J. O'BRIEN, Democrat, of Illinois, to increase the present diversion of 1,500 cubic feet per second to 2,500 feet. The extra diversion would be for a test period of 3 years, during which Army engineers would measure its effect on Great Lakes levels and on the Illinois Waterway.

Favorable Senate action on the measure is expected before the session's end.

In his previous vetoes, the President variously cited these objections to the diversion bills: (1) That the present rate of diversion is adequate for navigation in the Illinois Waterway and Mississippi River; (2) that more diversion might be harmful to navigation and hydroelectric power projects on the Great Lakes; (3) that Canada might be opposed to extra diversion, and (4) that increased diversion might adversely affect other States lying along the Great Lakes.

As recently pointed out in the Northwestern University Law Review, all of these objections have been answered wholly or partially by subsequent developments. An article by Anthony A. Olis, president of the sanitary district, and Robert A. Sprecher, special assistant attorney general of Illinois, brought out that:

The President himself dropped all reference to the first point between his first and second veto messages. On the second point, two expert studies concluded that the effect of increased diversion on Great Lakes navigation and power would be negligible. On the third point Canada interposed no objection to the recent increased diversion authorized by the United States Supreme Court on an emergency basis. The fourth point is answered in part by the two expert studies mentioned before and by the failure of other Great Lakes States, with the exception of Wisconsin, to object to the Illinois petition to the Supreme Court for emergency relief.

There are no more valid grounds for the President to object to the O'Brien bill, and we trust he will sign it.

One Nation Under God

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a prize-winning essay by Kenneth Oberembt, of Redwood Falls, Minn., entitled "One Nation Under God."

The American Legion and the American Legion Auxiliary render great service to our Nation by their work with young people. Perhaps their greatest contri-

bution is in the promotion of 100 percent Americanism, and that is exemplified by this essay produced by Kenneth Oberembt for the contest sponsored by the auxiliary.

In commending this splendid essay to your attention, I pay compliment to the legion and the auxiliary and the members of those two great patriotic organizations who give so freely of themselves to this splendid work.

The essay follows:

ONE NATION UNDER GOD

Listen: Atheist, Communist, and Fascist. Listen and understand my humble words.

I am a human being like yourselves, but more than that, I am an American. I live in a land of destiny, a land of progress, and a land of opportunity. I am a fractional part of the greatest earthly happiness, a free and wholesome way of life—the American way of life. I belong to a typical American home, one among millions upon which shines the luster of divine light.

My home contains all of the elements of the average home. It has its moments of heart-rendering sorrow, periods of hilarious ringing laughter, occasions for a needed reprimand, and time for well-won praise. But a much stronger force binds our individual paths together, the force of love. First is divine love in the acknowledgment of an infinite supreme being who holds our destiny in the palm of His hand, just as He rules every droplet of water in the seas. We owe our very existence, our very life, to Almighty God and it is entirely fitting and proper that we should worship Him, and thank Him for our many heavenly blessings. Our family is very closely bound, not only in love of the Almighty, but in the love of each other. We have our differences, the tremendous and the trifles, which must be settled wisely and tactfully. Money expenditures, disciplinary measures, and various other problems crop up again and again, and only by mutual love and understanding can they be worked out with a peaceful harmony.

The strength and unity of my home can be stated in the two greatest commandments: "Love the Lord thy God with thy whole heart, thy whole strength, and thy whole mind," and "Love thy neighbor as thyself."

My home and all American homes have a grave responsibility—to preserve the Nation for the good of future generations. My home is firmly dedicated to this ideal. Its first thought is to raise a family of religious, God-fearing citizens who will acknowledge a divine, merciful Being, and to impress upon them the nonexistence of mankind without His aid.

It has the duty of raising generations of physically and mentally clean Americans who will have the intelligence to treasure and defend the greatest gift given to man—the gift of freedom. The American home is responsible to imprint the virtues of honesty, sincerity, uprightness, benignity, and dependability upon its mombers who shall respect the nobility of all people whether tall or short, small or large, and with no discrimination of races. The job of my home is a tremendous job, but it is a task of love.

Each American home is a tiny portion of a vast pattern: the cell of a living organism. The home is a "little America" governed by the principles of faith, freedom, and fearlessness which make our America strong and linking—the melting pot of the world.

The American home dwelling with the faith of God is the symbol of rebuke against communism. The Marx', Engels', and Stalinists' supreme policy is to destroy the nearly infallible power of the churches and homes. Communism is an engulfing fire which dominates, enslaves, and corrupts the minds and hearts of all people under its influence. It swallows up all truth and spits forth lies, half lies—the very conceit of the Devil. But communism can never succeed. It will rampage, crush, and crucify the power of the home and church, but in the end it will be defeated by Almighty God.

Heed His might, for fire shall be destroyed by fire, and the lamb of peace shall come and rule the world. Embrace Him, Communist, atheist, Fascist, and you shall enjoy the most beautiful happiness the world has ever known.

There is an old phrase which says, "The family that prays together, stays together." Let this phrase read: "The nation that prays together, stays together," and then America can exclaim with one accord, "We are one Nation, under God."

The Indispensable Railroads

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. KEOGH. Mr. Speaker, my attention has been called to the following editorial which appeared in the New York Herald Tribune last week. I deem it of sufficient importance to ask permission to insert it in the RECORD. It was forwarded to me by Andrew J. Pizzini, a distinguished American long-interested in the continuing efficient and safe operations of American railroads, and who, in his capacity as former president and present chairman of the board of the Waugh Equipment Co., of New York, has done much in the field of railroading.

The editorial follows:

THE INDISPENSABLE RAILROADS

So the public service commission has allowed the New York Central Railroad to increase commutation fares by 15 percent. It was less than half of what the Central had asked, but the public service commission feared that any more would set off a trend of diminishing return.

As the rate makers pointed out, "It has been generally recognized for many years that railroad passenger business, as presently conducted, has not and cannot be operated at a profit." This, of course, applies to all the commuter roads. The fact is inescapable—transportation of several hundred thousand persons between city and suburbs each day is strictly a deficit operation. And the railroads would be only too happy to be relieved of this burden.

But there is also another unavoidable fact. The railroads are an absolutely essential part of the mass transportation which is vital to New York City and the metropolitan region. Certainly no one can rationally contemplate a situation with rail service gone and the public wholly dependent on buses and private automobiles. Yet, as many a traveler knows of personal experience, there are uncomfortable developments in this direction. The railroads, bedeviled by high taxes, increasing costs of operation, declining patronage and years of unsympathetic regulation, have too often had no option but decline. And some of them frankly say that, unless relief is provided, it is inevitable that commuter service will keep on deteriorating to the point of disappearance.

Now we refuse to believe that the metropolitan region is willing to allow a bad situation to get progressively worse. There is a growing concern over traffic congestion and more awareness that railroads can be a helpful complement to highways. Also a lot of people are beginning to realize that if the automobile is subsidized by tax-free facilities, then it is only fair to give equal consideration to rail transport. In short, the commuters must have the railroads, but since this service loses money and direct charges can never make up the deficit the only reasonable conclusion is that some form of public assistance is essential.

Whether regional cooperation can be attained remains to be seen, although here the progress in the case of the Long Island Railroad is encouraging. The forthcoming report of the Metropolitan Rapid Transit Commission, which has long sought workable solutions, is therefore awaited with great interest.

The Pine Flat Contract

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. SISK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the April 1957 issue of Western Water News, a publication of the Irrigation Districts Association of California.

This article, which is entitled "The Kings River Contract Pending After 11 Years," by Mr. Phillip Gordon, president of Kings River Conservation District, summarizes the background of the efforts of farmers and irrigation districts and the Bureau of Reclamation to negotiate a contract providing repayment to the United States for the reimbursable irrigation benefits of the Pine Flat Reservoir on the Kings River of California. You will note that a contract, drawn by the Bureau and agreed to by the irrigationists, has been pending before the Secretary of the Interior since December 1955. Meantime, the farmers have been operating under uncertain and expensive interim agreements which leave their rights and obligations uncertain and undefined. I recognize the obstacles which are delaying a final decision in this matter, but I earnestly hope and urge that they be overcome and that these people be accorded the decision they deserve in fairness and equity and which will permit them to go forward in full development and utilization of their water and their farms.

The article follows:

THE KINGS RIVER CONTRACT PENDING AFTER 11 YEARS

The Kings River contract, which was approved by the directors of the King River Conservation District and submitted to Washington in December 1955, was the result of over 11 years of effort and confusion. The confusion stemmed from the clear-cut statement in section 10 of the Pine Flat authorization bill which stated: "The Secretary of War shall make arrangements for payment to the United States by the State or other responsible agency, either in lump or annual installments for conservation storage when used."

Nearly 2 years later, in the fall of 1946, Commissioner of Reclamation Strauss wrote

the regional director that "the President has directed that I, as Commissioner of Reclamation, proceed forthwith to make the necessary repayment arrangements."

THE FIRST DRAFT

But it wasn't until January 13, 1950, that the Bureau of Reclamation got around to submitting the first draft of a proposed contract which the local interests found to be totally unacceptable. Through the succeeding years several additional drafts of proposed contracts were reviewed. On these several contracts, the spokesmen for the Kings River interests noted that "all of them had for their ultimate purpose the subjection of the Pine Flat project and the water rights of the entire Kings River service area to the reclamation laws and the arbitrary control of the Bureau of Reclamation. In all of them the Bureau sought to secure control of all of the power facilities of the project, the control of the storage capacity of the reservoir and the ultimate control of the water rights, ownership of which by the Kings River water users was conceded in all of the original reports on the project."

ANOTHER EFFORT

After the change in the administration, the contract committee of the Kings River Conservation District began to make progress and ultimately worked out the major areas of controversy to the point of approving the contract. The negotiations were carried on with the approval of Washington and the numerous exchanges of correspondence show the meeting of minds on the problems.

FRESNO SLOUGH RIGHTS

The current contract, now pending for approval with the Secretary of the Interior, includes about 5,000 words and is supplemented with an amended contract relative to the transfer of the rights claimed by the United States to certain Fresno Slough waters. The Fresno Slough water rights problem was one of the serious points of protracted controversy in the contract negotiations. It was finally agreed that the United States would transfer to the KRCD claims to the Fresno Slough rights for the sum of $750,000.

The main monetary obligation in the contract totals $14,250,000 "which shall constitute payment in full for the perpetual right to the exclusive irrigation storage uses of the project and payment in full of the reimbursable construction costs of the project allocated to irrigation * * *." But this amount itself was discussed over a period of considerable time, for the State had estimated the conservation benefits of Pine Flat at $10 million and the local interests stood on this figure.

FORTY YEARS BUT WITH PREPAYMENT

The contract provides for the payment in 40 successive equal annual installments, without interest. However, the prepayment of the obligation by any member unit is provided for at any time within the 40-year period. The obligation of the member units is to be based on the amount of irrigation storage use available to the respective member units in Pine Flat Reservoir. The contract provides for the allocation of the repayment of member units to the lands within the unit. Specifically, provision is made that "payment in full by any member unit, landowner, or stockholder of the amount so allocated shall, as to such member unit, landowner or stockholder, constitute payment in full for the perpetual right to the irrigation storage use of the percentage of the reservoir storage space represented by said allocation." Individuals have a 10-year prepayment period.

Details of operation and maintenance of the project works are spelled out in the contract. The KRCD is to pay "not to exceed 37.4 percent of the total annual joint costs of operation and maintenance of the project," and provisions are included for actually making the payments in advance for the operation and maintenance during the initial 5-year period.

RECOGNIZES RIGHTS

The contract recognizes the rights of the Kings River interests to the natural flow of the river and provides for the commingling of natural flow and stored water. The contract includes provisions for the delivery of water to excess lands under the recordable contract provisions of the reclamation laws. It recognizes water rights now held under the laws of the State by the Kings River units and includes the usual general provisions of contracts negotiated between local agencies and the United States in order to make them legal and operative.

New Age of Space Comes to Birmingham

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. HUDDLESTON. Mr. Speaker, our civilization is fast approaching the age of space. It is most certain to have a profound impact upon our lives and the world we live in.

The possibilities and problems of the age of space were discussed in a nontechnical conference held last week in Birmingham, Ala. The Southern Research Institute sponsored the 2-day program, which concerned missiles, rockets and space travel.

Missiles already are a major United States industry. Next year the Armed Forces will spend some $6 billion on missiles and their components. Within 4 years experts believe missile expenditures will exceed those for aircraft.

Missiles, however, are only one aspect of the age of space. There are the problems of research and technology, the search for materials and fuels for space vehicles, and the question of survival in space. All these important topics were discussed at the Birmingham conference by speakers who are nationally known in their fields.

These speakers were Dr. Clifford C. Furnas, chancellor of the University of Buffalo, former Assistant Secretary of Defense for research and development, who spoke on Military and Civilian Research; Mr. Dan A. Kimball, former Secretary of the Navy and now president of the Aerojet-General Corp., whose topic was Fuels for Space Vehicles; Mr. F. L. LaQue, vice president of the International Nickel Co., who discussed Materials for Space Vehicles; Maj. Gen. Dan C. Ogle, Surgeon General of the Air Force, Space Medicine; Mr. Ernst Stuhlinger, chief of the research projects office of the Army Ballistic Missile Agency, A Trip to Mars; Mr. John P. Hagen, director of project Vanguard, The First Man-Made Moon; and Mr. Erik Bergaust, managing editor of Missiles and Rockets Magazine, United States and Russian Missile Technology.

Under leave heretofore granted, I am pleased to insert an editorial entitled "New Age of Space Comes to Birmingham," which appeared in the Birmingham News of May 17, 1957. This enlightening editorial aptly points out that space travel—always man's dream—is now within his grasp.

The editorial follows:

NEW AGE OF SPACE COMES TO BIRMINGHAM

The age of space is no longer merely a figment of the science fiction writer's imagination. Under the pressure of military defense needs, man's rockets and missiles are reaching farther and farther into the realms above the earth's surface. Rocket and guided-missile development has become a multi-billion-dollar operation, heavily financed by the Government for defense purposes. It is having a strong impact on business and industrial leaders are anxious to learn more about it.

This was made clearly evident here in Birmingham yesterday at the first day's sessions of the Age of Space conference, sponsored by the Southern Research Institute. Some 350 businessmen and industrialists in attendance heard experts discuss progress and problems in missile development, research space medicine, and the prospects for space travel. Today they are touring installations at the Redstone Arsenal near Huntsville.

The 20th century has been noteworthy for many great achievements in the field of physical science. The first half saw, among a host of spectacular achievements, the beginning of mechanical flight and the large-scale release of energy from within the atomic nucleus. There are indications that the second half of the century may indeed see the realization of a dream almost as old as that of flight through air—that of flight through the reaches of outer space.

Michigan Week

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. BROOMFIELD. Mr. Speaker, I hope that our fellow Congressmen will join all of us from the Michigan delegation in our celebration of Michigan Week. Originated in 1954, Michigan Week has become an increasingly important event in our State.

The purpose of Michigan Week is best pointed up by the State legislature's resolution summoning the people of Michigan to celebrate the period in which residents of our State and of other States may become better acquainted with Michigan's boundless advantages and opportunities in industry, natural resources, agriculture, recreation, and culture.

We in Michigan could point with pride toward some of the outstanding physical features of our State: The 3,121 miles of inland seashore, the 11,000 inland lakes, the unexcelled fishing and hunting, the forest-fringed streams, all of which are unparalleled in the United States.

Or we might point out the 19 million acres of green-wooded vacation lands, the historic land of Indians, French, and furs. Or the winter wonders of ski-

ing and tobogganing on slopes unexcelled this side of the Alps.

Instead, we want to draw your attention to the heart of a Nation. To a State whose sinews helped spell victory for the Allied Forces during World War II. To a State which has resumed its role as the top producer of automobiles once the battles were won.

I hope you will join with me in celebrating Michigan Week. In commemoration of this event, I am sending you a scale model of one of our State's projects donated by Chrysler Corp.

I agree that all of you have beautiful States to visit. Some of you have historic spots which are unrivaled in the world in their significance. But the fact remains that very few of you would ever have the pleasure of visiting these wonders if it were not for our leading item of manufacture—the automobile.

Michigan Week is a 7-day celebration by the People of Michigan proclaiming their freedom, their blessings, and their hopes for the future. It is a celebration by the people of Michigan that proclaims their togetherness through their active cooperation as members of such groups as churches, schools, business and civic associations, veterans' organizations, labor unions, and luncheon clubs. In this way Michigan Week dramatically illustrates the fact that each individual in Michigan contributes to his State and also gains something from it.

Michigan Week points up the significant fact that the place where people live is an important unifying influence in their lives, an influence which can be made more favorable through the understanding, the will, and the action of all the people.

All of this concept is symbolized in the official Michigan Week emblem, the illustration of the proud robin chirping, "Its great to live in Michigan."

During Michigan Week the robin, official State bird, sings its message over the radio and on TV, in newspapers, in publications, and through all other forms of mass communication. Official Michigan Week banners, posters, buttons, bumper strips, and other materials, created by the State committee and produced at printing cost, are distributed to participating Michigan Week committees in every county in the State.

The Michigan flag bearing the State coat of arms, with its history dating back to 1837, is given special prominence during Michigan Week. It is proudly displayed with the American flag at meetings and events, and in public places.

The togetherness of Michigan people becomes a vibrant living fact in the events of Michigan Week celebrated in cities, towns, and villages each day throughout the State. All segments of community life take part in meetings, programs, talks, and discussions. Veterans' organizations conduct Operation Facelift to spark and to carry through community improvements; community forums consider what Michigan needs in the next 10 years to improve the livelihood of its citizens; Wolverine frontiersman awards are made to distinguished Michigan individuals for their attainment in opening new frontiers to the people of their Nation and State; and national sports figures are named to the Michigan Sports Hall of Fame.

The ideas, plans, and projects of Michigan Week which deepen the unifying belief that "its great to live in Michigan," help create the will to make Michigan even greater in the future.

Channelization of the Ohio River

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. NEAL. Mr. Speaker, in appropriating funds for civil works when economy in Government spending is a universal watchword, due consideration should be given to those projects of proven economic value.

Channelization of the Ohio River has proven its economic soundness beyond all estimates claimed by its original sponsors. The replacement program substituting high-level dams, each of which will eliminate three or more obsolete structures, is well underway. To delay the progress of this program by failure to appropriate sufficient funds will result in substantial financial loss to the Federal Treasury as well as the huge investments along the river course for utilization of vastly increased traffic. There can be no economy in withholding funds from well-established programs that have in the past and will continue to prove their economic value.

The postwar years have witnessed an industrial and economic renaissance in the Ohio Valley. Everywhere along the main stream and its tributaries, industry is seeking new sites for plant construction. Chemicals, aluminum, iron and steel, vast new electric power plants, and other basic industries have been attracted to the valley by its excellent labor force, its boundless deposits of coal and chemical brines, and above all, by that most precious of all natural resources—water—water both for drinking and for industrial processing and for efficient low-cost transportation of bulk freight.

These new billions of investment on which the economic resurgence of this great region is based, have been drawn by the magnet of reduced transportation costs. And that enormous economic incentive has been provided by the original Ohio River canalization to a stable 9-foot depth completed in 1929. The irony is that the original project was outmoded before it was complete. Designed to handle 13 million tons of freight annually, the canalized river carried 22 million tons in 1929. In 1955 the river carried 71.5 million tons, 37 percent more than the estimated traffic for the St. Lawrence seaway in 1965.

But that enormous traffic burden, carried in tows often more than 1,000 feet in length through 600-foot locks, has taxed the aging facilities to the utmost. Breakdowns are frequent. Many of the locks are in an advanced state of deterioration, and the threat of collapse is increasingly serious. Delays from traffic congestion impose excessive costs. And recently, the crowding has become so serious that the safety of crews, vessels, and cargoes is imperiled.

The advantages of low-cost transportation, which are the keystone in the arch of the valley's prosperity, are being eroded by the inadequacies of existing navigation facilities.

This development is particularly serious for the State of West Virginia. The position of our great State as the No. 1 coal-producing State in the Union depends upon low-cost water transportation access to distant markets. For 90 percent or more of our coal is sold outside the State. It is the literal truth that the welfare of the 46 percent of our labor force engaged in the coal industry is directly dependent upon the maintenance of efficient low-cost transportation on the Ohio River.

Not only will failure to correct the deficiencies of the Ohio River navigation systems injure our coal industry, it will soon begin to retard the development of industry which has of late years brought new life and prosperity to river communities which suffered long from poverty, stagnation, and neglect.

These are the reasons why we in West Virginia are vitally interested in the United States Army engineers' long-range modernization plan for the Ohio River. Already the Congress has wisely provided funds for a significant beginning of that program. Four great modern locks and dams are now under construction on the Ohio, which will eliminate 13 small inadequate structures. The new facilities will provide deeper, more stable pools for navigation; they will sharply reduce locking time, cut maintenance costs, and eliminate bottlenecks and the dangers of collapse of old facilities in the portions of the river which they will serve. They will augment water supply for homes and industry and they will create recreational benefits of untold value. But they are only the first steps. And no one of those under construction, nor all of them together will solve the problem until the entire job is done. For the Ohio is one river, not a series of disconnected segments. It takes only one bottleneck to impede the mounting volumes of through traffic which move not only from one end of the river to another but to remote destinations on the Mississippi, the Great Lakes, and the Gulf coast.

This great integrated modernization project must move forward with all possible dispatch to completion, if the Ohio River Basin, the industrial heart of the Nation, the atomic center of America, is to play its full part in the development of our economic potential for prosperity in peace and strength in time of war.

Every consideration of sound planning for the national welfare and security argues for orderly and efficient progress of the overall program, as a national project of the highest priority. Unnecessary delay or postponement of projects of such compelling urgency in a period of rising construction costs, is a false econ-

omy. The capabilities of the agency charged with construction responsibility and maximum efficiency of scheduling and construction should be the sole factors in determining the progress of the work. By these standards the urgently needed New Richmond locks and dam above Cincinnati should be commenced in fiscal 1958 and sufficient money appropriated for advance planning on the Pike Island project above Wheeling to permit construction on that essential project to begin in fiscal 1959.

Business and Industry Plan Blitz on Ike's Budget

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared in the Boston Daily Globe on May 16, 1957:

BUSINESS AND INDUSTRY PLAN BLITZ ON IKE'S BUDGET

(By John Harriman)

Somehow or other we wonder what happened to the picture of business and industry beamngi on Mr. Eisenhower as their "boy."

On Monday most of the mighty of the business world will convene in Chicago to launch a blitz on Mr. Eisenhower's budget. Attending will be such organizations as the National Chamber of Commerce, the National Association of Manufacturers, the National Association of Real Estate Boards, the Life Insurance Association of America, and so on. Even the doctors, through the American Medical Association, will be on hand to give the back of their hand to the budget which Mr. Eisenhower twice in as many weeks will take to the TV waves to defend.

Do we hear a murmured, "Et tu, Brute," from the White House?

TWO KINDS OF BUSINESS VOICE

In connection with the above, it is necessary to differentiate between the business voice when it speaks collectively, and when it speaks individually or in its component parts.

Collectively, business is mightily for economy all up and down the line. For only through economy can taxes be reduced. And, as everyone knows, taxes are the cause of great business suffering.

But when business speaks individually, its pleas for economy are not only muted, but qualified. Then what it wants is not economy in general, but economy in some part of the budget remote from itself and its interests. And if by any chance cuts are proposed which might somewhat reduce the flow of Government dollars to any industry, the cries issued by that industry are anguished in the extreme.

This, of course, explains why the tendency to cut is usually in areas like foreign aid, where those hurt are too distant, or too polite, to make much of a fuss over it.

The truth of the matter—impolite as it may be to so state—is that huge segments of American industry can only flourish if fed by the rich blood of heavy Federal spending.

MANY MUST HAVE FEDERAL LARGESSE

In the forefront of beneficiaries from Federal largesse are industries like aircraft manufacture and guided missiles—almost entirely tied to the Federal apron strings.

Electronics is another which draws mightily on the Federal purse. So is shipbuilding—with Government orders of $1.3 billion in the offing for the coming fiscal year. The Government will even spend $600 million in the auto industry.

Merchant-marine and airline subsidies will run to around $200 million. Industrial raw-material producers will pocket around $1 billion in Government orders.

Furthermore, innumerable industries are actively pressing proposals which will swell Government spending in their area, even while they give lip service to the economy idea in general.

The non-ferrous-mining people want Government aid of various sorts. The home builders want more money appropriated to aid military and other special types of housing. While every Tom, Dick, and Harry in industry has his special harbor, or river channel, or what-have-you that needs deepening or widening.

It's no wonder politicians become cynical.

A Commonsense Foreign Policy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting what I believe to be an important foreign-policy statement, a program to govern our foreign relations suggested by the Citizens Foreign Relations Committee:

A PROGRAM TO GOVERN OUR FOREIGN RELATIONS

The independent sovereignty of the United States must forever remain the ultimate objective of American foreign policy. This objective can best be attained in a peaceful community of free and sovereign nations, guided in their relationship by minimum standards of law and equity. To this end, it is the hope of Americans that governments be constituted to derive their lawful powers from the consent of the governed, and that peoples everywhere enjoy the dignity and freedom which is their grant from the Almighty.

As such a world develops, should breaches of such minimum standards threaten its security, the United States would dedicate its leadership and its power to enforcing just settlements alone or in cooperation with likeminded nations temporarily willing to act under its leadership. Under other circumstances the United States would maintain neutrality.

The greatest present obstacle to the attainment of the above-stated objectives is the existence of the Communist dictatorship, and its world agencies. Our aim must be to neutralize, isolate, reduce, and eventually eliminate Communist power. This policy of firmness does not mean we favor preventive war. Nevertheless, our enemies should be set on notice that—however grim the prospect—we will not shrink from war if, the Kremlin forces us to choose between conflict and surrender to Communist slavery.

Specifically, we propose that the Government of the United States:

1. Mobilize the strongest possible deterrents to war—military, psychological, political, and economic.

2. Return to those traditional American policies which sustained us in the past, especially: (a) The policies recommended by President George Washington in his Farewell Address; (b) the Monroe Doctrine; (c) the open door policy as defined in the Nine Power Treaty of 1922.

3. Exterminate the Communist conspiracy in the United States.

4. Withdraw recognition from the Soviet Union and its satellites.

5. Employ all measures to sap the economic strength of the Communist world.

6. Scrupulously observe present military alliances (where such alliances are in truth honored by our contracting allies), and form new alliances only for the period of the emergency.

7. Extend military and economic aid only to cooperating allies.

8. Wage unremitting psychological warfare against Communist regimes, including aid to effective anti-Communist exile, underground, and resistance groups, based on the principles of the Golden Rule.

9. Return to open diplomacy, except where military security imposes secrecy.

10. Oppose all activities which tend toward a world state, supergovernment, or the transfer of decisions for American security and welfare to foreign powers and/or foreign nationals. To this end, press for the expulsion of Communist member-states from the U. N. Reform the U. N. by removing all semblance of a permanent military alliance and separate it from its specialized agencies. Amend our Constitution to provide that neither the U. N. Charter, nor treaties, nor covenants, shall supersede it.

11. Base American foreign policy solidly on moral law, patriotism, enlightened nationalism and the teachings of Christ.

The United States—Its Friends

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. KEOGH. Mr. Speaker, objectivity has for many years marked the competent reporting of distinguished Arthur Krock of the New York Times and has contributed immeasurably to his world-wide reputation and renown. That competence, reputation, and renown were, in my opinion, added to by the following column which appeared in the New York Times of today.

The article follows:

FRIENDSHIP FOR THE UNITED STATES ON NATO'S FLANK

(By Arthur Krock)

LISBON, PORTUGAL, May 20.—In this peninsula of Spain and Portugal, which comprises the southwestern European flank of NATO, the traveler of inquiring mind will discover in these times a far friendlier attitude than in Britain and France toward the free-world leadership that circumstances have thrust on the United States. Despite some natural distaste for being the locale of American military bases, a fact deriving as inevitably from geography as our free-world leadership derives from America's natural resources, the

officials and people of Spain and Portugal display feelings of warmth for Americans and for the foreign policies of the United States Government as here revealed.

In Spain the Government, and the apparently large majority that supports it, are pleased with the fairly new discovery that they are now popular in Congress—though not yet visible in economic terms comparative with France and Britain—after a long period in which only the military viewed good Spanish-American relations as indispensable to sound United States policy. In Portugal, where for years the form of government dominated by Professor Salazar has for several reasons never stimulated the American differences of opinion that have affected the Franco regime in Spain, a very pleasant atmosphere has enveloped the United States and Portugal for a long time and was augmented by the wartime treaty concerning the Azores.

TWO IMPORTANT FACTS

An important, perhaps essential, contribution to the peninsular relations of the United States was made by American diplomacy. Our Ambassadors in Madrid and Lisbon, particularly James Clement Dunn and John Davis Lodge in the Spanish capital and James C. H. Bonbright in the Portuguese, have kept in mind two important facts that are not readily assimilable to many Americans. One is that we are not doing a favor, out of sheer economic or military benevolence, to the nations where we establish bases. The second fact is that the governments and peoples of other nations have a dislike for the presence of foreign troops that is deeper than our own for historical reasons. Only during the War of 1812 has the territory of the American Republic been occupied by the armed forces of another nation.

WISE ADMINISTRATION

The diplomacy based on the realization of these factors is further commended because implicit in the American bases and their manpower is that they are here to help proud nations keep their independence. And one of the demonstrations that the diplomacy is being wisely administered is that nearly all members of the United States military on duty at this juncture in Spain and on the Portuguese mainland wear civilian clothes by order. When the Spanish bases are completed the uniforms will of course appear, and a certain strain on relations goes with that. But our military has learned much from bases elsewhere and from housekeeping for the GI's in the occupied area of West Germany.

SIGNS OF PROSPERITY

The peninsular tourist from the United States in these days will also be favorably impressed by the surface show of daily life in the capitals and in the larger towns. In Madrid this has the aspects of a boom, with streets and shops and restaurants and hotels crowded not only by foreign visitors but also by nationals who seem to have money to spend. The tawny terrain, broken only occasionally by green and cultivated sections, looks more sunbaked than usual; but this was explained by el Conde Valle de San Juan (gratefully remembered in Washington as Pablo Merry del Val) in this simple fashion, "It hasn't rained in Spain for 10 years—not even on the plain." In Lisbon the distribution of humanity and its activity has always appeared to be more orderly, but the same signs of prosperity are visible. And the natural bounty and beauty of the Portuguese terrain are its permanent fixtures.

A week in the peninsula does not entitle a foreigner to form positive political impressions, but this is the substance of opinions sought from many others: The large Spanish majority envisages no government at this time that would suit it better than Franco's. The overwhelming mass of the Portuguese has merely to hear that Dr. Salazar, wearied of his tasks, might even contemplate returning to teach economics at Coimbra, to bombard all the saints with prayers that the Premier may live forever.

Salute to Station WBRC–TV

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. HUDDLESTON. Mr. Speaker, the Department of Defense tonight is honoring television station WBRC–TV, at Birmingham, Ala., for its outstanding contributions to the Armed Forces Reserve program. It is significant indeed that WBRC–TV is the first television station in the United States to receive the Defense Department's highest award for Reserve activities.

The Reserve program is, of course, vital to our national security and, therefore, needs the support of everyone. It is encouraging that the management of WBRC–TV has worked so closely with reservists and Reserve functions. As a mass communication medium, this television station has promoted the Reserve program in its news and special events programing. In addition, the station management has afforded its own employees every incentive to become reservists.

The credit for this unselfish policy is due to Mr. George B. Storer, Sr., head of the Storer Broadcasting Co., and Mr. J. Robert Kerns, vice president and managing director of WBRC–TV. They have not forgotten its obligation to the public interest. It has been their considered judgment that it is of the utmost importance and certainly in the public interest to support the Reserve activities of the various services 100 percent.

A majority of WBRC–TV's staff are members of the Reserve. When their units hold encampments or go on maneuvers, the employees are granted leave with full pay without having their vacation periods affected. This in itself is a patriotic gesture. Also, the station allows reservists use of its meeting rooms and other facilities.

WBRC–TV has furthered the Reserve program in many ways. News Director Leo Willette has regularly featured Reserve news on his news programs. Many special events, such as Armed Forces Day and Veterans' Day, have been telecast. Reservists have been invited as special guests on many shows. The Reserve story has been effectively told through the concerted efforts of the entire WBRC–TV staff.

Mr. Gary Arnold, a staff announcer, who is a technical sergeant in the Air Force Reserve, has been among the Reserve's most active boosters. It was he who first called attention to WBRC–TV's many activities in behalf of the Reserve program. His initial recommendation fast met with official approval. In notifying Mr. Kerns of the award, Secretary of Defense Wilson wrote, in part:

The award is provided to express the Department's appreciation for the outstanding cooperation to reservists and Reserve activities achieved through the personnel policy you have established. You have thus encouraged and assisted your reservists in fulfilling their military obligations. Such patriotic foresight provides real assistance to the success of our defense effort, and the Department is deeply grateful.

Here is the text of the citation which will be formally presented to WBRC–TV tonight:

WBRC–TV, an affiliate of the Storer Broadcasting Co., Birmingham, Ala., is cited for outstanding cooperation with reservists and Reserve activities. This organization has encouraged its employees to participate in Reserve activities by such cooperative policies as providing leave, in addition to annual vacation, for Reserve training, with the difference between civilian and military pay reimbursed; sponsoring guest radio and TV appearances of Reserve members; featuring special Armed Forces news features; telecasting military functions such as Armed Forces Day, Veterans' Day, and other special events; allowing the reservists the use of its meeting rooms, bulletin boards, and equipment; and providing company facilities for Reserve activities. This award is presented as tangible evidence of the appreciation of the Department of Defense.

WBRC–TV's patriotic policy of actively cooperating fully with reservists and Reserve activities is to be highly commended. I hope this station's outstanding contribution to the Reserve program will serve as a pattern and incentive to many other organizations.

We are proud to salute WBRC–TV for its significant contribution to our national security.

Stonewall Jackson, a Great American

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. DORN of South Carolina. Mr. Speaker, the Secretary of the Army, the Honorable Wilber M. Brucker, delivered a very eloquent and able address at the Hall of Fame, New York University, New York City, Sunday, May 19.

The occasion was the unveiling in the Hall of Fame the bust and tablet to Gen. Stonewall Jackson, of the Confederate Army.

It is my pleasure to commend to the House this inspiring address by a great American, the present Secretary of the Army:

STONEWALL JACKSON, A GREAT AMERICAN

(Remarks by the Honorable Wilber M. Brucker, Secretary of the Army, unveiling of Stonewall Jackson bust and tablet, Hall of Fame, New York University, New York, N. Y., May 19, 1957)

The voice of history proclaims General "Stonewall" Jackson worthy to be numbered among truly great Americans in the Hall of Fame. The enduring bronze in which he is here immortalized is no more permanent

a monument than the memory of his military genius and his unimpeachable character. Rightly does he belong in this company of the eminent, whose spirit, vision, and accomplishments have played such a tremendous part in shaping the American tradition.

Although the span of Stonewall Jackson's lifetime encompassed less than 40 years, it was long enough for him to display in full measure the highest qualities of citizen, scholar, and soldier. He was strong, fearless, and self-reliant. He walked in simplicity, gentleness, and honor. He was obedient to the voice of God, steadfast in his adherence to principle, and unswerving in his devotion to what he believed to be right. We are inclined to think of him today chiefly as the master military tactician—the venerated leader whose men followed him through the flame of battle with unquestioning faith. It is just as important that we recognize and pay tribute to the exemplary character upon which his career was built. What a splendid inspiration the Stonewall Jackson story is to Americans throughout all generations.

Thomas Jonathan Jackson was born in 1824 in the little village of Clarksburg, Va.—now in West Virginia. He knew tragedy at an early age, for at 6 he wept at the bedside of his dying mother, and found himself a lonesome, penniless orphan. He never forgot his mother. To the last hour of his life he loved to recall her memory, and her influence retained its potency. As a child he was exceedingly thoughtful. A contemporary described him as "a youth of exemplary habits, of indomitable will, and undoubted courage, who would never give up an undertaking until he accomplished his objective."

To young Jackson, life was a serious business. To prove himself worthy of his forbears he was spurred on to achieve high goals. This strong and driving purpose was the theme of his life and accounts for many of the distinguishing marks of his character. His hunger for self-improvement, his punctilious observance of the essentials of gentlemanly bearing, and the assertion of self-respect were in keeping with his zeal to measure up to what he expected of himself.

His insatiable desire for education prompted his interest in the United States Military Academy, and before he was 19 his hopes were gratified when he was appointed to fill a vacancy. In July 1842 one of America's most renowned Army heroes first answered to his name—Thomas Jonathan Jackson—on the parade ground at West Point. We can see him standing there that day, shy and silent, clad in Virginia homespun, with all his earthly possessions carried in a pair of weather-stained saddlebags, facing this new challenge with the calm assurance which never left him. He soon demonstrated that he was an indefatigable student. He was impressed with the tremendous importance of learning everything there was to know about military science. With Jackson as a cadet, self was subordinate to duty. During those 4 years he was the personification of the challenging motto of West Point: "Duty, honor, country."

After receiving his commission in 1846, he saw service in the Mexican War, where he demonstrated an unusual aptitude for leadership of soldiers in the field. His record at Chapultepec was so outstanding that he was given a battlefield brevet promotion to the grade of major, and praised for his industry, his capacity, and his gallantry. At this early period, he learned how to take immediate advantage of every tactical opportunity which came his way in battle. Restive after a few years of regular military duties, he accepted an offer to become professor of artillery tactics and natural philosophy at Virginia Military Institute. For the next decade he neglected no chance to increase his professional military knowledge, and at the same time he cultivated desirable qualities of mind and spirit. He was an untiring reader, and he read to learn. The wars of Napoleon were his constant study.

At the outbreak of the Civil War, he immediately cast his lot with the State of his birth and became a colonel of Virginia volunteers. Fate had been training him for this hour. He was an arsenal of military knowledge and experience. He proceeded to train his officers and men as thoroughly as possible in the fundamentals of warfare. His knowledge of strategy and tactics was not only gleaned from profound study but from actual combat. To a man, his command had confidence in Jackson as their leader. They became convinced that here was a commander who not only knew all there was to know about military science, but also was a man who would lead them to victory. For his part, Jackson was considerate and fair with his men, but when the supreme moment arrived in battle, he demanded everything they had to give, and was intolerant of anything less. From this combination came a combat capability that gained in momentum as time went along.

At the first battle of Bull Run, the Confederate commanding general rallied his broken regiments with the cry, "See, there is Jackson, standing like a stone wall." A near rout for the Confederate forces was turned into an overwhelming victory. Throughout the Confederacy he became "Stonewall" Jackson from that moment. During the scant 2 years which were left to him, "Stonewall" Jackson's brilliant exploits in battle after battle gave imperishable substance to his military leadership. He became the strong right arm and counselor of General Lee, and won the respect of the Union and the adulation of the entire Confederacy.

"Stonewall" Jackson possessed every attribute which makes for success in war or peace. Morally and physically he was absolutely fearless. He accepted responsibility with the same equanimity with which he faced the bullets of the enemy. He permitted no obstacle to turn him aside from his appointed path. In seizing an opportunity he was the very incarnation of untiring energy. The dominant trait of his character was his intense earnestness. His every faculty was engrossed in the accomplishment of the task at hand. He lost himself in the cause he served.

Religion played a very significant part in Stonewall Jackson's life. He was a conscientious and practicing Christian. He had not only a deep belief in God's omnipotence and justice, but a sincere and abiding trust in His infinite compassion and love. His faith gave him unshakable strength. He prayed for help to do his duty, and he prayed for success. He knew that "more things are wrought by prayer than this world dreams of." He went into battle with supreme confidence, not that the Lord had delivered the enemy into his hands, but that, come what might, the Lord's will would be done. It certainly can be said of Stonewall Jackson that "his Bible was literally food to his understanding and a guide to his conduct. He saw the visible finger of God in every incident of life."

On that dark night in May of 1863 at Chancellorsville on the Rappahannock when Stonewall Jackson was mortally wounded by the tragic mistake of his own soldiers, there fell a man whom America could ill afford to lose. When we contemplate his character and background, we must believe that after the final decision at Appomattox he would have been in the forefront of those who sought to dispel the bitterness of conflict and to heal the ugly wounds of war. It is logical to believe that his powerful voice would have been raised in unison with that of his beloved chief, Gen. Robert E. Lee, in recogizing reality and in counseling the acceptance of the inevitable. The desire to do right, the compulsion to consult the dictates of honor, integrity, and conscience above all else, was the motivation of Jackson's life. Can we doubt for a moment that his mighty influence would have been thrown into the balance to strengthen and sustain the reunited Republic? Like Abraham Lincoln, he was struck down at a time when America could least afford to lose the healing qualities of his great character.

Jackson's valiant philosophy comes down to us through the years of a century past with added meaning in this age when humanity's most priceless values, challenged by the military might and the worldwide subversive machinery of the godless Communist conspiracy, are in greater jeopardy than they ever have been in history.

It is time for us to learn to stand like a stone wall for America in the present cold-war crisis. The Soviet bear has already seized many free countries in its blood-stained claws. With Red China in the Communist camp, the Communist conspiracy now controls 15 nations and the destinies of 900 million people—over a third of all the people on earth. We have had plain and stubbornly repeated warning that the Soviet dictatorship fully intends to wipe out individual liberty, and impose world Communist domination if it can. We know that the Communists are openly working toward that end with every resource at their command. They proved in Hungary how merciless they are in the use of military force to batter down and overwhelm any attempt at freedom. The Soviets have directly threatened Great Britain and France with nuclear destruction. Within the last few weeks they have ominously rattled H-bombs and rockets in an attempt to intimidate some of the smaller nations of the free world and weaken our defensive alliances. They have made open efforts to obtain a military foothold in the vital Middle East, to stir up dissension wherever possible, and corrupt and exploit for their own evil purposes the aspirations of submerged peoples seeking to build the foundations of a better life. How could any thinking person fail to realize that freedom everywhere is in the gravest danger today?

Not long ago, Khrushchev boasted to the nations of the free world: "Time is on our side. We will bury you." May we not accept that challenge? Is time on the Soviet side? Is time ever on the side of a dictator, or a conqueror who rides a chariot of hate over the bodies of millions of men and women? The march of human progress has ever been the march of freedom—not tyranny. In training students to become the scientists, engineers, doctors, and technicians indispensable to their plans, Communist leaders are sowing the seeds of their own destruction. The moment a man enters the realm of the intellect, to think, to inquire, he begins to see a glimmer of light, the light of truth, and truth is what every dictator fears most, because in time, the truth will destroy him.

For example, in Hungary, after a decade of painstaking indoctrination, it was the youth of the country who had begun to see the truth. It was the students who took up their flag and led the revolt, marched in protest, attacked Soviet tanks with sticks and stones and bare fists, and for days, armed with little more than their own courage and idealism, held the Soviets at bay. The spirit of liberty has not died in Hungary. It will never die as long as people seek for truth.

The Communist conspiracy would like nothing better than to infiltrate our American institutions, undermine the foundations of our Government, and destroy the unity and determination of the people of this great Nation. Truth teaches that degenerate doctrines of communism can never prevail against the power of the ideals which are our heritage—the ideals which have dominated the lives of great Americans such as the men and women represented in this Hall

of Fame. If we measure up in all things to the highest standards of our American creed, if we do not flinch from responsibility, decision, or danger, if we stand up to every attack "like a stone wall," the forces of evil will never be able to prevail against us.

Patriotism is one of the strongest of our bulwarks. There are many people who smugly feel that they have all the answers, and who sneer at patriotism as outmoded. Although they have plenty of time and energy for the pursuit of pleasure, for all the fine but often superficial things, they are unwilling to sacrifice or do something for our country. They tend to "look down their noses" at anyone who displays true patriotic impulses. They sneer at anyone who expresses his patriotism. America was built by patriots, and America will be saved only by patriots.

It is not what America has but what we are that is the essence of our strength. We must seek to preserve and enhance above all else the spiritual values which have been the source of all the material advantages we possess.

As a nation, our public policy must be firmly based upon the immutable ideals of private character and morality. The critical conflict in which we are engaged today is not at the moment a trial of the strength of armaments, but rather of the strength and validity of principles. In the age-old conflict between ideals and expediency, we can never make an ignoble choice of compromising our ideals to obtain a temporary advantage. We do not seek merely peace in our time, but peace for all time. We do not see honor and justice and the blessings of liberty for ourselves and our friends alone, but for all men.

America must ever remain a tower of strength—both spiritual and material—standing foursquare to all the winds that blow. Any potential aggressor must know that we are ready and will stand like a stone wall to uphold the right. Our Armed Forces are the physical substance of our moral resolution. Their purpose is to prevent a war, not to start one. They are stout pillars of peace and justice. We know the terrible cost of war in terms of human life and sacrifice. We are fully aware that there are some things far worse than death. It was Stonewall Jackson who said: "What is life without honor? Degradation is worse than death. We must think of the living and of those who are to come after us, and see that by God's blessing we transmit to them the freedom we have ourselves inherited."

As we honor Stonewall Jackson today, it is fitting that we rededicate our lives to the task of transmitting unimpaired to those who come after us the freedom under God we ourselves inherited. Only thus can we add luster to his memory.

National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1957

Mr. MILLER of Nebraska. Mr. Speaker, the report by the Committee on Irrigation and Reclamation to the National Rivers and Harbors Congress was presented to that group on May 18. Much credit for its composition goes to Ival V. Goslin, engineer-secretary to the Upper Colorado River Commission, and William Welsh, secretary of the National Reclamation Association.

I would suggest that my colleagues review this report and if you do, you will understand that more than half of the funds for reclamation comes from the sale of public lands, certain minerals, and the repayment on reclamation projects. Irrigation allocations are returned to the Treasury without interest in accordance with a 55-year-old reclamation law.

Irrigation is a sound investment for the Nation. For instance, every 4 years the value of crops produced on reclamation farms equals the total appropriation for Federal reclamation which started 55 years ago. The cash value of crops produced in 1956 is more than $827 million. The total value of all crops produced under the reclamation program since 1902 is $11,398,000,000. More than half of this total was produced during the past 8 years.

It has been estimated that the Federal Government has received nearly $5 billion in Federal taxes from reclamation projects and adjacent trade territories. The land irrigated would be nonproductive without water and good people to work the land. Irrigation projects produce food for a growing, expanding population. Only about 2 percent of the products on irrigated farms add to our surplus agricultural products. It would not be possible to have an abundance of cheap vegetables without the irrigation of good land.

I suggest my colleagues read the report, particularly the policy recommendations made by the Committee on Irrigation and Reclamation to the National Rivers and Harbors Congress:

REPORT OF COMMITTEE ON IRRIGATION AND RECLAMATION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, 44TH NATIONAL CONVENTION, MAY 18, 1957

Chairman: Representative A. L. MILLER, Kimball, Nebr.

Vice chairman: Judge Guy C. Jackson, Jr., Anahuac, Tex.; president, National Reclamation Association.

Secretary: Ival V. Goslin, Grand Junction, Colo.; engineer-secretary, Upper Colorado River Commission.

Members:

Arizona: Representative STEWART L. UDALL, Tucson; member, Interior and Insular Affairs Committee.

California: Representative CLAIR ENGLE, Red Bluff; chairman, Interior and Insular Affairs Committee.

Colorado: Representative BYRON G. ROGERS, Denver; Harold H. Christy, Pueblo, director, National Reclamation Association.

Idaho: George L. Crookham, Jr., Caldwell; president, Guffey Water Development Association.

Kansas: Robert V. Smrha, chief engineer, division of water resources, State board of agriculture, Topeka.

Montana: Everett W. Rising, Washington representative, State Water Conservation Board of Montana.

Nebraska: Pete Badura, Ashton; president, Farwell Irrigation District.

Nevada: Representative WALTER S. BARING, Reno; member, Interior and Insular Affairs Committee.

New Mexico: John P. Murphy, Albuquerque; secretary, New Mexico Reclamation Association.

North Dakota: Fred Frederickson, Valley City; Washington representative, Greater North Dakota Association.

Oklahoma: Frank Raab, Oklahoma City; president, Canton Irrigation District.

Oregon: Representative AL ULLMAN, Baker; member, Interior and Insular Affairs Committee.

South Dakota: Charles Lee Hyde, Pierre; former State senator.

Utah: T. W. Jensen, Salt Lake City; secretary, Utah Water Users Association.

Washington: Earl Coe, Olympia; director, department of conservation and development, State of Washington.

Wyoming: State Senator Earl T. Bower, Worland.

INTRODUCTION

On April 15, Congressman OVERTON BROOKS, of Louisiana, president of the National Rivers and Harbors Congress, announced the appointment of a new committee. This committee is to be known as the committee on irrigation and reclamation to serve with this, the 44th annual national convention of the congress. In announcing its appointment, Congressman BROOKS said, "The purposes of the committee are to formulate a policy and a program for the continued orderly development by irrigation and reclamation of our water and land resources in the arid and semiarid regions of the West, and to suggest ways and means whereby the National Rivers and Harbors Congress may better cooperate and coordinate its efforts with those of the National Reclamation Association and the advocates of reclamation irrigation."

This committee has been instructed to deal only with matters of general policy. Individual projects for which the approval of the United States Congress is desired are to be considered as usual by the national projects committee of the Rivers and Harbors Congress, which is chairmaned by Congressman SID SIMPSON, of Illinois.

You will note the personnel of this newly appointed committee on irrigation and reclamation on a preceding page in this report. All of the men on this committee appreciate the opportunity of being able to present the case for reclamation at this Congress. We see in the appointment of this committee a new area for cooperation and coordination of the efforts of all of those in the United States who are interested in the development of water and land resources. The appointment of this committee, and its subsequent activities, should lead to a better understanding of the problems of all regions of the United States.

NATIONAL STRENGTH DEPENDENT ON RESOURCE DEVELOPMENT

This committee is fully aware of the current economy program. Certainly its members have no quarrel with the fundamental objectives underlying that program. We are also cognizant of the responsibilities of world leadership that have fallen on our shoulders. If we are to maintain our respected and responsible position of leadership in world affairs we, as a nation, must remain strong. To do so we must make real and accelerated progress with those programs which are vital to our dynamic national economy.

The orderly, sound, and continued development of our national resources is the most important program under which we can maintain our national virility. The high standard of living which we are enjoying today—a standard of living unequaled anywhere in the world—has been termed the most important single factor in preserving our Nation's strength and position of leadership. For these reasons this committee believes that the basic philosophy of this report should be the continuation of orderly development of our water and land resources.

HISTORY, RECLAMATION FUND

Historically, national reclamation, as we know it, began with the passage of the Reclamation Act in 1902, which established the reclamation of the arid and semiarid lands of the West as a Federal activity. This act included a provision that financing of a Federal undertaking should be done through a

revolving fund to be established within the Treasury of the United States; this fund to be known as the reclamation fund. It was expected that the income would be adequate to finance a reasonable program. In 1902 the reclamation fund had $7,700,000 available. After meeting several crises in its early history it was found necessary to rebuild the reclamation fund. One of the things Congress did to accomplish this was to pass what is known as the Hayden-O'Mahoney amendment to the reclamation laws, approved on April 9, 1938. This amendment provided that all revenues from reclamation projects were, irrespective of source, to be deposited in the reclamation fund. The primary purpose of the amendment was to secure for the fund the power revenues anticipated to accrue from powerplants such as those at Grand Coulee, Shasta, and Parker Dams, which were then under construction. Through the operation of the reclamation fund under the original law and amendments, income to the fund increased so that by 1956 approximately $94 million were coming into it annually. This sum provided more than one-half of the total appropriations for reclamation purposes for 1957.

Current practice

Currently it is the practice of the Congress to appropriate from the reclamation fund each year sufficient moneys to meet the cost of the approved programs for general investigations, operations and maintenance, general administrative expenses and the emergency fund, except for certain items allocated to the general fund. After providing for these appropriations, the balance in the fund on June 30, prior to the fiscal year of appropriation, is applied to construction and rehabilitation. The difference between the amount available in the fund and the total appropriated for construction and rehabilitation is derived from the general fund. When the Congress authorizes reclamation projects it requires the power allocation to be returned to the Federal Treasury together with interest on the power investment. Irrigation allocations are returned to the Treasury without interest in accordance with the 55-year-old Federal reclamation law.

RECLAMATION, A SOUND NATIONAL INVESTMENT

Financially sound

Reclamation is a sound national investment. In that fact, we firmly believe; although we realize that it is not always fully appreciated by those who do not live in our irrigated States. Therefore, at this time, we wish to reemphasize this fact. Just how sound an investment for the Nation it has proved to be can be illustrated by quoting a few figures. For instance, every 4 years the value of crops produced on reclamation farms equals the total appropriation for Federal reclamation since reclamation was started 55 years ago. The cash value of the crops produced last year, 1956, was more than $827 million. The total value of the crops produced since the reclamation program was started in 1902 is $11,398,000,000. More than half of this total was produced during the past 8 years. It must also be remembered that many of the big reclamation projects, which were more costly to construct, and which are more complex in their operation than early projects, and which will eventually bring in large agricultural yields are only now getting started in agricultural production. It has been estimated that the Federal Government has received nearly $5 billion in Federal taxes from reclamation projects and the trade areas supported by those projects since 1902. There have been paid to the Federal Treasury $532 million from power revenues; while the irrigation farmers have repaid more than $121 million. From a purely financial standpoint, reclamation projects repay the investment in many ways.

Other values

There are other values created by reclamation which must not be overlooked. More than 3,200,000 acres of desert land have been reclaimed, and more than 4,140,000 acres have received supplemental water; 93,500 new farms have been brought under irrigation; 360,000 American citizens are living on those farms, and 1,800,000 people are living in areas supported by reclamation. Without a doubt, these reclamation communities will stand for centuries to come as a testimonial to the farsighted vision of Theodore Roosevelt and others who inaugurated the reclamation program more than half a century ago.

President Theodore Roosevelt, in his second annual message on December 2, 1902, said:

"The reclamation and settlement of the arid lands will enrich every portion of our country."

In his third annual message, December 7, 1903, he said:

"The Nation as a whole is, of course, the gainer by the creation of these homes, adding as they do to the wealth of the country, and furnishing a home market for the products of the East and South."

Truly, these predictions have come to pass. The farmers living on reclamation projects are excellent customers for the manufactured products of the Eastern States. Modern Americans should appreciate the fact that a large percentage of the green vegetables and fresh fruits that are an important part of our everyday diet are grown on irrigation projects. Doctors and representatives of medical associations tell us that these green vegetables and fresh fruits have contributed immensely to the health and well-being of the people of this Nation—the healthiest on earth.

RECLAMATION IS NECESSARY

More important than pointing to the benefits to be derived from our reclamation program is the recognition of the fact that our Nation needs reclamation; that reclamation is a vital part of the American way of life. These facts have been recognized by Presidents representing each of our major political parties. President Franklin D. Roosevelt, on November 27, 1933, said:

"Reclamation as a Federal policy has proven its worth, and has a very definite place in our economic existence."

Every President since the enactment of the original Reclamation Act in 1902 has endorsed reclamation as a Federal program. Twenty years later President Dwight D. Eisenhower, on October 13, 1953, said:

"The vast new territories which have been opened up; the new settlement opportunities which have been provided and the new industry created as the result of America's reclamation activities, testify to the importance of this program."

Population trends—Loss of food-producing lands

The need for reclamation can be clearly demonstrated by referring to a few statistical facts. The Census Bureau tells us that the population of the United States is increasing at the rate of nearly 3 million persons per year. Simply stated, this means there will be 3 million more stomachs to fill next year than there are this year. At the same time that our population is increasing at this rapid rate, we are losing more than a million acres of good agricultural land every year to highways, airports, municipal and suburban developments, industrial and military establishments, and by other means.

While our need for more food is increasing year by year, our capacity for the production of that food is decreasing at the same time. These two closely interrelated forces speak for themselves.

Our real hopes, irrigation and reclamation

Except through the processes of irrigation, reclamation and drainage there is very little additional land available in the United States for producing additional food supplies in the foreseeable future. Even with the application of better farming practices, production per acre cannot be increased rapidly enough to meet the needs of our growing population.

Agricultural surpluses only temporary

Experts in the Department of Agriculture relate that a balance between production and consumption will be reached by 1962, and maybe earlier. This means that agricultural surpluses now so frequently cited as reasons for not authorizing additional reclamation projects are only temporary. Because it will require 10 years, or longer, to complete large basinwide multipurpose reclamation projects which are left for construction in the United States, agricultural surpluses will be disposed of long before reclamation projects now being authorized can be brought into production.

POLICY RECOMMENDATIONS

Because of the extreme importance of the overall national water resources development program, and the vital human part reclamation has to play in it, your committee on irrigation and reclamation recommends the following basic principles as a guide to coordinate this phase of the program with the flood control, rivers and harbors improvements and other activities of the National Rivers and Harbors Congress:

1. Reclamation is of the utmost importance to the entire Nation in providing the basic necessities of life, food, fiber, and homes; in raising the standard of living; in creating new wealth and increasing the tax base. It should be continued at an accelerated pace.

2. The Congress of the United States should firmly establish and maintain its right to determine the policy and criteria under which all Federal water development projects will be authorized.

3. Wherever practicable, basinwide, multipurpose planning, and development of water resource projects should be the rule followed.

4. Power revenues, whenever available, should be used on a basinwide or areawide basis to assist in repayment of irrigation costs beyond the ability of the water users to repay.

5. In order to avoid litigation in the settlement of water disputes and to preclude domination of the development and control of natural resources by Federal agencies the principle of using the Interstate Compact should be encouraged.

6. Present procedures under which Federal water resource projects are investigated and reported to the Congress are adequate. If changes in procedures should prove to be desirable, the changes should lead to simplification of procedures rather than to additional agencies and complexities.

7. Basic land and water inventories, soil and water research, snow surveys, and stream forecasting are of paramount importance. These activities should be continued and expanded where necessary in order to provide data for current and future planning.

8. It is recognized that due to their complex nature and the necessity for future basinwide development, reclamation projects will be expensive, thus requiring the Federal Government to advance loans of major proportions. Full financial participation and responsibility by local and State agencies should be encouraged in the planning and development of projects. The use of conservancy-type districts capable of levying taxes on project beneficiaries as agencies to execute repayment contracts with the Federal Government should be more nearly the rule than the exception.

9. In planning and constructing water-resource projects the need for supplemental water on lands presently inadequately supplied with moisture should be given priority over providing water for new lands.

10. There are many potential small irrigation and reclamation projects throughout the United States. The construction of these would alleviate economic distress and raise living standards. The small projects program of the Department of the Interior should be activated and maintained with adequate funds each year to provide for constructive and progressive water-resource development in this field.

PROCEDURAL RECOMMENDATIONS

It is further recommended that in order to carry out the above basic principles the National Rivers and Harbors Congress through the coordination of its appropriate and interrelated committees:

(a) Vigorously support a reclamation program designed to fully develop the land and water resources of the Nation;

(b) Bring to the attention of the President and the Congress the urgent need for a continuous, progressive, well-planned program of project authorization;

(c) Urge and actively support adequate appropriations needed to carry on planning of water-use projects by appropriate Federal agencies;

(d) Support appropriations for continued development of all financially feasible and economically justified water-resources programs;

(e) Support legislation requiring full compliance with, and adherence to, State water laws by Federal agencies.

SUMMARY

In summary, the purposes of the committee on irrigation and reclamation of the National Rivers and Harbors Congress shall be to promote the development, control, conservation, preservation, and utilization of the Nation's water resources, to work for the continuation of the services and the coordination of activities of Federal agencies dealing with water resources, to cooperate with and assist in securing authorization and construction of Federal water-use projects which meet with the approval of States and local agencies, to assist water users of the Nation in the economic development of river basins, to preserve the rights and interests of the States in their water resources, to promote the enactment of legislation favorable to these principles, and to oppose legislation detrimental to the orderly and progressive development of the river basins of the United States of America.

Facts Do Not Cease To Exist Because They Are Ignored

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. REED. Mr. Speaker, it is well to remember that facts do not cease to exist because they are ignored. Under leave to extend heretofore granted, I wish to recall a few facts that fix responsibility for all time where it belongs for the Korean war. I quote from Bureaucracy Runs Amuck, by Lawrence Sullivan, on pages 61, 62, and 63 as follows:

Representative DANIEL A. REED, of New York, has itemized this aspect of our global economic planning in some detail, as set forth in the CONGRESSIONAL RECORD for July 9, 1942, beginning at page A2869, as follows:

"Japan launched her murderous assault against China on July 7, 1937. During the period from 1937 through 1940 we exported to Japan 8 million tons of scrap iron, steel, and scrap steel, and also thousands of tons of other essential war materials. The very year—1937—that Japan opened war on China our exports of scrap iron and steel amounted to 2,081,037 tons, or enough to build 20 battleships of 45,000 tons each, 200 submarines of 2,400 tons each, 10 aircraft carriers of 30,000 tons each, and 26 cruisers at 15,000 tons each. The next year, 1933, our scrap and steel exports to Japan were 1,463,000 tons: 1939, 2,179,000 tons, and 1940, 1,248,000 tons.

"At that point the United States foreign trade statistics normally published every month by the Department of Commerce, became a 'military secret.' No figures are available as to our metals exports to Japan in the first 11 months of 1941.

Congressman REED went on to say:

"While this appeasement program toward Japan exhausted our supply of material with which to make steel for our own defense, it armed her to strike her dastardly blow at Pearl Harbor * * *. More than this, the appeasement policy did not stop with furnishing Japan the material to build her navy, her air force and her tanks. There was also exported to Japan from the United States during the year 1937, aircraft and parts valued at $2,483,946; and the next year, 1938, $11,062,777; in 1939, a total of $3,306,000 in these items, and in 1940, $933,000.

"During these same years we also exported to Japan petroleum valued at $219,856,062, with which to operate her war machine. It is interesting to note that of this vast shipment of petroleum, 555,546 barrels of it was aviation gasoline in 1939, and 776,499 barrels in 1940. The extent to which the appeasers went in arming Japan in disclosed by the official figures relating to the shipment of cotton, aviation gasoline, iron and steel scrap, steel ingots, blooms, tin plate and tin scrap, refined and scrap copper, motor trucks, aircraft parts, ammunition, and machine tools."

Representative REED's itemization of our copper exports to Nippon showed a total of 717,277,918 pounds for the 5 years 1936–40, on a refined basis, beginning at about 5 million pounds for 1936 and swelling to 249 million pounds in 1939 and 233 million pounds in 1940.

"Does any responsible person believe," Congressman REED pressed, "that without this vast quantity of war material, furnished by the United States to Japan, she could have held out against China for 5 years? What would have been the history of Pearl Harbor, Midway, Bataan, Corregidor, and the Dutch East Indies, if, instead of arming Japan, the same materials had been used by our Government to build up our own defenses?"

Mr. Speaker, also under leave to extend my remarks in the RECORD, heretofore granted, I am inserting an article by David Lawrence, entitled "Korea Is Cited as Instance of Peril in Budget Cutting." The article to which I have referred appeared Monday, May 20, 1957, in the New York Herald Tribune:

KOREA IS CITED AS INSTANCE OF PERIL IN BUDGET CUTTING

(By David Lawrence)

WASHINGTON, May 19.—President Eisenhower, in a few brief sentences in his television speech on the budget recently, touched on a bit of fateful history. He spoke of a tragedy that proved costly in money and lives to the American people. He characterized the policy that caused it as both unwise and foolhardy. He said:

"Our Armed Forces became so starved and depleted that by 1950 we had to withdraw our military strength from South Korea. That area was then declared to be outside our defense perimeter.

Dean Acheson, who as Secretary of State in a public speech in January 1950 declared Korea to be outside the defense perimeter of the United States, issued a statement last week bristling with indignation. But actually he missed the point. For President Eisenhower gave Mr. Acheson a real alibi by pointing to the budget cutting of a drastic nature which began long before he became Secretary of State in January 1949.

OUTCOME OF ECONOMY

It was this economizing which made it necessary for the United States late in 1948 to order its military forces withdrawn from Korea—a movement completed in July 1949. The only indiscretion on Mr. Acheson's part was that, in his January 1950, speech, he officially revealed to all the world the strategic decision of the United States Joint Chiefs of Staff not to regard Korea as a primary obligation of our defense planning.

It was actually the Truman administration's decisions of 1947, 1948, and 1949 which caused the severe cut in the military budget, and it was this which Mr. Eisenhower was emphasizing last week in his pointed reference to the curtailment of funds for the Military Establishment prior to 1950.

The facts are readily ascertained by reading The Forrestal Diaries. The late James Forrestal, as Secretary of Defense from September 1947 to March 1949, kept stenographic records of many of his conferences. There is revealed in this book the whole background of the budget cutting of those days.

TEN BILLION FOUR HUNDRED MILLION DOLLAR CUT

The military chiefs, for instance, struggled in 1948 and 1949 with the budget for the fiscal year beginning July 1, 1949, and ending June 30, 1950. They had recommended $23.6 billion for that year. Secretary Forrestal endeavored to persuade Mr. Truman to agree to a military budget of at least $17.5 billion, and later urged the Joint Chiefs to go along with a budget of $15 billion. But Mr. Truman was adamant and recommended to Congress defense appropriations totaling only $13.6 billion. Congress appropriated $13.2 billion, and later on in 1949 added $873 million for aircraft, which sum Mr. Truman announced he would impound and wouldn't spend. The Korean war subsecquently cost the United States almost $20 billion and 137,000 casualties. The continuing defense of Korea is still a big annual expense to the American taxpayer.

BUCKPASSING POPULAR

In the period just before the Korean war, the Soviets had blockaded Berlin, and a Communist invasion of Indochina was in full swing. The situation in Korea, moreover, was plainly far from stable. Mr. Forrestal, in October 1948, addressed a letter to Secretary of State Marshall, asking for guidance and mentioned that he had written the previous July to the National Security Council to get a clear-cut idea of what the international dangers were, but had received no reply. It was a constant passing of the buck back and forth with no policy at all—not even a "brink of war" philosophy of deterrent action so far as the Far East was concerned.

In January 1949, General Eisenhower was called in as a special adviser on military budget affairs. He examined the military budget then, as he did when he was Chief of Staff of the Army in 1947, but only in terms of the defense of the United States itself—not in terms of hypothetical international situations, such as Korea, involving the Asian mainland. With the money available to the military services of the United States, Korea had to be considered by the Joint Chiefs, including General Eisenhower, as outside America's "defense perimeter." When American forces were ordered out of Korea in 1948 and 1949, it was a policy de-

cision by President Truman. The military leaders concurred because they could not, with the limited financial means at their disposal, keep on the Asian mainland troops which were vitally needed elsewhere to protect the defense line of the United States.

SOUTH KOREA IS ATTACKED

What was the responsibility of President Truman in the face of the world situation as a whole? What were America's obligations at that time? There was, to be sure, in Mr. Acheson's speech of January 1950 a vague reference to the United Nations as a possible defender of the Korean area. But the Communists were certainly not deterred by this comment. They attacked South Korea in June 1950. Mr. Truman rightly intervened. But why didn't his administration tell the military chiefs in advance that such action might possibly have to be taken under United Nations auspices and that, since the United States would have to bear the brunt of that action to repel aggression, the necessary funds for manpower and equipment would be made available beforehand?

The failure then, and the failure now, to let the military chiefs obtain the funds they need to maintain adequate forces to fulfill obligations imposed without warning by the civilian branch of the Government is at the root of the military troubles of the United States. Small wonder America was caught unprepared at Pearl Harbor and again in Korea. When will the lesson be learned—that the American people pay in lives for the mistaken judgments made by their civilian leaders? How much longer will the advice of the military leaders be disregarded when budgets are prepared, and what will the penalties be in terms of casualties in future wars?

Republican Split on Budget Seen as Political Suicide

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HILLINGS. Mr. Speaker, I wish to call the attention of the House and especially my colleagues on this side of the aisle, to a thought-provoking column by David Lawrence which appeared in the New York Herald Tribune May 21, 1957.

The article follows:

REPUBLICAN SPLIT ON BUDGET SEEN AS POLITICAL SUICIDE

(By David Lawrence)

WASHINGTON, May 20.—A hysteria of budget cutting is sweeping the country. It is alienating the so-called conservatives in the Republican Party from the party leader—President Eisenhower. The net result may be not only a substantial increase in the Democratic majority in both Houses of Congress in the 1958 election but a landslide for the Democrats in electing a President in 1960. Then the second New Deal, with some real spending, will begin.

The Frankenstein now being built up by the Republican conservatives will, unless challenged promptly by President Eisenhower himself, split the Republican Party precisely as happened in Congress in 1910 and in the Presidency in 1912, when the Democrats were handed their victory on a platter as a result of dissension in the Republican ranks.

The political "mess" in the Republican Party has been brought on by mistaken tactics of both the "modern Republicans" and the so-called "conservatives."

NOW CONSIDERED HOSTILE

For some strange reason, an administration that has been uniformly friendly to business now is considered hostile by these conservatives because it hasn't cut the budget and reduced taxes this year, as it did before. But while many Republicans outside Washington are swallowing the propaganda that the administration has "gone New Dealish," Congress is quietly preparing to cut the defense and mutual security programs, yet at the same time voting even larger appropriations than before to advance the "welfare state."

Thus, up at last Friday, Congress, amid a fanfare of publicity, has reduced appropriations for fiscal year 1958 by $1,250,000,000 from the amounts requested by the President. But the recent action of the House of Representatives in passing the Housing Act of 1957 has increased the new obligational authority by $1,600,000,000 over and above the amounts requested by the administration. This completely wipes out the $1,400,000,000 cut in appropriations and leaves a net increase of $200 million.

While budget spending may not be noticeably affected in the year 1958 as a result of this action, future outlays will certainly be augmented. This is only a sample of what's going on. Appropriation cuts will be made now and deficiency bills passed later on, and the public will be fooled.

ONE-SIDED CUTS

The budget is too vital to be made a football of politics but evidently the impression is being conveyed throughout the country that Congress is slashing the budget as well as the spending. Actually, it is slashing appropriations for many important services hitherto considered essential by businessmen and is not cutting down the "welfare stuff" as many of the so-called conservative voters have been advocating.

In the end, virtually all of whatever is saved on the budget will go toward reduction of taxes in lower income brackets. To prevent this, businessmen will raise a hue and cry about applying the savings on the budget to debt retirement. But it will be too late. Businessmen will be lucky then not to get an increase in corporation taxes. There is already a drive on to help small business at the expense of companies earning over $25,000 a year.

For there's a movement being generated now and a cycle being begun that will mark a fateful turn in American economic history. If the leadership of President Eisenhower is forsaken by an influential block in his party, the modern Repblicans will have no place to go in 1960 but with the Democrats. They will prefer a modern Democrat to a Republican who deserted Eisenhower's leadership.

HIT FROM BOTH SIDES

A middle-of-the-road leader always gets hit from both sides as he pursues a truly delicate and difficult course in public affairs. President Eisenhower has achieved great things on the international side and has averted a major war, but he is struggling now with tides of dissent within his own ranks on domestic issues that could hurt his international policies, too.

The Democrats are, of course, the beneficiaries of this confusion. They are supplying the votes in congressional committees to help reduce the defense program, though a few months ago they were shouting loudly that Russia was ahead of us in planes and that the Republican administration was neglecting armament needs. The Democrats still have the solid support of their own conservatives, who vote with the modern Democrats of the North in order to put the Republicans at a political disadvantage.

The division in the Republican Party is growing more serious every day. There are some observers here who fear that the Republican Party has already committed political suicide and that the Republican Presidential nomination in 1960 will not be worth anything to any candidate. The patient man in the White House, on the other hand, has not given up. He says to friends that he is just beginning to fight. He is still confident he can convince the rival factions that they must pull together or face political disaster at the polls.

Statement on Food-Cost Trends

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. ANFUSO. Mr. Speaker, the Consumers Study Subcommittee of the House Committee on Agriculture recently started a series of hearings on food-cost trends and the spread of the consumer's food dollar. Thus far in these hearings our subcommittee, of which I have the honor to serve as chairman, has concentrated primarily on the rising cost of food distribution in the United States in recent years, as well as on the role of certain religious and voluntary agencies in the distribution of some of our food surpluses abroad.

In later hearings our subcommittee will study food marketing problems, the cost trends of specific commodities such as milk, vegetables, meats, coffee, and so forth, farm prices and incomes as related to the retail cost of food, also the effect of our food and fiber programs as a deterrent to communism abroad, stockpiling of food surpluses for use in the event of a national emergency, and others.

When our hearings opened on May 7, I made a statement explaining the work of the subcommittee and delineating the current food-cost situation. Since then there have been a number of requests for copies of this statement. I am, therefore, inserting the text of the statement in the RECORD at this time.

The statement follows:

STATEMENT OF HON. VICTOR L. ANFUSO ON FOOD COST TRENDS

This morning the Consumers Study Subcommittee is opening its first hearings. This subcommittee was created on March 14, 1957, to study and investigate, among other things—

1. The cost of living and, with respect to agricultural products the share which the farmer gets of the consumer dollar and how it compares with other costs, that is, wages for labor, profits for middlemen, retailer, etc.

2. The part which our food and fiber programs have played in winning friends for the United States and preventing the spread of communism at home and abroad.

3. The accomplishments or deficiencies of our public, private, and voluntary agencies in this common struggle.

4. The proper stockpiling of surpluses within the limits of the United States as a matter of national and civilian defense.

The hearings today and tomorrow will be devoted to a consideration of the general picture on food cost trends in the United States.

Representatives from the Department of Agriculture, the national farm organizations, organized labor, consumers, and from the food processing and distributing agencies will give us the benefit of their information and views on this subject.

Sometime tomorrow we expect to have a representative from the Department of Agriculture give us a statement of the pros and cons on the rapidly increasing use of trading stamps as they affect food retailing costs. After hearing that statement, the committee will decide on the scope of its investigation into the effect of the use of trading stamps on the cost of food distribution.

Before calling the first witness this morning, I want to make a few observations on the work of this subcommittee as it relates to the general problems encountered by the Committee on Agriculture.

We are concercned with two vital problems, the high cost of living for the consumer and the low returns to the farmer for his abundant production of high quality foods. We believe that these two problems are related in so far as the current high cost of living is affected by increasing retail food costs. That is why the subcommittee was created.

This committee has no intention of engaging in a witch hunt or of attempting to embarrass any segment of the food processing and distribution industry. We are concerned, however, to find that in the past 10 years, although the average unban family has increased its food expenditures by $500, only $45 of this increase goes to farmers while $400 goes to food processors and distributors.

We are also concerned that during this period food supplies have become overabundant. Warehouses have been filled to overflowing with storable farm products. Yet some urban families cannot buy the food they need to raise healthy children.

Urban families of 5 or more members with incomes of less than $4,999 today are spending over half of their income for food.

While available data are not conclusive it appears that the larger urban families, with average or below average incomes, are spending a higher proportion of their income for food now than 10 years ago. They are spending this higher proportion of their income in an attempt to achieve some kind of a minimum diet at a time when United States farmers are in a position to supply them the most ample diet on record and at a much lower cost at the farm than 10 years ago.

Ladies and gentlemen, I think this is a challenge for the attention of this committee and of the entire food industry. If, in examining this problem together, we can find ways of lowering the cost of processing and distributing the staple livestock and other food products, many urban families will purchase more food, they will be better nourished, and current farm surpluses will be reduced.

Although we cannot expect to completely solve the problem by this approach, I want to underline the importance of this line of attack on the farm surpluses problem. On April 19, 1957, the Commission on Increased Industrial Use of Agricultural Products, authorized by the 84th Congress, sent an interim report to Congress. In this report the Commission states that 12 percent of the land in crops and rotated pastures produces fruits, vegetables, and grain cereals consumed directly as food.

About 7 percent of this land produces items for industrial and nonfood purposes, items such as tobacco, cotton fiber, wool, and a part of many crops such as soybeans and corn.

About 10 percent of the land produces products for export.

The remaining 71 percent of the land in crops and rotated pastures goes into feed for livestock and ultimately into the production of livestock food products such as meat, eggs, and milk.

This Commission recommended a threefold increase in research on industrial uses for farm products and listed a large number of useful projects. I agree with their recommendations. I believe there should be increased research on industrial uses for farm products.

But, ladies and gentlemen, if we, through our studies, can find ways to reduce the cost of processing and distributing food by as little as 5 percent, and that reduction in marketing charges is reflected in increased food purchases, it would be the equivalent of a 36-percent increase in industrial uses of farm products.

If we can find ways and means of reducing food-marketing charges by as little as 2 percent and these savings are reflected in increased food purchases by the financially hard-pressed housewife, it would be the equivalent of more than a 15-percent increase in industrial use of farm products.

I make these comparisons, not to belittle the importance of additional research on industrial uses of farm products, but to indicate the great importance of the task of this committee and of the food industry.

Of course all savings in food-marketing costs will not be reflected in increased purchases of foods. But in the lower-income groups, purchases would increase immediately with a drop in retail prices. Surveys in the spring of 1955 show that purchases of meat, poultry, and fish by nonfarm, housekeeping families, increased from 8.9 pounds a week for the families with incomes of less than $1,000 a year to 16.3 pounds a week for the families with incomes of $6,000 to $7,999. And from our knowledge of American family preferences we can guess that most of this increase was in the red meats, beef, and pork rather than in fish and poultry.

These surveys also showed that nonfarm family purchases of milk, cream, ice cream, and cheese increased from the equivalent of 11.2 quarts for families with incomes of under $1,000 to 16.4 quarts for families with incomes of $6,000–$7,999. Fruit and vegetable purchases increase just as spectacularly as family income increases up to the $6,000 or $8,000 level.

These figures are convincing evidence to me that families with less than $6,000 income will buy more livestock products, fruits, and vegetables if either the retail price is lower or their incomes increase.

On a dollar basis urban households of two or more increased their cash expenditures for meat, poultry, and fish and dairy products as their family income increased, as follows:

Income of household	Weekly purchases (meat, poultry, fish)	Weekly purchases (dairy products)
Under $2,000	$5.16	$2.01
$2,000 to $5,999	8.30	3.85
$6,000 and over	10.59	4.52

Although the committee is interested in, and concerned about, the increased charges for food processing and distribution of foods in recent years, it realizes that many of these increased charges are required to cover additional costs of precooking, preparation of ready-to-use mixes and special packaging. It also knows that the modern housewife who can afford it prefers these new ready-to-serve food products.

We have no intention of trying to turn the clock back. We join with the food industry in taking pride in the large variety of high-quality foods available to the American housewife. We know that in no other country in the world does the housewife have such a variety and such an abundance of fine foods available to her.

Yet we cannot be satisfied when we know that half of our urban families would like to buy more food if they could afford it, and that surpluses have accumulated in American storehouses because farmers cannot find a market for all the food they are producing.

We hope that every segment of the food industry as good Americans will join with us in a search for ways and means of reducing the processing and marketing costs, especially of the staple food products purchased by families with average and below average incomes.

Text of Preliminary Statement of House Un-American Activities Subcommittee As Read by Subcommittee Chairman Clyde Doyle, California, at Chicago, Ill., Subcommittee Hearings Beginning March 26, 1957

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. DOYLE. Mr. Speaker, unanimous consent heretofore having been granted me so to do, I am pleased to present for your information, as well as the information of all my colleagues and any others who read this, a true and correct copy of preliminary statement made and read by me on Tuesday, March 26, 1957, at subcommittee hearings of the House Un-American Activities Committee, over which I presided, beginning on said date at Chicago, Ill.

The statement follows:

INVESTIGATION OF THE DISSEMINATION OF COMMUNIST PROPAGANDA IN THE UNITED STATES

Mr. DOYLE. The committee will please come to order.

I have a preliminary statement that I wish to read. It is customary so to do in these hearings.

In these hearings in Chicago with this subcommittee of the Committee on Un-American Activities beginning this morning, it is our purpose to obtain further information for legislative purposes about the extent, character, and objects of the Communist propaganda in the United States, including subversive activities of the Communist Party. This is our official duty and obligation under the expressed terms of Public Law 601, enacted by the United States Congress in 1946 during the 79th session thereof.

The primary purpose of our inquiry today and tomorrow here in the Chicago area is the extent to which the press is Communist dominated so far as foreign language papers are concerned or the subversive conspiracy is implemented thereby. We expect to investigate today and tomorrow the extent to which this foreign language press, which is printed or distributed in or from the Chicago area, is the tool of the Communist subversive propaganda activity.

We recently made a very successful investigation on the same important subject of the New York City area. It is the Communist infiltration of the foreign language press of which we will be concerned chiefly.

Evidence which the committee has already received in hearings in other cities on this same subject indicates clearly that the propaganda operations of the Communist Party in the United States among minority groups serve as one of the most powerful means and methods of subversion.

The activities of the Communist Party right here in the Chicago area takes on a new significance in view of the recent announced decision of the Communist Party of the United States to transfer its headquarters nationally to Chicago.

The Communist Party and Communist front organizations which already exist here in this important industrial area are among the most virile and extensive in our entire beloved Nation.

On examination of Communist propaganda publications is sure to prompt the cry from the Communist and the Communist controlled fronts and Communist controlled press that we are attempting to exert a censorship of the press. This is, of course, false and unfounded, and the Communists know that such an attack on this committee has no foundation in truth or in fact.

I want to make it clear that this committee has no intention of seeking censorship of newspapers, magazines, or books, in interfering in any way with the operation of genuine and free publications. But we are definitely instructed by the United States Congress and by Public Law 601 to investigate and report the extent and character of Communist subversive propaganda and activities wherever it sticks its ugly head. The Communist publications are another matter. To the extent that any foreign-language newspaper that we are investigating today and tomorrow is controlled by Communist philosophy is not a free press. They are but the mouthpiece of a foreign ideology from a foreign source of a subversive conspiracy against the free press or against free speech in the United States.

The constitutional right to advocate change in an orderly manner is fundamental. We recognize it as such. But orderly change in our constitutional law is not the subversive intent of the Communist Party in the United States. There are constitutional guaranties of free speech and free press, and thank God there are, but there are no constitutional guaranties protecting subversive, fraudulent propaganda, designed to forcibly and violently overthrow our constitutional government or prohibit the Government of the United States from dealing with it in the legal manner.

Indeed, there are already existing laws against such types of publications. It is apparent that these laws are frequently being violated and circumvented in many ways and that these laws need to be strengthened.

The committee subscribes wholeheartedly and vigorously to the premise that any American citizen has the established right to say and to write what he pleases and to present his grievance in a legitimate way to the representatives which he has democratically chosen to govern him, but at the same time the people of the United States and the Government of the people of the United States have a right and a duty to learn the identity of those who illegally and subversively abuse the freedom of speech and the freedom of the press in order to bring about subversive destruction of our constitutional form of government.

At this point I wish to incorporate in the record the authorization of the full House Committee on Un-American Activities for this series of subcommittee hearings and the order by the chairman of the full Committee on Un-American Activities, to wit, the Honorable FRANCIS E. WALTER, in which he appointed this subcommittee consisting of three members, to wit, the distinguished gentleman from Tennessee [Mr. FRAZIER], who is absent this morning; the distinguished gentleman from Ohio [Mr. SCHERER], who is on my right; and myself, CLYDE DOYLE, of California, as subcommittee chairman.

The reason I insert this in the CONGRESSIONAL RECORD is not only that I learn that many of the Chicago and Illinois Members in this great body have received communications from that area from constituents falsely charging what was in my preliminary statement, but likewise charging that it, and the hearings growing out of same, were a deliberate interference with the freedom of the press.

This is not the first time that false, deceitful statements have come to my attention as having been received by Members of this great body from geographical areas where subcommittees of the Un-American Activities Committee have held hearings, but I wsih to say, Mr. Speaker, that there is a definite, systematic and malicious program in being from Communist philosophy undergrounds and on surface members and sympathizers to misinform and mislead Members of Congress and other legislative bodies as to what is said in preliminary statements by subcommittee chairmen of our House Un-American Activities Committee. Therefore, in presenting this to your attention and consideration I do so with the cordial invitation to you who read the same to communicate to me any suggestion, criticism, or any comments which you desire to make to me about the same. I will cordially welcome the receipt thereof.

Of recent date I have furnished to all of the Members of this great legislative body from the Chicago area a true and correct duplicate of this text this day called to your attention.

Mr. Speaker, little wonder is it that these distinguished Representatives in Congress from the Chicago area have received false and baseless and untrue communications attacking my preliminary statement and the said subcommittee public hearings. I say this for the reason that at said hearings it was proven that in a foreign-language paper, named Vilnis Weekly Review, there appeared the following article under date of Friday, June 27, 1952:

ESCAPED KOREAN POW'S EXPOSE UNITED STATES CRIMES

PYONGYANG (Hsinhua).—Open letters by three escaped Korean prisoners of war to the Korean People's Army were published by the local paper "People's Army News" on May 22. The authors of these letters are Cpl. Choi Song Ok, Pfc. Li Hun Si and fighter Yun Chang Il, all of whom escaped from Compound No. 76 of the POW camp on Koje island. Based on personal experience, they have exposed the American crime of manhandling, torturing and butchering captured personnel and have blown skyhigh the American lies about voluntary repatriation, humanitarian principles and the like.

CHOI SONG OK'S LETTER READS: ISLAND OF HORROR

I joined the Korean People's Army when the Syngman Rhee brigands and American imperialist forces started invading North Korea. In a battle, I lost consciousness from a wound and was captured by the Americans. I was flung into a POW camp in the Pusan area and later transferred to Koje island.

I really cannot find words to describe all the horrors that my comrades and I suffered in the Koje POW camp. But I assure you that this POW camp run by the American Army is literally a hell. I escaped from this camp on May 7.

Compound No. 76 of the POW camp is dark and poorly ventilated. Its quarters are in utter darkness, devoid of bedding. It has 18 torture rooms and six steam rooms in which Americans put the captives to death by live steam. In addition, there are four gallows.

The American gangsters treated the POW's like beasts. They starve prisoners and imposed forced labor on us every day, despite our hunger. Our two meals daily were inadequate and consisted of coarse food. We had rice only once a week.

The American robbers tortured captured personnel on the flimsiest pretexts. They also often starved prisoners to death.

As was the case with other captives, the American gangsters tried to make me sign the so-called petition in blood, but I refused.

DON'T WANT TO SERVE AMERICANS

On April 14, Brigadier General Dodd, camp commander, a colonel and three other officers came to our compound. The prisoners were assembled to listen to Dodd. The meeting ground was heavily guarded. Dodd announced that all POW's would be registered. Then forms were distributed to the prisoners to be filled in and signed. He said that the United States Army command wished to release those prisoners who wished to serve the United Nations forces and so they were required to sign an anti-Communist petition in their own blood.

We immediately started shouting. "Send us home. We don't want to serve the Americans. Observe Geneva Convention. We refuse to join United Nations forces." The POW's rose as one man in their wrath.

Dodd beat a hasty exit. The American guards encircled us and fired. Eighteen POW's were killed and 37 wounded.

Next day they carried out individual interrogation of POW's, and I was interrogated. An American colonel asked me whether I knew which POW's were members of the Nodong Dang and who had started the riot. He wanted me to give their names. The colonel said: "If you tell me the facts, I shall give you 800 United States dollars and release you. Then you can live a free life in Seoul."

ELECTROCUTION

I stubbornly refused to answer these provocative questions, on the ground that international law did not require me to answer such questions. Then they dragged me out of the interrogation room and thrust me into a dark cellar. There I was stripped, bound, and whipped.

Other comrades were suffering the same torture in the cellar.

I lost consciousness several times. The sadists poured hot water on my body and kept whipping me. Finally, the American gangsters put me into a cell so small I could not turn around. They said menacingly: "If you don't tell us who shouted Communist slogans at yesterday's meeting, you will be electrocuted."

I was filled with burning hatred for these monsters and resisted the interrogation and torture in silence.

At last I got an opportunity to escape from the POW camp. I crossed the 38th parallel and returned to the free soil of my motherland.

I can never forget the terror in the American POW camp on Koje Island, and my deep hatred of the American brigands will never diminish. I will do my utmost, and even give my life, to drive the foreign aggressors out of my country.

TRUTH OF UNITED STATES SCREENING

Following is the text of a joint letter by Li Hun Si and Pun Chang Hi:

We are filled with indignation and loathing for the shameless violation by the American and Rhee brigands of all international law, and their vicious oppression of our captured personnel on Koje Island.

On May 4, we escaped from the American prisoners of war camp on Koje Island and returned to our motherland. Now we are happily breathing the fresh air of freedom.

We want to accuse the American butchers of atrocities on Koje Island before all people of good will. We ask the people of our country and people throughout the world unanimously to support our brothers on Koje Island who are being beaten and maltreated by the American forces.

The American interventionists' cruelties in the POW camps on Koje Island are perpetrated to force our captured personnel to become cannon fodder for the Syngman Rhee and Chiang Kai-shek brigands, and slaves of the Americans. With this goal in mind, the American military authorities on Koje Island again started forcible screening in April. The American robbers fabricated so-called petitions and forced our captured personnel to affix their fingerprints in blood. Those who refused were maltreated and were subjected to third-degree questioning. When we two refused, we were interrogated and tortured.

It is difficult to imagine the sufferings we have endured.

All captured personnel of the Korean and Chinese people's forces are anxious to return to their own countries. We believe that the day will come soon.

The American robbers' scheme to turn our captured personnel into their slaves, and Syngman Rhee and Chiang Kai-shek's cannon fodder will never be released. The American robbers must bear responsibility for their crimes on Koje Island.

We who have returned to our free motherland will resolutely defend our beloved motherland and strive for unconditional victory.

Therefore, I naturally asked the Secretary of Defense on April 30, 1957, furnishing him a photostatic copy of said article dated June 27, 1952, to give me the answer in connection therewith. Here, therefore, is my communication to the Secretary of Defense, dated April 30, 1957, and here is his answer to my inquiry dated May 17, 1957:

APRIL 30, 1957.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

MY DEAR MR. SECRETARY: Enclosed is photostat of page 2 of Vilnis Weekly Review for Friday, June 27, 1952, published at Chicago, Ill., on that date. This exhibit was introduced before my subcommittee in public session of the House Un-American Activities Committee on March 27. It is a reproduction of the English language portion of a Lithuanian newspaper published in Chicago.

I will thank you to give to me such appropriate comment as you may have in the premises relating to the alleged facts set forth in this dastardly article.

Thank you.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D. C., May 17, 1957.

Hon. CLYDE DOYLE,
House of Representatives.

DEAR MR. DOYLE: Reference is made to your letter of April 30, 1957, to the Secretary of Defense forwarding a photostatic copy of a page of the Vilnis Weekly Review for Friday, June 27, 1952. Additional reference is made to a letter addressed to you on May 8, 1957 from Capt. Carlton R. Adams, Director of Legislative Liaison informing you that your request for comments on the Vilnis Weekly Review article had been forwarded to this Office.

This Office is unfamiliar with the publication. It is noted, however, that the source of the story entitled "Escaped Korean POW's Expose United States Crimes" is Hsinhua. Hsinhua is the official news agency of the Chinese Communist regime in Peiping, and as such, it is completely controlled by the regime (as are all media of information in Communist China). It is the main source of Chinese Communist propaganda in the press and publications field.

During the period in question (June 1952), the Chinese Communists were suffering a severe propaganda loss to the U. N. command and especially to the United States in Korea, because at that time some 33,000 former North Korean and Chinese Communist soldiers were adamantly refusing repatriation to their homelands. The Korean truce negotiations were underway and the Communist side was stalling over the issue of nonforcible repatriation of prisoners of war. As you know, in the Orient face is a most important psychological asset. In the summer of 1952 the Chinese Communists were losing face over the PW issue and the exposure before the world of the true feelings of these former Communist soldiers with regard to the North Korean and Chinese Communist "paradise" was most intolerable in the eyes of the Communist regime.

The article from the Vilnis Weekly Review is only one of a variety of methods by which the Communists attempted to take the pressure of world opinion off their own difficulties and contradictions by ascribing to the U. N. command the very crimes of which the Communists themselves had been guilty.

The whole issue of U. N. treatment of Communist POW's has been thoroughly investigated through the mechanism of the International Committee of the Red Cross which made thorough and periodic inspections of U. N. command PW compounds throughout the Korean War. Except for the most minor and relatively insignificant deficiencies, the inspection teams of the International Committee of the Red Cross gave the U. N. command a completely clean bill of health on the handling of Communist POW's. The mere fact that 33,000 of these POW's refused to return to North Korea or to Communist China is in itself most eloquent testimony to the manner in which the U. N. command took care of their welfare, and treated them in all respects in strict accordance with the Geneva Convention on POW's.

Because the article is based on completely distorted facts and outright fabrications, it is impractical to attempt to analyze each particular statement. It is assumed that the three soldiers who are described in the article were simply ordered to sign their names to the so-called letters which were prepared by a Communist propagandist within the context of the campaign to discredit the U. N. command and the United States.

I am at a loss to understand why a weekly publication, which depends upon American freedom of the press for its existence, would publish such obvious Communist propaganda, but as you know it is beyond the purview and authority of the Department of Defense to look into such matters.

I trust that these general remarks and comments on the article will serve your purpose.

Sincerely yours,

G. B. ERSKINE,
General, USMC (Retired), Assistant to the Secretary of Defense (Special Operations).

In producing this traitorous article from a foreign-language newspaper, printed at Chicago on June 27, 1952, and which paper is still printed there, was the subcommittee interfering with the freedom of the press? In asking you this question I call your attention especially to paragraph 7 of my preliminary statement beginning as follows:

The primary purpose of our inquiry today and tomorrow here in the Chicago area is the extent to which the press is Communist-dominated so far as foreign-language papers are concerned or the subversive conspiracy is implemented thereby.

And for your information I am pleased to present the following text of one of the pamphlets widely distributed in Chicago at the time prior to the subcommittee hearings beginning March 26, 1957:

YOUR RIGHT TO READ NEWSPAPERS, TO BUY BOOKS, TO SEE FILMS, IS CHALLENGED BY THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

On Tuesday, March 26, and Thursday, March 28, several of your fellow citizens have been summoned to appear for inquisition before the House Un-American Activities Committee (the Walter committee) at the Federal Courthouse in Chicago. Their crime: They publish newspapers, sell books, or exhibit films that the bigots on the Walter committee don't like.

"The most un-American activity in the United States is the conduct of the Congressional Committee on Un-American Activities. It is so viciously flagrant a violation of every element of common decency associated with human liberty that it is a foul mockery on all that Jefferson and Lincoln made articulate in their dreams of a cleaner, finer order on earth."—From an editorial in the Detroit Free Press, sister paper of the Chicago Daily News.

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble and to petition the Government for a redress of grievances." (First amendment, Constitution of the United States, Dec. 15, 1791.)

Some of the people summoned by the Walter committee are editors of foreign-language newspapers published in Chicago. Apparently in the eyes of the Walter committee anyone who speaks or writes in a foreign language is suspect. This is in line with the objectives of the Walter-McCarran Immigration Act, of which Congressman WALTER is coauthor.

The Constitution forbids Congress to restrict freedom of expression, so it cannot legislate in this field. Therefore, the purpose of the inquisition is to create hysteria and block the growing opposition to the Walter-McCarran Act.

The specific objective of the forthcoming inquiry is to destroy the foreign-language newspapers because of their influence in arousing opposition to the Walter-McCarran Act. Freedom of speech is of special importance to these people because they speak in a different language. If the foreign-language press is deprived of its rights, will other newspapers be secure?

The Walter committee seeks to accomplish its purpose by having paid informers attack those with whom it disagrees. These informers label as subversive and un-American those who sell books not approved by Secretary of State Dulles, or who show Russian films, or who oppose repressive legislation.

We agree with the following message sent to a meeting of the American Booksellers Association by President Franklin D. Roosevelt in April 1942, when the Nazis were burning books with which they disagreed:

"We know that books burn—yet we have the greater knowledge that books cannot be killed by fire.

"People die, but books never die. No man and no force can abolish memory."

Among those summoned to appear before the Walter committee on March 26 and 28 are:

EDITORS

Mrs. Alice Yonik: Editor in chief of Vilnis (meaning Surge). Vilnis has been published for Lithuanian readers in Chicago since 1920 and has been a daily newspaper since 1926. Mrs. Yonik has been with the newspaper since 1932. She is a native of Chicago and is active in the Lithuanian Women's Cultural Club.

Leon Pruseika: Associate editor of Vilnis.

Jacob Pauliukas: Manager of Vilnis.

Vincent Andrulis: Columnist and former editor of Vilnis. Member for 27 years of the Association of Lithuanian Workers. Active in Lithuanian Literary Society. He is very ill with a heart ailment.

Mrs. Nellie De Schaaf: Housewife. Editor of Vilnis' English section from 1950 to 1952.

Anthony Minerich: Business manager and former editor of the Croatian weekly, Narodni Glasnik (meaning People's Voice). Formerly active in United Mine Workers of America. Now active in Croatian Fraternal Union.

John Zuskar: Business manager of the Slovak weekly newspaper, Ludowy Noviny (meaning People's News). Secretary of the Slovak Circle. Member for 45 years of the National Slovak Society.

FILM EXHIBITORS

John Rossen: Theater manager. Veteran of World War II. Executive director of the Chicago Council of America-Soviet Friendship.

LeRoy Wolins: Veteran of the Korean campaign. Graduate of the University of Chicago. Director of the Film Forum of Chicago, which has been showing Russian films. Editor of Friendship. Administrative secretary, Chicago Council of American-Soviet Friendship.

BOOKSELLER

Otto Wangerin: Operator of Modern Bookstore. Active for 40 years in labor and progressive movement.

The Good Government Under President Eisenhower

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. HILLINGS. Mr. Speaker, I am amazed at the letters I am receiving from California these days. I am not surprised at the volume—it is a rare day in my office when I do not receive at least 100 letters—but I am concerned about the fact that many of the writers are unreasonably critical of the President of the United States and his administration. Concern over the budget and taxes has, in many cases, caused some of my constituents to completely ignore the fact that there are many fine things being done by our Government from which all of our 170 million Americans are benefiting. It is not my purpose to act as counsel for the defense, because the President is completely capable of speaking for himself and does so very ably. I do think it is time, however, to answer the question, "Does our country have good leadership and good government?"

In answering this question, I would like to point out that I have voted to cut the President's budget and will continue to do so, because I think it is too large. It is my hope that Congress will be successful in reducing Federal expenditures by at least $3 billion. I then will do everything I can to press for a tax reduction and an overhaul of our complicated and sometimes unfair tax laws. I have no reason to be politically beholden to Mr. Eisenhower inasmuch as figures released by Congressional Quarterly show that I received a higher percentage of the vote than the President or any other candidate for public office in my district in the elections last November. Nevertheless, I am convinced that our country, under the Eisenhower administration, has outstanding and forward-thinking leadership and that our people have every reason to be proud of the kind of Government we have today.

My correspondents who have been so quick to criticize some of our Nation's fiscal policies should recognize that there are good things to be said about this budget. For the first time in a quarter of a century we have in prospect three balanced budgets in a row. By next year we will have retired some $5 billion on the public debt. This is quite a contrast with years past when our country was operating on deficit financing and balanced budgets were virtually unobtainable. In addition, the $7.4 billion tax cut given the American people in 1954 has already saved them almost $25 billion in taxes. The population of our country has increased by 10 million persons since President Eisenhower took office, but today Federal civilian employees are almost one-quarter of a million fewer than in 1952. This means that while our country has grown larger, we have cut the size of our bureaucracy. Remember that 24 percent of all of the budget goes for Federal expenditures not subject to control by the President, and 63 percent of the Federal budget is for national defense. Remember, too, that the President can't change many existing programs, because his own party doesn't control the Congress.

Everyone of us should recognize that our country's prosperity is at the highest level in history, and individual incomes today are $18 billion higher than they were last year. There is virtually no unemployment problem in our country. At the same time, our Nation's position and prestige in the world is now greater than at any time since World War II. We are not at war, and the Russians, who were threatening aggression not so long ago, are now on the defensive. Shakeups and revolutions are taking place throughout the Soviet empire. Our chances for a permanent peace are improving daily under the leadership of President Eisenhower who has gained the respect and confidence of other leaders of the free world.

None of us should be rubber stamps, and each of us has the right to differ with the President and other Government officials. However, any fair appraisal of the overall picture, whether we are Democrats or Republicans, would show that the country is in good hands, and the future is bright. I hope the President's critics will keep this fact in mind and not allow opposition to certain fiscal policies prevent their recognition of the good work which has been done.

Eggheads and Squareheads

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Gerald W. Johnson, which appeared in the New Republic of May 20, 1957:

EGGHEADS AND SQUAREHEADS

(By Gerald W. Johnson)

The fastidious disgust of Mr. Dean Acheson and the vociferous disgust of Mr. Philip Wylie with the "moralism" (the quotes are to emphasize the fact that the word is not morality) of our foreign policy inspire some faint hope that the Pecksniffian aroma in the American atmosphere is fading. But the hope is faint. Mr. Acheson and Mr. Wylie are both Eggheads, and the much more numerous Squareheads have an appetite for moralistic mush that is nearly, although not quite, insatiable.

Mr. Acheson seems especially exasperated by the President's unctuous comment on late events in the Middle East: "Two wrongs do not make a right." Yet it is undeniable, by Mr. Acheson or anybody else. If Nasser steals a sheep, that is definitely one wrong; but if the President knocks the gun out of the wrathful sheepowner's hand, that doesn't make a right. It only makes us accomplices while Nasser gets away with the sheep.

Of course the President's argument is that if someone hadn't stopped the sheepowner, murder might have been done, and murder is worse than the loss of any amount of mutton. The argument loses force, however, if murder is going to be done anyhow, which seems highly probable. Israel today is not what any underwriter would call a preferred risk, and Israel didn't even own the property that Nasser appropriated.

The situation in the Middle East presents a genuine moral dilemma. There is no right course, morally speaking, in such a case; the best anyone can do is to pursue the course that, while not harmless, will be least injurious to the world. This means that whatever one does should be done apologetically, because it is certain to be questionable morally, whatever it is.

But Mr. Eisenhower and Mr. Dulles are not prepared to admit the existence of a moral dilemma anywhere at any time. They blandly insist that their course is impeccably correct, not merely a fumbling, if honest, effort to make the best of a thoroughly bad job. This is the moralism that has the eggheads rolling their eyeballs and gnashing their teeth; the extent of the error is debatable, but the assumption of rectitude when some degree of error is inevitable, is infuriating. Like the Old Men who maddened Kipling, these seem to take the attitude that—

"Whatever we do, we shall fold our hands, and suck our gums, and think well of it.
Yes, we shall be perfectly pleased with our work, and that is the Perfectest Hell of it."

However, the asperity of the eggheads will not appreciably affect the course of history unless it proves to be the precursor of a corresponding displeasure among the squareheads. At present, what is of vastly greater moment is the prevalence of similar sentiments in infidel parts. The wrath of the Acheson-Wylie axis may be comparable to that of Peleus' son, but it is not as sinister as the cold dislike we seem to be arousing in all the popular leaders of Asia and Africa. For the eggheads can only froth at the mouth, but the heathen can give aid to our enemies without risk of being hanged.

The peripatetic Secretary of State apparently fancies himself in the role of a missionary. There would probably be no harm in that except for the unfortunate fact that the heathen are also beginning to see him as a missionary has never been popular in partibus infidelium of the gospel, but of the kind intent on establishing the moral superiority of the Catholics, the Protestants, or the Jews—at any rate, of the Americans. That kind of missionary has never been popular in partibus infidelium. On the contrary, he has usually been regarded as about the most godawful nuisance known to international relations, not excluding conquistadores, filibusters, and plain pirates.

If the poor, benighted Hindu has got it into his head that Mr. Dulles is a missionary of the meddling type, then we had better transfer Mr. Dulles promptly to some other field of activity. For that would mean a conviction that our real objective is not international amity, but the imposition upon India of monogamy, Sunday blue laws, and the substitution of soda pop for the beverage that Jesus of Nazareth supplied at Cana; which would be enough to provoke a rebellion that would make the Sepoy mutiny resemble a game of tiddley-winks. In the course of it the Hindus would probably welcome communism or any other ideology that would preserve them from the horrors of Calvinism.

No doubt a policy is to be deprecated if it does no worse than drive Mr. Acheson, Mr. Wylie and affiliated eggheads into the screaming meemies; but it is to be more than deprecated, it is to be deplored if it has the effect of creating throughout a continent, or two continents, a clammy distaste for everything American because American will be equated with holier-than-thou. For that sort of thing can hardly be removed by the most toilsome efforts of a hundred years.

Resolution Regarding Panama Canal

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. DORN of New York. Mr. Speaker, as a member of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, I should like to call the attention of my colleagues to the resolution adopted by the New York Society of the Panama Canal at its annual meeting in New York on May 4, 1957:

RESOLUTIONS RE PANAMA CANAL

Whereas certain prominent individuals and groups have advocated internationalization of the Panama Canal for divers and naive reasons; and

Whereas considerable agitation is being fomented in Panama for the nationalization of the canal or for vast increases in the annual payments to the Republic of Panama above those now provided in the existing treaties; and

Whereas the advocates of a sea-level canal are constantly pressuring the Congress to authorize this futile and extravagant adventure; and

Whereas it is apparent that transit facilities of the canal will be inadequate in the near future and that increased capacity should be studied now and provided for by the Congress: Therefore be it

Resolved by the New York Society of the Panama Canal at its annual meeting in New York, May 4, 1957, as follows:

1. That the society respectfully and most earnestly urges the Congress of the United States to enact, without further delay, legislation providing for the creation of an independent Interoceanic Canals Commission to study and review all of the problems involved and to report back to the Congress with its recommendations in the premises;

2. That copies of this resolution be sent to the authors, in the Congress, of measures providing for the creation of the proposed Interoceanic Canals Commission, and to members of the congressional committees charged with the duty of considering legislation dealing with the Panama Canal, the metropolitan press and to the other Panama Canal Societies in the United States.

THE NEW YORK SOCIETY OF THE PANAMA CANAL.
JOHN J. FITZPATRICK,
Secretary.
R. W. HEBARD,
President.

America Is No Land of the Plenty for the Aged

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a most timely and thought-provoking summary of an independent study that has been made about the financial problems of the growing number of aged persons in our American population.

This summary, which appeared in a recent issue of the Oil, Chemical, and Atomic Workers' Union News shows that 26 percent of Americans over the age of 65 have no income of their own; 38 percent have less than $1,000 a year and the numbers within these brackets represent an increasing portion of our population.

The startling revelations of the difficulties plaguing these individuals, within the growing prosperity of this great Nation, poses a very real challenge to all other segments of our society, including the legislatures, both national and local.

The article follows:

The United States is a land of plenty—but not if you're over 65 years of age. Nearly three quarters of Americans beyond 65 either have no income of their own—or earn less than $1,000 a year. And you know how well you can live on $20 a week.

There are signs of betterment on the horizon. Both political parties advocate higher social-security benefits and there are indications that adequate care for older people will be less and less a burden on our economic system.

Nevertheless, among the rapidly increasing population over 65, 36 percent have no income whatever, 38 percent have less than $1,000, while 11 percent have an income between $1,000 and $2,000. In many cases, these incomes must do not only for the individual earning the money—but often support a spouse and other members of the family. Only 15 percent of the oldsters over 65 earn or receive more than $2,000 a year.

This is a summary from a comprehensive report made by John J. Corson, a former director of the Bureau of Old-Age and Survivors' Insurance, and John W. McConnell, professor at Cornell University. The findings have been published in Economic Needs of Older People, a text of 533 pages by the Twentieth Century Fund, a nonprofit foundation for research on economic and social problems.

Older persons in our population (those over 65) are steadily increasing not only in number, but in proportion to the total population. Since 1900, the number of persons 65 and over has increased 4 times while the total population has only doubled. The over-65's now number over 14 million.

It is an unhappy fact that while older persons make up a larger share of the population than formerly, a vast preponderance of these older folks are subsisting on a far less than average income, and have a living standard well below the average for the population.

The report notes that unemployment is at a minimum from ages 35 to 44, rising gradually between 45 and 64. At age 65 there is a marked increase in unemployment. And, once unemployed, older workers find it difficult to secure new jobs.

A significant point brought out by this study which is often overlooked in an individual's plans for retirement is the matter of health. Among persons over 65, one-tenth to one-third are chronically ill. Medical studies disclose that persons aged 65 or over have about twice as many disabling illnesses, lasting a week or longer as persons aged 50 to 64. Moreover, the average disabling illness of the aged lasts twice as long as that of the younger group. A study made by the Bureau of Old-Age and Survivors' Insurance found that no more than three-fifths of those who had been hospitalized during the survey years were able to pay the hospital charge, even in part, from their own resources.

It is a situation which reflects either upon our sense of justice or upon the soundness of our social and economic system, or both. Yet, all is not completely dark for citizens of advanced years.

One central finding of the new Twentieth Century Fund study is quite hopeful. Though the over 65's are increasing twice as fast as the general population and despite the increased benefits recommended, the study suggests that the burden on the rest of the population will decrease rather than increase. There are several reasons for this.

In the first place, older persons are simply one element in the total nonworking population. Children, invalids, housewives, retired persons, and others are included in the total nonworking segment. And this total nonworking group is growing proportionately smaller rather than larger.

Thus as the percentage of our people in the nonworking group grows smaller it becomes clear that the ability of the United States to support its nonworking population will grow rather than decrease. This is underlined by the fact that total national output is increasing even faster than the over 65 population, and the total productive effort that goes to support older persons is likely to become a smaller percentage of our total output.

Adding it up, this means that for the future we can, if we wish, take better care of our older people because we can afford to.

Nevertheless, the study finds that the individual himself—or herself—has a special responsibility to save—be it through home ownership, private insurance, savings accounts, investments or contributions under private retirement plans.

Justice Makes Mockery of Basic Law

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. DAVIS of Georgia. Mr. Speaker, more and more the people of the United States have become alerted to the pattern and practice of the United States Supreme Court in attempting to change the law of the land through so-called judicial decisions. The lawmaking power is the responsibility of Congress. Congress alone has the power and the responsibility to make law or to change law.

The decisions of that Court in the past two decades are convincing that a dangerous and frightening thing is taking place, namely, that the Supreme Court is deliberately undertaking to rewrite the Federal Constitution and laws.

The average American has been reluctant to believe the truth about the Supreme Court, but the pattern and purpose of the Court has become so obvious that it can no longer be ignored or overlooked.

The indignation and concern which the conduct of the Court is causing is aptly expressed in the following editorial in the May 15 issue of the Metropolitan Herald, Atlanta, Ga.:

JUSTICES MAKE MOCKERY OF BASIC LAW

The high regard for the United States Supreme Court held by citizens of this Nation throughout most of its history has been unique in American politics.

Whenever any politician attempted to tinker with the Court, American citizens have risen up to defend the Court in a mighty chorus of righteous anger.

It was only a few short years ago, when one of the most popular Presidents this Nation has ever had, attempted to undermine the Court with a court-packing plan only to be slapped down by the American people in his attempt.

However, such is not the case now. The Court is in disrepute. The Court is no longer held with honor and respect. And the Court has no one but its present membership to blame for this state of affairs.

By its brazen disregard for prior decisions, by its ignoring of precedent in law, by its issuance of legal edicts without constitutional or legal foundations, by its usurpation of the power of Congress to make laws, by ignoring truth, facts, and the Constitution, the present members of the Court have made a mockery of the Constitution and of the Court itself.

Its latest irresponsible edict in the Philadelphia Girard case has drawn a steady fire of criticism and scorn from the Nation's outstanding lawyers and from a large segment of the free press.

Yet the Court continues on its reckless way, issuing edicts without regard to established law, precedent, or the Constitution.

It is a dangerous policy. It is alarming. It is endangering our basic laws and our basic liberties.

Congress must reassert its own legislative powers and restore the Court to its constitutional duties before it is too late.

Foot-in-Mouth Disease

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the Hartford Times of May 18, 1957, makes most interesting reading:

FOOT-IN-MOUTH DISEASE

For a man of the stature of our Secretary of State, John Foster Dulles has an unfortunate habit of putting his foot in his mouth on one subject—permission for American newspapermen to travel to Red China on business.

He told reporters the other day that he realized it was inconsistent to put a flat ban on travel by newsmen to Red China and at the same time to suggest that a strictly limited number of responsible correspondents be permitted to go. The suggestion, he said, was a concession to American news agencies. When men like Mr. Dulles, a person of sturdy integrity, believe sincerely in a principle they don't compromise on it. Apparently Mr. Dulles' faith in the rightness of his ban is shaky.

He also made a silly proposal. He said American newspapers, if they wish to cover Red China, could hire foreigners to do the job for them. Thus, American citizens would not be put into hazard where our Government could not protect them.

Loyalty, as Mr. Dulles should know, operates in two directions. Journalists, especially in the United States, have a good record for loyalty to their employers. But the employers also extend loyalty to their reporters. Any reputable newspaper would be just as concerned over danger to its Red China reporter if he were, say, a Swiss as if he were born and brought up in Hartford. Somehow Mr. Dulles' suggestion smacks of hiring mercenaries.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Wisconsin in Forefront of Efforts for Mentally Retarded

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. WILEY. Mr. President, I send to the desk a statement and appended articles on the heart-warming performance of the State of Wisconsin and the fine job increasingly being done in other States for the mentally retarded in our population, especially for mentally retarded youngsters. I ask unanimous consent that the statement and the appended articles be printed in the Appendix of the RECORD.

There being no objection, the statement and articles were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

I was pleased to note in the Milwaukee Journal of last Sunday an article describing a helpful session, which was held at the Milwaukee Vocational School, looking toward the solution of a problem which has stirred the hearts of countless Americans.

This session was a slow-learners institute. It was designed to shed light on how to provide educational and related assistance for the 1½ to 3 percent of our population which falls into what has been described as the "mentally retarded group," especially the youngsters in that classification.

AAMD MEETING TODAY

Today is, I believe, an appropriate occasion to refer to the important progress which is being made on behalf of the slow learners, because on this very day in Hartford there is convening the American Association on Mental Deficiency's annual convention.

It will hear many leading experts discuss various phases of this mental deficiency problem.

SPLENDID WORK OF NARC

I have in my hand the text of an article from the April 1957 issue of the newspaper Children Limited, which describes this convention. This newspaper is published by the National Association for Retarded Children—a splendid nonprofit organization of parents and friends of the mentally handicapped.

In looking through every issue of this newspaper, one finds encouraging signs of what is being done on a National, State, and local basis.

Infiintely more, however, needs still be done. We have barely scratched the surface in helping the retarded. Infinitely more youngsters are not receiving adequate attention than are receiving adequate attention.

But at least we are on our way. Progress is being made, thanks to the devoted efforts of parents, educators, doctors, psychologists, and others.

ARTICLES SHOW PROGRESS IN BADGER STATE

Naturally, I am especially pleased that my own State is helping to lead the way, although far more needs be done in Wisconsin as elsewhere.

In the April 1957 issue of Children Limited there was, for example, a brief article describing how the University of Wisconsin in Milwaukee, in cooperation with the Wisconsin Council for Mentally Retarded Children, is recruiting teachers for retarded youngsters.

In the February 1957 issue was an article describing how Msgr. J. W. Felder, chaplain of the St. Coletta School for Exceptional Children in Jefferson, in my State, has surveyed the problem of religious training for retarded youngsters.

In the December 1956 issue there was depicted how the former Governor of my State, the Honorable Walter Kohler, served as honorary chairman for State Retarded Children's Week campaign.

In the April 1956 issue was an article on the formation of Phi Mu Sigma fraternity, a grand group which I was pleased to address last year (as described in the May 7, 1956, RECORD). Phi Mu Sigma is a professional fraternity for teachers of the mentally retarded.

I have selected these Wisconsin references in Children Limited merely as an illustration. These particular articles show what one State is doing at the grassroots and what, I hope, all 48 States will do and can do on behalf of these youngsters.

"NO LESS PRECIOUS"

The worthy theme of the national association is that these retarded youngsters are "no less precious" than any other youngster.

One article in the February issue of this year was well entitled "For Children Limited, Love Unlimited."

With true love, with real understanding, with expert direction, with generous contributions, we can go a long way toward fulfilling our deepest responsibilities to these youngsters and to adults as well.

REPORT BY WHO EXPERTS

This is not a problem affecting just a small limited group. It is a problem which affects a vast number of Americans, and naturally, it is a problem not limited to our shores alone. I point out for example the important 48-page publication, The Mentally Subnormal Child, a report prepared by a joint expert committee convened by the World Health Organization with the participation of the United Nations, ILO and UNESCO.

Let us therefore each do our part in whatever way we can toward meeting this challenge.

ARTICLES FOR CHILDREN LIMITED

There follows now the various brief articles. All are from Children Limited, published by the NARC, with the exception of the Milwaukee Journal article to which I have referred.

[From Children Limited for April 1957]

AAMD CONVENTION SLATED MAY 21–25

Connecticut Gov. Abraham A. Ribicoff will greet delegates to the first general session May 22 of the American Association on Mental Deficiency's annual convention in Hartford.

Registration will begin May 21 and the annual meeting will conclude with the installation, May 25, of the association's new president, Chris J. DeProspo.

Section meetings during the convention will deal with all aspects of work with the mentally retarded, including education, medicine, social work, psychology, administration, and parent liaison.

Dr. Romaine P. Mackie, chief of the Section on Exceptional Children and Youth of the Office of Education, and Dr. Leonard J. Duhl, psychiatrist from the Professional Services Branch of the National Institute of Mental Health, Department of Health, Education and Welfare, will address a public meeting May 22.

Rudolph P. Hormuth, specialist in services for mentally retarded children of the United States Children's Bureau, will describe the material and child health program for mentally retarded children at a sectional meeting May 22, chaired by Dr. George Tarjan, superintendent of Pacific State Hospital in California.

Another panel on May 22 will deal with a social work approach to the problems of the mentally retarded and their families. It will be headed by Mrs. Sadie E. Smith, director of social services at the Columbus State school, Ohio.

Language and speech of the mentally retarded will be discussed in a section meeting May 23. Dr. Ross H. Copeland, administrative assistant to the superintendent of the Muscatatuck (Ind.) State School, will chair the panel and present the results of a national survey of speech and hearing services for the retarded in State institutions.

Play and music therapy, hypnosis with the mentally retarded, and parent counseling will be among topics discussed at a psychology sectional meeting May 23 headed by Dr. Harold Michal-Smith of Flower and Fifth Avenue Hospitals.

Armond Carr, NARC secretary, will be a participant in a section meeting May 24 to discuss teamwork between parents and the administrator of a program for the mentally retarded.

Other panelists will discuss the roles of religion and recreation in the life of retarded children at residential facilities.

Another panel on the 24th will deal with the role of parents in a program for the mentally retarded. Dr. Arthur T. Westwell, an AAMD past president, will preside.

Manford Hall, NARC consultant on community services, will chair a discussion of Community Casework Help to Families in Dealing With the Problems of Mental Retardation.

[From the Milwaukee Journal of May 19, 1957]

SLOW LEARNER PARLEY TOPIC—PROGRESS IS SEEN

Parental shame and widespread ignorance about mentally retarded children is slowly being overcome, parents and teachers attending a slow learner institute at the vocational school were told Saturday.

About 300 persons heard problems of the mentally retarded outlined by Dr. Reynold Jensen, professor of pediatrics and psychiatry at the University of Minnesota, and Dr. Ignacy Goldberg, educational consultant for the National Association for Retarded Children, New York City.

The institute this year, seventh of its kind, dealt with the emotions of the mentally retarded child.

"We no longer need to be ashamed, or to shun, disregard, or avoid the difficult un-

pleasantries associated with the problem," Dr. Jensen said.

PROGRESS IN 10 YEARS

"We have learned at long last that it can be studied, and worked out. There has been a correction of an attitude about a stubborn but real problem facing society. We can talk about it, think about it, and make plans for the future."

Ten years ago, he said, a meeting such as Saturday's could not have been held because of the shame associated with the retarded child.

Help for parents of mentally retarded children has been among the most important reasons why the problem is being studied widely, Dr. Jensen said. But progress has been important only in the past 7 years—starting with the creation in 1950 of the National Association for Retarded Children—and there is much to be learned.

Between 1½ and 3 percent of the Nation's population falls into the mentally retarded group, but the estimate might be low, he said. More research may help find the true extent of the problem as well as answers to it, he suggested.

WISCONSIN A LEADER

"Today, polio no longer needs to be feared as much as it was 2 or 3 years ago," he said, and added that with the proper research and understanding such progress might be made with the mentally retarded.

Some research is being conducted by the National Association for Retarded Children, Dr. Goldberg said.

There has been enough speculation and misunderstanding of how much training a mentally retarded child should be given, he said.

Special classes are being offered for the trainable child throughout the United States, he said, adding that Wisconsin was offering classes before many other States.

[From Children Limited for April 1957]

WISCONSIN ARC, UNIVERSITY OPEN JOINT DRIVE TO RECRUIT TEACHERS

The University of Wisconsin in Milwaukee, in cooperation with the Wisconsin Council for Mentally Retarded Children, is conducting a recruitment drive for teachers of retarded children.

Future Teachers of America clubs in 25 high schools have been offered a special program on the opportunities available in teaching retarded children.

The program, under the direction of Robert L. Erdman, associate professor in the university's department of exceptional education, consists of background material on teaching retardates, showing of the film Tuesday's Child, and a group discussion on the NARC publication If This Is Not for You.

The FTA clubs have responded enthusiastically to the proposed program, according to the council, and definite dates are now being scheduled. In several cases, FTA groups have invited other school and community organizations to attend the meetings.

[From Children Limited for February 1957]

CATHOLIC DIOCESES THROUGHOUT UNITED STATES SURVEYED ON RELIGION FOR RETARDED

Monsignor J. W. Feider, chaplain of the St. Coletta School for Exceptional Children in Jefferson, Wis., has completed a survey of the 131 Roman Catholic dioceses in the United States to ascertain the scope of religious training offered to Catholic retarded children.

The basic purpose of the study, according to Monsignor Feider, is "to formulate and recommend an ideal diocesan program of religious training for mentally retarded children on all levels."

Special consideration will be given to religious training of mentally handicapped children in public institutions and to a program within the parish for those remaining at home, the monsignor said.

Questionnaires were sent to the superintendents of schools in each Catholic diocese in the United States. Returns indicate that 7 dioceses have special day school programs, with a total of 26 classes and a total attendance of 520 pupils.

In 25 precent of the dioceses, mentally handicapped children are included in the regular school program for religious instruction. Special instruction to prepare mentally retarded children for reception of the sacraments is given by 7 percent of the dioceses contacted.

The text and teacher's guide most frequently used in giving religious training to retarded children is "My Guide to Heaven," published by St. Coletta School in Jefferson. "My Guide to Heaven" is a catechism of essential doctrine written by Monsignor Feider.

Full-time chaplains serve in 15 public institutions for the retarded. In a majority of cases, local pastors provide religious instruction and spiritual care for residents in public institutions.

Monsignor Feider cautioned that his findings represent the results of responses to his questionnaire and may not present a comprehensive picture of Catholic efforts on behalf of the mentally retarded child.

In a letter that accompanied his questionnaire, Monsignor Feider wrote:

"According to reliable statistics available, there are in the Nation 640,000 mentally handicapped Catholic children between 30 and 80 I. Q.

"Of this number only about 2,000 are definitely known to be receiving religious instructions in preparation for reception of the sacraments.

"There is serious question as to the lot of the remaining 638,000 children in the matter of religious instruction and training with a view of receiving the sacraments."

The questionnaire requested information on special day school programs, I. Q. levels of children receiving training, teaching personnel employed, texts used, program of preparation for reception of the sacraments and parochial school provision for retarded children.

Other questions related to availability of chaplains.

[From Children's Limited for April 1956]

FRIENDS OF THE SLOW LEARNERS FORMED AS PROFESSIONAL EDUCATION FRATERNITY

Phi Mu Sigma (literally, "friends of the slow learners") is a new professional fraternity for prospective teachers of the mentally retarded.

Plans for organizing the fraternity were begun on the campus of Wisconsin State College, Milwaukee, in 1953. This is the first year the group has functioned as a formal organization.

The fraternity lists its objectives as these:

"To foster better understanding of mentally handicapped children.

"To promote finer relationships between the parent and teacher of the mentally handicapped child.

"To educate the public to the existence and the special problems of such children.

"To familiarize and orient entering students to the field of mental deficiency.

"To promote and maintain professional growth by the continued contact with other workers in the field."

To help achieve these goals the fraternity carries on special projects and holds year-round professional and social meetings. Speakers, movies, and demonstrations have served as programs for the meetings.

The fraternity has also helped distribute materials for Retarded Children's Week, helped take retarded children to the circus, sponsored bulletin-board displays at the college on opportunities in teaching retarded children, and made a film dealing with the teaching of the retarded as a career.

Membership in the fraternity is open to any student who is registered as a major in the education of the mentally handicapped, and who has attained an overall scholastic average of C.

The official fraternity key is offered to pledging students who have earned at least 25 points doing service in behalf of Phi Mu Sigma.

Members of the Wisconsin State group are hopeful that other chapters of Phi Mu Sigma will be started soon on college and university campuses throughout the United States.

The fraternity recently voted to present special merit awards and citations to six persons who have contributed to the field of promoting the welfare of mentally retarded children and adults.

The six selected are President Eisenhower, Gov. W. J. Kohler, of Wisconsin, Roy Rogers and Dale Evans, Dr. Salvatore DiMichael, and Dr. Samuel A. Kirk.

The fraternity is also giving recognition to the parent organization in Wisconsin which has contributed scholarships for prospective teachers of the retarded at Wisconsin State.

The awards will be presented at ceremonies to be held at the college May 4.

Address by Hon. Harry F. Byrd, of Virginia, at St. Luke's Church, Smithfield, Va.

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered on the occasion of the completion of the restoration of St. Luke's Church at Smithfield, Va., May 19, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR HARRY F. BYRD, DEMOCRAT, OF VIRGINIA, ST. LUKE'S CHURCH, SMITHFIELD, VA., MAY 18, 1957

Mr. Day, officers and directors of the historic St. Luke's restoration, distinguished guests and friends, I am pleased to participate in this ceremony today for many reasons. I am honored to be in the presence of my friend, Henry Mason Day, and others responsible for restoration of historic St. Luke's and their guests and friends.

I salute Mr. Day and I want to pay my tribute to him. I do so not as a Virginian but as an American. It is to him that we owe the restoration of this church, one of the great landmarks of the world. His indefatigable work and his determination to succeed have made possible the great privilege we enjoy today, which will be passed on to all future generations. An opportunity, such as this, to rededicate ourselves to our God and our country is indeed a high privilege.

As we assemble here in this fine old church, now so faithfully restored, I experienced mixed sensations. They are peaceful and solemn, and they are sensations of pride and responsibility. It is inspiring to stand in this church, the oldest standing Protestant Church in America, built in 1632.

We are reminded of the great chain of historic events our forebears set in motion here

in these James River environs. Here indeed was a case of the infinitely small being infinitely great.

It was in this quiet corner of tidewater Virginia, 350 years ago last Monday, that the small band of founders in three small ships landed at Jamestown and lived one of the great moments in history.

It was a moment of greatness because these men and their stanch followers built with such soundness and vision that a new world slowly but surely began to form. They were great men in whom nature succeeded. They were men who made religious use of life.

Here respect for individual rights and responsibilities was established.

Here the dignity of man was acknowledged.

Here the rights of free enterprise and initiative were encouraged.

Here truth to God, and truth to self were practiced.

On this foundation was built the first representative government in the new world—the House of Burgesses, the predecessory of our State legislatures and the National Congress.

Material results are but the tardy sign of invisible activity. The courage to hope, and live, and build for a better world was the great legacy the founders bequeathed their descendants. From this came their fortitude to fight for liberty when it was threatened, and win the independence of a great nation.

The achievements incident to the American Revolution were the immediate inspiration for the French, and since that time the cause of democratic freedom has been spreading in ever-widening sphere. Today the United States stands as a beacon of hope in the world.

So it is thrilling to come to this section of Virginia whence sprung the ideal of democracy. Here in this old churchyard sleep the dead whose mighty hopes for the future made them men.

They include some of the settlers who came to this parish in 1622 with Edward Bennett. They came with high hopes, and despite adversity, they "hung out" and ultimately the settlement prospered to make its indelible contribution to a great new country.

There could be no more noble shrine to the memory of those God-fearing settlers than this—the restored Old Brick Church, and no more sacred place of worship and rededication for this and future generations. It is a place of deep and tranquil inspiration, which nourishes, purifies and ennobles the soul of man.

As I look with admiration at this church, in its restoration of today, I am moved by the fact that it is a powerful symbol of the fruits of slowly won peace, the fruits of industry, of constitutional government, and above all it is a symbol of the will of man to express his belief in God in the most filling way possible.

Of the 522 people residing in the parish in 1634, all must have contributed either from his purse, his crops, his strength, or the fullness of his heart toward rearing this worthy place of worship. It is work, to whatever end, that gives flavor to life.

We know that in the 17th century, the colonial church here was not only the center of religious life in the parish, but it was also the center for secular affairs. In a real sense, it symbolized the parish.

In the case of St. Luke's, the church served also as one of the 5 sites in Virginia where the court of the colony was permitted to convene. Even now there seems to be a feeling of official status about the edifice. Perhaps it is best expressed in the quiet dignity of the Gothic architecture.

We have but to look around at the interior detail to see the painstaking care of the original construction. Everywhere there is evidence of the lofty purpose and continuant devotion to a great and lasting project.

In retrospect, it would seem that there is a parallel between the long days spent in construction of the magnificent old church, and the construction of the Virginia Colony. Both were built on firm foundations. Both endured the hardships of growth in a scarcely civilized, but verdant land. Both looked confidently to the future, with an inspiring mission under God.

Despite the toll of time, in the long span of its three and a quarter centuries, the church continued to stand and serve as a house of worship. And finally in our own time when the old church was threatened with total destruction, men and women of patriotism and good will all over this Nation joined in the great effort for its restoration. Many of these fine people are here today. I can imagine their sense of pride and satisfaction. Theirs has been an undertaking well done in accordance with their desire and power.

Good repair is like liberty. It is not a continuous state. We must everlastingly work at it. Fortunately, in this country, foundations for our freedom were set deep in the Virginia soil, like the foundations of old St. Luke's. Like the church, the edifice of our constitutional democracy was constructed slowly but surely, with the toil and sacrifice of our citizens. Like "Old Brick," our form of government has served us well for centuries. We must guard it vigilantly against the forces of decay from within and the forces of evil from without.

I was thrilled to be with the Vice President of the United States at Jamestown on Monday and to stand where a nation was born—and that Nation today is the most powerful in the world—the United States of America.

At the end of the 17th century, the entire colony of Virginia numbered 80,000 people. The wilderness was fast being settled all along the coast—from Maine to Florida. A steady tide of migration was pushing up the rivers and bays, and far back into the interior to the mountains. In the splurge of growing and building and creating, the little hamlet of Jamestown was soon forgotten. Brambles and bushes grew up over the ancient landmarks and ruins. Later, 2 or 3 resident tobacco farmers cleared some of these away, and their plows passed over the graves of the forgotten dead.

Now, in the year 1957, a reverent and grateful country turns again to the place of its beginnings. The multitude of Americans who visit Jamestown during the coming months will do well to remember that the very soil beneath their feet is mixed with the mortal dust of thousands of men, women, and children who perished there that a nation, our Nation, might live.

I am proud to be present on the occasion of the completed restoration of St. Luke's Church, for it is a tangible expression of our determination to keep faith with those who have gone before us in the service of our democracy and our God. I know all of you will join me in prayerful rededication to these high purposes.

The Soil Bank Program

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Two and Two on the Farm," which appeared in the Indianapolis Star on May 17, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO AND TWO ON THE FARM

Glimmerings can be seen of hope that the farm problem at last may be approached in Washington with some respect for the elementary facts of life. The House has voted, by a narrow margin, to suspend the soil-bank program at the end of the current year.

In part the House action was a product of the economy drive in Congress. The agricultural program offers a fertile field for economy. The cost of the soil bank alone is estimated at possibly $1,200,000,000 a year. Price support and other programs run the total current bill for aid to farmers to about $5 billion a year.

But the House action also was based in part on reaction against evidences of abuse of the program and against lack of indications that the soil bank is likely to make any long-run contribution to solution of the basic farm problem.

Secretary of Agriculture Benson, even though he helped to establish the soil bank and doubtless now feels obligated to defend it, himself has offered to take the lead in reexamining the whole business. In a recent letter to the chairman of the Senate Agriculture Committee, Benson outlined the idea that farm programs aimed at limiting production have not worked and cannot work.

Success is impossible for programs based on presently used principles. The programs which have been tried, or have been seriously considered, fall basically into two groups. In one group are programs aimed at bolstering farm income by means of price supports or price subsidies. In the other are attempts to limit production. Programs in practice have generally been a combination of the two. They are self defeating.

Price support programs enlarge the problem rather than helping to solve it. When price help for a given commodity is assured, the farmer produces as much as he can of that commodity. The more support is given to a particular crop, the more of that crop will be produced and the harder the price will be to support.

As to controlling production, Secretary Benson said it briefly: "Farmers will not accept, legislators will not vote, and from a practical standpoint administrators cannot impose the kind of controls which, at the price objective specified by law, would be necessary to bring production into line with market outlets."

The alternative course is one toward which some leaders have been pointing for many years. Instead of trying to suppress our farm production, we should learn to make use of it, find markets for it. Senator CAPEHART laid before the Senate more than a year ago a proposal in this direction. Now Benson also suggests it. Perhaps the recent House action indicates an inclination of Congress to look toward a better way. If so, the farmer may at last be due for a lift out of the hole instead of help in digging the hole deeper.

The Family Farm

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article entitled "Family Farm Holds Its Own," from the Hoosier Farmer, reprinted in the Indianapolis News on May 16, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAMILY FARM HOLDS ITS OWN

A small but ever noisy group of people has been doing a lot of needless worrying about the survival of the family farm. The United States Department of Agriculture has just completed a thorough study, entitled "Family Farms in a Changing Economy," and reports that family farms are holding their own, after several decades of rapidly changing farm technology.

Today in America, unchanged from 25 years ago, some 96 percent of all farms are family-operated, the study showed. "Noncommercial" farms have increased rapidly, from only 15 percent of all farms in 1930 to nearly a third in 1954. Most of the farms in this group were residential or part-time farms and their operators depended for their living largely upon nonfarm work. Subsistence farms, where annual sales amount to less than $250 each and where this is the major source of cash, have dropped from about 500,000 in 1930 and 1940 to less than 200,000 today.

Family farms—those commercial units lying between the extremes of farm income—still make up the vital core of American agriculture, the study repeatedly points out. Surprisingly, a quarter-century of technological progress has brought with it a slight increase in the proportion of farms that are smaller than one-man units. The USDA study concludes that the family farm will continue to be an important factor in our agriculture. It also suggests that failure to reach farm sizes of family proportion is a more clear and present danger to the family farm than is the development of larger than family-size units.

Farm Bureau is the true champion of the family farmer and constructively battles to safeguard the farmer during these periods of shifting technology and changing times. Unlike those with leftish views who would like to tie the farmer to the economic fence posts of 25 to 30 years ago, Farm Bureau works to boost net farm income per family farmer now.

The Revolving Students' Payment Plan

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a statement on the revolving students' voluntary payment plan, a loan plan for students inaugurated by the New School of New York, which is a college leaning heavily upon international scholars, and which was a great haven for the scholars who were persecuted by Hitler and escaped to the United States.

Mr. President, in the discussions of a number of my colleagues and myself who have sponsored a bill for student loans—a sort of FHA for students—we have contended that many meritorious students who have talent should not be denied the use of such talent by our country because they cannot, due to economic circumstances, go to school.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE REVOLVING STUDENTS' VOLUNTARY PAYMENT PLAN—THE NEW SCHOOL, 66 WEST 12TH STREET, NEW YORK, N. Y.

The international exchange of knowledge is a vital necessity for world peace and understanding.

Dr. Alvin Johnson, president emeritus of the New School, has expressed this need most concisely: "Einstein the German, Niels Bohr the Dane, Pavlov the Russian could speak to the whole world of scholarship in what language they chose, for the whole world knew the language of mathematics and science. * * * The New School was set up to enable the social sciences and humanities to break out from their solitary confinement cells into the free air of international scholarship."

As with international scholarship, so with international relationships—the nations of the world must shatter the barriers that inhibit the unrestricted flow of ideas and damage the cause of world peace. Today's students, who are tomorrow's leaders, hold the answer to this grave problem.

The New School is designed to encourage this free exchange of ideas; it is a place where students from Pakistan and India, Indonesia and the Netherlands, Israel, and Egypt, can study and discuss their problems. It is a place where understanding will grow in a natural soil, and tolerance and acceptance take root in widely disparate hearts and minds.

In 1956, Mr. Sol Kittay, a long-time friend to the students of the New School, became aware of the tremendous potential for international understanding inherent in the foreign student body. He realized that although it was not customary for American colleges to provide long-term loan privileges to foreign students, such a project was desperately needed. In one bold stroke, Mr. Kittay envisioned and developed a pioneering program that would promote and encourage international good will and help solve the ever-present problem of student financial need.

This program is aptly called the RSVP plan—the revolving students' voluntary payment plan. The RSVP plan will permit American and foreign students to meet their financial needs from the same loan resource. Thus, because of the revolving nature of the plan, it will make for mutual responsibility and create a sense of equality.

It will give the student a feeling of psychological independence; reveal the faculty's confidence in him as an individual; give former students an opportunity to help other students even as they were helped; provide a basis for continuing contact through letters, deans' annual reports, etc., between the New School and the student after he completes his studies.

The accomplishments of the New School's educational program and the quality of its foreign students are exemplified in the following typical cases and statements:

P. V. (India): She studied at the New School, and in 1949 received a doctor of philisophy degree on the thesis Child Care in India. She is presently employed with the secretary for health and welfare in India. While en route as a delegate to a conference in Canada, she made a detour to New York specifically to express her gratitude to the officers of the New School.

T. L. (Yuogslavia): He studied in Vienna, but had to leave because of political persecution. After his arrival in the United States, he studied at the New School, and in 1956 received his doctor of philosophy degree with an outstanding thesis entitled "A Comparative Study of Four Protestant Parishes in Germany." He is now an assistant professor at Hobart College, but plans to teach in Germany in the near future.

B. S. (Germany): She studied at the New School, and received her doctorate from its graduate faculty. Her dissertation, The Human Element in Industrialization, was published by the University of Chicago Press for the American Anthropological Association. At present she is an assistant professor in Puerto Rico.

All of these individuals required financial assistance, and currently over 200 other students must have additional funds to help them meet subsistence and tuition costs. Many deserving foreign students are refused aid because of lack of funds and, with rising student registration, the situation is becoming increasingly critical.

In essence, RSVP says:

Funds must be raised to make loans available for worthy but needy students.

Funds so raised will be administered by the board of trustees of the New School on faculty recommendation and with the help and advice of an international sponsors committee.

Loans under the RSVP plan will be no-interest loans, and they will be repaid by the student when he finds himself financially able to do so.

The RSVP plan will be self-sustaining within 5 years if $100,000 for loans can be made available at a rate of $20,000 per year for each of the next 5 years.

All contributions to the RSVP plan are tax deductible.

The New School has served mature students from all over the world: Argentina, Australia, Austria, Belgium, Brazil, British West Indies, Canada, Colombia, Chile, Cuba, Czechoslovakia, Denmark, Egypt, Estonia, Formosa, France, Germany, Ghana, Great Britain, Greece, Hungary, Iceland, India, Indonesia, Iran, Iraq, Israel, Italy, Japan, Jordan, Kenya, Korea, Latvia, Liberia, Mexico, Netherlands, New Zealand, Nigeria, Norway, Pakistan, Philippines, Poland, Puerto Rico, Sierra Leone, Spain, Sweden, Switzerland, Syria, Turkey, and Yugoslavia.

A People's Call for Action

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a distinguished speech by the Senator from Minnesota [Mr. THYE]. The speech is entitled "A People's Call for Action," and was delivered before a meeting of the Combined Jewish Appeal of Chicago and the United Jewish Appeal, at the Standard Club, in Chicago, on May 16.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PEOPLE'S CALL FOR ACTION

(Address by the Honorable EDWARD J. THYE, United States Senator from Minnesota, before a meeting of the combined Jewish Appeal of Chicago and the United Jewish Appeal Standard Club, Chicago, Ill., Thursday, May 16, 1957)

Mr. Chairman and fellow Americans, I am honored to be able to participate with you tonight in this United Jewish Appeal campaign meeting under the sponsorship of the combined Jewish Appeal of Chicago.

Before I proceed any further, permit me to pay tribute to the honorary general chairman of the 1957 United Jewish Appeal, the Honorable Herbert Lehman. During the years I worked with him in the United States Senate, I came to know him as a man of high dedication to his country and a man of unquestioned integrity. Senator Lehman was always devoted to the cause of humanitarianism, whether it was in this great nation or in connection with problems of peoples in foreign lands. I am confident that he will have a profound effect upon the success of your current campaign to raise much needed funds for the United Jewish Appeal.

I am aware that men of all faiths are present here tonight to join hands in a cause which transcends religious boundaries. Each one of you individually is participating in the writing of one of history's most dramatic chapters. Every human emotion is involved in this campaign. The future welfare of people you may never meet depends upon the success of your efforts and contributions. You are, by your participation, engaged in an international political struggle between the forces of freedom and the forces of oppression. You are engaged in refugee resettlement and rehabilitation work. You are involved in reshaping the destiny of a nation and its people. In a very real sense you are helping to reconstruct the original cradle of human civilization.

Tonight, I shall not attempt to speak on the equities involved in the political struggles of the Middle East in which Israel plays such a key role. I would rather address my remarks to the humanitarian needs of millions of individuals such as you and I who have been caught up in the cross currents of the struggle for freedom which is taking place in the world today.

In December of 1956, I had the opportunity to visit Europe and to receive first-hand accounts of Polish and Hungarian uprisings which touched off a series of explosive international developments. I observed refugees who fled from their homelands in their quest of freedom. These were people who could no longer tolerate the yoke of oppression. They were willing to give their lives so that others might enjoy the freedoms which we take for granted. Their needs were the basic needs of men and women everywhere. They needed food, shelter, jobs, and clothing.

In addition they needed encouragement, spiritual communion, and the knowledge that they were wanted. In the weeks and months following October 29, 1956, we witnessed a genuine outpouring of brotherly love and concern for these people throughout the world.

The people in the United States responded to these needs in a display of unselfish humanitarian concern for the millions of refugees who came out of Hungary.

The United Jewish Appeal played a vital part in that effort and seeks to continue its programs through your present contribution of time and money. In the Emergency Rescue Fund alone you are seeking to assist a minimum of 100,000 persons.

The Jewish refugees who are streaming from the boundaries of oppression are seeking freedom and the right to pursue honorable lives in an atmosphere of peace.

Within the ranks of today's refugees you will find men and women from all walks of life and of all ages. There are thousands of children involved in this exodus. There are families who have been able to move together and there are families whose members have been separated and who seek each other. They too, need clothes, food, shelter, and employment. There is a need for education of the children, medical attention for the sick, and welfare and relief programs. This is the type of task which challenges the imagination and initiative of all of us.

The nation of Israel has opened up its doors to a never-ending number of Jewish refugees who seek entrance to their homeland. Israel is a young nation which is currently engaged in an effort to maintain its sovereignty, independence, and freedom. The people of this nation have made great strides in the past 9 years.

It is a nation of approximately 2,000,000 inhabitants who live in an area comparable to the State of New Jersey. It has traditionally been an agricultural country. We recall the stories and pictures of the shepherds and their flocks moving about the countryside in search of pasture and water. Limited crops were grown. Olives, citrus fruits, melons, and a few vegetables represented the basic agricultural output. Today, approximately 1 million acres of land are under cultivation; 132,000 acres are used for grazing; and 130,000 acres are planted in forests. Beef cattle have come into prominence, cotton has been introduced as a crop, sugar beet is processed in local refineries, and peanuts constitute an important crop. In 9 short years, the people of Israel have greatly expanded their agricultural economy.

Israel has also made great economic progress with its industry and the development of its labor forces. This has not been accomplished without difficulties. Israel has experienced serious inflation which poses a problem to the continued development and growth of its industrial economy. We in the United States are very sensitive to the byproducts of inflationary trends.

Added to the problem of inflation has been the problem of absorbing the refugees which continue to reach the shores of Israel. It is now anticipated that another 100,000 will come in the calendar year of 1957—principally from Hungary, Poland, and Egypt. Israel as a nation is doing its best to meet these problems. In 1948, for example, there were 280,000 gainfully employed; in 1956 the number had reached about 600,000. This integration has taken place without serious social dislocation.

This growth in the labor force has resulted in a great increase in production. The national income in Israel has increased considerably in recent years. In 1955, the increase in total real income was 9 percent and this was accomplished while taking in about 30,000 new workers whose production was probably somewhat below that of experienced workers.

This rapid growth has been stimulated by large investment during the past 9 years. This type of heavy capital investment will be required over many years to come if Israel is to continue to develop economically. There is a need to replace external investment to a certain extent by capital investment from private savings within the country. However, with a population of immigrants, most of whom arrived with few personal belongings, it is natural that savings have been invested in household and durable goods.

Israel's industry, while expanding, is dependent to a great extent on the outside world for capital, raw materials, and markets. She has been drawing heavily on both private and public foreign capital to make up her unfavorable balance of trade, and to finance settlement and development programs. Contributions to the Israeli Government by the purchase of bonds and contributions to Israeli institutions by world, and especially, American Jewry have constituted principal outside sources of funds. The productivity of Israel must continue to expand if it is to compete in the world markets.

Israel is seeking to improve its trade relations with the European countries in the next few years. Up to this point, United States aid and German reparations have allowed those two nations to dominate the supply of goods to Israel.

This brief résumé of Israel's current economic status illustrates two things: The tremendous strides which have been made in the short period of 9 years and the fact that Israel still needs assistance in her attempts to become more self-sufficient and to further strengthen her economy.

Through all of this one can observe the struggle of a nation and the personal needs of its people and its potential citizens. Through your work in the next few weeks, you will contribute in a very real sense to the building of a nation and to the resettlement of individuals who turn to Israel for refuge.

The refugees you will assist are a tired people physically, mentally, and emotionally. Many have merely existed during past years while holding out dreams of a life sometime in the future. Certainly many of the children have been subjected to disillusionment without the opportunity for the dreams and hopes of free youth. In recent months, some force has set them free and they are making their way toward Israel or some other free nation. They do not seek relief. They seek opportunity. Opportunity to work, to build a family, to contribute to society, to worship, and to give something in return. These are opportunities which you and I enjoy with each passing day. It is a part of our life and has been for all of our years.

Today we have an opportunity to show our thankfulness for the blessing which has been bestowed upon us. By responding to the United Jewish Appeal, you will play a key role in the rebuilding of a nation dedicated to freedom and world peace. Equally important, you will play a role in the rebuilding or resettlement of a human life.

The Changing Pattern in Corrections

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. WILEY. Mr. President, I was pleased to note in the newspapers of my State reference to a very fine address which was delivered by the Director of the Federal Bureau of Prisons of the United States Department of Justice, the Honorable James V. Bennett. Commissioner Bennett spoke before the Wisconsin Corrections Conference at Green Bay a few days ago.

In this speech Commissioner Bennett referred to the variety of new-type efforts being made to help straighten out lawbreakers by sound rehabilitation rather than by the old-style methods, which long since have proven that they simply harden lawbreakers and make them still worse offenders when they get out of prison.

Commissioner Bennett saluted the Wisconsin corrections system. He stated, for example:

> Wisconsin has taken the lead in centralizing responsibility for prisons, paroles, probation, and allied services.

He stated further that—

> Wisconsin * * * was one of the pioneering States * * * with its camp system.

He saluted the professional training which is characteristic of workers in the field of correction in the Badger State.

Commissioner Bennett himself has long been among the forward thinkers

and forward doers in seeking a sounder American corrections system.

Fortunately, as he indicated in his remarks, there is, throughout our country today, more and more of a trend toward helping the offender reestablish himself so that he can become a gainful member of society. It is a trend which avoids the extreme of so-called coddling, but which refuses to swing to the opposite extreme of threating human beings like beasts and assuming that harsh punishment alone will make them law-abiding thereafter.

Still more needs to be done toward straightening out our prison population and making it possible for them to become assets rather than debits, to society and to their loved ones. We need, in particular, to cut down the appalling rate of repetition of crime, once these offenders return to civilian life.

It is far costlier for society to have such persons go in and out of prison and engage in crime after crime throughout an entire lifetime, than it is to mobilize our experts and our resources so as to straighten out these offenders, so they never leave the straight and narrow path again.

I send to the desk the text of Commissioner Bennett's significant address, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGING PATTERN IN CORRECTIONS

(Address by James V. Bennett, director, Bureau of Prisons, Wisconsin Corrections Conference, Green Bay, Wis., May 15–17, 1957)

When I accepted the invitation of your able and energetic presiding chairman to discuss with you the changing pattern in corrections, I did so hastily and perhaps with insufficient deliberation. As I faced the task of trying to delineate contemporary correctional patterns, to show their derivation from older patterns, and to give some hint as to what these might be in the future, I was somewhat overwhelmed by the dilemmas before me. The hazards of assuming the roles of historian, philosopher, and prophet in one play are serious indeed.

I might, for example, have chosen to be a jeremiad, bemoaning the snail's pace of progress in achieving our goals; bewailing the skimpy budgets which prevent the fulfillment of program and the recruitment of trained personnel; or criticising a lethargic and disinterested public except in times of scandal or riot. But these and other similar defects in our contemporary patterns of correction have been pointed out many times before. Nevertheless, they are real defects which we cannot afford to overlook. Or, I might have chosen to be a Pollyanna emphasizing the essential progress that has been made in our field. In the memory of most of us we have seen the shaved head, the striped clothing, the chain gang, and practically all of the brutalizing, repressive disciplinary devices, so common in prisons of yesterday eliminated. Also we have witnessed the steady improvement in the basic standard of living, of food and clothing, in practically all institutions. Then, too, we are conscious of the increased concern among prison administrators of the importance of programs as opposed to repression and regimentation. Finally, we can point to the growing acceptance of centralized State systems of correction and the expansion of the diversification of institutions. Even though we must admit that these and other advances are not universal among all our correctional institutions, or at the same stage of development, we can point with pride to real progress in our field.

My dilemma in discussing this topic of "The Changing Pattern in Corrections," therefore, was how to steer an even course between the Scylla of deatism and the Charybdis of complacency. A better metaphor perhaps would be to compare our correctional patterns to a coral reef on which each new idea lives for a while and then dies but leaving behind its bit of enduring principle to be added to the sprawling mass. It was about 1840, for instance, that Captain Maconochie at Norfolk Island in Australia established his mark system that gave the transported prisoners from England a chance to earn a discharge from their heavy sentences. A few years later, some of our States took over this principle of sentence reduction into what we now call good-time law. The idea spread rapidly so that practically every State in the country now provides by statute for a substantial reduction of a prisoner's sentence for good conduct.

Today, however, we are inclined to be skeptical of the mechanical application of these good-time laws and to some extent perhaps consider them outmoded in the face of the more realistic indeterminate sentence. Brockway, who so vigorously and eloquently defended his formulation of the indeterminate sentence combined with parole was certainly influenced by Maconochie's mark system. And the concept of the adult authority would probably have been impossible without that of the indeterminate sentence. Thus we can see a sound historical continuity between the mark system in faraway Australia a hundred and twenty years ago to the adult authority idea of California today.

This is one part of the changing patern in our criminal law which provides the structure within which our corrections must function. There is, in fact, a general overhauling going on in the administration of criminal justice which is certain to affect our correctional patterns very significantly. The lively debate concerning mental responsibility is one. Another is the growing movement to take out of the hands of the court all but the most general authority with respect to determining the exact amount of time an offender must stay in prison. Better defense of the man charged with crime is looked upon as something to be expected. And accordingly more and more States and communities are inaugurating systems of public defenders. Let's hope the number grows still further. Codifying and modernizing codes of criminal law as is being done by the American Law Institute under the leadership of Prof. Herbert Wechsler and United States Judge Herbert Goodrich is a significant and important step in developing a pattern of corrections in line with the atomic age. You are doing this also in Wisconsin, I am happy to note. The recognition of the need for reorganizing our court system in line with modern principles of efficient management as Justice Vanderbilt has done in New Jersey is also of the utmost value in developing a frame for a more effective correctional system.

But to return to our changing correctional patterns more specifically. There is developing a new administrative organization plan which holds great promise. Wisconsin has taken the lead in centralizing responsibility for prisons, parole, probation and allied services. California and 1 or 2 other States have approached the idea of complete integration of all correctional agencies, but none more effectively than Wisconsin. Here you have successfully integrated institutional management, parole, probation and field services. This, I believe, is a sound pattern of administration. It makes possible the translation of principle into practice along a broad front of action. It eliminates the old bugaboo of interagency competition for budgets and for unitary legislative improvements. And above all, it provides a continuity of leadership and responsibility not otherwise available. The older pattern of a loose aggregation of institutions and agencies managed by independent boards of trustees is no longer adaptable to our complex governmental system and our highly mobile society.

Paralleling this renewed interest in the improvement of our criminal law and the changing pattern in our administrative organization, we can point to many promising changes in the correctional program matrix. The most obvious change, I think, is our decreasing anxiety about the need for maximum custody for all prisoners. We have known for a long time that only a small proportion of persons sent to prison needed absolute secure custody, but our immediate predecessors had only a rule of thumb and impressions to go by. Today we are putting more and more prisoners into camps and open institutions. Wisconsin, incidentally, was one of the pioneering States in this regard with its camp system started under Warden Lee and carried on so successfully by Warden Burke. And we can do this with reasonable safety because we are accumulating more information about each inmate and because this information can be evaluated more accurately by institutional classification committees functioning as administrative staffs.

Another influence that is having and will continue to have a deciding effect on our correctional patterns is the professional training that several universities are now offering as preparation for correctional work as a career. The University of Wisconsin has long had such a curriculum under the direction first of Professors Ross and Gillin and now their able successors, Marshall Clinard and Michael Hakeem. I have been pleased that many of their students participate in our student internship program each summer. These young men and women spread out into various correctional programs in parole, probation, and institutional work and bring with them the knowledge and skills of the social and behavioral sciences and with it a healthy and critical questioning of traditional and established practices.

Despite our occasional impatience with the lag in noticeable progress, we cannot help but realize the distance we have traveled in the short span of 20 or 25 years. The lock-step and silent systems are today beyond any defense and we are more concerned with what the psychiatrist calls milieu therapy, with the art and skill of interpersonal relations, with a relaxed institutional atmosphere and disciplinary measures of control that do not destroy the self-esteem and self-respect of the prisoner. To be sure and sadly we have not by any means solved our prison-labor problem but on the other hand no one would go back to the days of the contract system.

It is heartening indeed to note the changing attitude on the part of the general public and the media of public opinion toward the prison, parole, and the prisoner. Political interference in prison and parole administration still exists, but when revealed it takes on the proportion of public scandal and is no longer accepted as a matter of course. Newspapers, regardless of political preference, have in many States actively supported campaigns for revitalized correctional programs and appropriations for modern institutions. I need only point to Colorado, Missouri, Louisiana, Florida, Connecticut, and New Mexico as outstanding examples of concerted public support and a willingness to assume the costs of a modernized statewide correctional system.

If these evidences of the changing pattern in corrections have an optimistic tinge, it is not because I am unaware of the great gaps that still exist as I am sure you are

not unaware of them either. These gaps will in time be filled but there exists many areas yet to be explored. We need, for example, to emphasize more practical research in an effort to evaluate the end results of our progarms. We need to examine more carefully this problem of recidivism and get behind the disturbing statistical picture of the repeated. We need to apply some of the principles of human relations to ourselves and do some "role playing" of our own for a new perspective toward the problems of the offender and the prisoner, the probationer and parolee so that we can gain a better insight to the person and the personality we are treating.

And we can experiment with programs. Why not a system of subsidized aftercare for the released prisoner? Instead of releasing him with a small gratuity and some casual assistance, let us spend at least some, if not as much, money as it costs to keep him in prison on a sort of foster-care community program. The idea of paying a few dollars a day to guide and help the released prisoner need not come as a shock if we think of the services now available for persons no more severely handicapped. Can we not get away from the idea of supervision and surveillance and substitute for it a kind of graduated practical economic support that means something, that is directed primarily at helping people help themselves? This is not to advocate "giving" anything to anybody that has not been earned or is not needed, but allowing the parole or probation officer more than the pittance some of them now have to develop a situation properly attuned to the needs of the client is certainly worth a trial.

I started out by comparing the pattern of corrections with a coral reef. I shall close by calling your attention to the contribution that men and women like yourselves make when they plant things for the future. In my home State of Rhode Island and elsewhere in New England, for that matter, one is struck by the surpassing beauty of many of the roads lined with enormous spreading elms. The men and women who planted these trees generations ago to cool the weary wayfarer and lift up his thoughts could not possibly have hoped to live long enough to enjoy them themselves. They labored selflessly for those who would come after them. It is the same spirit which, I am sure, will sustain and inspire you to plow the rough ground and lay out the pattern for tomorrow's more effective and fruitful correctional system.

The Importance of Encouraging People-to-People Friendship Between Nations

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. SALTONSTALL. Mr. President, the importance of encouraging people-to-people friendship between nations has been brought into focus recently by the visit of the Vice President and several Members of the independence celebrations in the new nation of Ghana, and the extended tour by the delegation to other parts of the vast continent of Africa.

It is also important that, in addition to official visits, and the visits by growing numbers of American citizens, efforts be made to improve the communication of words and ideas between North America and Africa. It is of particular interest to me that a special series of international broadcast programs have been beamed on Africa for the past several months from a 50-kilowatt transmitter located at Scituate, Mass., owned and operated by the World Wide Broadcasting System, under the direction of a pioneer in international broadcasting, Mr. Walter S. Lemmon. Each day the broadcasts of WRUL—the Voice of Freedom—are beamed across the Atlantic to a growing number of listeners in all parts of Africa. The Voice of Freedom began this new program service to Africa on February 28, with a special broadcast, Salute to Ghana, by Vice President NIXON and several Members of Congress. Since then, WRUL has continued to broadcast a number of special programs to Liberia, Nigeria, and other nations in that vast and friendly continent.

Because of the importance of the Voice of Freedom's Spotlight on Africa programs, I ask unanimous consent that excerpts from the Salute to Ghana broadcasts be printed in the Appendix of the RECORD, in connection with my remarks. The excerpts include brief statements by Vice President NIXON; the Senator from Rhode Island [Mr. GREEN]; myself; Representative FRANCES BOLTON; Representative BARRATT O'HARA of Illinois; and Representative DIGGS, of Michigan.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

REMARKS BY VICE PRESIDENT NIXON

It gives me great pleasure to join with WRUL—the "Voice of Freedom"—in this radio salute from America to the new nation of Ghana, on the west coast of Africa.

As an American from the State of California—on the west coast of America—I cannot help but think of the days of our early pioneers as they explored, settled, and developed our gold coast on the Pacific—and by constitutional measures joined California to the Union of States some 107 years ago.

This week we salute the 5 million African citizens of the Gold Coast and the triumph they have achieved in gaining the independence of Ghana by peaceful, parliamentary means after nearly a century of colonial rule. It is a remarkable tribute to these changing times that Ghana now achieves her independence by peaceful means, and at the same time continues her association with the British, as the first Negro state to achieve full membership in the Commonwealth.

Ghana, like my own native California, is rich in tradition, in natural resources, and the pioneering spirit to get things done. Thanks to the progress of the 20th century in communications, transportation, agricultural and industrial techniques, and the all-important problems of improved health conditions and expanded educational facilities, Ghana is destined to play an important part in the making of a better world.

I am looking forward to my visit to this vital part of Africa, and joining in the independence celebrations in Accra, the capital of Ghana. I know I will be among people who are friendly to America for there is a blood relationship between millions of our American citizens and the citizens of Ghana, through their ancestors who came to America from the Gold Coast years ago. Today freedom and independence have become a reality for these citizens on both sides of the Atlantic and I look for growing friendship and cooperation between the peoples and the Governments of our two Nations.

I wish to thank Mr. Walter Lemmon and the World Wide Broadcasting System for beaming this special series of broadcasts to West Africa this week, and the part WRUL—the Voice of Freedom—is playing in encouraging people-to-people friendship between North America and the two great equatorial continents of Africa and South America.

REMARKS BY SENATOR THEODORE FRANCIS GREEN, OF RHODE ISLAND

Congratulations and best wishes to you, the people of Ghana, on this historic occasion. With the birth of the new state of Ghana, a former dependent territory will enter the community of nations, independent and free.

The United States of America has traditionally been sympathetic with those peoples who have by their labor obtained independence and self-government. Ghana has already demonstrated its capacity to direct its own affairs in the world society. It now will rest with its leaders to carry forward its own economic and social development.

Ghana's independence marks a significant advance of Africa's peoples toward self-government. This process will, of course, continue as the spirit of independence is matched by experience and increased capacity for self-government.

As we rejoice with the people of Ghana, Americans are moved to reflect upon the earliest days of our own great Republic. Then a weak nation, we needed the assistance of older nations in charting our course across the turbulent seas of our destiny. Ghana, too, will require such assistance. Because we in America are conscious of the problems which every new nation faces, we have gladly demonstrated our support of new governments which seek to develop stable and democratic ways of life for their peoples.

During my recent visit to your beautiful country, I was deeply impressed by the warm friendliness of your people and by the sincerity and devotion to purpose of your leaders. It is not only my hope but also my conviction that the continuing friendship between our peoples will provide an enduring basis of mutual understanding and respect.

To all you people of Ghana—my warmest greetings and my heartiest good wishes on this great day in your history.

GREETINGS TO THE NEW REPUBLIC OF GHANA, AFRICA, BY SENATOR LEVERETT SALTONSTALL, REPUBLICAN, MASSACHUSETTS, OVER STATION WRUL, BOSTON

I am glad to join Vice President NIXON and my colleagues in Congress who are taking part in this broadcast in a radio salute to the new nation of Ghana.

In the United States, we have watched the establishment of Ghana as a free country with the greatest of interest. We have been especially pleased that this has been achieved entirely through peaceful means, by the enlightened cooperation of both the citizens of Ghana and the British Government.

We know that the name Ghana is a significant one, going back to a free nation of a thousand years ago, and that the new Ghana is a symbol of the ancient traditions and aspirations of her people, now realized once again.

The people of my own State of Massachusetts and Americans everywhere are, I feel sure, confident that the relations between the United States and Ghana will be friendly and close, and characterized by lasting good will.

I should like to point out that this broadcast is being transmitted from Boston, the capital city of my State, over International Radio Station WRUL.

Good luck to Ghana.

EXCERPTS OF REMARKS BY CONGRESSWOMAN FRANCES P. BOLTON, OF OHIO

I can assure you that the worldwide broadcasting system is honoring me to appear in this special salute program to Ghana.

I was thrilled with Africa, with every country of Africa, and to me the future is so great and so much lies ahead for its peoples and ours as we try to understand Africans and they us.

When you realize that three of the United States fits into Africa, you get a sense of the hugeness of that continent.

One gets a feeling that coming out of the very earth is the demand for a free and full life.

We have much to give in the way of technical assistance, help along the line of education, hospital, training of people for health work, which has been part of my life. The difficulty has been that we have to deal with the mother country, but now with the emergence of the new nation of Ghana, we go directly to them.

I'd like to bow to the women of Africa because they know today that they are the heart of Africa, and I have talked with enough of them and they are eager to be educated and play their part. I'm old-fashioned enough to feel that the women should guide the home, protect the children and bring them up. We do so much quietly that way. I'd urge them to be quiet, but forceful in what they do.

REMARKS BY CONGRESSMAN BARRATT O'HARA OF ILLINOIS

In the heart of every American there is joy that on March 6 of the year 1957 there will have come to the freedom-loving people of Ghana the priceless treasure of independence. Forever, March 6 will be an anniversary date of celebration for all peoples everywhere who love freedom and who know that in the climate of freedom the horizons ever are broadening and the dignity of man brought closer to the plane intended by the God of us all. In my district on the south side of the city of Chicago in Illinois, as in many other congressional districts in the United States, are many fine men and women, our fellow Americans in the United States in the task of making this, our country, a better land for all men, whose ancestors came from this rich domain now at long last again to take its proud place in the community of free nations. When Ghana, unshackled from the old colonial chains, goes forward in national independence to a great future, in a rebuilding world, the men and women and children in my district, and other congressional districts of the United States from coast to coast, will be on their knees giving prayers of thanks for the triumph that has culminated the long and courageous struggle the people of Ghana, thanks that in the independent State of Ghana—first colony south of the Sahara to attain independence—the torch of freedom will be borne forever by the sons and daughters of freedom to light for all Africa into a new day of equality of brotherhood and of human dignity. To the government and to the people of Ghana, our salute of victory and our affection that in the companionship together in all the good works of free people will endure forever.

REMARKS BY CONGRESSMAN CHARLES C. DIGGS, JR., OF MICHIGAN

Hello, friends, this is CHARLES C. DIGGS, JR., one of three Negro Americans who are Members of the Congress of the United States.

I am speaking to you from my home city, Detroit, Mich., United States of America, the automobile manufacturing capital of the world. It is an exalting privilege to greet and salute your distinguished Prime Minister, Nkrumah, his official family, and you, the people of Ghana, on the occasion of the celebration of your independence. It seems to me that the birth of this new African nation could not have happened at a moment more potent in this era of world history. The hopes of millions of Africans are, indeed, centered on the Gold Coast as it picks up the reins of full self-government. But, added, are the hopes of millions of people of all nations, of all races and creeds, both enslaved and free. Today, the concepts of freedom and of self-government are being challenged; and all men who believe in the glory and rightness of the free way of life have a vital stake in the ongoing struggle for its preservation and, thus, in the survival of any people who declare their independence.

For Ghana, there is a burning promise of national greatness in what you have done in the years leading to this point. You have been skillful engineers in coupling your own vehicles for passage to freedom. Your faith in the common man, your goals of political independence, your positive action toward the reality of self-government; these are, historically, the great faiths and pursuits of a democracy-minded people. And we are triumphant with you that they persevered during a century of colonialism, and we stand grateful with you that they have been honored by the grant of independence. That, under vigorous, dedicated leadership, you have been alert to the educational, scientific, industrial, and agricultural gains which must be made for the achievement of national success; and that you have been preparing for this time of independence when you would be called upon to show your self-sufficiency; and that you are resolute in your determination to cultivate and utilize the full resources of the people and your nation's natural wealth toward this end: all of this foretells your triumph in economic independence. Two major goals of national life are counterparts of the goals of private life; one is the fulfillment of greatest individual potential—this is represented in your national objectives—and the other is utilization of the fruits of your works to the betterment of international welfare. This latter, to the gratification of the free world, you have embodied in your aim to work with other nationalistic, democratic, socialistic movements in Africa and other continents in abolishing all forms of national and racial oppression, economic inequality among nations and among races and peoples to support all action for world peace. We who rejoice with you through these days are mindful of the arduous road you must travel to realize your dreams in the life of your nation and our common dreams in the life of the world. And we are also dedicated to the proposition that this light of freedom in Ghana will grow and grow, until its rays, with ours, light up all the dark places of the earth, bringing an enduring social order of peace and good will and, for all men, freedom from oppression and want. America salutes you. We pray with you for a strong nation under God, with freedom and justice for all.

Kentucky, Tennessee, West Virginia Rural Development Program Work Conference

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Frank G. Dickey, president of the University of Kentucky, on May 13, 1957, welcoming the rural development program work conference relating to Kentucky, Tennessee, and West Virginia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WELCOME TO RURAL DEVELOPMENT PROGRAM WORK CONFERENCE—KENTUCKY, TENNESSEE, WEST VIRGINIA

(Address by Dr. Frank G. Dickey, president, University of Kentucky, May 13, 1957)

During the past 7 months we have had over 175 groups (ranging in size from 25 to 12,000 participants) of various kinds meeting here on our campus. All of these groups have been welcome and all have been of great value to those who participated and to those persons in our society who will benefit from the findings of such sessions. I do not believe, however, that any meeting or any group holds within its hands the potentialities of this group interested in rural development.

You are not only concerned about those centers that are being used as pilot centers for experimentation and development; you are working with a program which has unlimited possibilities for millions of other citizens of our Nation. To say that the eyes of the informed public are upon you would be an understatement.

You have the interest and support of the Federal Government; you have the backing of the State offices; you are vitally connected with educational institutions and agencies; and you are working with the citizens of our State and Nation.

We at the University of Kentucky are most happy to have the privilege of serving as hosts to this first multiple-State conference on the rural development program. We feel that this new approach to improving the opportunities, across the board, in underdeveloped areas can be of very great and practical importance to our State and to all States where such areas exist.

Joint efforts of local people in the areas needing development, of State agencies and groups, and of Federal agencies having resources to offer, can bring strength and coordination in the development process that would be impossible without the joint planning and working together. It is in such conferences as this, where the leaders sit down together to pool their thinking and thresh out their ideas, that effective lines for working out the program can best be developed.

For all of these reasons, I take great pleasure in welcoming you to the campus of the University of Kentucky for this all-important meeting. You have with you some of the outstanding leaders in America today. You yourselves are leaders in your own communities, States, region, and Nation.

We have a tremendous obligation and responsibility to fulfill, and it is my belief that we can do the job which we have set out to do.

The University of Kentucky is proud to be one of the institutions connected with these first stages of such a noble and wonderful experiment. We are putting a great deal of manpower and a tremendous amount of time and energy into this rural development project. We believe in it and we know that you do too; therefore, let me wish for you a most successful meeting here on our campus.

We want you to feel at home; we want you to let us know if there is anything which we can do to make your stay here a more pleasant and profitable one; and we want you to enjoy your meeting here so much that you will return again and again to utilize our facilities for the benefit of this fine project.

The Religious Faith of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. MARTIN of Pennsylvania. Mr. President, Dr. Theodore A. Distler, an outstanding educator, and a student of Lincoln, made an able address on April 27, 1957, entitled "The Religious Faith of Abraham Lincoln," before the Washington Pilgrimage of American Churchmen. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THIS NATION UNDER GOD—THE RELIGIOUS FAITH OF ABRAHAM LINCOLN

(Lincoln memorial address given by Dr. Theodore A. Distler, April 27, 1957, before the Washington Pilgrimage of American Churchmen, Washington, D. C.)

Abraham Loncoln's religious faith was no mere intellectual assent to theological propositions, but a vital trust in the God of the universe. In 1863, in his letter to the Quakers of Iowa, Lincoln wrote: "It is most cheering and encouraging for me to know that in the efforts which I have made, and am making, for the restoration of a righteous peace to our country, I am upheld and sustained by the good wishes and prayers of God's people. No one is more deeply than myself aware that without His favor our greatest wisdom is but as foolishness, and that our most strenuous efforts would avail nothing in the shadow of His displeasure. It seems to me that if there be one subject upon which all good men may unitedly agree, it is in imploring the gracious favor of the God of Nations upon the struggle our people are making for the preservation of their precious birthright of civil and religious liberty." The faith in the beneficent Creator and Ruler of the universe expressed here is a recurrent theme in Lincoln's public addresses, official and personal correspondence, and proclamations.

Totally independent of the expressed creeds of his neighbors, Lincoln united formally with no church. Yet, in 1864, in a letter to the Methodist Episcopal Church, he wrote with deep feeling: "God bless all the churches, and blessed be God, who in this great trial, giveth us the churches." Lord Charmwood writes: "He still went and took his boys to Presbyterian worship—their mother was an Episcopalian and his own parents had been Baptists. He loved the Bible and knew it intimately."

In the minds of his biographers there is no doubt that Lincoln prayed. Lord Charmwood is quite convinced that his prayer life was genuine. "So humorous a man was also unlikely to be too conceited to say his prayers. At any rate he said them; said them intently; valued the fact that others prayed for him and for the Nation; and, as in official proclamations he could wield, like no modern writer, the language of the prayer-book, so he would speak of prayer without the smallest embarrassment in talk with a general or a statesman."

We recognize fully the intrinsic values of corporate worship, of the sacraments, and of other religious exercises; nevertheless, the heart of religion is to be found in prayer. Theological beliefs and ethical conduct belong to the totality of the phenomenon known as religion, but more important than either or both is ultimate dependence upon spiritual power. That Lincoln turned, especially in times of crisis, to Almighty God for guidance and for help is admitted by all. In this fact is to be found the validity of his religious faith. He trusted God; he relied upon the Creator; he had a deep sense of dependence upon the Almighty. He prayed often to the God of his fathers. His religious faith was dynamic; it was personal. We believe that it was effective. Surely, the labors of Lincoln on behalf of his country bear witness that the effectual fervent prayer of a righteous man availeth much.

Lincoln did have a theology, although it was not a popular theology. In a narrow sense his theology may have been limited to an intense belief in a vast and overruling providence. But he was not a deist. For him the divine providence was still creatively action and was available in a personal manner. In his campaign for election he was very much hurt by the opposition of clergymen. He confessed to being no Christian in the sense that he was not a church member, but he announced his theological creed: "I know that there is a God and that He hates injustice and slavery. I see the storm coming and I know that His hand is in it. If He has a place and work for me, and I think He has, I believe that I am ready. I am nothing, but truth is everything; I know I am right because I know liberty is right, for Christ teaches it, and Christ is God. I have told them that a house divided against itself cannot stand, and Christ and reason say the same, and they will find it so."

Such language does not belong to deism, or rationalism, or humanism, or unitarianism. On their face value, these are the words of a Christocentric theist. Lincoln not only believed that God exists, he seemed to have believed that God broke through at a point in history, that he is incarnated in Christ. Christ is God.

Lincoln's theology is clearly set forth in the second inaugural address. Probably no other speech of a modern statesman uses so unreservedly the language of intense religious feeling. This speech reflects not only his conception of the nature of God, but also his conception of the nature of man.

"The Almighty has his own purposes. 'Woe unto the world because of offenses: for it must needs be that offenses come; but woe to that man by whom the offense cometh.' If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Yet, if God wills that it continue until all the wealth piled up by the bondman's 250 years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said 3,000 years ago, so still it must be said, 'The judgments of the Lord are true and righteous altogether.'"

Here are the outlines of a sound and dynamic theology, which declares that God has an eternal purpose for humanity; that He is a just God whose judgment is upon all who disobey His law; that man is, by nature, a sinner whose redemption depends upon his trust in the love and forgiveness of the grace of God.

In closing, consider with me the final words of Lincoln's farewell at Springfield in 1861: "I now leave, not knowing when or whether ever I may return, with a task before me greater than that which rested upon Washington. Without the assistance of that Divine Being who ever attended upon him, I cannot succeed. With that assistance, I cannot fail. Trusting in Him, who can go with me, and remain with you, and be everywhere for good, let us confidently hope that all will yet be well. To His cafe commending you, as I hope in your prayers you will commend me, I bid you an affectionate farewell."

How far is this dynamic faith of Lincoln from the soporific, man-centered, machine-trusting, superficially optimistic creed in evidence upon us. In times like our own, can we be men of little faith? Our national destiny and the future of western civilization wait for the leadership of men whose religious faith will equal that of Abraham Lincoln.

Address by Secretary of Agriculture Ezra Taft Benson in Cincinnati, Ohio

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Secretary of Agriculture Ezra Taft Benson before the Republican National Conference in Cincinnati, Ohio, on May 17, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE REPUBLICAN REGIONAL CONFERENCE, CINCINNATI, OHIO, MAY 17, 1957

It is a privilege to participate in this Republican regional conference.

I like your conference theme, "Concentrate on '58," because it expresses sharply and clearly what we Republicans must do to win control of the 86th Congress. As one who has had some firsthand experience with the problems which arise through divided responsibility, I can attest to the need for a Republican Congress to bring our administration programs to full fruition and thus pave the way for another great victory in 1960.

It seems to me particularly appropriate that we are meeting in Cincinnati, the birthplace and the home of the late Senator Robert A. Taft. He was truly a giant in our party and in the United States Senate where he served so long and so ably. He and I had a common ancestor several generations back, but I am even more proud of my kinship with Bob Taft's ideals.

The senatorial campaign he waged in 1950 was, in my opinion, one of the most effective in the annals of American political history. It brought him a smashing victory and it was based primarily upon just two things: Honest discussion of the issues and good, hard work—sweat, if you please.

We Republicans have the issues today. As we concentrate on 1958, let's expend the sweat that is required to bring those issues squarely before every voter in the Nation. If we do that, victory is assured.

It seems to me that the one, big, burning, overriding issue of our time involves the maintenance of peace—for without peace all other issues could be obliterated overnight. Such matters as civil rights, foreign trade, and farm price supports would become meaningless in a nuclear holocaust with not even taxes but only death as the one certainty.

Therefore, it should be clear that the political party which can best serve the Nation today is the party which can best preserve peace. I say, and the record says it far more eloquently than any man could, that party is the Republican Party.

Our party provided the leadership that brought peace with honor to our country, ending the long, stalemated Korean war—a so-called little war, but still one big enough to have cost us 157,530 casualties. President Dwight D. Eisenhower got us out of that war and he has kept us out of others. Uneasy though the state of world peace may be, it is important to remember that the difference between even an uneasy peace and war can be the difference between life and death.

By none of this do I mean even to imply that there is a war party within the United States. There is not. What I am saying is that the Republican Party, on the record, is best qualified to preserve the peace—a just and lasting peace.

Since this is true and since the preservation of peace is paramount in the hearts and minds of our people, why should we not say it again and again and again?

Oh, I know that our political opposition would like to shift the area of debate to other subjects. Sometimes they recognize our own strengths better than we do.

As we concentrate on 1958, let's put first things first. Let's keep our campaign on a positive basis. Let's emphasize our strengths—for we have many. Let's take the affirmative side of the debate and leave the negative to the Democrats.

In recent weeks there has been some tendency for the initiative to slip away from the Republican Party on the important issue of Government economy.

To me it is such an elemental fact that the Republican Party is the party of economy—of sound fiscal policies—that I can't quite believe my ears when I hear some Democrats of the "tax and tax and spend and spend and elect and elect" philosophy talking about cutting the budget. Frankly, I had never expected to live so long.

As Republicans we must meet squarely the issues of the budget and fiscal responsibility.

We have a 1958 budget with projected expenditures of more than $71 billion. It is admittedly a bigger budget than most Americans, including the President of the United States and the Secretary of the Treasury, would like to see. But the fundamental question involved here is simply this: Is it a bigger budget than we need to do the job that confronts our Government? Can we spend less and still preserve the peace that all of us want and the various services the Federal Government must provide?

Expenditures proposed for the next fiscal year are $2.9 billion larger than for the current one. Of that increase, $2.6 billion—or 90 percent—involves major security programs such as defense, atmoic energy activities, mutual assistance, etc.

More than three-fifths of the budget—some $45 billion—is devoted to the job of waging peace. This is a tremendous sum. Yet the direct costs to the United States of World War II were $310 billion. The costs of another war would be incalculable.

Yes, as the President point out in his second inaugural address, the price of peace comes high today. Can we afford to make available less than the minimum amount which he has said is required for our own security?

Personally, I would sooner accept the considered judgment of President Eisenhower on the question of our defense needs than that of any other living man.

Moreover, I believe that we need to keep the size of the budget in perspective. We need to view it relatively not only to the programs and policies it is designed to implement but also in relationship to the continued population and economic growth of our Nation. The proposed 1958 budget represents some 16 percent of the gross national product, as compared with 20 percent for the last Truman budget year of 1953.

We need to remember that during the last 4 years of unprecedented prosperity our total output of goods and services had increased by more than $65 billion, or 18 percent. Over those same 4 years our population has grown by more than 11 million, or 7 percent.

Another fact: During the past year our per capita income rose almost $80. Federal spending on a per capita basis under the proposed budget would be up about $10.

Now, two other important facts with respect to this budget:

1. The projected budget calls for total outlays of $71.8 billion. The last proposed Truman budget called for expenditures of $78.6 billion—and this at a time when there were fewer Americans, earning and producing much less.

2. The projected administration budget is expected to be in balance for the third straight year—something this country has not seen in a quarter of a century. By way of contrast, the last proposed Truman budget carried a deficit estimated at approximately $10 billion.

As we "concentrate on 1958", let's stack the record of Republican accomplishments in the field of Government economy against the sorry spectacle of financial irresponsibility displayed by our predecessors. Honestly folks, I don't believe the opposition really wants to debate this.

On the issue of Federal taxes, you will recall that it was the Republican 83d Congress that provided the greatest tax cut in all history back in 1954. Its direct benefits to American taxpayers have already reached the staggering total of $25 billion. It was the Republican 80th Congress that voted the only other sizable tax reduction in recent history.

Let's match the Republican record of tax cuts against the opposition record of tax increases as we concentrate on 1958.

There are many additional positive accomplishments of this Republican administration that need restating and reemphasis from time to time. You know we may be inclined to take some of these things for granted because they are a part of our basic philosophy. Here are some things we can point to:

1. Government competition with private business has been substantially reduced. Some 500 commercial-type businesses operated by the Government in competition with private business have been discontinued. I speak from some personal experience on this because when I became Secretary of Agriculture, I discovered that as a member of the Virgin Islands Corporation Board I was also representing the Federal Government in the hotel business and a variety of other enterprises.

"Our" hotel—and I use the word "our" in quotes—was called Blue Beard's Castle, and it was quite a plush establishment at the time it was built by the Federal Government back in 1934. For a hostelry operating in the "red" as deeply as this one was, the use of the word "blue" in its name seemed singularly inappropriate. We sold it, and the Government was out of another business venture.

2. The rapid rise in living costs has been checked. This administration has nearly brought to a halt the violent, galloping inflation and the progressive cheapening of the dollar which marked the Truman administration.

Recently, you will recall, the advisory council of the Democratic National Committee had the temerity to point to rising living costs. The New York Times pegged that one just right. I would like to read a brief excerpt from their editorial on the subject.

"But who is responsible for the fact that living costs reached their present plateau? Consumer prices have risen, since 1946, all told, from roughly 78 to almost 119, or 41 points. But 37 of those points were accounted for before Mr. Eisenhower came to office, only 4 since the end of 1952. In other words, talk about new highs for the cost of living is neither more nor less than an attempt to confuse the fact that while the costs of living rose 47.5 percent under Mr. Truman in the 7 years, 1946–52, their rise during the nearly 4½ years of Mr. Eisenhower's administration has been 3½ percent."

3. Free enterprise has been encouraged. The faith of our party in the free-enterprise system is being vindicated anew. Today more Americans are at work in more businesses, producing, earning, and investing more than ever before in our history. Private enterprise is providing a record number of jobs at the highest wage rates ever. And all of this is happening without the stimulus of war.

4. As the party of Lincoln we are expected to move continuously forward in the field of human rights, and we are doing just that. The United States is providing a haven for tens of thousands of refugees from Communist tyranny. Racial discrimination on many fronts is giving way before the unsensational but constant, day-to-day efforts of the administration. Progress in the field of civil rights which gained its greatest momentum in 1953 and 1954, when the Nation had both a Republican President and a Republican Congress, has been slowed somewhat by a Democratic Congress, but it will not be denied.

As we concentrate on 1958, let's make these points again and again.

Now I assume that when Meade Alcorn invited me to appear here, he expected me to devote a part of my talk to the farm situation. This I propose to do now, although I might preface my remarks by saying that there must be an easier way to make a living than by being Secretary of Agriculture. It's a job that inevitably invites more brickbats than bouquets, particularly during a period of adjustment in agriculture such as the one through which we are now passing.

Between now and the 1958 elections, we shall again be hearing politically inspired charges about the agricultural situation, and we must be prepared to meet them head on with cold, hard facts.

We'll be hearing that the family farm is disappearing—that it's on the way out. The truth is that farms are increasing in size because modern technology makes it possible for the farmer and his family to operate larger units. But it is also true that today—as 25 years ago—96 percent of the farms in this country are family operated.

Moreover, the efforts of this administration to attack specifically the problems of small farmers through the rural-development program have been stymied by the Democrat-controlled 84th and 85th Congresses. We have been denied the funds required to implement this program even on a modest basis.

We'll undoubtedly hear again, as we have in the past, that the agricultural economy is virtually bankrupt. Certainly no one will deny that agriculture is in a cost-price squeeze, but nevertheless farm assets are at an all-time high and so are farm real-estate valuations.

We'll be hearing that rigid price supports or some bob-tailed version of the Brannan plan are the answers to the farm problem. The truth is that many of agriculture's present ills developed because we continued fixed, wartime price supports too long after the situation they were designed to meet had ended. As for the Brannan plan, it's a hodgepodge of socialistic nonsense that neither

farmers, farm organizations, nor Congress itself has ever shown any disposition to accept.

We'll probably see the administration's soil bank used as a whipping boy by the political opposition—the same people who a few short months ago were claiming it as their very own. Now they are attempting to blame it for all of the shortcomings of the old parent programs whose weaknesses made the soil bank necessary.

Now I should like to list some positive accomplishments of this administration—accomplishments in which we, as Republicans, can take genuine pride:

1. The St. Lawrence seaway is under contruction. This will bring enormous benefits to agriculture through lower transportation rates.

2. Five million farmers and farmworkers have been brought into the social-security program. For years farmers had helped to pay the costs of this program every time they bought anything, but not until the Eisenhower administration were they permitted to share in the benefits.

3. Farmers have received new tax benefits. There was, of course, the 10-percent income-tax reduction received by all taxpayers, but in addition to this farmers were given accelerated tax write-offs for equipment, special deductions for certain conservation practices, and a refund of taxes collected on gasoline used on the farm.

4. Emergency programs to assist farmers hit by drought, flood, and other natural disasters were instituted promptly.

5. Farm credit facilities have been broadened and made more effective.

6. Determined efforts to regain lost export markets have been undertaken. The result is that shipments of American farm goods abroad during the present crop year are running at the highest rate in history.

7. Research appropriations to aid farmers have been more than doubled.

8. Most important of all, the long slide in farm income has been halted and reversed. Net farm income in 1956 was 4 percent higher than for the previous year. A further increase is expected in 1957.

Sixty percent of the much-advertised decline in the parity ratio occurred before the present administration took office. Ninety percent of the decline came while high rigid wartime price supports were in effect.

The much-publicized decline in net farm income began 10 years ago. Incomes have declined every year since then but two. One was the wartime year, 1951; the other a year of peace, 1956.

The peak of net farm income was reached in 1947. Gross cash farm income from marketings is higher today than it was 10 years ago. The reduction in net income is a result of higher costs, not lower gross income.

Tonight I want to talk about the road ahead for agriculture.

Much attention has been focused on the huge stocks of farm products owned by or under loan to the Government—stocks which now represent an investment of $8.3 billion. Agriculture is faced not only with the necessity of reducing these stocks; there is the even greater challenge of using constructively the abundant production which, year after year, is likely to flow to market from American farms.

This great outpouring of agricultural abundance is the result of improved technology, of course. But it is also partly the result of a prolonged period of incentive prices—incentives supplied first by the market place and then by law.

Price support policies of the past are responsible, to a degree, for the presently overexpanded agricultural plant. While the technological revolution undoubtedly supplied the means for increasing output, the support program helped provide the incentives. And while these policies increased production on the one hand, they choked off consumption on the other. The result is an accumulated stock and a continuing production of farm products greater than our growing population can assimilate unless adjustments are made.

How can we best make the adjustments called for by the prospect of agricural abundance?

Can we reduce production? For 25 years we have tried to control production by restricting the acreage of a few selected crops. Yet total production has increased even more rapidly than the incerase in our population. The evidence of the past quarter century is that farmers offset acreage controls by fertilizing more heavily, increasing the yield per acre. And they use the acres diverted out of one crop to produce other crops.

Shall we sell these surplus commodities abroad? Yes, we should and we are. Agricultural exports this year are at an alltime high. We sell our commodities for dollars, both for cash and for credit. We sell them for foreign currency, and we barter them for strategic materials. Yet there are limits—and we may be approaching them—to what we can do in the way of selling our abundance abroad.

Shall we give the commodities away? Yes, we should within prudent limits, to the extent that we can do so constructively. This past fiscal year we donated more than 2 billion pounds of farm products to public agencies, charitable organizations and needy persons at home and abroad.

Shall we put a part of our excess productive capacity into the soil bank? Yes, and we are doing this, chiefly through the acreage-reserve program. But this is temporary and costly. It would be difficult to justify the continued payment of such sums as would be needed to operate a permanent acreage-reserve program. And a permanent program which subsidizes nonproduction is contrary to our tradition.

Shall we destroy food, or let it spoil? No, we should not, and we have exercised every safeguard to prevent spoilage. Our people would not condone such moral bankruptcy or such economic waste. The capacity to produce abundantly is a blessing; the challenge is to make wise use of this abundance.

Is there any way out of this impasse? I am convinced that the answer is "yes."

We can so price our products that we reduce the incentive for overproduction.

We can price our products so they will move into use.

We can move away from acreage-control programs that do not control.

We can expand markets for industrial and nonfood uses—as we are doing in our increasingly vigorous research programs.

We can, above all, build up our markets for livestock products—milk, meat, and eggs—wholesome, tasty, nutritious foods that people can and will purchase in greater quantities if the price is attractive.

We can consume more of our food in the form of livestock products. We have been moving toward an animal agriculture during the past 20 years and we can move further.

We can give special attention to the problems peculiar to small farmers—as we are doing in the rural-development program.

The present mandatory price support-acreage control program for corn, based on legal formulas, has the opposite philosophy. Its objective is scarcity. Corn acreage, cut back by the control program, is now at the lowest level in 66 years. This program has reduced corn acreage in the Corn Belt and increased it in California, Washington, Oregon, and other areas. The corn producing area has been spread out and diluted. Nineteen years ago, when the commercial corn area was laid out for acreage control purposes it included parts of 12 States. Now it includes parts of 24.

But even more amazing is the size of the corn allotment in the commercial area. In 1938 the allotment totaled 40.5 million acres; for 1957 the allotment is 37.3 million acres. With a smaller pie being cut into more pieces, is it any wonder that most corn producers here in the Corn Belt prefer to ignore their allotments?

Corn is the major feed grain, far exceeding in importance all the other feed grains combined. But the other feed grains are moving up. But cutting back on corn, the program has provided an opportunity for an expansion in the acreage of competing feed grains such as barely and sorghum grain.

Are corn farmers willing to move in the direction of competitive pricing, more freedom and growing markets?

It appears they are. More than 61 percent of the corn farmers who voted in last fall's referendum expressed a preference for greater freedom to plant, coupled with greater flexibility of price supports. Yet, because the law required a two-thirds vote to carry, corn farmers today continue under a program which the majority of them have disapproved.

We now have this interesting situation:

A clear majority of the corn farmers voting in the referendum have expressed a willingness to move toward greater freedom of operation and greater reliance on our marketing system. Yet the law has not been changed. In fact, efforts to obtain more realistic corn legislation were beaten down in recent months in both the House and the Senate. In both instances a majority of Republicans supported the bills while a majority of the Democrats opposed them.

Is there not the courage to strike a legislative blow for freedom when the people directly concerned have, in effect, requested it?

We have heard, until now, that economic freedom is lost because the people most concerned bargain it away in exchange for security. The leaders of the people, we are told, cannot stand against the strong popular urge for what is considered to be economic security.

But how shall we then explain a circumstance in which the people themselves request less Government interference, but their Government will not relax its paternalistic grip?

We have come a long way indeed, in this land of liberty, when we continue to impose on a particular group of farmers, against the will of the majority, control programs which do not control, and support programs which pile up surpluses and lose markets. Let's remember this as we concentrate on 1958.

There are more than 200 farm products for which we are authorized to provide price supports. For six of these, corn among them, programs are in effect to control production and to support prices according to a legal formula.

These 6 commodities bring in only 25 percent of our farm income.

Yet for these six commodities, surpluses are greater, costs are higher, infringements on individual liberty are more extensive, international relations are placed in greater jeopardy, and farm complaints are more vociferous than for all the other of the 200 commodities combined.

Farmers who produce certain commodities, such as soybeans and livestock, have demonstrated that realistic pricing can build markets and increase net income.

Our present need is not to stimulate production to meet the demands of war. Our need is for agricultural adjustments to accommodate the tremendous technological revolution through which agriculture is passing. And it is time to make further program changes called for by these new conditions.

Most of the professional research institutions which have studied the problem have said so.

The corn farmers, voting with both their corn planters and their referendum ballots, have said so.

These voices are being heard in a growing crescendo.

We should ever lend our ears to voices raised in behalf of freedom, responsibility, and enterprise. The most glorious pages of history result from giving audience to the plea for freedom; the darkest pages result from its denial.

The Republican Party has a long and glorious history in the never-ending battle for human freedom. We must and we will continue to give leadership in that great cause.

Freedom can come to full flower only in a world at peace. Therefore, the achievement and maintenance of a just and lasting peace remains the major objective of this administration.

May God give us the strength and wisdom to attain that objective.

Address by the President of Vietnam

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. HUMPHREY. Mr. President, the distinguished President of Vietnam, Mr. Ngo Dinh Diem, addressed the National Press Club during his recent visit to Washington, D. C. The remarks of this eminent leader of free Asia deserve the closest attention of us all.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HIS EXCELLENCY NGO DINH DIEM, PRESIDENT OF THE REPUBLIC OF VIETNAM, TO THE NATIONAL PRESS CLUB, WASHINGTON, D. C., MAY 10, 1957

Mr. Chairman, ladies and gentlemen, I am particularly pleased to have this opportunity of meeting today the representatives of a broad section of the American press. I say this in full sincerity because it permits me to convey to you the appreciation of the Vietnamese people for the unanimous support you gave us during the tragic days of March and April 1955. We were then abandoned by nearly all our friends in the free world. Being only a handful, we had to fight for the life and honor of the Vietnamese people, against the return of colonialism, reduce the remnants of the feudal sects to impotence, and ward off immediate Communist absorption.

2. In those critical days, the American correspondents in Saigon exhibited unusual courage, far-sightedness, and disregard for personal inconveniences. They have done honor to the entire American press. We know it, and we want to thank them once more for it.

Next, I want to tell you that the cause which you served just over 2 years ago has lost none of its ardor and that the dangers which we experienced at that time are still lurking in the background today. These dangers have taken other forms, but remain virulent and have the same goal—the destruction of free Vietnam.

3. Destiny has placed our country at the converging point of one of the great human migrations. It lies across one of the main roads of access to the reserves of raw materials of southeast Asia. In addition to this critical situation, the Vietnamese masses, like the Asian masses, are now aware that their political and economic development were retarded by colonial domination. Their nationalist feeling and social resentment have thereby been exacerbated. They have become embittered and impatient. They want to catch up rapidly with the advanced western nations, and some are even prepared to accept totalitarian measures in order to achieve this end.

4. The Communists have taken advantage of this situation to extend their domination over continental China and over neighboring countries.

5. Thus Vietnam, by virtue of its geography and history, is subject both internally and externally to heavy pressure. Its future political and economic regime will be to a very large extent determined by this fact. The Vietnamese people will be able to defend their independence and freedom against the covetousness of expansionist nations and the seduction of totalitarianism, only to the extent that they possess the necessary intelligence and sense of discipline. You should not lose sight of these geographical, sociological and historical facts if you wish to appraise correctly and justly our present efforts, because the Vietnam problem is a complex one.

6. Vietnam is located at a strategic spot in Asia. Its people are sensitive to all the currents which are agitating the Asian world. The problems of Vietnam cannot be separated from those of Asia. None of us must forget that Asia is living in a state of high revolutionary tension. Nationalist feeling may be in a large measure satisfied by the recovery of political independence, but only on the condition that political independence be made meaningful by tangible economic independence. And this is precisely the key to the understanding of Asia's revolt. Revolutionary tension there is at a high pitch because for too long the peoples of Asia have been the victims of hunger, disease and illiteracy. They are impatient. They want to see a quick end to their miseries. But how?

7. Vietnam cannot shut itself off from this revolutionary atmosphere, because Asia's problems are Vietnam's problems. Furthermore, by virtue of its geopolitical situation, Vietnam lies in the midst of this tension itself.

8. We see from time to time some Asian statesmen or leaders adopt positions which do not agree with our viewpoint. They probably hope thereby to shelter their peoples and themselves against this climate of tension in order to examine their problems in greater tranquillity, deal with them and solve them one by one, leisurely, surely. This attitude is very human. But I am afraid that I do not see the problem in the same fashion, because I think this revolutionary tension is not entirely external to us. It is in large measure of internal origin. It is an organic part of the general situation of Asia. Well, I myself stated in June 1954, when I assumed office, that I wanted to carry out our national revolution peacefully in every respect.

9. You know that events have not complied with my wish. You, yourselves followed closely this situation in April and May 1955. An American photographer even lost his life there. In spite of my goodwill, I could not avoid the conditions of the revolutionary struggle the moment I came to grips with an important problem. I was successful in stabilizing a situation seemingly past mending, thanks to the strong measures taken and thanks to the moral and material support of the American people. But more important and urgent tasks are arising all the time and require solution. The most important and urgent of these is the economic and social recovery of Vietnam. I have outlined this problem earlier.

10. Whether we like it or not, the revolution continues to be with us in Vietnam. And as in all revolutions, a period of centralization is necessary before we can pave the way for decentralization. This must be done if we want to avoid paralysis, anarchy, and with them, violent revolution or foreign invasion.

11. You know as well as I do that the possession of Vietnam is a great temptation for the Communists. Vietnam is the gateway to the invasion of southeast Asia and to its immense resources in manpower and raw materials.

12. As long as communism has not renounced world revolution and domination, we cannot let ourselves be lulled by the songs of peaceful coexistence. This is especially true since competitive coexistence has replaced peaceful coexistence as the war cry of the Communists after the last congress of the Russian Communist Party. Moreover, the Chinese Communist Party proclaimed in December 1956, the necessity of imposing the dictatorship of the proletariat by violent action. Because Communist pressure threatens to weigh heavily on all our land frontiers, Vietnam must be more watchful than in the past against this menace.

13. We are convinced that our neighbors are also concerned about the problems of internal subversion and that their efforts combined with ours can stem international communism of which Red China is the active leader in all southeast Asia.

14. I am certain that it is clear now that Vietnam is living in a volcanic situation. It is a focal point in this vast area of the world which is bound to experience, for many years to come, rapid, profound, and violent transformations.

15. What to do then?

It is obvious that we must not allow fatalism and defeatism to overwhelm us. Neither must we be deluded into adopting seemingly easy solutions which consist in imitating western methods blindly. America has had more than a century at his disposal to accomplish and digest its political, economic, and social revolutions.

16. We must then find our own solution in the light of our own experience of the last 2½ years, in drawing from the experience of other democratic nations, and from our own Vietnamese traditions. We have endeavored to build a political and economic structure in conformity with our national character and the geopolitical realities of Vietnam, while retaining all the essential freedoms of men. Our task has been now to organize our political and economic life in such a way that our government will be strong enough to meet the enormous difficulties which beset us, flexible enough to deal rapidly with an ever-changing situation, and open enough to allow more freedom as the dangers which threaten us subside.

17. Our experience is hard. But it is also exalting, because we are not alone: the United States is with us. We can never repeat often enough how effective the moral and material aid of the American people to Vietnam has been. This aid has met complete success. Nobody can deny it. We want the American people to know it.

18. We also want the American people to know that their unselfish and effective aid to Vietnam is a good example for other peoples of southeast Asia. In this connection I am pleased to tell you that—now that the economy has begun to recover—principally thanks to American aid—the people of Vietnam are increasing their own contribution to the general welfare. New and higher taxes were recently imposed—national conscription has been decreed—and a new policy for foreign private investment has been announced.

19. I wish to conclude on this optimistic note. I am convinced that by its determina-

tion, courage, sense of discipline, and with the effective friendship of the United States, Vietnam will triumph over its difficulties, internal, and external.

Address of Dr. Frank P. Graham at Dedication of the University of North Carolina Sundial

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. ERVIN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an eloquent speech made by Dr. Frank P. Graham, a distinguished former Member of this body, at the dedication of the sundial which was recently presented to the University of North Carolina by one of its ablest and most devoted alumni, John Motley Morehead, a native of Spray, N. C., and a resident of Rye, N. Y., who has rendered outstanding service at home and abroad as engineer, inventor, industrialist, citizen, soldier, and diplomat.

Despite the exacting duties devolving upon him in his busy and varied career, Mr. Morehead has unceasingly manifested his love for his native State. It is not surprising that this should be so, because his forebear, Gov. John Motley Morehead, was one of North Carolina's greatest public servants of all time.

In his generous benefactions to his alma mater, the University of North Carolina, Mr. Morehead has exemplified his conviction that man does not live by bread alone. In addition to his establishment of the Morehead scholarships for youths exhibiting capacities for future leadership, Mr. Morehead has presented to the University of North Carolina the famous Morehead Planetarium, as well as the sundial. And a quarter of a century ago he joined his relative by marriage, Rufus L. Patterson, in the gift of the beautiful Morehead-Patterson Bell Tower.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SUNDIAL IN HISTORY AND THE MOREHEAD SUNDIAL AT THE UNIVERSITY OF NORTH CAROLINA

We gather here on this baccalaureate day to dedicate the sundial, man's first keeper of time, on the campus of the first existing State university. An ancient device in the time keeping of the race, becomes here a reminiscent link in the chain of the light and shadows of our cultural heritage. The light and shadows of the sundial helped to measure and guide the hours of man's work and movements for thousands of years. The light and liberty of this university for more than a century and a half has helped to measure and guide the movements of democracy in this State as a part of the rise of freedom in the modern world.

FOUR MEDIEVAL INSTITUTIONS IN MODERN TIMES

Four institutions which tower across the centuries from medieval to modern times and whose influence reaches across the oceans and continents in our time, are the cathedral, the parliament, the corporation and the university. The medieval university, founded by the church and chartered by the state as a corporation, became one of the highest expressions of the human spirit.

Deeply precious in the lives of millions of people across these centuries have been the love and loyalty of the sons and daughters for their alma maters. No sons and daughters have a deeper love and loyalty than the alumni and alumnae of the University of North Carolina. Of the legion of her sons none has a more abiding devotion than John Motley Morehead of the class of 1891.

With his first cousin-in-law, Rufus L. Patterson, more than 25 years ago he gave the Morehead-Patterson Bell Tower, whose chimes are a part of the music of the place, whose clock strikes the hours of the day's work on this campus, and whose light, as a beacon for way-faring folk, shines afar from this hill.

A HOPE YET TO BE FULFILLED

Some 20 years ago he conceived a noble benefaction. Though it did not come to successful fruition his intent revealed concentrated devotion to his alma mater. He had invested over a quarter of a million dollars in a chemical experiment for the manufacture of diamonds. If the experiment proved successful a financial combine contracted to pay him $23 million for its rights. In a walk on his Westchester County estate, where the rythmic waves of the sound added to the music of his adventurous hopes, he confided his intention of giving all the $23 million as an endownment for alma mater. This endownment was not to supplant in any way, but was to be supplement above the level of more adequate State support, then on its slow way toward recovery from the cruel depression. The experiment just missed coming through. In a scientific experiment the miss of an inch can be as deep as a mile. Despite the darkness of those years, what a time we had, in expectant imagination in endowing student loan funds, scholarships, fellowships, professorships, research, the Southern Collection, the library, the institutes, the University Press, and those things of the spirit which make universities great with the freedom of the mind and the liberating resources for the creative expression of the noblest aspirations of the human spirit.

A determined scientific explorer and pioneer trail blazer in many fields, of iron will, deep loyalties and strong preferences, he may yet find this adventurous trail again. Whether it comes through or not, and it remains quite doubtful, we are in our hearts none the less grateful for what was and still is in his heart. With his zest for discovery, his benefactions to his home community, to civic and cultural enterprises in his native State and his concentration on this institution, we are most grateful for the high loyalties of his inner life and his abiding love for alma mater.

NOBLE BENEFACTIONS ALREADY MADE

In addition to that unrealized major intent, other generous benefactions have come through in high intent and noble proportions: the memorial building as the home of his collected treasures, the planetarium which declares the glory of God to hundreds of thousands who pass this way, and the Morehead trust which fulfills one of his dreams in providing scholarships and fellowships for youth of highest character and talent for admission to this institution. He has often expressed the wish that as long as his alma mater lives that those chosen would become her students as the preferred and devoted objects of his real intent. What Rhodes Scholars mean to the alma mater of Cecil Rhodes, the Morehead Scholars in like spirit mean to the alma mater of John Motley Morehead.

THE VALUE OF THE SUNDIAL IN THE HISTORY OF CIVILIZATION

To his other benefactions he now adds the sundial as a fitting companion to the planetarium, whose "firmament showeth the handwork" of God, who long ago said "Let there be light-and there was light." In this gift is the faith of the ancient saying, "Face the sun and the shadows will fall behind you."

In the heyday of the sundial the earth did not take any more time for its rotations but man took more time for his ruminations. Mayhap the sundial, which kept the slower tempo of past ages, will remind us, with all our ways of acceleration, to make the multiplication of the mechanical contacts of our civilization the means for deepening the cultural and spiritual content of our lives. The sundial, which kept the people's time for over 4,000 years, speaks to us still from the depth and breadth of its long service in ages gone. It is worthy of remembrance by the people's university, itself dedicated in depth and breadth to the service of all the people in all generations.

References to the sundial are found in the poetry of Plautus, the histories of Herodotus, in the Second Book of Kings, the 38th chapter of Isaiah, and in the 4,000 year old records of the Mesopotamian civilization. The use of the sundial spread across the earth and become a part of that multicultural exchange which has always meant so much in the old and new civilizations in the East and West. Histories of the sundial have been written by Gatty, Mayall and Milham.

When the sundials in their legions made their cultural invasion of Rome, Plautus, protesting against their cutting up his more leisurely days into wretchedly small pieces, cried out, as quoted by Gallius as quoted by Mrs. Gatty and as now quoted by me, saying, "When I was a boy, my stomach was my sundial—one more sure, truer, and more exact than any sundial."

Despite the poetic lament of Plautus, the sundial, in response to man's need for measures of time, went on its way of tested utility and increasing beauty to serve and adorn the royal courts, public squares, spacious lawns, Romanesque, Byzantine, and Gothic cathedrals, the mosques of Islam and the medieval and modern universities. The largest sundial in the world was built in India in 1730 by the Maharajah of Jaipur. It is 147 feet long, 90 feet high, and casts a shadow on a stone arch with a radius of 50 feet.

As a companion to the sundial there developed the waterclock in the second century B. C. The water trickled through a hole in the bottom of an earthern vessel which would be emptied in the same periods as measurements of time. In desert and dry countries the sands of time replaced water, and the hourglass later replaced the earthern vessels. In monasteries candles were notched to mark the distance burned by the hour.

Toward the close of the 10th century mechanical clocks made their entrance on the time stage of the world. A Benedictine monk who later became Pope Sylvester II invented a mechanical clock in 996 for the cathedral at Magdeburg. The de Vick clock appeared in 1360. The main spring was invented by Henlein in 1500 and Huygens invented the pendulum in 1657. Mechanical watches were developed from some of the principles of the mechanical clock and reached high precision in the hands of the watchmakers of Switzerland.

On land the sundial survived the coming of clocks and watches. Even as late as the begihning of the 20th century railroad watches in France were adjusted for accuracy with the old reliable sundial. In many parts of the world today many millions of people keep their time by the sundial.

Gnomonics, as the art of building a sundial is called, requires use of astronomy, geometry, logarithms, geography, mechanics, architecture and the fine arts. Wilham, in his comprehensive treatise on sundials will, for those of you interested, take you through the mathematics and the mechanics of dial construction beyond my ken but to the durable and knowledgeable satisfaction of such a dreamer, imaginative engineer and practical builder as our generous benefactor, John Motley Morehead III, who has with well kept time and a nobly spent life had a creative part in building an industrial enterprise which today encompasses the earth, whose proceeds are helping to advance the values of his alma mater for the people of his native State and across the world from generation to generation.

To determine time it was necessary to choose as a basing point in the view of man some happening in the universe which was regular, dependable and constant in its repetition. The rotation of the earth on its axis—which appeared to primitive and ancient man as the day's journey of the sun—was chosen as the regular occurrence which could be depended upon to measure all sorts of time. It has been found that the rotation of the earth has not varied one one-thousandth of a second in the last several centuries.

The Babylonians and the Greeks marked off the daytime thus measured into 12 hours and the nighttime thus measured into 12 hours. In the summertime the daytime hours were longer and the nighttime hours shorter and vice versa in the wintertime. The Egyptians and Romans marked off the day into 24 equal parts, diving the 24-hour day into 2 main equal divisions of 12 hours each. For purposes of timekeeping sunrise began the day for the Babylonians, sunset for the Jews, and midnight for the Romans.

THE COMING OF STANDARD TIME

According to true solar time the length of the true solar day is different at different times of the year, lasting, as the students of time calculate, 24 hours on the 16th of September and 24 hours and 51 seconds on December 23d. It is only the sundial which keeps true solar time. To get the mean solar day the true solar days are averaged for the year. Star time and sun time agree on about March 21st. On that day the sun, on which sun time is based, is in the vernal equinox, on which star time is based. Star time gains a whole day over sun time in 12 months. The difference can be computed from tables in a few minutes. These tables and computations lag behind the needs of modern industrial travel and communication. Just as true or local solar time had been replaced by mean solar time, so mean solar time has been supplanted by standard solar time. Every city, town or village once had their own local or their own mean solar time. Only the localities in the same longitude would then have the same time. To get around the difficulties thus caused in a modern industrial society of wide travel and instant communication, standard solar time came into being, by which all the localities in a specified time zone chose to run their timekeepers sufficiently fast or slow so that all localities in the agreed area would have the same time.

For the North American Continent there are five standard-time areas: Colonial, which includes Newfoundland and far-eastern Canada, eastern, central, mountain, and Pacific time. Eastern standard time is 5 hours slower than the mean solar time of Greenwich, England, which is the basing point of the worldwide system of standard time. Standard time is daily adjusted for exactitude in accuracy not to man's ancient and longtime friend, the sundial, but is adjusted to the stars by astronomical observations made in the United States Naval Observatory in Georgetown with the accuracy of a few thousandths of a second. In highly protected vaults of the Observatory the clocks keep star time. From star time eastern standard solar time is calculated. At the appointed time every day the distributing clock in Washington sends its time signals through relays of the Western Union telegraph system to electrically synchronized clocks in all parts of the United States. Time is also signaled from 14 wireless stations in the United States and from the Eiffel Tower in Paris. The ships at sea and the remotest hut with a radio receiving set get the time by day and by night.

The ancient ancestor of this nationwide electrically synchronized keeping of time, as a part of the worldwide system of standard time, is the ancient sundial. Its representation on this campus, in the dignity of enduring stone, has now become one of the treasures of this university, whose time began in the late 18th century, whose life and services widened and deepened in the 19th and 20th centuries, and whose hopes are as fresh and immortal as the spirit of youth in all the centuries to come.

On a university campus we look at a sundial not only in the context of sun shadows, water clocks, hourglasses, chronometers, mechanical clocks, and watches, but also in the context of astronomical, geologic, prehistoric, historic, and atomic time.

ATOMIC TIME

In the astronomical time of this little planet of the sun, itself one of the smaller stars among millions of larger stars of one galaxy of stars among billions of galaxies of stars, we envisage man evolving in physical descent from lower to higher species. With the unfolding of his intelligence and his spiritual awareness, came man's spiritual ascent in the higher consciousness of one God and the brotherhood of all people, trailing clouds of glory from God who is our home.

From the fossil-bearing strata of geologic times we glimpse the ages of the earth from pre-Cambrian to Pleistocene times.

From the archeological relics of prehistoric time we learn of man's primitive stages as hunter, fisherman, tender of flocks, tiller of the soil, and artisan in the old stone age, the middle stone age, the new stone age, the age of bronze, and the age of iron.

In historic times are recorded the transitions of civilization, the dynasties, wars, and internal struggles of the people; their forms of government; the ideas, customs, and technical arts of the people, their ways of worship, work, love, living, and keeping of time; and the expressions of their humane hopes in ancient, medieval, and modern times.

In atomic times the earth's clock, with its thermonuclear-electronic parts, is fast ticking away toward the hour of doom or the time of hope in the alternative of universal annihilation in international war or universal brotherhood in international cooperation for freedom, justice, compassion, and peace. The moral imperative of atomic times is the United Nations as an expression of the community of faith, the community of freedom and the community of man.

In the perspective of astronomical, geologic, and historic times is unveiled here the sundial, the first timekeeper, to adorn the campus of this old yet young university. This sundial is something ancient under the sun. The university of the people was something new under the sun. Ancient time under the shadow of the sun and youthful hopes under the sanction of the people now meet in this historic place and in this present hour. By a bringer of many good gifts to this historic place, is now brought the sundial, wrapped in an alabaster box of the spirit and laid with reverent hands at the feet of alma mater. The unveiling will be by Miss Lucy Chatham and Miss Page Nelson, great-great-great-granddaughters of John M. Morehead, one of the national leaders of the Whig Party, one of the most progressive and constructive governors in the history of North Carolina, founder and first president of the alumni association of the university, a position held exactly 100 years later by John M. Morehead III, another great builder of his alma mater.

THE MOREHEAD FOUNDATION AND THE UNIVERSITY OF NORTH CAROLINA

May I say for all of us, Mr. Morehead, that the youthful scholars you so nobly bring to your alma mater, in all times to come, will long renew your youth in their own studies, inquiries, sports, friendship, and dedication on this holy hill under the sun and the stars of the high heavens of their immortal hopes.

For the inspiration of youth on their earthly pilgrimage, the sun, on its heavenly journey, has revealed for your precious association and filial devotion no place in which are more organically blended the natural beauty of hill and forest, rock walls and ivied halls, humane heritage and youthful hopes, free inquiry and zestful learning in the service of the people, than your alma mater, deep in the hearts of the people of North Carolina.

Daughter of time and mother of unending generations of youth, alma mater, under God, keeps ever fair and ever young in the light and liberty of the turning years, in the support of a great State, in the love and loyalty of her sons and daughters, in the quest of youth for truth, goodness and beauty, and in the struggles and hopes of the people for freedom of knowledge, equal justice, peace on earth and good will toward men in God's own time.

The Financing of the Boonville, Ind., High School

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which was written by Mr. Kenneth W. Weyerbacher of Boonville, Ind., to the magazine Nation's Business and which appeared in the May 1957 issue of that magazine. It relates the initiative of that community in financing a needed high school.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ACTION AT BOONVILLE

I have been following your articles in Nation's Business with interest and the one in the February issue—Free Ballots Depend on Free Markets—was of particular interest to me. Locally we ran into difficulties with the money market after deciding to build a much-needed high school.

In January of last year we organized a holding corporation to finance, build, and lease for 30 years to the school corporation a new high-school building costing $1,150,000. After plans were prepared and the bonds were advertised for sale, we discovered the bond market for municipals had virtually collapsed. By law in this State we were only able to offer these bonds at a maximum rate of 4 percent interest. No investment house bid our bonds in, and we were left hanging in the air.

We made application to the State of Indiana for common school funds and although our application was approved, we got in the middle of a political fight between an outgoing governor and an incoming governor and could receive no assurance that we could obtain any State funds.

Federal aid was entirely too far away since it was necessary, due to our local conditions and extreme overcrowding of our schools, to be in the new high school by September 1958. In addition, it was the general feeling that Federal aid was not for us, since it was not only a time-consuming operation, but we felt it would be much more expensive in the long run.

The board of directors of the corporation then determined to sell the bonds locally. Our township has an assessed valuation of approximately $10 million, a population of 14,800, and around $500,000 of school indebtedness.

We determined to offer the issue to local people and local banks, at an average net interest of 4 percent. We eventually had 117 pledges. Approximately $300,000 was subscribed by banks and the balance by local individuals.

We then had a meeting of the subscribers to the issue, drew numbers out of a hat and assigned them to individual bond purchases. These people then, in order of their number drawn, were permitted to select the maturities which they desired.

So far as I know, no complaints were received as to the maturities of the individual buyers and we have since delivered the bonds and obtained the $1,150,000 and have started the construction of the school which we propose to have completed by September 1958 for the use of our high-school students.

There was no big money involved, although some of the individual purchasers did take rather large amounts.

It has, we believe, presented a pretty cogent argument against Federal aid to education. Most communities could do exactly as we did, although we never heard of anyone else doing it nor do we know if it had ever been tried successfully in the past. Troy Township, of Perry County, Ind., has since followed our lead.

We found that we could also have built a grade school * * * since we could have obtained subscriptions for an additional $500,000 worth of bonds.

KENNETH W. WEYERBACHER.

BOONVILLE, IND.

Address by Gov. Theodore R. McKeldin of Maryland Before Americans for Democratic Action

---

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Theodore R. McKeldin, Governor of Maryland, at the 10th anniversary banquet of Americans for Democratic Action, at Washington, D. C., on March 30, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, AT 10TH ANNIVERSARY BANQUET OF AMERICANS FOR DEMOCRATIC ACTION, WILLARD HOTEL, WASHINGTON, D. C., MARCH 30, 1957

I am a party man, without apology. Nevertheless, in my last campaign for governor of Maryland I was honored by the support of the ADA. I know that they did not support me because I am a Republican. They supported me because they gave me credit for sense enough to know that the way to strengthen my party was to give the State a good administration, and on that ground I was happy to receive their support.

For the same reason I regard it as a duty, as well as a privilege, to appear here to explain my position as a party man sympathetic with the liberal point of view and to state what I think that implies in the immediate future. But to clear the air, let me point out that this is one occasion on which I am not campaigning—talking politics, yes, but not for the purpose of winning an election. When a man is campaigning he must talk about the things that interest the voters, and those are usually things of immediate concern, rather than long-range policy.

But constitutional limitations forbid my running agan for governor of Maryland, and I am not now a candidate for any other office. So I seize the occasion to talk to you of things that may have no bearing on the voting in 1958, but that in the course of the next 10 years are going to be very important indeed.

Liberalism in this country is not a program, nor even a policy, but an attitude. Its opponents have done their best to convince the world that it is not even an attitude, but merely a pose; hence the sneering references to bleeding hearts and the allegations that the liberal is a sentimentalist. Of course it can be true; but a reactionary can be, and often is, as much of a sentimentalist as any liberal.

Liberal and conservative alike face a world of change and neither can do anything about that, for it is a condition of life. The difference between them is in their attitude toward changes that they cannot prevent. The liberal is chiefly concerned by what may be gained through wise action; the conservative is chiefly concerned with what may be lost by unwise action. One may be as honest as the other, and which attitude a man assumes may depend as much on his temperament as on anything else.

For my part, I feel that in the United States today the hope of gain is more important than the danger of loss, but I am firmly convinced that gain isn't going to be automatic. The possibility is there; but the possibility can be realized only by bold, vigorous, and intelligent action. Merely sitting still inevitably means loss. The conservatives, at least the wiser ones, agree with that. They are for action as much as any liberal; but their action is confined to nailing down what we have rather than trying to increase it.

Recognizing then that change inevitable, and assuming that appropriate action to meet it is imperative, we arrive at the crucial question—what action is appropriate in the circumstances that exist?

Let me repeat for emphasis that I am not talking about a program outlining steps that should be taken tomorrow or next week. I am talking about a long-range policy for liberalism, covering certainly the next 10 years and probably the remainder of this century. I am not suggesting how to win an election, I am arguing for a point of view to be held through many elections.

As regards foreign affairs, the liberal point of view is pretty firmly established. This country is committed to the proposition that the possibilities of human freedom have not been exhausted. It is our position that the art of self-government by free men, far from being worn out, has no more than begun its finest development. Therefore we are determined that it shall not perish from the earth, but shall have a chance to flourish, and to come to its full flower, not here only but in other parts of the world as well.

But as regards domestic affairs, the position of liberalism is by no means so strong, and I suggest that one reason is the failure of liberal thought to keep up with the marcn of events.

Do not misunderstand me. I am not denying the value of the immediate liberal program. We must continue the fight to create genuine equality of opportunity. We must root out the last remnants of economic serfdom. We must be eternally vigilant against all efforts to establish any form of tyranny over the mind of man. All this is good and necessary work and to discourage it by questioning its value would be the height of stupidity.

But above and beyond and behind all this there is an enormous problem to which our political leaders are paying little attention except in matters of detail. I refer to the most important change that has affected American life since the beginning of the century, the transfer of the vast majority of our people from a rural to an urban environment. Since 1910 although the total population has risen from 92 million to 160 million, the number of people living on the farm has actually decreased from 32 million to 25 million.

On the other hand, we have been developing not so much cities as groups of cities, in the Chicago area, in the Los Angeles area, and especially in the area from Boston to Washington, which is becoming more and more like one gigantic city, of which Baltimore, Philadelphia, and New York are merely subdivisions. We have had nothing like this before, so we have no precedents by which we may be guided in the management of such a concentration of population. In Baltimore, for example, we are preparing to go to the Susquehanna River to insure our water supply, and there we begin to encroach on Philadelphia's water supply.

Such a change is bound to affect all our ways of living profoundly and especially it is bound to affect the art of government. We have understood that as it regards details and we have developed an army of experts in such matters—housing experts, park-and-playground experts, traffic experts, and innumerable others. But we have developed no conspicuous group of leaders who are devoting their thinking not to details, but to the overall problem, that of developing a population expert in the ways of urban living.

It is quite different from living in a sparsely settled region. It is also quite different from living in the cities that existed in, say, 1910. What Al Smith learned by living in the shadow of Brooklyn Bridge is not of much use to boys and girls growing up in such places as Greenbelt, on the edge of Washington, or Middle River, on the edge of Baltimore.

For my part, I believe that life can be as rich and satisfying in such places as it ever was in Whittier's snowbound farmhouse, or down on the Swanee River. But I don't believe that life can be rich and satisfying anywhere unless people take thought to make it so. And I suspect that the greatest task of all the asks that confront American liberalism is that of discovering and revealing to our people ways and means of preserving freedom of the mind while adjusting to the restrictions of the body that crowded living makes necessary.

As a measure of the extent of the change consider how the second amendment of the

Constitution, "the right of the people to keep and bear arms shall not be infringed," has been in effect repealed, not by act of Congress and the State legislatures, but by the pressure of events. To say nothing of concealed weapons, you simply cannot have people roaming through the streets of a big city carrying shotguns and squirrel rifles, because someone would fire, and you cannot discharge firearms in the city without endangering many people. So the right of the people to keep and bear arms has been, not merely infringed, but very largely abolished. Yet I do not believe that the American is any the less a freeman for that deprivation.

But this does not apply in all cases. In the old-style cities, where people were piled upon each other in a way we would not tolerate now, the task of teaching newcomers how to adjust to urban living was assumed, not by liberalism, but by persons who were serving their own ends. So we had the political machines and the corrupt bosses of a generation ago. The result was that vast numbers of city dwellers lost all freedom and most of their human dignity, becoming mere robots acting at the command of the bosses.

The dispersal of the former slum-dwellers has broken up that old system to a large extent, but that doesn't mean that bossism is no longer possible. It cannot reappear in the old shape, but never doubt that it is capable of assuming some new shape, if conditions are right.

The task of liberalism in the years immediately ahead is to make sure that conditions are not right for the appearance of the boss in a new guise. But to accomplish that task, liberalism must understand very clearly what it is trying to do. That is to say, it must have a very sharp perception of how freedom and human dignity can survive among people huddled together, not merely in cities, but in great collections of cities whose basic interests are in constant collision.

If there is any definite formula by which this can be worked out, I don't know what it is, and I know of no one who does know. I am not Sir Oracle. I am not Solon, the Lawgiver. The best I can do is state the problem, which I do not expect to be solved by any one man, but by the joint efforts of a great many wise men.

Yet, after all, it is not really new, except in its current terms. The basic problem of self-government from the beginning has been that of creating an informed and intelligent public opinion. As conditions have changed we have tried many devices, all to the same end. In small communities the town meeting, or the muster served very well. As population increased, the press, especially the small-town press, took over. But neither the town meeting, the muster, nor the country weekly can serve in enormous concentrations of population. Some other device must be discovered or invented.

I said "device" but of course the answer will be not one, but a long series of devices, contributed by thinkers of many types. But they will be liberals in the broad sense, that is to say, men who think it more important to promote good than to prevent evil. They will be men who believe that the Golden Age is ahead, not behind. They will be men who believe that error may be tolerated with safety, where reason is left free to combat it. In short, they will be men who believe that the human mind is capable of discovering new truth, even in the field of government, and whose hope of discovering new truth overcomes their fear of failing into new error.

With that I return to my opening statement, I am a party man. I believe that partisan organization is the most efficient implement available with which to effect our purpose, and to discard it entirely would be tantamount to abandoning that purpose. But it is only an implement and, like other tools, it can be bent or broken and so becomes useless, in which case it has to be discarded. This is, however, a misfortune to be avoided if possible, and it can be avoided when party men are alert and boldly determined to keep the party organization always in shape to serve the changing times.

The usefulness of such an organization as the ADA is, of course, to keep both major parties in shape, and that function should be approved by party men on both sides. Your advantage is that, being free of prior commitments, you are in position to take the long view, to plan grand strategy rather than immediate tactics. It is with that in mind that I have invited your attention to this difficult problem of the shift to the urban life with all its danger that in the confusion, our people may lose their clear understanding of the essentials of liberty.

You can do this better than the partisan whose immediate problem is to win the next election; but in doing it, you will be serving the parties, both parties, to better purpose, perhaps, than their own leaders. For you will be assisting both to achieve the ultimate end that both profess to seek, that is, the establishment and maintenance in this Republic of the kind of self-government that leads to equal justice under law.

Disappearance of Indian Lands

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. HUMPHREY. Mr. President, an article which appeared in the Minneapolis Star on March 14 has recently come to my attention. It is entitled "American Indian Lands Go the Way of the Buffalo Range," and is written by Jay Edgerton of the Star staff.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN INDIAN LANDS GO THE WAY OF THE BUFFALO RANGE

(By Jay Edgerton)

One of the major concerns of all those interested in the welfare of the American Indian is the rapid disappearance of Indian lands.

Oliver LaFarge, the well-known author who is president of the Association on American Indian Affairs, has reported to his board of directors that "land is a vital element in the Indian economy. Tribal lands seem to be safe at present, but what is happening to individually held allotted lands is really alarming."

Contrary to widespread popular belief, Indian land is not sacrosanct. Much of it can be sold. In this class is the so-called "alloted" land, that is acreage which has been specifically granted to individual Indians.

Only 4 years ago there were 13,500,000 acres allotted Indian land. Today this has been decreased by 1,600,000 acres.

"At Pine Ridge in South Dakota," LaFarge points out, "where the Oglala Sioux verge on despair, 23,000 acres were sold in fiscal 1955. It will take very few more years of the present policy to reduce that reservation and the Minnesota reservations to economic uselessness."

Sale of Indian reservation land was authorized by Congress in 1910. The coming of World War I, with increased demands for horses and beef cattle and the consequent necessity for grazing lands, brought a tremendous acceleration in sales of Indian lands.

Throughout the 1920's, sales of Indian lands continued all over the western high plains, except in the Southwest where most Indian land is unallotted.

By 1934 many Indian leaders and those interested in Indian welfare were alarmed by the dwindling land resources and when Congress passed the Indian Reorganization Act a provision was written into it allowing Indian tribes to buy up land that individual Indians wanted to sell.

At the same time the Roosevelt administration adopted a hard policy on Indian land sales. The Secretary of the Interior, by official order, declared that no Indian land could be sold except in cases of dire need. In the intervening years, however, the order has been rescinded and many observers now argue the Government is trying to pressure Indians into selling their lands.

W. O. Roberts, former director of the Aberdeen, S. Dak., office of the Bureau of Indian Affairs, in an article in the News Letter of the Association on American Indian Affairs, explains that the Indian service now has "an efficient real estate corps devoted to the appraisal and sale of Indian trust property.

"Of course it is technically true that every sale of Indian land originates with the application of the Indian owner himself," the News Letter continues. "A sale could not be made without the Indian's signature. However, it is equally true that strong pressure is put on the Indian landowner, in most cases, to make him want to sell land. This pressure is artful, persuasive and almost invariably successful. The only possible curb to the avalanche of sales would be a strong land policy by the Department of the Interior."

In part—although many other factors also are involved here—loss of Indian lands has stimulated the growth of Indian slums in and around many western cities. When an Indian has sold his land and his money is gone he frequently tries the city in the hope of finding a livelihood. In all too many cases he is poorly equipped to make this difficult readjustment.

"If they (Indians) are abandoned by the Government," Roberts says, "before they can take their place in a community, there is trouble, and it matters little whether the abandonment is by termination of Federal services or by the more subtle means of selling out their homesteads.

"It should not be assumed that relocation off the reservation of a partially acculturated Indian family solves much, if anything; it merely transfers the same problems to another locality."

Last year there was a drop in Indian land sales below 1953—255,000 acres of Indian land changing hands as against 521,000 acres in the earlier year. In part, says LaFarge, this may have been caused by modification of policy following protests to the Government, but also cattlemen in the northern plains areas eased off on land acquisitions for financial reasons. In any event too much Indian land is being sold.

Safety on the High Seas

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. NEUBERGER. Mr. President, all of us in the Senate who represent great maritime and seacoast States should be

particularly interested in an article entitled "How Soon, the Next Ship Disaster?" which is scheduled to appear in the June 1957 issue of the Reader's Digest.

This informative and illuminating article, written by Howard Whitman, emphasizes the great gaps which now occur in the safeguards and protections that have been set up for those who travel the high seas, either as passengers or as crews of our vast merchant fleet.

It is my hope that the material brought forth in this article will help to close some of the breaches in our maritime safety that have been exposed and disclosed by Mr. Whitman.

I ask unanimous consent that the entire text of this article from the June Reader's Digest be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW SOON THE NEXT SHIP DISASTER?

(By Howard Whitman)

On the navigation chart of the Coast Guard cutter *Spar*, as it bucked a reluctant sea off Nantucket Island, I noticed a penciled warning at a spot where the depth is 39 fathoms: *Andrea Doria*. We reached it in a few hours—the graveyard of a great ship.

I had not gone to the *Doria's* grave out of sentiment, though I could have; the memories of a happy voyage with my family on this ship a few months before the sinking were still fresh in my mind. I went to write an epitaph. Below in the dark deep lay a sea queen, dead but for a single hope: that out of her disaster might come the inspiration which could save others from a similar tragedy.

The *Spar* hovered for 24 hours near where the *Doria* and the *Stockholm* collided last July. We saw 25 ships go through the "crossroads," this funnel where Atlantic traffic converges off Nantucket. How safe were they? Could it happen again?

The skipper of the Nantucket Lightship, George Bannan, who was returning with us to the mainland, remarked: "I watch the ships going all over the compass on foggy nights, and sometimes on the radar I've seen 3 or 4 of them within 5 miles playing ring-around-the-rosie."

Charles Cowing, skipper of the *Spar*, added, "That's how it is. There's no traffic cop out here."

The comments of these Coast Guardsmen express what I had found in months of investigation among captains of luxury liners, merchant mariners, port officials, admiralty lawyers, radar experts, and others of the sea fraternity. In their tight-lipped circle these men know what the public has not yet been told: that the *Doria-Stockholm* collision was not just a freak hard-luck accident. Some such tragedy was almost inevitable. Months before, at the Whitehall Club, where skippers meet, a luxury-ship master had said, "We're going to have a big collision that will wake people up. Conditions being what they are, it's got to come."

And more are expected. Capt. Thomas W. Sheridan, of the Council of American Master Mariners, asserted, "It could happen again and again. We're lucky there haven't been more *Dorias*."

Every day there are 4 or 5 ship collisions, on the average, between vessels of 500 or more tons; 30 collisions per week, some 1,500 every year. Less than 48 hours before the *Doria* disaster an almost identical collision occurred between the freighter *Fairisle* and the tanker *San Jose II* in the same vicinity in the same patchy fog. But it took the sharp bow that slashed the *Doria* to shatter public illusions about how ships are sailed in this day and age—illusions of safe slowing down in fog, of definite and well-heeded sea lanes, of monitored traffic, of security by means of radar.

International rules governing navigation, the "Rules of the Road," require ships to slow down in fog to moderate speed. In admiralty courts "moderate speed" has been defined as that speed at which a ship can stop within one-half the distance of visibility. This should be safe enough. But do ships obey the rule?

Engineer John Carrothers stated in United States Naval Institute Proceedings: "I have made some 200 transatlantic crossings, the majority of them as an officer on America's greatest liners. Never once do I remember the ship slowing down in the open sea because of fog."

Ships in the northern tracks of the Atlantic are requested to radio to Coast Guard ice-patrol ships their position, speed, the sea temperature, and any ice they have sighted. The big passenger liners regularly leave out "speed" when it's foggy. One captain candidly admitted: "In any information messages I send out during a fog I never include my speed, for the simple reason that I'm probably going full speed."

A Coast Guard officer said, "They don't fool us, though. By plotting their course from point to point we know they're plowing through fog at full speed."

But what can the Coast Guard, or anyone, do? There is no authority that can crack down on fog speeders. After a collision—only after—a shipping company may have to pay damages if fog speeding is proved. That's why the matter is hushed.

What does the skipper do in fog? "I sound my whistle every 2 minutes, I keep an eye on the radar, I put the engine room on 'standby'—and I keep right on going full ahead," the captain of a passenger-cargo vessel declared. He said as an afterthought, "I know it's dangerous."

All captains know it is dangerous to plunge through fog at full speed with these multi-thousand-ton steel behemoths which can slash each other mortally and, even in an emergency, may require 3 miles to stop. And all captains know why it is the custom to race through fog in spite of the danger.

Commodore John Baylis, former captain of the port of New York, epitomized what I heard from dozens of skippers: "The master of a big ship has his schedule. If he docks late the company has had stevedores waiting for him and tugs engaged, and chances are that the steamship line runs into overtime or has to pay for an extra day. They don't say anything to the master about being late but the look on their faces says, 'You got us involved for thousands of dollars.' The implication is, 'Why didn't you bring her in on time even if you had to take a few chances?' "

So tight schedules and economy are the villains. Every extra hour at sea costs money and the pressure on shipmasters to push their vessels to the maximum, fog or no fog, is well-known on every waterfront.

Much was said about sea lanes when the *Doria* went down. The eastbound *Stockholm* "was nearly on the westbound track and some 20 miles north of the recommended track for vessels bound to Europe," stated congressional investigators. But the Atlantic sea lanes, established in 1855 and later incorporated in the North Atlantic Track Agreement, are merely recommended. Though the United States in 1948 made it mandatory for United States passenger ships to stick to the lanes, many nations, including Italy and Sweden, have never subscribed to the North Atlantic Track Agreement.

Capt. Gunnar Nordenson of the *Stockholm*, like every master I met, believes in sea lanes but he wants them mandatory and dependable, not merely recommended. Lacking this, many a captain cuts in and out of lanes because if he doesn't take a shortcut some competitor will. A haphazard alinement of traffic on the sea may have sufficed when ships were slower, smaller, and fewer. But today, with floating hotels hurtling toward each other, the orderly routing of sea traffic is urgent.

Even my 10-year-old son was surprised when he asked Capt. Pietro Calamai of the *Doria* if the ship was obliged to follow a set course and the captain replied, "No; a master is free to take his ship anywhere on the ocean." A child of the air age, my son believed that just as planes file their flight plans before taking off, so a ship would file a plan that set forth the course it expected to follow, and that some central traffic control would be informed if it deviated from course.

I asked the captain of a popular tourist vessel, "Isn't there some place you can query and get information about other ships' positions so you'll know what traffic you're going to encounter?"

He replied, "I always have one of my officers pick up the New York Times on sailing day so I can see what's expected in and out of the harbor."

This in a day when even taxis are dispatched by radio.

The closest approach to a central information agency is the search and rescue setup of the Coast Guard, and this is fragmentary. At its Rescue Coordination Center in New York, I examined the 10- by 20-foot Atlantic chart that has markers on it to show ships' positions. There are about 2,000 ships on the Atlantic at any one time, but this chart plotted only 150. Why? Because ships send in their position, course, and speed, along with weather data, every 6 hours if they feel like it—but fewer than 10 percent of them feel like it. One of the world's fastest liners has never reported to the Coast Guard, and another only twice in 5 years.

The need is for a modern system of mandatory reporting of position, course, and speed; and an electronic plotting board that shows at all times where ships are and where they're headed—this information to be available to any captain who needs it.

But isn't radar's all-seeing eye the answer? Both the *Doria* and the *Stockholm* were equipped with radar. And there is much additional evidence that radar is not the protection it is popularly thought to be.

Actually, overreliance upon it is regarded as a hazard. Admiralty courts have handled 17 major collision cases involving radar, and many times that number have been settled out of court or are awaiting trial. In the Proceedings of the Merchant Marine Council, Admiralty Attorney Nicholas J. Healy III stated: "In the hands of an incompetent operator radar sometimes produces a false sense of security which will lead him to continue at high speed in areas of limited visibility."

In one case in which radar gave this false sense of security an admiralty judge remarked, "This collision would not have happened if both vessels hadn't had radar."

It takes skill to interpret properly the ghostlike pips on a radar screen. And it is an open secret on the waterfront that many who stand radar watch haven't that skill.

The *Doria* hearings told the story. The ship's second officer, who had been on the radar before the collision, was on the stand. What training in radar did he have? No actual training. How did he learn about radar then? He picked it up when he was third officer on the *Conte Grande*. Did he plot the course of the *Stockholm* when its pip appeared on the scope? No. Why not? He thought it wasn't necessary.

In the hearing room during this testimony was the representative of a radar company. During a recess I asked him if most ships' officers were competent at radar. He replied, "If you knew the score you'd shudder. When a shipping line buys radar equipment a sales

representative usually goes aboard with the installing technician and explains to the officers how it works. This is like a television man giving instructions to a housewife when he installs a set: he just shows her which knobs to turn. The officers pick up what they can, read some booklets, and that's about it."

Immediately after the *Doria* disaster the British merchant marine added to the requirements for a deck officer's license: "Submission of a certificate of proficiency as a radar observer." Said the United States congressional report on the *Doria:* "Every maritime country should do likewise."

The congressional investigators also advocated a short-range radiotelephone on the ship's bridge so that when another vessel heaves into view one skipper can talk directly to the other. Many people were appalled after the *Doria-Stockholm* crash that the deck officers of these ships hadn't communicated with each other to decide who was going which way. They had no bridge radiophone equipment.

Great Lakes ore boats talk to each other; so do tugs in the harbors. It should not be beyond the means of great shipping lines to equip each bridge with a short-range radiophone.

On United States ships there is another problem. Supreme Court Justice Felix Frankfurter, traveling aboard one of the world's finest liners, remarked to the captain, "You are the lord and master of all you survey."

The captain replied, "You are laboring under an illusion, Mr. Justice. I am just a navigator."

After hearing this story I asked the captain in question what he had meant. He explained, "I had probably just got through hearing the union delegate tell me to go to hell. On American ships the unions are boss and the so-called delegate is more powerful than the captain."

Another American captain declared: "We wish we could pick our crew and know that every man to whom we entrust the safety of the ship is competent. We don't want incompetents forced on us by the union. On one crossing I woke up in my quarters and saw the reflection of the sun making an arc around the cabin. I realized what was happening—I had a quartermaster who didn't know how to steer. I rushed to the bridge, and sure enough he had taken the ship around in a circle. If that quartermaster had hit another ship I'd have been responsible. The captain on a United States ship is supreme, but not supreme enough to reject an incompetent crewman when the union delegate says, 'Take him.'"

Other shipmasters told of a helmsman who didn't know the difference between "course zero-two-nine" and "two-nine-zero" (and almost ran a luxury liner into a breakwater); a third officer on watch whose eyesight was so bad he could see only 2 miles in 8-mile visibility; and a radarman who said all was clear just as his ship rammed another vessel in a fog (he hadn't warmed up the radar set and his scope was blank, like a TV set for a few seconds after you turn it on). There are ample competent seamen, but unfortunately there are also exceptions such as these. Yet if the captain refuses to take a crewman whose ability he doubts, his ship may be stranded in port by a walk-off.

That's the story of the high seas, 1957. There is much to be done.

I went to the graveyard of the *Andrea Doria* because I thought she might be immortal still, might save many more than the 50 lives she took. For disasters can pay dividends. The *Titanic* sinking brought the iceberg patrol.

Will humanity now get a dividend from the *Doria*? If not—how soon the next ship disaster?

Minnesota Recognition of Eastern Orthodoxy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. HUMPHREY. Mr. President, the distinguished Governor of Minnesota, Mr. Orville L. Freeman, recently signed into law a bill passed by the Minnesota legislature recognizing Greek Orthodoxy as a major faith.

Among the press comments written to commemorate this important event were certain remarks printed in the nationally circulated publication the Atlantis.

I ask unanimous consent that the text of the article from the May 12, 1957, issue of the Atlantis, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINNESOTA LEGISLATURE RECOGNIZES EASTERN ORTHODOXY

ST. PAUL, MINN.—The day of March 1, 1957, was one of historic significance for the Eastern Orthodox faith in Minnesota. After 2 years of preparation, a legislative bill, House Resolution 346, unanimously passed the House of Representatives and Senate of the Minnesota State Legislature and was summarily signed by His Excellency, Governor Orville L. Freeman. Pictured with Minnesota Governor Orville L. Freeman signing the resolution are the Honorable Thomas N. Christie, state representative; the Reverend Anthony Coniaris, pastor of St. Mary's Greek Orthodox Church in Minneapolis, and Ernest A. Villas, past national chairman of the Greek Orthodox Youth of America. Initiated and prompted by the Greek Orthodox delegation, the resolution received enthusiastic and helpful support from Russian, Serbian, Ukrainian, Syrian, and Rumanian Orthodox clergy, and lay representatives. Minneapolis is especially proud of the honorable Thomas N. Christie, first member of the Orthodox Church to be elected to the State legislature, who has subsequently served five consecutive terms in the house of representatives. Representative Christie is not only distinguished by his civic duties, but also as former secretary and member of St. Mary's Church Board of Trustees, as a past district governor of the Order of Ahepa, and as three-term president of Minneapolis Demosthenes chapter. In 1951 Representative Christi visited Greece and was invited by the American Ambassador to address the Greek Parliament. Upon his return to Minnesota the same honor was bestowed upon him by the Minnesota Legislature which he addressed extending official greetings from the Greek Parliament and Government.

The Reverend Anthony Coniaris is a native of Boston and graduate of Holy Cross Seminary at Brookline, Mass., and Northwestern Theological Seminary. He has gained national recognition through his outstanding articles of the Greek Orthodox Church, and is eagerly sought throughout the Twin City area as a speaker and lecturer. The ecclesiastical honors bestowed upon him by the archdiocese are keen evidence of his recognition as one of the outstanding American-born Greek Orthodox clergymen in this hemisphere. Father Coniaris is deeply loved by his parishioners, and the newly constructed and uniquely beautiful St. Mary's Greek Orthodox Church, auditorium, and school are testimony of the confidence the people of Minneapolis have in his spiritual leadership.

Ernest A. Villas is a national councilman of the Greek Orthodox Youth of America, and has previously served as GOYA national chairman for 3 years. He is past chairman of the Council of Eastern Orthodox Youth Leaders of the Americas and was the first faculty advisor of the Eastern Orthodox Fellowship at the University of Minnesota. A member of the board of trustees and choir of St. Mary's Church, he is a teacher by profession, and is chairman of the fund raising campaign of the new church and community project.

FROM ONE WEEK TO ANOTHER—MINNESOTA TOO

Gov. Orville L. Freeman, of Minnesota, has signed into law a legislative bill unanimously passed by the house of representatives and the senate, recognizing Greek Orthodoxy as a major faith. Initiated and duly supported by the Greek delegation under the leadership of State Representative Thomas N. Christie, the bill also received the wholehearted and enthusiastic support of the Russian, Serbian, Ukrainian, Syrian, and Rumanian delegations. Mr. Ernest A. Villas, former national chairman of the Greek Orthodox Youth of America, also was very instrumental in preparing the resolution and in doing his best to promote its passage by the Minnesota Legislature. The Reverend Anthony Coniaris, pastor of the Greek Orthodox Church at Minneapolis, was the originator of the idea that Minnesota too might follow the precedent set in at least 25 other States and recognize good old Orthodoxy, the Holy Mother of all Holy Christian churches, as a major faith. Minnesota's response was quick and unanimous; and 7 million Orthodox Christians in America have but words of heartfelt thanks and of eternal gratitude to offer to the Legislature of the Gopher State and to His Excellency, Gov. Orville L. Freeman.

Aid for the Family-Size Farm

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ULLMAN. Mr. Speaker, certainly the present economic situation facing the American farmer provides little cause for optimism. The administration has devised and implemented a variety of agriculture programs, yet the plight of agriculture has become increasingly worse. If the trend continues the family farmer might well become a thing of the past.

Elected representatives in the State of Oregon as well as Oregon farmers have been gravely concerned over this unfortunate trend. Recently the Oregon State House of Representatives enacted House Memorial 3 calling for legislation aiding the family-size farm. I believe this memorial will be of interest to my colleagues and I ask unanimous consent that the text of it be printed following my remarks.

The memorial follows:

House Memorial 3

Memorial to the Honorable Senate and the House of Representatives of the United States of America, in Congress assembled

We, your memorialists, the House of Representatives of the State of Oregon, in legis-

lative session assembled, most respectfully represent as follows:

Whereas Congress has, through the years, devoted much time, effort, and money on legislative programs pertaining to our agricultural economy; and

Whereas it is generally conceded that a reasonable degree of prosperity and agricultural income is necessary at the grassroots level; and

Whereas the family-type farm operator is regarded as an essential part of our democratic form of Government and any Federal legislation designed to influence or maintain a measure of the economic parity between the rural and urban areas should be so designed that the major provisions thereof provide a substantial benefit to the family-type farm operator; and

Whereas in recent years, acts of Congress appear to have granted special privileges to corporate and absentee ownership types of farm operations and to a large extent have ignored the family-type farm operator: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon, That the Congress of the United States enact legislation or amend the various Federal laws pertaining to agriculture to the end that the economic benefits provided in such laws be basically directed toward the family-type farm operator whose net income from all sources does not exceed $10,000 per year; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, the Secretary of Agriculture and to all members of the Oregon congressional delegation.

Adopted by house May 13, 1957.

EDITH BYNON LOW,
Chief Clerk.

PAT DOOLEY,
Speaker of House.

The Condition of the Potato Industry in Washington State

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. JACKSON. Mr. President, I have in my hand an excellent letter sent to me by the Washington Potato and Onion Shippers Association, of Yakima, Wash. The letter sets forth with admirable clarity some of the problems and the resulting condition of the potato industry in Washington State. Among the industry's problems is, of course, the continuation of the 3-percent transportation tax on the shipment of cargoes, which leaves farmers in Washington State at a disadvantage in their attempt to bring their goods to eastern markets.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON POTATO AND
ONION SHIPPERS ASSOCIATION,
Yakima, Wash., May 1, 1957.

Senator HENRY M. JACKSON,
United States Senate Building,
Washington, D. C.

DEAR SENATOR JACKSON: Following your suggestion that our requests and recommendations be submitted in writing, we ask that you give further consideration to the following:

1. Realizing that equitable freight rates from our producing area to all parts of our country are vital to the very existence of our industry, we request that you continue your fine cooperation with Fred H. Tolan, our traffic manager, in his efforts in this field.

2. The 3-percent transportation tax, initiated as a war measure, should be repealed. We realize the difficulty of securing any action that will reduce revenues. If you decide that this tax cannot be dispensed with, your continued cooperation with Fred H. Tolan probably could result in establishing a reasonable ceiling or maximum limitation of not more than, and we hope less than, 3 cents per hundredweight.

3. The Washington State College, Institute of Agricultural Sciences, the Washington State Potato Commission, State of Washington Department of Agriculture, and cooperating units of the United States Department of Agriculture, are working together on a planned program of research and education. We are recently advised that on account of lack of funds, their program does not provide for a pathologist, as recently hoped for, to assist in the potato research program in the Columbia Basin. We request your aid in securing such a scientist to be provided by the United States Department of Agriculture to round out the potato research program in this area.

4. The Columbia Basin project area includes approximately 2,500,000 acres. One million twenty-nine thousand of these acres are suitable for irrigation. The original land classification by the Bureau of Reclamation segregated the lands into three major irrigable land classes. To further subdivide the lands an adaptation of soil series was superimposed over the three land classes. The integration of the land classes and soil groups forms 22 land types. The topography extends from level plain area, through gently rolling, to rough eroded canyon areas. The climate varies from sometimes well below zero winter temperatures to occasional desert heat extremes of 100 or more degrees. This diversification of land types, topography, and climate in a compact area provides an ideal location for a Federal agricultural regional research laboratory and experimental station.

5. You have already been fully advised of disastrous effects on our potato industry by the interpretation by the inspection service that "dark, discolored, slightly sunken areas" on potatoes that arrive in the various markets when shipped under maturity conditions, that with mutual knowledge and consent of buyer and shipper, permit the loading of potatoes with considerable percentages of "badly skinned" tubers having 50 percent or more of the skin missing or feathered, is evidence of unsuitable shipping conditions. You have emphasized to the Department our recommendation that the terminal interpretation of suitable shipping conditions be liberalized on arrival inspections after transit.

It is generally considered that with State-Federal inspection available at practically all potato shipping points, that a certificate of inspection issued under State-Federal regulations should be final determination of "suitable shipping" condition.

We have been favored by the United States Department of Agriculture by their arranging a meeting with industry representatives of our State on the evening of June 4, at the Pacific Power & Light Auditorium in Yakima. Both Mr. E. E. Conklin, Chief, Fresh Products Standardiaztion and Inspection Branch, and John J. Dimond, Acting Chief, Regulatory Branch of the Agricultural Marketing Service, United States Department of Agriculture, will be here. It is hoped that after full discussion we will have a meeting of minds and favorable action on our recommendation. You will receive from us a full report of this meeting.

6. The present prospects are for a favorable potato production year with perhaps another surplus crop. We are advised that it is reasonably probable that a diversion program will again be initiated by the United States Department of Agriculture to aid in withholding an undesirable surplus from the fresh market. It is greatly to be desired that this program be effective June 15, 1957, in order that the intermediate crop be under its provision. Your assistance in bringing this recommendation to favorable conclusion is requested.

In this connection, you will remember that we were criticized in Dr. Butz' letter for not staying within our acreage guide. We are enclosing a production sheet from the office of the Bureau of Reclamation listing area production for the past 10 years. It is to be noted that if the new area of the Columbia Basin project is deducted from our present total State acreage, we would have reduced our acreage almost 50 percent. We believe that new lands coming into production, farmed by new growers should have some consideration in programing acreage guides.

Sincerely yours,

OTIS C. MOYER,
Chairman, Legislative Committee, Washington Potato and Onion Shippers Association, Inc.

Potatoes in the State of Washington and on Columbia Basin project land, 1946 to 1956, inclusive [1]

Year	State of Washington		Columbia Basin project	
	Acres	Production (bushels)	Acres	Production (bushels)
1946	44,000	10,120,000		
1947	34,000	8,840,000		
1948	40,000	12,600,000	16	8,600
1949	36,000	10,080,000	231	83,000
1950	38,000	11,780,000	334	147,100
1951	28,000	10,920,000	429	198,200
1952	26,000	10,660,000	3,715	1,544,200
1953	27,000	10,800,000	6,142	2,838,200
1954	30,000	13,200,000	9,059	4,210,100
1955	38,000	16,055,000	14,621	7,545,000
1956	41,000	16,491,000	20,867	9,819,900

[1] Recommended acreage guide for 1957, 85 percent.

Theodore Roosevelt's Relations With Labor

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. O'MAHONEY. Mr. President, as vice chairman of the Theodore Roosevelt Memorial Commission, I ask unanimous consent to have printed in the RECORD an article entitled "Theodore Roosevelt: His Relations With Labor." This material has been prepared by the Legislative Reference Service of the Library of Congress, and is thoroughly documented.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THEODORE ROOSEVELT: HIS RELATIONS WITH LABOR

Theodore Roosevelt was "by nature a conservative," wrote Hermann Hagedorn, "(but) he recognized * * * that true conservatism demanded a just reappraisal of industrial and economic conditions, and prompt, far-

reaching remedial action."[1] One of the peculiarities of Roosevelt's career was that despite his conservative nature, his initial distrust and suspicion of the labor movement were gradually but steadily moderated until, toward the end of that career, he had become an ardent and outspoken champion of labor causes.

In his first political post, New York State assemblyman, Roosevelt opposed almost every piece of legislation sponsored or favored by the unions. He fought the movement to abolish convict contract labor. He opposed and helped defeat in 1882 bills to increase the wages of New York City laborers. He was hostile to the attempt to increase the salaries of New York City firemen and police.[2] He opposed several measures to regulate and shorten hours of work. He thought that men who worked 14 and 16 hours a day were unfortunate, but he "refused to countenance the sort of legislation which contemplated an interference with the rights of individual employers."[3] In short, as he put it, he did not "pretend to have the interest of workingmen at heart."[4]

Reform, however, was always a major interest for Roosevelt and he made exceptions in his generally antilabor position when the problems of women, children, and public health were concerned. During the campaign by the New York labor and reform forces against conditions in the tenement house cigar manufacturing industry, Roosevelt was appointed to the legislature's investigating committee. "As a matter of fact," he later wrote, "I had supposed I would be against the legislation * * * for the respectable people I knew were against it. * * * However, my first visits to the tenement-house districts in question made me feel that, whatever the theories might be, as a matter of practical commonsense I could not conscientiously vote for the continuance of the condition which I saw."[5] Thereafter he vigorously supported bills to abolish tenement-house manufacturing, not because labor unions supported the legislation but almost despite that support. The law was a necessary "hygienic measure."[6] He told Governor Grover Cleveland, while pleading for the governor's approval for the legislation, that he was "opposed to most trade union measures, but this bill was an exception to the rule."[7]

As the Republican candidate for mayor of New York City in 1886, Roosevelt enjoyed the support of the most conservative elements of the city. He ran third to Tammany's Abram S. Hewitt and to the candidate of the labor movement, Henry George.

Roosevelt was to change many of his ideas about labor, but he never gave up his vigorous opposition to labor violence. He was furious at the Haymarket rioters of 1886.[8] As a member of the New York Police Board, he was zealous in efforts to quell violence. The New York Times commented, shortly after Roosevelt's appointment, that "for a mob, the force had neither fear nor favor, and for a mob of strikers it was peculiarly prompt and thorough".[9] To union leaders, Roosevelt asserted that he was "a strong believer in the rights of labor" but that he was "all the more bound to see that lawlessness and disorder were put down, and that no rioter was permitted to masquerade under the guise of being a friend of labor."[10] In 1895 he wrote, "The reckless labor agitator who arouses the mob to riot and bloodshed is in the last analysis the most dangerous of the workingman's enemies. This man is a real peril; and so is his sympathiser, the legislator, who to catch votes denounces the judiciary and the military because they put down mobs."[11]

GOVERNOR OF NEW YORK

By the time he became Governor of New York, Roosevelt's views on labor causes had become quite favorable; and he pursued his goals with his usual energy. About a third of his first message to the legislature he devoted to a discussion of the need for better enforcement of existing labor legislation and the passage of rigid factory laws. Poor enforcement he attributed, at least in part, to the fact that employees rarely complained "for fear of being discharged." He recommended that the "enforcement of the entire body of legislation relating to labor be placed under the board of factory inspectors."[12] In addition, he announced plans to eliminate unlicensed employment bureaus, settle strikes with the aid of the bureau of mediation and arbitration, improve the work of the bureau of labor statistics, and speed up the municipal courts' handling of wage disputes.[13]

In his second annual message to the legislature he devoted less space to labor. For the most part he pointed to the record of his first year. The only major recommendation he made was for the passage of an employers' liability law.[14]

His record as governor in the field of labor legislation was impressive. Roosevelt worked vigorously to secure the passage of a sweatshop law to make buildings used for manufacturing purposes meet decent health standards in order to be licensed. He was convinced that "the uneconomic, unwholesome, and un-American sweatshop system [must] disappear from our industrial life."[15] The legislature responded with a law providing for additional factory inspectors, licensing of tenements in which manufacturing was carried on, labeling of tenement-made goods, and the extension of the powers of the factory inspector. Roosevelt's interest in this matter was so acute that, in 1900, he personally toured the tenement sweatshop districts to inspect for violations of the law, the first such visit by a Governor of New York.

Although he failed to secure the enactment of an employers' liability law, he did sign a mass of labor bills. Among the more important were those which required licenses for tenement house manufacturers, increases in the size and power of the factory inspector, the creation of a tenement house commission whose findings resulted in much legislation to improve housing conditions, regulation of the working hours of women and children, the protection of women and children from dangerous machinery, building equipment inspection for workers' safety, amendment and extension of the mechanics' lien laws, reduction of the hours of drug clerks, and provision for the prosecution of violators of the 8-hour law and prevailing rate of wages on State work. In addition, he signed bills giving a salary increase to New York City public-school teachers, for the registration of laborers for municipal employment so that preference might be given according to the date of application, to amend the law requiring seats for women in factories to include waitresses in a hotel or restaurant, for the prosecution of labor law violators by district attorneys in any county on complaint of the factory inspector, and for the publication of a quarterly bulletin on labor conditions.[16]

Roosevelt failed to gain the legislature's consent to some of his proposals. Under pressure from retail merchants, the lawmakers refused to transfer the enforcement of the merchantile law of 1896, which regulated the work of women and children in stores, from the New York City Board of Health to the State factory inspector. He was not able to obtain State supervision of private employment agencies. And he vetoed a bill relating to safety appliances on scaffolding for the use of employees because it might have forced the use of a certain patented device by all builders.[17]

"I know we should work for humanity," Roosevelt told the City Club in New York in 1899, "but I also know that it is dangerous to interfere with relations between employer and employed."[18] At first he was reluctant to approve legislation regulating labor's hours and wages, but he signed the law for an 8-hour workday and prevailing rate of wages on State work because, he said, it was "wise for the State to set a good example" and because he regarded the general tendency toward an 8-hour day as "healthful."[19]

"I believe in shortening the hours of labor and I am happy to say that we have passed in New York State a very drastic 8-hour law for public employment," he wrote. "It is the kind of progress which should be made very slowly and with caution."[20]

Roosevelt was, of course, acutely conscious of the influence of labor leaders. One of the first things he did on arriving in Albany was to ask various labor leaders to come to see him. He sought a wide range of opinion on labor measures, conferring with national as well as local labor leaders, rival union groups, and intellectuals in the labor movement. He sympathized with labor's disappointment over the failure of the legislature to pass an employers' liability law and did his best to secure its passage.[21]

Despite the achievements of his administration, Roosevelt remained an object of suspicion to many labor men, chiefly because of his propensity for the use of troops in industrial disturbances. The slightest threat of violence, and Roosevelt was ready to rush troops to the scene of the dispute. He did so in the Croton Dam strike, and was prepared to do so in the Buffalo grain shovelers strike and the New York City street railway strikes. The critics of this policy he accused of truckling to the labor vote.[22]

In the opinion of one commentator, Roosevelt, as Governor, had not reached the point where he was willing to accept organized labor as a bargaining power with rights equal to those of employers and government. He resented the persistent pressure which labor placed upon him and in his correspondence expressed disgust for labor's methods. He had hoped for the approval and admiration of trade-union men, but his best efforts failed to win appreciation.[23]

PRESIDENT

Still feeling his way in the Presidency, Roosevelt's first annual message to the Congress was essentially cautious in tone. He asked for, and later was granted, the creation of a Department of Commerce and Labor. He requested the maintenance of the tariff to protect labor and the reenaction of the Chinese Exclusion Act. He asked for legislation to do away with the competition of convict contract labor in the open labor market, to enforce the 8-hour law, to protect women and children from excessive hours of labor, night work, and unsanitary conditions. He praised the efforts of labor unions, but cautioned that "the chief factor in the success of each man * * * must ever be the sum total of his own individual qualities and abilities."[24]

Implementing his policies, he tried to remedy the lax enforcement of the Federal 8-hour law by Executive action, helped push through Congress laws improving working conditions of miners in the Territories, supervising employment agencies in the District of Columbia, and protecting street railway motormen and conductors in the District. Also for the District, legislation was passed to safeguard factory employees against accidents and to control child labor. Roosevelt urged the Congress to pass a workmen's compensation law for the protection of Government employees, but accepted a watered-down version of his original proposals. He consoled himself with the thought that it was the best he could get and that at least it committed the Government to the right policy.[25] Roosevelt also obtained legislation to improve railroad

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

safety standards, and to regulate the number of consecutive hours of duty for railroad workers.[30] He urged the Congress, in later messages, to prohibit child labor throughout the Nation and particularly requested a model child-labor law for the District of Columbia.[31] When the Supreme Court declared unconstitutional the Employers' Liability Act relating to common carriers, he suggested that the Congress reenact the law to meet the objections of the Court.

The most dramatic event concerning labor during Roosevelt's Presidential tenure occurred during the coal strike of 1902. The striking miners, under the leadership of John Mitchell and the United Mine Workers, were opposed by mine operators who refused to negotiate. George F. Baer, spokesman for the operators, declared that "the rights and interests of the laboring man will be protected and cared for—not by the labor agitators, but by the Christian men to whom God in His infinite wisdom has given control of the property interests of this country."[32]

As the strike dragged on, a national coal shortage developed, and as conciliatory gestures emanated only from the union, public sentiment began to swing to the miners. Roosevelt felt compelled to act (although there was great doubt as to his legal powers in the matter), both to protect the public interest and because he feared the political repercussions of a coal famine.[33]

He called a conference of both parties at the White House. Mitchell offered to accept the findings of a commission to be appointed for the purpose of examining the union's complaints, but Baer bluntly refused. The meeting ended in failure and the strike went on.

Roosevelt now decided to intervene even more directly. He secretly drew up a plan whereby the Army would take over the mines and run them as receiver. The owners were indirectly notified of the President's intentions and capitulated under this pressure. They requested the President to set up an arbitration commission. That body was duly appointed and granted the miners a 10 percent increase, reduced the working day to 8 and 9 hours for different types of work, and set up a special body to settle disputes arising during the 3 years the award was to be in effect.[34]

The President did not hesitate to displease labor leaders if he felt himself in the right. He later wrote:

"If I were a factory employee, a workman on the railroads, or a wage earner of any sort, I would undoubtedly join the union of my trade. I believe in the union and I believe that all men who are benefited by the union are morally bound to help to the extent of their power in the common interests advanced by the union. Nevertheless, irrespective of whether a man should or should not, and does or does not, join the union of his trade, all the rights, privileges, and immunities of that man as an American and as a citizen should be safeguarded and upheld by the law." [35]

Roosevelt implemented this stand by reinstating a Government printer who had been dismissed because he did not belong to the union. The President resisted the protests of Gompers and other labor leaders on this question, despite the impending presidential election of 1903.

Roosevelt's final thoughts on labor policy are probably best embodied in the Progressive Party's labor plank in 1912. These included:

Effective legislation to prevent industrial accidents, occupational diseases, overwork, involuntary unemployment, and other injurious effects incident to modern industry;

The fixing of minimum safety and health standards for the various occupations, and the exercise of the public authority of State and Nation to maintain such standards;

The prohibition of child labor;

Minimum-wage standards for women;

The prohibition of nightwork for women and the establishment of an 8-hour day for women and young persons;

One day's rest in seven for all wage-workers;

The 8-hour day in continuous 24-hour industries;

The abolition of the convict contract labor system;

Publicity as to wages, hours, and conditions of labor;

Standards of compensation for death by industrial accidents and diseases which would transfer the burden of lost earnings from the families of working people to the industry, and thus to the community;

The protection of home life against the hazards of sickness, irregular employment, and old age through the adoption of a system of social insurance adapted to American use.[36]

The Budget

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "People and the Budget," which appeared in the Florence (S. C.) Morning News on May 16, 1957, and which merits the attention of the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEOPLE AND THE BUDGET

We concur with President Eisenhower that the price of peace is high. We agree that we can weaken our defenses against the enemy only at our own peril. Foreign aid of some kind is an essential factor in America's responsibility to this immensely complex world. "Good defense is not cheap." That is sound doctrine.

But we do not agree that this country's complex and wasteful bureaucracy is worth the cost. American Government is honeycombed with unnecessary bureaus and Federal jobholders that spend Federal tax money with a lavishness that sickens.

In his address to the people the President said that "no great reductions in it (the Federal budget) are possible unless Congress eliminates or curtails existing Federal programs, or all of us demand less service from the Government."

The President vigorously defended defense spending and foreign aid. He is on sound ground when he takes the position that we must be willing to pay the cost of an adequate defense and that we must use American influence through American aid to help correct economic conditions abroad that contribute to world unrest.

There is, and we think happily, a ground swell for national economy. But the trouble is that that ground swell is in favor of economy so long as it doesn't strike home. And political spokesmen who trumpet for budget cutting aren't willing to take the political rap that comes from supporting economy in an area affecting their constituents.

The budget needs cutting. Not even in the field of defense spending and foreign aid is lavish spending of hard-earned tax dollars justified. Realistic spending administered with business efficiency should characterize every dollar spent for defense whether it be for the Military Establishment or as foreign aid. Freehanded spending abroad is unfair to every American taxpayer.

But freehanded domestic spending is equally unfair. This administration thinks a $71,800,000,000 budget necessary because that's the only kind of budget capable of keeping up the spending habits to which Americans have become accustomed. We have looked to the Government so long that we've established the habit of being subsidized and we expect it. And taking the cue from the people, the Government has created a lavish and complex bureaucracy that spends money as if it were as plentiful as water after a Texas flood. We recall that several years ago the Federal Government spent $1,800 for the erection of four hand rails to the steps of the Florence post office.

Sometime, somewhere it must stop if we are to remain nationally solvent. But when it stops it will be because pressure from the people has demanded it—from people who are willing to accept Government economy in areas that affect themselves.

Italian Immigration

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. MADDEN. Mr. Speaker, last Sunday I spoke at a gathering of the Calumet Chapter of the American Committee on Italian Immigration which was held in the City Hall, Gary, Ind.

On Monday, a Subcommittee of the House Foreign Affairs Committee under the chairmanship of Congressman CARNAHAN, held hearings in the First Congressional District of Indiana with the purpose of recording a cross section opinion of our Foreign Policy Program.

The following resolution was unanimously adopted at the meeting on Sunday afternoon and submitted to the congressional subcommittee on Monday:

RESOLUTION OF THE CALUMET CHAPTER OF THE AMERICAN COMMITTEE ON ITALIAN IMMIGRATION PASSED AT THE MEETING OF SAID CHAPTER, HELD MAY 19, 1957, IN GARY, IND.

Whereas a congressional committee will hold hearings in Gary, Ind., to give the people of this region the opportunity to express their views on the question of foreign aid to foreign nations by our Federal Government; and

Whereas it is our belief that the foreign aid given to our allied nations has brought remarkable results, both in their struggle to rebuild their economy and to rearm themselves in order to give our Nation valid cooperation in stopping the spread of communism in the different countries; and

Whereas such foreign aid, when properly given, as it is in the case of Italy under the able administration of the former Ambassador, Mrs. Clare Booth Luce, brought very good results, both in the economy of the country and also in taking away from the communistic idea large masses of workers, who for years have been fed the idea of American imperialism; and

Whereas for the safety of our country we need the full cooperation of our allies in all fields; and

Whereas our enemies point to our immigration laws as discriminatory to national minorities, and it is necessary to show that we are in good faith when we give aid: Therefore be it

Resolved by the Calumet Chapter of the American Committee on Italian Migration, That its members, who cover the entire Calumet region of the State of Indiana, go on record as favoring the continuation of economical and financial aid to our allied nations, so that they can be in position to fully cooperate with the United States in containing communism and attempt to make this world a better place to live; be it further

Resolved, That our immigration laws be changed so as to remove from them the present discrimination to national minorities.

SAM BUSHEMI,
President.
ROCCO V. SCHIRALLI,
Secretary.

Law, To Survive, Must Be Moral

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ROOSEVELT. Mr. Speaker, although the contempt trial of Arthur Miller has not yet been decided, and regardless of its outcome, I believe the questions raised by John Steinbeck to be worthy of consideration and thought by all Members of Congress who must pass on questions of judgment such as these. I respectfully submit the article for the consideration of my colleagues.

The article follows:

[From Esquire for June 1957]

THE TRIAL OF ARTHUR MILLER

(By John Steinbeck)

The trial of Arthur Miller for contempt of Congress brings close to all of us one of the strangest and most frightening dilemmas that a people and a government has ever faced. It is not the first trial of its kind, nor will it in all probability be the last. But Arthur Miller is a writer—one of our very best. What has happened to him could happen to any writer; could happen to me. We are face to face with a problem by no means easy of solution. "Is a puzzlement!"

No man knows what he might do in a given situation, and surely many men must wonder how they would act if they were in Arthur Miller's shoes. I wonder what I would do.

Let me suppose that I were going to trial for contempt of Congress as he is. I might be thinking somewhat as follows:

There is no doubt that Congress has the right, under the law, to ask me any question it wishes and to punish my refusal to answer with a contempt charge. The Congress has the right to do nearly anything conceivable. It has only to define a situation or an action as a "clear and present danger" to public safety, public morals, or public health. The selling or eating of mince pie could be made a crime if Congress determined that mince pie was a danger to public health—which it probably is. Since many parents raise their children badly, mother love could be defined as a danger to the general welfare.

Surely, Congress has this right to ask me anything on any subject. The question is: Should the Congress take advantage of that right?

Let us say that the congressional committee feels that the Communist Party and many groups which have been linked with it—sometimes arbitrarily—constitute a clear and present danger to the Nation. Now actually it is neither virtue nor good judgment on my part that has kept me from joining things. I am simply not a joiner by nature. Outside of the Boy Scouts and the Episcopal choir, I have never had an impulse to belong to things. But suppose I had. And suppose I have admitted my association with one or more of these groups posted as dangerous. As a writer, I must have been interested in everything, have felt it part of my profession to know and understand all kinds of people and groups. Having admitted these associations, I am now asked by the committee to name individuals I have seen at meetings of such groups. I hope my reasoning then would go as follows:

The people I knew were not and are not, in my estimation, traitors to the Nation. If they were, I would turn them in instantly. If I give names, it is reasonably certain that the persons named will be called up and questioned. In some cases they will loee their jobs, and in any case their reputations and standing in the community will suffer. And remember that these are persons who I honestly believe are innocent of any wrongdoing. Perhaps I do not feel that I have that right; that to name them would not only be disloyal but actually immoral. The committee then is asking me to commit an immorality in the name of public virtue.

If I agree, I have outraged one of our basic codes of conduct, and if I refuse I am guilty of contempt of Congress, sentenced to prison, and fined. One way outrages my sense of decency and the other brands me as a felon. And this brand does not fade out.

Now suppose I have children, a little property, a stake in the community. The threat of the contempt charge jeopardizes everything I love. Suppose, from worry or cowardice, I agree to what is asked. My deep and wounding shame will be with me always.

I cannot be reassured by the past performance of the committee. I have read daily for a number of years the testimony of admitted liars and perjurers whose charges have been used to destroy the peace and happiness of people I do not know, and many of whom were destroyed without being tried.

Which path am I to choose? Either way I am caught. It may occur to me that a man who is disloyal to his friends could not be expected to be loyal to his country. You can't slice up morals. Our virtues begin at home. They do not change in a courtroom unless the pressure of fear is put upon us.

But if I am caught between two horrors, so is the Congress caught. Law, to survive, must be moral. To force personal immorality on a man, to wound his private virtue, undermines his public virtue. If the Committee frightens me enough, it is even possible that I may make up things to satisfy the questioners. This has been known to happen. A law which is immoral does not survive and a government which condones or fosters immorality is truly in clear and present danger.

The Congress had a perfect right to pass the Alien and Sedition Act. This law was repealed because of public revulsion. The Escaped Slave laws had to be removed because the people of free States found them immoral. The Prohibition laws were so generally flouted that all law suffered as a consequence.

We have seen and been revolted by the Soviet Union's encouragement of spying and telling, children reporting their parents, wives informing on their husbands. In Hitler's Germany, it was considered patriotic to report your friends and relations to the authorities. And we in America have felt safe from and superior to these things. But are we so safe or superior?

The men in Congress must be conscious of their terrible choice. Their legal right is clearly established, but should they not think of their moral responsibility also? In their attempts to save the Nation from attack, they could well undermine the deep personal morality which is the Nation's final defense. The Congress is truly on trial along with Arthur Miller.

Again let me change places with Arthur Miller. I have refused to name people. I am indicted, convicted, sent to prison. If the charge were murder or theft or extortion I would be subject to punishment, because I and all men know that these things are wrong. But if I am imprisoned for something I have been taught from birth is a good thing, then I go to jail with a deep sense of injustice and the rings of that injustice are bound to spread out like an infection. If I am brave enough to suffer for my principle, rather than to save myself by hurting other people I believe to be innocent, it seems to me that the law suffers more than I, and that contempt of the law

and of the Congress is a real contempt rather than a legalistic one.

Under the law, Arthur Miller is guilty. But he seems also to be brave. Congress feels that it must press the charge against him, to keep its prerogative alive. But can we not hope that our Representatives will inspect their dilemma? Respect for law can be kept high only if the law is respectable. There is a clear and present danger here, not to Arthur Miller, but to our changing and evolving way of life.

If I were in Arthur Miller's shoes, I do not know what I would do, but I could wish, for myself and for my children, that I would be brave enough to fortify and defend my private morality as he has. I feel profoundly that our country is better served by individual courage and morals than by the safe and public patriotism which Dr. Johnson called the last refuge of scoundrels.

My father was a great man, as any lucky man's father must be. He taught me rules I do not think are abrogated by our nervous and hysterical times. These laws have not been annulled; these rules of attitudes. He taught me—glory to God, honor to my family, loyalty to my friends, respect for the law, love of country, and instant and open revolt against tyranny, whether it come from the bully in the schoolyard, the foreign dictator, or the local demagog.

And if this be treason, gentlemen, make the most of it.

Heroic Rescue in Surf

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Man Swims to Rescue of Girl in Undertow," published in the Greensboro (N. C.) Daily News. The article describes the heroic rescue in heavy surf of a 14-year-old Durham girl who was being pulled out to sea by an undertow.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE HUNDRED YARDS IN SURF—MAN SWIMS TO RESCUE OF GIRL IN UNDERTOW

ATLANTIC BEACH, May 20.—Jimmy Thompson, a young father of Route 1, Mebane, swam more than 100 yards in heavy surf yesterday and rescued a 14-year-old Durham girl being pulled out to sea by an undertow.

Thompson, about 25, was fishing on the Triple Eas Fishing Pier near here when he saw that Shirley Holder was in trouble.

He raced several hundred feet down the beach, plunged in, and made his way back to shallow water with the girl. She was unconscious. Artificial respiration revived her. She was taken to Morehead City Hospital for treatment of shock and exposure. The hospital said today that she was recovering nicely.

Shirley's mother and stepfather, Mr. and Mrs. J. R. Reams, were fishing on the pier while Shirley and friends went bathing down the beach. Scores of persons on the pier and beach saw the rescue.

The Fort Macon Coast Guard Base a mile away was notified and sent a small boat on a trailer pulled by a jeep. However, efforts to launch the boat were unsuccessful. It kept getting swamped by heavy seas kicked up by stiff southwest winds and a falling tide.

"If ever a man deserves a medal for heroism, Thompson does. It was the greatest display of courage I ever saw," said Barry West, manager of the pier.

Bank Mergers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following excerpt from an address by Harry J. Harding, honorary president of the Independent Bankers Association, 12th Federal Reserve District, and president of the First National Bank of Pleasanton, Pleasanton, Calif., at the annual convention of the Independent Bankers Association, at Miami, Fla., on April 27, 1957:

So that we may have something to shoot at, let me suggest an addition to any bank merger bill, along the following lines:

No merger shall be approved under this act, in cities of 10,000 or less population, when the result will be 2 or less banks located in the city in which the merging bank is located; nor in cities of more than 10,000 population up to 25,000 population when the result will be 3 or less banks located in the city in which the merging bank is located; nor in cities of over 25,000 population to 100,000 population when the result will be 4 or less banks located in the city in which the merging bank is located; nor in cities of over 100,000 population when the result will be 5 or less banks located in the city in which the merging bank is located. In each case, the population figures will be those of the last Federal census.

Nor shall any merger be approved under this act when the result will be that the merging bank will hold more than 30 percent of the total banking deposits of the area in which the merging bank has offices.

Let's kick this around for awhile. I don't want you to say you are for this, or that you are opposed. I would like to have you think of the arguments both for and against such a proposal, so that we may carefully study them and weigh them. You may feel that the criteria specified in this suggestion are not realistic, but can you think of better yardsticks than the ones suggested. Do you think that we ought to have any yardsticks other than the discretion of some Federal agency?

The yardsticks I have suggested are no more arbitrary than the existing requirements as to the capital necessary for the establishment of a new bank, or of a merging bank. The prevention of undue concentration of banking control is just as much in the public interest as the limitations on the loans that a bank can make. As to the argument that mergers should be left to the discretion of a supervisory agency, this, in my opinion, could apply equally as well as to the capital requirements for a new bank.

Let's not say it can't be done, but rather ask ourselves, should this be done? I am convinced that it is either a ceiling—or destruction to our independent banking system.

One Hundred Million Dollars in Surplus Foods Sent to Needy by United States Religious Faith Groups

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. FULTON. Mr. Speaker, it is a real pleasure to congratulate for their fine record of human service in their relief programs, the Catholic Relief Services, the National Catholic Welfare Conference, as well as the Church World Service, the National Council of the Churches of Christ in the U. S. A., and also the United Jewish Appeal, and the Synagogue Council of America.

These agencies have achieved the high figure of $100 million in surplus foods sent to needy by United States religious faith groups, and handle 91.3 percent of all commodities distributed to hungry abroad by United States voluntary agencies. All United States voluntary agencies have joined in this magnificient evidence of the religious and humanitarian activities of the good American people and their church and charitable organizations.

American overseas relief agencies of the Roman Catholic, Protestant, and Jewish faiths distributed more than 1,140 million pounds of United States surplus foods free to destitute and hungry people abroad during the 9 months ended March 31, 1957.

These supplies of America's stocks of reserve foods—cheese, powdered milk, beans, corn, rice, wheat, cornmeal and flour—comprised more than 91 percent of all such surplus foods distributed by all American voluntary relief groups during the period.

The overseas shipments by the religious agencies had a total value of $99,895,942.

Other surplus stocks similarly distributed by nonreligious voluntary agencies amounted to 108 million pounds, with a value of $14,184,256.

Of this, the largest amount—nearly 101 million pounds valued at $13,294,899, or 8.09 percent of the total was distributed by CARE—Cooperative for American Remittances to Everywhere, Inc.

In addition, 61 million pounds of dried milk valued at $9,605,040 were distributed through UNICEF—United Nations Children's Fund.

This has been reported by the American Council of Voluntary Agencies for Foreign Service, 20 West 40th Street, New York City, which is composed of 40 agencies registered and recognized by the United States Government. The report is based upon data issued by the United States Department of Agriculture.

In all, the United States Commodity Credit Credit Corporation Corporation released 1,310 million pounds of food valued at $123,685,000 for free distribu-

tion overseas by voluntary agencies during the 9 months.

During the same period, the CCC released approximately 750 million pounds of surplus commodities for distribution to needy persons in America through various State welfare projects, institutional programs, and so forth.

Operation of the overseas free food distribution by the religious faith groups was carried out in addition to their regular, on-going, worldwide schedules of relief and rehabilitation through which contributed and purchased foods, clothing, bedding, medicines, and self-help supplies are furnished and through which are maintained continuing programs of resettlement, constructive development, and assistance for refugees as well as support for orphanages and hospitals, tuberculosis, and other health projects.

In the assisting of the United States surplus food distribution, the faith groups utilize the networks of their own voluntary relief personnel and that of associated religious agencies.

Because of the highly voluntary nature of their assistance both here and abroad, religious faith leaders report, the faith agencies achieve an extremely high rate of distribution per dollar of cost, with much more than 200 pounds of food—in many cases more than 400 pounds—being given to relieve human misery for each dollar expended in their programs.

Costs of the surplus operations of the religious faiths are defrayed by the voluntary contributions of their members. In Protestant churches the contributions are largely through the one great hour of sharing, united appeal, and the share our surplus programs. In the Roman Catholic Church the programs are implemented through the bishop's relief fund. The Jewish faith operates successfully their large programs through the emergency rescue fund of the United Jewish Appeal as well as other Jewish relief programs. These agencies have proven devoted, efficient, and highly effective, and are to be complimented on their heartwarming approach to the problems of relief, refugees, and family aid and rehabilitation.

Surplus commodity shipments by American voluntary agencies during the 9 months—July 1, 1956, to March 31, 1957—were:

	Total pounds	Dollar value
RELIGIOUS AGENCIES		
American Friends Service Committee	6,129,220	$929,641
American Jewish Joint Distribution Committee	8,584,700	559,290
Assemblies of God Foreign Service Committee	973,000	96,274
Catholic relief services, National Catholic Welfare Conference	796,802,300	65,378,021
Church World Service	249,866,366	23,171,056
Hadassah	1,462,766	375,137
Lutheran World Relief	72,997,047	9,063,114
Mennonite Central Committee	2,103,000	185,644
Unitarian Service Committee	377,700	80,255
World Relief Commission	916,555	87,510
Total	1,140,302,653	99,895,942
SECULAR AGENCIES		
American Friends Austrian Children	826,000	$111,040
American mission to Greeks	471,600	65,957
American Korean Foundation	240,000	15,576
CARE	100,985,145	13,294,899
Foster Parents' Plan for War Children	394,110	73,849
International Rescue Committee	720,000	98,360
Iran Foundation	1,992,070	216,658
Rumanian Welfare	1,170,000	151,206
Tolstoy Foundation	90,000	25,200
United Lithuanian Relief Fund of America	947,000	90,091
Volunteer Border Relief	298,000	30,260
Russian Children's Welfare Society	72,000	11,160
Total	108,205,925	14,184,256
Total, religious and secular agencies	1,248,508,578	114,080,198
United Nations Children's Fund	61,968,000	9,605,040
Total	1,310,476,578	123,685,238

Areas receiving United States shipments included Afghanistan, Algeria, Antigua, Austria, Bahama Islands, Belgium, Bolivia, Brazil, British Guiana, British Honduras, British Virgin Islands, Burma, Cambodia, Ceylon, Chile, Colombia, Costa Rica, Dominica, Ecuador, Egypt, England, Ethiopia, Formosa, France, French Guiana, French West Africa, Gambia, Gaza, Germany, Goa, Gold Coast, Greece, Grenada, Guadaloupe, Guatemala, Haiti, Honduras, Hong Kong, India, Indonesia, Iran, Iraq, Israel, Italy, Jamaica, Japan, Jordan, Kenya, Korea, Laos, Lebanon, Liberia, Libya, Malay States, Malta, Martinique, Mexico, French Morocco, Nigeria, North Borneo, Nyasaland, Okinawa, Pakistan, Panama, Paraguay, Peru, Philippine Islands, Portugal, St. Kitts, St. Helena, St. Vincent, San Salvador, Sarawak, Sierra Leone, Spain, Surinam, Syria, Thailand, Trieste, Trinidad and Tobago, Tunisia, Turkey, Vietnam, Yugoslavia.

Real Brotherhood

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely editorial which appeared in the Daily Evening Item, Lynn, Mass., on May 20, 1957:

REAL BROTHERHOOD

There was no segregation at the bottom of a 24-foot well excavation in Manorville, N. Y., last Friday night.

There was no question of any superiority of any race when Sam Woodson, a Negro construction worker, lifted 7-year-old Benny Hooper, white, from the sandy pit in which he had been trapped nearly 24 hours.

On the same day when thousands of persons gathered before the statue of Abraham Lincoln in the famed Lincoln Memorial in Washington, D. C., to pray for racial justice and civil rights legislation to protect American's minorities, Sam Woodson was giving a dramatic demonstration that Negro and white man are brothers under the skin when emergency arises.

Sam Woodson, a humble, God-fearing, prayerful man, risked his own life to bring the Hooper boy to safety and return him alive to his grief-stricken parents.

There was no white council in that well pit. There was no talk of keeping the Negro in his place. All that was wanted was a stout heart and strong arm to snatch a blue-eyed boy from death.

Sam Woodson supplied both.

With a prayer on his lips and trust in his Almighty God who made men of all races and colors, he effected a rescue while the whole Nation waited with bated breath.

How Mr. Lincoln would have loved Sam Woodson.

The Plywood Industry

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Plight of Plywood," which appeared in the Florence (S. C.) Morning News on May 17, 1957. This outstanding newspaper is edited by Mr. James Rogers and is published by Mr. John O'Dowd.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PLIGHT OF PLYWOOD

"If, by some magic, a man could take steps 200 feet long and were to walk across South Carolina with such strides, from the mountains of Oconee and Pickens Counties to the Coastal Plain, he would set foot down into forest with every other step. Over three-fifths of the surface of the State is covered with trees; about 62 acres out of every 100 are forest clad."

That is the opening statement in the 1957 edition of South Carolina Forest Facts, published by the South Carolina Forest Industries Committee in cooperation with American Forest Products Industries, Inc.

Only in 10 of the State's 46 counties is the percentage of forested land less than 50 percent of the total land. Only one county in the Pee Dee—Marlboro, with 49.1—has less than 50 percent of the total land in forests.

The wealth of our forest resources is still one of the cardinal virtues of our land. Yet the South Carolina coastal plain, in particular, is in trouble forestwise. A principal industry is the plywood industry. South Carolina hardwoods are among the best in the world. Yet plywood from South Carolina hardwoods must now face the competition of plywood from Japan where labor is so cheap that American manufacturers, paying a $1 per hour minimum wage, are at a virtually impossible disadvantage. Here in the Pee Dee where the veneer and plywood industry has been a profitable industrial operation for many years, manufacturers are finding it more and more difficult to survive in the face of this foreign competition.

If we are to maintain the level of our forest wealth, it is imperative that legislative action be taken to control the competition which today is driving more and more domestic manufacturers of plywood out of business.

Lawrence Sunday Sun in Eloquent Tribute to Senator McCarthy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. LANE. Mr. Speaker, the late Senator Joseph R. McCarthy, of Wisconsin, will be enshrined in history, as one of the outstanding national figures of the 20th century.

He spent his talent and his strength to protect the United States which he loved so well, from its hidden enemies.

In the course of his crusade to expose treason and subversion, he won an enduring place in the hearts of millions.

Nowhere, outside of his home State, was his popularity greater than it was in Massachusetts, which embraced him as if he were a native son.

At the height of his meteoric career, when it seemed that he was fighting singlehandedly against the compromisers, the people of Lawrence, Mass., opened a store on the city's main street to accommodate the thousands who came to sign the petitions documenting public support of his mission.

Senator McCarthy will be honored in memory, long after other leaders are forgotten.

As evidence of the esteem and affection which he won during his vigilant and vigorous defense of our internal security, I bring to you the following appreciation of his public service. It is a thoughtful and inspiring editorial that appeared in the Lawrence Sunday Sun, Lawrence, Mass., on May 19, 1957:

IN RETROSPECTION

The tumult and the shouting over the death of Senator Joseph McCarthy have subsided but today, as he lies in his final rest, people still speak of him. Perhaps it is significant of his eminence in the thoughts of everyone during his career—and now—that, although the name Joseph McCarthy is by no means an uncommon one, whenever it was spoken everyone knew just which one was meant.

Senator "Joe" McCarthy was not just a political figure. He was a great American. Not only was he a combat veteran of World War II, but, after the war, he continued to fight with all his gifts and powers for his country.

He loved intensely all that was American. He hated with equal intensity any person or ideology designed to destroy America. Communists, pinks, and fellow-travelers who infiltrated our Government and Armed Forces attracted his special wrath.

With the zeal of a crusader, he worked to pry them out from under their rocks. The entire Nation should be grateful to him today in memory for the degree of success he enjoyed in that effort in spite of the cloak-and-dagger atmosphere in high places which sought to, and in many instances did, prevent him from tearing the masks from enemies of this country.

The worth of Senator McCarthy's service to the United States cannot be adequately appraised even today. Only time and the accumulation of the tomes of history will accomplish that.

He made enemies. Anyone who fights for the right attracts the condemnation of those who are affected by his actions. His enemies were furtive and bitter. Abuses were piled upon him. He was constantly under attack and much of this malediction came not only from the Communists but their friends and protectors in high positions in Government.

Little wonder that, in his nerve-wracking struggle to protect his country and defend himself, his health was affected to the ultimate.

Joe McCarthy, as surely as any man who died on the battlefield, gave his life for the land he loved. He went down fighting for freedom and justice for every one of us.

It will take a long time to find a person equally as patriotic and militant to replace him. His life has ended, but the work he did so nobly should be perpetuated and the enemies of our country everywhere run down and ferretted out with the same sublime fervor as was applied to that task by this truly great American.

Schools Come First

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times-Herald.

I heartily agree with the editor that the urgent need for new buildings for schoolchildren is as important as the doubtful need for new office buildings for the Members of Congress.

SCHOOLS COME FIRST

The House Education and Labor Committee has fortuitously recommended a 5-year program of Federal aid to school construction at the rate of $300 million a year. This is a little less than the sum requested by the President. Nevertheless, it is a considerable amount of money and, quite apart from the other arguments about Federal school aid, it may invite some scrutiny from economy-minded Members of Congress.

A comparison is hence in order. The House of Representatives is planning a new office building for its Members, in addition to the two now in use, at a cost of roughly $100 million. The Senate has a new building already underway at a cost of $20 million, excluding the cost of new tunnels to connect it with the Capitol.

Now, we do not in the least suggest that these new congressional buildings are not desirable. Congress has not been overly generous in providing office space for its Members. These buildings are needed, just as new schoolrooms are needed. But, as a matter of priority, Members might have a little trouble explaining things to their constituents if congressional needs were met while school needs were not.

There has been no recent increase in the number of Senators and Representatives; and none is anticipated unless or until Hawaii and Alaska are granted statehood. This is in marked contrast to the school situation. The school-age population of the United States has increased mightily during the past decade and will continue to increase for some years to come; right now, in fact, the public schools are overflowing with about 2¼ million children above their capacity. Denied classrooms, these children will be denied the opportunity for adequate education. When the question of additional rooms is considered, schoolrooms ought to come first.

Congress Did Not Intend Atomic Energy Commission To Be Chorus of "Yes" Men

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an editorial from Tuesday's Washington Post and Times Herald with which I wholeheartedly agree:

DISSENT ON THE AEC

It seems fairly obvious from the tenor of President Eisenhower's remark at a recent news conference that he is not thinking of reappointing Thomas E. Murray to the Atomic Energy Commission. This is in some way unfortunate, because Mr. Murray has made extremely valuable contributions in emphasizing the importance of small nuclear weapon development as well as in questioning assumptions of the Commission majority. Mr. Murray, whose term expires on June 30, is the only Democrat now on the Commission and the only remaining member who antedates the Eisenhower administration.

Possibly the President has been persuaded that Mr. Murray's views have become so polarized as to make him a factor for disharmony on the AEC. There might be some point to this if it were recognized at the same time that the opposite pole is represented by the Commission Chairman, Lewis Strauss, who also wears a second hat as special assistant to the President on atomic energy matters and hence tends to dominate the Commission. Messrs. Strauss and Murray are frequently if not perpetually at odds; and often Mr. Murray has been treated virtually as a pariah.

Structurally, the dual status which Mr. Strauss occupies is a monstrosity. It places him in a privileged position and results in the denial to his colleagues of information important to their work and decisions; it also tends to undermine the coequal status among the five Commissioners which Congress prescribed when it established the AEC. No one can doubt Mr. Strauss' dedication; and despite frequent past disagreements we think he currently is doing a good job of appealing for ratification of the treaty for the International Atomic Energy Agency (although Mr. Murray, who also supports the treaty, testified yesterday that he had not been consulted on the AEC decision). Particularly because of Mr. Strauss' dominant position, however, it is extraordinarily important to insure that other views will obtain adequate representation. Indeed, this has much to do with the recruitment of capable men for AEC positions.

Whether or not Mr. Murray is reappointed, rounded discussion and dissent have an

essential function in the management of the atomic energy program. The Atomic Energy Commission handles billions of dollars of public funds and determines policies that have a vital bearing on the lives of Americans. A slavish harmony on the AEC would be undesirable and even dangerous, and we trust that the President will have this in mind when he considers Mr. Murray's position as well as the still unfilled vacancy left by the death of the late Dr. John Von Neumann in February. Congress never intended the Atomic Energy Commission to be either a one-man show or a chorus of yes-men.

Arms to Tito

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Boston Daily Record on May 16, 1957:

ARMS TO TITO

The decision of the administration to resume shipment of weapons, including 215 jets, to Yugoslavia is clearly a calculated risk based on considerations of the realities of today, as opposed to the realities of last fall when the shipments were stopped.

It is a risk President Eisenhower has taken in the certain knowledge of an eruption of criticism in Congress and elsewhere. He could not have taken it lightly. It must have been based on information, not publicly available in the detail to which it is to him, that conditions in Yugoslavia warrant the gamble.

This newspaper does not like Yugoslavia's Tito. He is a Communist dictator. In fact, we were in the forefront of the movement last year to stop the arms shipments at the time Tito was snuggling up to the Kremlin and vice versa. We have been given to understand our influence helped stop them.

Since then there have been indications that Belgrade has moved sharply away from Moscow. We do not have the information to support the State Department's announcement that "intervening events have confirmed the President's basic finding that Yugoslavia is and firmly intends to remain independent." But we must assume the President has.

There are two other things to bear in mind. One is the shipments will be extended over the next few years "at a more modest rate than originally planned." The other is that the weapons are types "procured under programs drawn up in past years," and halted last October. Hence they cannot be new jets or the latest equipment of any kind.

As in all risks there is an element of danger. It would be equally dangerous in waging the cold war to permit a situation that prevailed last year to govern a decision now. It is from this perspective that we shall watch how the President's risk develops.

Speaking of risks, there would have been none whatever if the administration had sent those jets to strengthen our men and the ROK forces in South Korea. At his Tuesday press conference, Secretary Dulles said the administration is considering doing something to replace the obsolete equipment in Korea. This consideration has been dragging and dragging far too long.

Tribute to Hon. Earl W. Jimerson, President, Amalgamated Meat Cutters and Butcher Workmen of North America

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. PRICE. Mr. Speaker, on Sunday night, May 19, in New York City, the Honorable Earl W. Jimerson, president of the Amalgamated Meat Cutters and Butcher Workmen of North America, was guest of honor at a testimonial dinner attended by over 700 leaders of labor and supporters of the new State of Israel.

The large assembly paid tribute to the native of my home community of East St. Louis, and praised him as a great humanitarian and labor leader, who had contributed immeasurably over the years to the welfare of hundreds of thousands of American citizens and through all these years put above everything else emphasis upon recognition of the minorities.

I have known Earl Jimerson through my entire life. He was a leader in his home community before going on to higher positions in a labor of love—the Amalgamated Meat Cutters and Butcher Workmen of North America. He has brought honor and credit to his organization and has set a high standard of moral leadership. His long years of service in his organization through most of which he held the roll of leader are marked with integrity and honesty. His reputation for fine character and fair dealing is recognized not only among his associates in his organization work but by the leaders of industry, which are serviced by the members of his organization.

I am happy also to note that at this affair in New York last Sunday evening, Mrs. Jimerson was also honored and shared the tributes which were heaped upon her husband.

I was most happy to see this deserved recognition come to my fellow townsman and to my personal friend. This feeling is shared by every resident of the East St. Louis area, who has been privileged to know Earl Jimerson.

I include herewith an account of the testimonial written by Mr. Tom Duffy, editor of the East St. Louis (Ill.) Journal, which appeared in that newspaper on Monday, May 20, 1957:

SEVEN HUNDRED AND FIFTY HONOR EARL JIMERSON AT TESTIMONIAL DINNER

(By Tom Duffy)

Seven hundred and fifty leaders of labor and supporters of the new State of Israel paid tribute Sunday night to Earl W. Jimerson, an East St. Louis native who rose from the job of butcher in a grocery store to the presidency of one of the largest labor unions in the Nation.

Jimerson was the guest of honor at a testimonial dinner sponsored by the Amalgamated Meat Cutters and Butcher Workmen of North America which he has headed since 1942, management of meat, fur and leather industries of the Nation, and leaders in the drive to raise money for the State of Israel. At the dinner held in the Hotel Commodore here, it was announced that through the efforts of Jimerson, personally, and the union as a group, more than $750,000 had been raised for Israel and the ultimate total is expected to exceed $1 million.

EMPHASIS ON MINORITIES

Jimerson was lauded as a great humanitarian and a labor leader who put above everything else emphasis upon recognition of the minorities in the United States.

Among the speakers paying tribute to him were Patrick E. Gorman, secretary-treasurer of the Amalgamated Meat Cutters; William L. McFetridge, vice president of the AFL-CIO and president of the AFL Building Service International Union; Nick Kenny of the New York Daily Mirror who wrote the new state song of Israel; Col. Robert Henriques, of London, England, author of the book 100 Hours to Suez, and Joseph Kaufman, chairman of the Meat Producers Council of New York.

Among others at the dinner were Carmine DeSapio, secretary of the State of New York and the current leader of Tammany Hall; J. Raymond McGovern, former comptroller of the State of New York under Governor Dewey; Judge Charles F. Murphy of the New York Appellate Division, and various other eastern officials.

UNION VEEP WAS CHAIRMAN

Chairman of the dinner was Max Block, New York, vice president of the Amalgamated Meat Cutters, and the toastmaster was Maxwell C. Rabbock, editor of the Trade Union Courier of New York.

The theme of the testimonial not only was a tribute to Jimerson for his work in raising money for Israel, but a defense of labor as generally responsible for progress in the United States despite the current scandals unveiled in Washington and a rigid labor front-line support for the State of Israel.

Sharing the honors heaped upon Jimerson Sunday night was his wife, Mrs. Frances Jimerson, who was described by the speakers as the "first lady of the Amalgamated Meat Cutters Union."

Mr. and Mrs. Jimerson maintain their home at 760 Vogel Place, East St. Louis, although Jimerson's offices are located in Chicago. The Jimersons frequently commute between Chicago and East St. Louis.

Jimerson has been active in the butchers union since the union began organization work in East St. Louis prior to World War I. He was elected to his 15th term as president of the international union last June.

A $6½ million cooperative apartment project in New York City has been named in honor of Jimerson. The project, sponsored by the union, is under construction.

Economy in Government

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who's to Blame?" which appeared in the Bamberg (S. C.) Herald on May 16, 1953. This paper is one of our best edited and most attractive weekly newspapers in South Carolina. The editorial was written by Mr. Lewis Brabham, the editor of the Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO'S TO BLAME?

Senator BYRD, the "watchdog" of the Treasury says the people back home have it in their power to force Congress to cut the President's massive $72 billion budget for next year. It is quite true that not all of the blame rests on your Congressmen and Senators.

The people have come to look upon their Representatives in Congress as potential money-getters for their States. Whenever a matter comes up involving some millions for a State, the State's Representatives in Congress are expected to work to get the cash.

The average taxpayers want economy in Government; they want lower taxes, but when a pet project in which they are interested comes up they still want the money. The plea for economy applies usually to the other fellow.

Of course, you can't blame them when the money is being handed out with a shovel. They figure that if they don't get theirs somebody else will, and they are just about right. But when we begin to cut on a national scale, the cuts have to start with somebody's pet project, and there the trouble begins.

Senator BYRD is a big man of national stature. He has been known to decline projects which would have meant millions for his State of Virginia. But, by and large, the voters don't see eye to eye with him on such matters. "Our project calls for only a few millions, only a drop in the bucket," they argue, and they are entirely correct, except that when you multiply one project by the tens of thousands all over the country, you come up with a $72 billion budget.

Goshen News Honored

EXTENSION OF REMARKS
OF
HON. F. JAY NIMTZ
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. NIMTZ. Mr. Speaker, it is with genuine pride that I call the attention of my colleagues to the fact that one of the most coveted honors in the field of journalism has been won by a newspaper in the Third Congressional District of Indiana. The newspaper is the Goshen News, of Goshen, Ind., and the award was the 1957 Ayer cup for excellence in typography, makeup, and printing.

The Goshen News was chosen by the judges for this great honor in competition with 823 other newspapers of all sizes in the United States. Of particular note is the fact that the News, with a circulation of only 7,745, is the smallest newspaper ever to have won the Ayer cup.

Under leave to extend my remarks in the RECORD, I would like to include a letter of congratulations to Frank L. Haskell, publisher of the News, together with an article by R. C. Lehman, managing editor, which appeared in that newspaper under date of May 15, 1957:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 11, 1957.

Mr. FRANK L. HASKELL,
Publisher, Goshen News,
Goshen, Ind.

DEAR BUD: It was with extreme pleasure and pride that I read of the award of the N. W. Ayer cup to the Goshen News for excellence in typography. It is my understanding that you won this award in competition with 823 other newspapers in the United States.

Please extend to your staff my congratulations upon winning this award and bringing this great honor and distinction of the newspaper publishing world to the Third District of Indiana.

Kindest personal regards to you and the Goshen News family.

Sincerely yours,

F. JAY NIMTZ,
Member of Congress.

CONGRATULATORY EXPRESSIONS POUR IN TO THE NEWS FOR WINNING AYER AWARD

(By R. C. Lehman)

Ever since announcement was made a month ago of the awarding of the Ayer Cup for excellence in typography, makeup, and printing to The Goshen News, messages of congratulations have poured into The News office. They have come from every part of the country, from Maine to Texas and from Alaska to Florida. They have come largely from the publishers of other newspapers—professionals of the craft whose praise is especially sweet to our ears—but they have also come from representatives of every facet of the printing trade, from public officials, and from friends who have no connection at all with the industry.

There have been so far well over a hundred formal letters and telegrams in addition to the countless telephone calls and personal congratulations. They have come from some of the biggest newspapers in the Nation and from some of the smallest, from papers far away and from our neighbors here in Indiana. The volume of messages has been so great and the value and significance of the award has been so stressed in them that even we here at The News, who were really overwhelmed at receiving the award, are only now beginning to realize how truly great a distinction has been conferred on The News. The News was chosen in competition with 823 other daily English language newspapers by N. W. Ayer & Son, of Philadephia, as being the best, regardless of size, in typography, makeup, and printing. In other words The News was chosen as making the best appearance to the eye of any of the entries, which included many if not most of the largest newspapers published in this country.

ACCOUNTS OF AWARD

Many newspapers carried extensive accounts of the awards. The Christian Science Monitor was one which published a long account, together with a two-column 6-inch reproduction of the front page of the winning issue of The News and a history of the paper. The Monitor itself received third honorable mention for papers in its class of over 50,000 circulation. The News circulation is 7,745, and is the smallest newspaper ever to have received the top award. The Monitor was among those who sent a message of congratulations to The News.

Among other newspapers heard from were the New York Daily News, which has the largest circulation of any newspaper on this continent. Robert G. Shand, managing editor, sent his congratulations. And separately, from the White House correspondent of this same newspaper, Francis M. Stephenson, a onetime resident of Goshen and well known here, came another letter which said: "You not only put out a good looking paper from a typographical side but you publish one of the newsiest papers"

From closer at home was a letter from Philip Maxwell of the Chicago Tribune, extending congratulations, and another from Quentin P. Gore of the Chicago Sun-Times who said "It is a notable achievement." Barry Bingham of the Louisville Courier-Journal and the Louisville Times, said: "I feel sure that you must share my conviction that no newspaper can achieve maximum effectiveness unless its appearance makes an appeal to the eye of the reader. Your success in this direction in a community the size of Goshen is really outstanding."

FROM FAR NORTH

From Sitka, Alaska, came a letter from Franklin R. Hoff of radio station KSEW asking for a tape recording of an interview on the subject, stating that "we would not only broadcast this on KSEW but also send it to the four stations on the Midnight Sun network and the Northern Light Broadcasting Co. at Cordova. This must have been a great moment for the man who is responsible for the makeup that won the prize."

Franklin D. Schurz, editor and publisher of the South Bend Tribune, wrote: "I think you have an excellent newspaper and I am sure that it will continue to improve and grow in the future." From the same newspaper also came congratulations from Paul Neville.

W. L. White, of the Emporia (Kans.) Gazette, another famous newspaper, has asked for a copy of the prize-winning issue, and Charles Reynolds, news editor of the Des Moines Register and Tribune, who also has an Elkhart County connection, wrote: "It made me proud of my home area. I showed several issues of your paper to various people on our staff here and they agreed that you put out a neat, distinctive paper." Mr. Reynolds is a son of Mr. and Mrs. Robert Reynolds, of New Paris, and his wife is the former Frances Beck, of Goshen.

Some writers hinted a little wryly but good naturedly of feelings of jealously or envy. A. W. McCall, editor of the Daily Tribune at Grand Haven, Mich., a friend of the publisher of the News, wrote, "I thought you were going to bring your foremen up to this area sometime (to see how the Tribune operated.) Maybe it would be better if we came down to see you." Malcolm Bauer, associate editor of the Oregonian, at Portland, Oreg., wrote, "Congratulations on your winning the Ayer award. You have our respect and envy." Dale Stafford, editor of the Daily News at Greenville, Mich., said, "For years I have been entering newspapers and to date I haven't received an honorable mention, so I know how difficult it is to get the prize." John Stingle, of the Los Angeles Examiner, wrote, "Congratulations on your achievement from one of the losers," and a communication from the Manchester Evening Herald, Manchester, Conn., is signed "Jealously, Louis Mandell, news editor."

LETTER FROM GOVERNOR

Harold W. Handley, Governor of Indiana, wrote to the editor of the News that "It is with a great deal of pride I read that an Indiana newspaper, the Goshen News, has been awarded the coveted Ayer Cup for typographical excellence. Please convey my heartiest congratulations to all members of the News family for the vital part each has played in bringing national recognition not only to your newspaper but to the community and State it so proudly represents."

Another letter of congratulations also came from F. JAY NIMITZ, the Indiana Third District's Representative in Congress.

The Communist Menace

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Real Harm," from

the New York Journal-American of May 15, 1957. The editorial deals with the trial of alleged Communists.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REAL HARM

In some recent decisions involving Communists in this country, the Supreme Court has been engaging in legal calisthenics, consisting chiefly of bending over backwards.

The Court would call this a lay opinion, meaning we are not attorneys versed in the subtleties of law. Conceded. But we're pretty well read up on the subtleties and dangers of the Communist conspiracy, and we're fed up with decisions that strain at technicalities.

By a 6–2 finding Monday, the Court ordered a new trial for two men and a woman under prison sentence for hiding a convicted Communist leader in a mountain cabin in California.

After FBI agents closed in, with search warrants for two of the persons, they took with them articles they found there. The stuff was carefully inventoried. It consisted of such things as pipe cleaners, salve for athlete's foot, a nightgown, and a pair of dungarees.

Because the material was transported to San Francisco, the majority of the Court held it constituted "illegal seizure" and ordered a new trial.

The two dissenters, Justices Harold H. Burton and Tom C. Clark, held to the belief that if any items actually admitted into evidence were illegally seized, "their effect should be governed by the rule of harmless error since there was ample evidence of guilt otherwise."

Maybe, on second thought, ours is not an amateur's opinion after all, particularly when you compare the technicality of a "harmless error" against the immeasurable harm this country invites by softening our defenses against the Communist conspiracy.

There was an expression used in the last war, "giving aid and comfort to the enemy." We never saw a more fitting example than in this type of decision.

And, of course, the taxpayers will foot the bill for the new trial.

Foreign Aid Hearings at Gary, Ind.

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. MADDEN. Mr. Speaker, a subcommittee of the House Foreign Affairs Committee conducted one day of hearings on the mutual aid program yesterday at Gary, Ind. Forty-two witnesses testified. The following is testimony of H. B. Snyder, publisher of the Gary Post Tribune:

OUR INTERNATIONAL RELATIONS

I think we all agree that American security has more meaning to us, all of us, than any other problem. Our differences seem to be based on the way we see it. There are still a few stone age people who think we can be safe merely by retreating behind our oceans and letting the world go hang.

However, once people's minds are probed there are very few stone age people left. Even those who insist on cutting the budget to bedrock usually think it can be done without danger to Americans, while many of them will, if pressed, admit that we cannot be quite safe if we make no effort toward responsible world leadership.

Unfortunately, we are in one of those periods when for the moment a lesser problem has been substituted for the major one. Without understanding the implications men are saying that money is more valuable than national security. Of course, they know better.

Unquestionably, the rising budget is a problem of the most serious consequences. Actually there is a limit somewhere beyond which a free government cannot go in taking the income of its free citizens. I don't know where that limit is, and I think no one else does.

But the fact there is a limit indicates the utmost effort must be made, not only by government but by the people themselves, to hold down governmental costs. Those costs are too high for our domestic well-being, but no cost is too high if it prevents war.

It would be easy for any of us to say what should or should not be done if we knew what would or would not lead to war. But no one knows. No one can know. And even if someone did he has no means of doing anything about it. Only the Government can lead and only the executive department of the Government can get all the available facts and frame a policy of procedure.

Americans have always acted under that belief even if they did not quite understand why. Politics shall not go beyond the water's edge is an old American belief. We have realized our interests require a single program under one leadership in international affairs. And we are no different from other nations.

What then should our policy be about those relations? It should be to follow the leader who alone can speak for all of us. It should be to provide him the money he says he needs to carry out the program he thinks will give us security—or as much security as can be obtained.

I spend a great deal of time reading about international relations, and I'll admit I don't know how much we should spend nor how we should spend it. I don't have the knowledge of the President, and neither does anyone else outside of the executive department of the Government.

I don't agree with some of the acts of our leaders. Recently, I am afraid, we have made some serious mistakes, but all leaders make mistakes, and we can only hope they will be able to retrieve their losses, if they really turn out to be losses. But I don't see how we can have any hope for the future if each one of us tries to go his own way, particularly if we are misled by a momentary hysteria about money. Let me say the hysteria has a sound basis but that is no reason for not seeing it for what it is.

I have no doubt whatever that American security is tied up with world security. We are not living alone, and we never can live alone. To some extent we are our brothers' keepers, chiefly because if we are not, some wild men will take over the job, and they will cease being our brothers, in fact become dangerous enemies. We have too many enemies in the world now. We cannot afford to create others through simple neglect or through a false fear of bankrupting ourselves.

I realize one should be careful in supporting careless expenditures of public funds. Waste of public money is a crime against the individual, society, and Government. Every wasteful dollar should be squeezed out of the budget. The Hoover Commission reforms should be carried through completely. The Defense Department should be investigated by an American "royal" commission of the highest caliber in order to assure civilians that our military services are not competing against each other to their and our detriment and that the admirals and generals do know the value of a dollar, an idea that is subject to general civilian disbelief.

Furthermore, we should be sure that this Department which some people thing is spending us ragged is not fighting the last war and has a sound doctrine fitting the needs of the day and a program of development that will carry out the doctrine. Too many battles and wars have been lost because the generals or the politicians above the generals have failed to understand what they were preparing for. If we want to save money, why not attack the problem where the money is thickest? If we intend to save our country, why not be sure we have a Defense Department that understands the thinking, strategy, and tactics of today's problems and today's and tomorrow's weapons?

Finally, why not attack pork, not the pork on the hoof but that in the barrel? With so many special-interest snouts in the trough, it is no wonder the trough is nearly empty. All of us need to put first things first, and never has this fact been more certain than in this atomic age. Either we use our brains or we perish.

The Need for Schoolhouses

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "The Pot Calls the Kettle Black," from the Boulder, Colo., Daily Camera of May 18, 1957. It deals with the question of the need for schoolrooms and schoolhouses.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE POT CALLS THE KETTLE BLACK

In an effort to put facts on school construction needs before the public, we have occasionally quoted figures compiled by the United States Chamber of Commerce, along with statistics from numerous other sources. Most of the chamber's statistics have been based on official figures of the United States Office of Education.

Despite this fact, the chamber's compilations on classroom needs compared with classroom construction have been disputed by proponents of Federal aid for education. Latest dissent coming to our attention appears in the May issue of the NEA (National Education Association) Journal. On pages 322–325 of that issue the chamber is accused of statistical manipulations.

The NEA Journal reproduces a chamber of commerce chart showing that classrooms constructed in the past 10 years greatly outstripped enrollment increases. The chart shows that increased enrollment required 290,000 new classrooms and 470,000 were actually constructed. The magazine says the chart is misleading because it overlooks three major factors—backlog: the number of needed classrooms, as yet unbuilt; replacement: need to replace obsolete, hazardous, damaged, and destroyed structures; and overcrowding.

It looks to us like a case of the pot calling the kettle black. Here is what the NEA Journal overlooks in its attack on chamber statistics:

From the reproduced chart the Journal omits this line which appears on the original: "Source: Figures on school construction

and school enrollment—United States Office of Education."

The Journal overlooks the chamber's observation regarding its chart and the difference between 290,000 classrooms needed by increased enrollment and 470,000 classrooms built: "It should be recognized that this overage was used to absorb accumulated shortages left over from the depression and war years, and to replace obsolete buildings."

While it is somewhat disturbing to see so revered a publication as the NEA Journal attempting to prove the chamber of commerce's alleged distortion of facts by substituting its own distortion, the basic point brought out by statistics should not be missed by the taxpayers. That point is that most States and localities have rallied to the challenge of need and have substantially stepped up classroom construction in an effort to meet this need.

Secretary of Health, Education, and Welfare Oveta Culp Hobby testified 2 years ago that there was a deficit of 312,000 classrooms in 1953. She forecast then that this shortage would be cut to 176,000 by 1959–60.

By fall 1956—3 years ahead of the 1959–60 school year—that deficit had been cut to 159,000, according to figures of the United States Office of Education. The acceleration of construction to meet need has demonstrated that States and localities are well able to take care of school building needs and most of them are doing it.

The NEA Journal sets needed classrooms for the 1956–57 school year at 159,000, using the United States Office of Education figure. The publication sets the 1957–58 need at 180,000 and the requirement for 1958–59 and 1959–60 combined at 68,000 classrooms.

The Journal estimates construction with State and local funds for each of these 4 school years at 60,000 classrooms. The Journal ignores the fact that the construction rate has been on the increase during the past 10 years. It also ignores new construction plans as reflected in recent school-bond sales.

William M. Adams, chairman of the municipal securities committee of the Investment Bankers Association, has come up with some facts that completely scuttle the proposition that States and localities can't or won't meet their school-construction requirements.

Bear in mind that the official United States Office of Education estimate of need for 1956–57 was 159,000 classrooms. From the time of that estimate to the end of January 1957, 69,200 classrooms were already scheduled for completion. School bonds in the same period sold at a rate, which projected throughout the school year would provide for approximately 96,600 classrooms in addition to those scheduled for completion. The classroom figure was arrived at by figuring 30 pupils to a classroom at $1,000 per pupil, a computation generally used by the United States Office of Education as a minimum.

This projection did not take into consideration the many millions in additional school bonds that will be passed by local voters this year, which could easily cover any deficit remaining.

These statistics, which should be far more reliable than the haphazard estimates of need as compiled by the United States Office of Education and the arbitrary rate of construction set forth in the NEA Journal, reflect no crisis in school construction. Even the National Education Association's estimate that 840,000 school children are attending school on a half-time basis reflects no crisis. That figure is only 2.6 percent of the 32,339,000 children in school.

If there is any valid excuse at all for Federal aid for school construction, it is crisis—genuine emergency. The facts do not indicate crisis except in a handful of unusually poor and scattered counties. This has been shown even in so-called hardship States, none of which is actually unable to take care of its schoolchildren.

Federal aid means Federal control. High officials in the United States Office of Education have said so.

Federal aid also means a waste of tax money. Subsidy payments by the Government in other areas of so-called hardship have shown how the dollar diminishes when it takes the route of Federal red tape.

Since local school boards have done a good job running our schools throughout our history, we don't want Federal control, which dictates how and what our children are taught.

Since States and localities have stepped up construction to meet needs, we don't need Federal aid.

Since the Government produces no wealth, it can give the people "free" money only after it has taken that money from them. Such free money is not only shrunken money. It is also the price paid for our birthright of locally controlled schools, which have played so significant a part in the greatness of our country.

Is This Bedrock?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Boston Daily Record on May 13, 1957:

IS THIS BEDROCK?

There is a real conflict over the size of the Eisenhower budget, particularly the requested appropriations for foreign aid, and it is salutary that the President will explain his stand to the people in radio and TV addresses.

The stand is that $3,880 million is a bedrock figure for foreign spending. Any further reduction—the President previously and voluntarily agreed to a cut of $520 million—would endanger world peace.

We find it hard to see just how anyone can fix upon X number of dollars and say that here world peace ends and world conflict begins.

Many Members of Congress also do not understand and Treasury Secretary Humphrey still is on record as warning that if we do not stop spending ourselves blind we will have a "depression that will curl your hair."

There is another side of the story as far as peace is concerned.

Secretary Humphrey and Senator HARRY F. BYRD, of Virginia, both are thinking of this side: A weakened and insolvent America would be no bulwark for peace but would only invite aggression.

Senator BYRD calls the Eisenhower spending plans "a luxury budget on a global basis.

"While we may regard ourselves as the most powerful force in the world," he warns, "it should be remembered that other nations also have been powerful and dominated much of the world in their day. But history records that many of these nations destroyed their position by assuming burdens beyond their capacity."

When we think of our strength, we must also think of a direct Federal debt of $275 billion—equivalent to the full assessed value of all the land, buildings, machinery, livestock, and everything of tangible worth in the United States.

We must also think of State and local public debts of $50 billion and private debts of $466 billion.

These are not items of strength. They could be catastrophic in a new emergency, whether domestic or international.

We do not question for a moment that the President, sincerely dedicated to the preservation of peace, believes his program is bent to that end.

But the other side of the coin must be considered. Are we spending ourselves into weakness and further inflation?

The people should have that side of the argument before them, as clearly as President Eisenhower states his own philosophy.

It would be a good thing if Senator BYRD could speak to the people on an "equal time" basis.

Shoulder Weapons for the Ground Forces

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. BOLAND. Mr. Speaker, the Secretary of the Army, Wilber M. Brucker, announced on May 1 last that the Army had standardized a new shoulder weapon for the ground forces, the T–44 rifle which was developed at the Springfield, Mass., Armory. This new rifle is now designated as the M–14, and it replaces the famous M–1 Garand weapon.

I would like to have printed with my remarks in the RECORD a news story from the Springfield Daily News of May 10, 1957, detailing the role that the Springfield Armory played in the research and development of this new rifle.

Also, I would like to include two other news stories from the Springfield Daily News on May 17, 1957, which tell the story of the last M–1 Garand rifle to be produced at the Springfield Armory, and how the inventor of the M–1, John Garand, was a witness to the event.

The news stories follow:

[From the Springfield Daily News of May 10, 1957]

ARMORY EXPLAINS HISTORY OF DEVELOPMENT OF NEW RIFLE BY RESEARCH UNIT—TEAMWORK OF MANY BRAINS PRODUCED THE T–44 AFTER YEARS OF GRUELING FIELD TESTS IN THE ARCTIC AND TROPICS

Right now there are only 550 M–14 (T–44) rifles in existence, all of them stored at Springfield Armory. In a few short years there will be need for millions more. Enough to be carried by more soldiers and marines than any other military weapon in the history of modern times.

It's quite a manufacturing jump from a half thousand weapons into the millions for use of American forces and NATO troops, but the local gunplant has that answer—the team that designed and created the revolutionary lightweight fully-automatic shoulder piece which over 10 years of abuse and weather testing outstripped all its competitors.

That team worked in such close harmony on the creation of this versatile weapon which will replace 3 in present use that no 1 man could be credited with the creation and development of the T–44.

With the cooperation of Col. D. G. Ludlam, commanding officer of the Armory and the

public information office at the gunplant, the 9 living men who led the research and development, the industrial engineering and the production engineering were brought into 1 room for a Daily News interview yesterday.

As questions on the birth of the new piece were answered it was obvious to an outsider that the answers had to be formulated by more than 1 man because a number of them had meshed their efforts together to try and answer the requirements made just 10 years ago by the "customer."

That "customer" happens to be Uncle Sam and when the Government's top military men and arms experts line up specifications for a new weapon gathered from actual field operations and wartime experiences, they set deadline dates to meet.

The high pressure operation gives an indication as to the reason why one man couldn't tackle the job and come up with an "Eureka, I found it" conception of a daring new small arms.

Deadline dates by higher authority and new specifications for futuristic weapons are constant at the local gunplant and even now, in the research and development division at the Armory, the successor to the M–14 or T–44 is being worked over.

It was in the research and development division when reports seeking improved characteristics of a small arms weapons came in about 1945 from no less a military authority than the late Gen. "Vinegar Joe" Stilwell of World War II fame in the China-Burma-India theater of operation.

A lighter rifle than the M–1 Garand was needed and later specifications began including a search for a rifle that could replace three in use by American troops.

As head of the rifle section of the Armory the late Lloyd S. Corbett, of East Longmeadow, who died a few months ago, led the program to work out the idea that was to become the T–44 and now the M–14 or M–15, designations depending on the weight of the barrel used.

In 1947, Research and Development, under the leadership of such experts as H. F. Hawthorne, acting chief of Research and Development, E. M. Harvey, chief of light weapons development, and Stanley W. Fish, chief light weapons, had a prototype that was ready for project-control testing at Aberdeen Proving Grounds, Md., and then at Fort Benning, Ga.

At that time, the T–44 had as competitors in the race for M–1 successor, the T–47, a Springfield Armory entry also, the EM–2 British rifle, and the T–48, a Belgian rifle, manufactured here by Harrington & Richardson in Worcester.

The grueling field tests in the Arctic and in the tropics, reduced the race to two possibilities, the T–48 and the T–44.

An order for 500 T–44s brought into play the talents of Lt. Col. C. S. Campbell, chief of Plans and Operation, and J. D. Finn, civilian executive assistant, who handed down the orders; R. S. Henry, Engineering Division, acting chief of rifle section, V. A. Luukkonen, acting chief of the Engineering Division, who had to create the blueprints of parts and recommend the most economical and best tolerances and materials to make the gun, on a mass production basis.

Then came the work of finding the dies, the jigs and the tools to make the weapon on a pilotline basis. This was in the field of experts like George Mackintosh, deputy chief of Armory operations, and W. H. Hayes, chief of production engineering office more simply AOD.

The team operation was as close as the movements of any football or basketball team and there was not always a division of effort that might be indicated by the above comments.

The end result is a .30 caliber weapon, a shorter and lighter rifle without sacrificing any velocity of the bullet which will fire 20 rounds without reloading either semiautomatic or automatic. The M–1 Garand fired eight rounds without reloading so the improved firing capacity is obvious.

Economy was an essential of the development of the T–44. Ninety percent of the present M–1 assembly lines can be used in the production of the rifle when the go ahead call comes.

Improvements in the rifle will go on even before mass production worked out by this team of leaders and their aids who have made the Armory the small-arms center of the entire free world.

Because of the work of these men and the employees at the gun plant, private companies could make the T–44 on a package operation that would spell out even the smallest tool to be used.

[From the Springfield Daily News of May 17, 1957]

ARMORY MAKES LAST M–1 AFTER 20–YEAR PRODUCTION

INVENTOR GARAND ON HAND FOR QUIET CEREMONY AS ASSEMBLY LINE IS STOPPED

As thousands of Springfield area visitors flocked through the gates of venerable Springfield Armory to see open-house exhibits this morning, a truly historic moment in the development of American military arms took place.

In building 20 at the gun plant, armory civilian and military officials and craftsmen watched the last M–1 Garand rifle taken off the assembly line.

The end of manufacturing of the rifle carried by World War II and Korean war fighters took place at 10:43 a. m. when rifle No. 6084405 was run through final assembly.

On hand for the event, which will silence this assembly line until orders for the newly adopted T–44 or M–14 comes from Washington, was John Garand, the man whose genius made the M–1 possible. With him were Brig. Gen. Jean E. Engler, chief of the industrial division of the armory; Col. E. R. Light, of the Office of the Chief of Ordnance; Col. Douglas Ludlam, commanding officer of the armory and Col. Maurice Driscoll, commanding officer of the Springfield Ordnance District.

The number of Garands manufactured at Springfield has run into the millions since 1937, when the first mass-produced M–1's started rolling off the assembly lines. Gunmen said it would be difficult to fix an exact number since some of the rifles were made in private industry.

With work continuing on such weapons as the M–39 aircraft machinegun, the T–171 Vulcan air cannon, and the M–60 lightweight machinegun, the end of Garand production will not mean any change in the present 2,500 work force, armory officials said.

If Mr. Garand, now retired and an occasional visitor to the armory, felt any emotion witnessing the end of full-scale manufacturing of his weapon, it couldn't be noted.

He stood quietly with a group of officers and civilians around a gun rack. He left with the officers to look over the exhibit of rifles at the main arsenal.

[From the Springfield Daily News of May 17, 1957]

GARAND SEES LAST NAMESAKE ROLL OFF ARMORY PRODUCTION LINE

Modest John Garand, the Springfield man whose genius attracted worldwide attention through his contribution to military small arms, today termed the adoption of the fully automatic T–44 to replace his Garand rifle as a "fitting and necessary step."

He attended with a group of officers and top civilians the turning out of the last M–1 rifle for general field purposes at the local gun plant.

A soft-spoken man, immaculately dressed, and quick on his feet, Mr. Garand refused to make any comment on how much of a part he played in the development of the T–44, fully automatic rifle which is to replace the M1 for use of American and NATO troops.

If the almost legendary gun maker refused to discuss his role in making the new rifle possible, others close to armory production claimed that the part he played was a significant one.

Ninety percent of the assembly line making the Garand can be converted to make the versatile T–44, it was pointed out.

Mr. Garand, in brief comments while he waited for the photographer to take pictures of him holding the last general purpose M1, said that the need for a smaller cartridge was obvious and was now being fulfilled by the new weapon.

The T–44, which can fire a clip of 20 rounds without reloading, uses a smaller bullet and smaller sized parts to cut down on the rifle weight.

Foreign Aid

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a letter which appeared in the New York Times on May 7 written by Mr. Elgin Groseclose of Washington, D. C. It is a very interesting letter and comes at an opportune time as hearings begin on the Mutual Security bill today.

The letter follows:

EXTENSION OF FOREIGN AID—NATIONAL INTEREST AND CONCERN FOR LESS FORTUATE HELD ANTITHETICAL

(The writer of the following letter, an economic consultant, served as Treasurer General of Iran during World War II and is presently president of Welfare of the Blind, Inc., a Christian agency for the sightless of the Middle East.)

To the EDITOR OF THE NEW YORK TIMES:

The perplexity among the electorate over the foreign aid program, the waste and confusion in administration and the dubious results to date are all explainable in the light of Stanley Stuber's letter in your April 28 issue. Mr. Stuber, a concerned Christian and church official, argues for foreign aid on two grounds: national interest and Christian concern for less fortunate peoples.

Both are appropriate motives, but mutually exclusive. You cannot combine disinterested benevolence and self-serving national diplomacy in the same program. It cannot be for both God and Caesar. And from this attempt comes the split personality of foreign aid and the public confusion. Administrators too often spend the public funds abroad as though they were provided by the ravens. A billion dollars a year is spent for "defense support" which no one understands. Former Ambassador Norman Armour, commissioned by the Senate Foreign Relations Committee to examine the aid operations in Greece, Turkey, and Iran, reported that "defense support resembles a fund out of which any mission can draw for almost any purpose."

LIMITING BENEVOLENCES

Church organizations which officially urge that foreign aid be extended to underdevel-

oped countries through Government-financed programs, as an expression of American Christian concern, should realize the constitutional limitations on Government appropriations for foreign benevolences. As Charles A. Beard, in the Republic, quoting Justice Joseph Story, points out, foreign benevolences as public policy are beyond the powers of the Federal Government.

Moreover, church people, if they would follow the teachings of Jesus, would concentrate more on promoting aid to the unfortunate peoples of the world through their own church missionary societies rather than through taxation which must be borne by many who do not share this Christian conscience or who may believe that the funds should better be spent on the unfortunate peoples of our own country, such as the neglected mountain people, slum dwellers, and Apache children.

Finally, the church is much more competent at the job than Government. It costs the churches about one-tenth what it costs the Government to maintain personnel overseas, and the results achieved by the missionaries are immeasurably greater than those of the ICA.

ELGIN GROSECLOSE.

WASHINGTON, *April 29, 1957.*

The Honorable Carl Vinson

EXTENSION OF REMARKS
OF

HON. STERLING COLE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. COLE. Mr. Speaker, on yesterday, the Secretary of Defense, Mr. Charles E. Wilson, was host to the members of the Armed Services Committee of the House, members of the Joint Chiefs of Staff, and other distinguished persons in the field of aviation, at a luncheon in his office at the Pentagon to provide an opportunity for the National Aeronautic Association to present the Elder Statesmen of Aviation award to our distinguished colleague, the Honorable CARL VINSON, chairman of the Armed Services Committee of the House.

It was my privilege to be present on this occasion and join with my colleagues in paying tribute to our great chairman.

After preliminary introductory remarks by Thomas Lamphier, president of the association, a eulogy of Mr. VINSON was made by Mr. John F. Victory, chairman, Committee on Elder Statesmen of Aviation, National Aeronautic Association. His remarks were as follows:

Mr. Secretary, Mr. VINSON, and honored guests, when Orville Wright made the first successful flight of an airplane in 1903, there was but small realization by the world of the future impact of that event upon the progress of civilization and the destinies of nations. Likewise the election of Hon. CARL VINSON, of Georgia, to the United States Congress 3 months after the start of World War I, did not forecast the significance of the contributions he would make to American aviation. On September 12, 1925, there occurred the first of a long series of events which were to bring to bear on the future of American aviation the devotion, talents, and wisdom of this budding statesman from Georgia.

At that stage in our history, World War I had intervened. Airpower, for the first time in history, had become an instrument of warfare. But 7 years after the close of that war, military aviation in the land of its birth was still in its infancy. On June 30, 1925, the Army had about 1,400 planes, of which 396 were designated "standard planes," a term which we understand today as meaning "combat ready." The Army Air Service, as it was then known, had 912 officers.

Naval aviation had 398 service airplanes, of which 218 were with the fleet and the remainder in reserve. Naval aviation had 623 officers, of whom 377 were pilots. It had one carrier, the *Langley*, which was a converted collier used chiefly for experimental purposes.

There was a more or less popular movement in those days to unite Army and Navy aviation into one separate organization, to discontinue the surface fleet, and to limit the Navy to submarines. Had such policies been adopted in 1925, it would have been quite difficult, to say the least, for America to have carried the war to Japan during World War II. The country is indebted to farsighted and responsible officials in those days who kept America's military policy on an even keel. Among those men of vision, courage, and statesmanship was our guest of honor today, Congressman CARL VINSON, of Georgia. He was one of nine men appointed by President Coolidge as members of the President's Aircraft Board, commonly known as the Morrow Board, in honor of its Chairman, Dwight W. Morrow.

That Board of distinguished Americans was appointed September 12, 1925, "for the purpose of making a study of the best means of developing and applying aircraft in national defense and to supplement the studies already made by the War and Navy Departments on that subject."

After extensive hearings, the Morrow Board separated the wheat from the chaff, and made such sound and solid findings and recomendations, that for the first time in our history an entire program of legislation proposed by an investigative body was enacted into law. For example, the Morrow Board recommended and the Congress approved 5-year aircraft procurement programs for the Army and Navy; assistant secretaries for aeronautics in the Departments of War, Navy, and Commerce; and enactment of the Air Commerce Act that became the legislative cornerstone for the remarkable development of civil and commercial aviation in America. Approval by the Congress of these and other recommendations of the Morrow Board marked the true beginning of the transition of airpower from infancy to adulthood.

Among other important steps were: The change of the name of the Army Air Service to Army Air Corps; representation for Army aviation on the Army General Staff; making permanent the principle of extra pay for flying duty; and renewed emphasis on the procurement of additional personnel for flight training and duty, as well as new and improved types of aircraft. Practically the same recommendations were made with reference to naval aviation, and it is significant to note that each of these recommendations was subsquently fully implemented, the Congressman from Georgia being the author of a number of the legislative proposals which resulted from the Board's recommendations. So, for the first time in the peacetime history of our Nation, aviation as an instrument of national defense received the full blessing and support of the highest echelons of our Government.

The dominant role of airpower in World War II was universally recognized. Following that war, and the establishment of a separate Department of the Air Force, economy again threatened the growth of aviation. Here again came Mr. VINSON'S vision and statesmanship. He was the author of legislation providing for a 70-group Air Force. He successfully led a fight for additional funds for more planes for the Air Force, and this in the face of a then current economy drive in the Congress. He was the author of the Air Force Organization Act. He was the author of the Marine Corps Organization Act, which gave that organization its first statutory charter, with 3 combat divisions and 3 air wings. He has consistently and successfully led the support of naval aviation.

As Chairman of the House Armed Services Committee, he guided the difficult hearings which resulted from the B–36 controversy in 1949. Faced with serious dissension among the military services, he directed the Committee inquiry in such a manner as to allay the fears of service personnel and preserve the steady growth of aviation in the military services. He then defined national airpower as follows: "The national airpower consists of the military airpower of the various services, plus commercial aviation, plus the national industrial and manpower resources pertaining to aviation." That definition was adopted by the Committee and remains the guiding policy of the Nation today.

Elected to the Congress on November 3, 1914, Mr. VINSON is now serving his 43d consecutive year in the House of Representatives. He was Chairman of the Naval Affairs Committee for 16 years, and is now serving his 7th year as Chairman of the House Committee on Armed Services.

In the judgment of the National Aeronautic Association, the long and fruitful legislative career of Carl Vinson, Congressman from Georgia, and his steadfast and farsighted support of modern facilities for aeronautical research as the foundation of air progress; his support of the fullest practicable development of airpower by an independent Air Force, and of air arms inseparable from the Army, Navy, and Marine Corps, stamp him as a most constructive and influential public servant in the Congress of the United States. Over a long period of years he has, with exceptional competency and vision, provided for the vitally important development of all segments of airpower, and has demonstrated outstanding leadership in providing a sound legislative basis for the national security. On this record the National Aeronautic Association proudly designates Carl Vinson "Elder Statesman of Aviation."

At the conclusion of Mr. Victory's statement, Secretary of Defense Wilson read to the assemblage the citation, which is as follows:

The board of directors of the National Aeronautics Association of the United States of America, pursuant to authority duly vested in it, does hereby constitute and designate CARL VINSON elder statesman of aviation in recognition of his significant and enduring contributions over the years to the progress of aeronautics, and his demonstrated qualities of patriotism, integrity, and moral courage worthy of emulation.

Mr. VINSON then responded in a very effective, moving, and appropriate manner with the following statement:

Mr. Secretary, Mr. Lamphier, Dr. Victory, my colleagues, and distinguished guests, I deeply appreciate the high honor that the National Aeronautic Association has conferred upon me by designating me an elder statesman of aviation.

There are times in a man's life when it seems almost impossible to find either the voice or the words to express the emotion of the human heart. Today is such an occasion in my life.

For you, to ascertain the deep feelings that surge within me, I urge you to look beyond my simple words, and understand the gratitude, that I have for the honor which has been bestowed upon me, and for

the overly generous things that have been said.

To you—the officers and members of the National Aeronautic Association who have selected me for this award, to the civilian and military leaders of our Nation, and to you my colleagues of the Congress honoring me by your presence—I want to express my deep appreciation.

This is an occasion which I shall remember to the last day of my life.

Fate has been kind to me. I have been privileged to be a Member of the Congress for almost 43 years.

During that time, I have experienced the trials and tribulations of three wars, followed by the elation of victory, and the gratitude that our great Nation continues to survive, prosper, and champion the cause of freedom throughout the world.

During this same period, I have been privileged to observe and perhaps make a modest contribution in legislation to the irresistible growth of American aviation.

To me, it seems but yesterday that our Nation's aircraft flew at speeds of scarcely 100 miles an hour, with a maximum range of 200 miles, and the ability to carry only the smallest types of military weapons and bombs.

I must confess that I had unbounded faith in the future of aviation when I sat as a member of the Morrow Board in 1925 and assisted to the best of my limited ability in writing a legislative program to chart aviation as an important weapon in our national defense. But I am frank to say that my vision did not forecast the status of aviation as it is today.

In the brief space of about 30 years, we were destined to be in the jet-atomic age, with manned aircraft traveling three times the speed of sound, carrying atomic and hydrogen weapons so devastating that they defy the mind of man.

But even now, the inventive genius of man is bringing us into an age of rockets and missiles of such speeds and capabilities as to further defy imagination.

Who knows what vistas will yet be opened through the further genius of man in this great field of aviaton.

In recalling the progress of aviation over the past 43 years, I can only conclude, that its future will be as startling as its past.

While its pathway has not always been smooth in the legislative halls—it has seen its ups and downs—I am deeply gratified that my contributions, small as they may have been, have helped in keeping American aviation high in the sky.

We who write the law, formulate the policies, and provide the money—all of which is important—nevertheless play but a minor role in the full development of aviation. The greater contribution to American aviation is made by the men and women who labor at the drafting boards, the scientists at the wind tunnels, the engineers at the test laboratories, and above everyone else, those brave and patriotic officers and men who have in the past and are now dedicating their lives to the actual operation of manned aircraft who proudly wear on their uniforms the insignia of the pilot's wings.

So long as this Nation remains militarily strong, we will be a free people. Our national defense must ever be the paramount concern of the Nation.

I have no hesitancy in saying that today the capabilities of American aviation are of such powerful and forceful character as to provide the Nation with the shield of protection that gives us the peace we enjoy at this hour.

As the years slip by, my life has been greatly enriched by my association of over 40 years with the officers, men, and civilian heads of our armed services, as well as our leaders in government, research, and the aviation industry.

This scroll, so beautifully inscribed, will be placed in an honored spot in my home and will be one of my most prized possessions. And as the shadows of the long, long night begin to fall across my pathway, it will ever be a reminder to me that in my humble and feeble way, I tried to make some contribution for the benefit of our beloved country.

I thank you from the bottom of my heart.

The Case Against the Surtax

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. CRETELLA. Mr. Speaker, my colleague, the Honorable ANTONI N. SADLAK, has introduced H. R. 6452, a bill to reform the present tax structure, and if the Members could spare the time to give this bill the attention and consideration which it so deservedly merits, I am sure that his bill will meet with favorable action on the part of the committee to which it has been referred.

He has expressed, by his statements, most eloquently the reasons for his position and the benefits to be derived by all taxpayers under it. My own mail reflects acceptance of it by many segments of our people, and I am pleased to insert in the RECORD a timely article appearing in the Hartford Times on May 11 on the subject.

This article, written by Robert H. Murphy, executive vice president of the Wiremold Co., and member of the taxation committee of the National Association of Manufacturers, is offered for your information:

THE CASE AGAINST THE SURTAX

(By Robert H. Murphy)

Thanks to the device of withholding, income taxes today have become relatively painless. On that score, the device has its merciful aspects. On the other hand, I strongly suspect that it also tends to prevent us from realizing fully just what we pay in taxes and, beyond that, what the Government is doing with them.

Many people, for example, would have a hard time telling you the gross figures listed on the stub of their paychecks, or their pay envelopes. It's the net that counts, the take-home pay. The deductions are simply figures on a piece of paper, and easy to disown. We are apt to forget that the difference is also our money and that—collectively—we have a voice in how it is spent, and even how much should be collected in the first place.

I would guess that if you made an informal survey among your friends and acquaintances, you would be surprised to learn just how few of them could tell you with any accuracy what their tax is, in what surtax bracket they fall, and what has been happening to them over the past years, from a tax point of view.

It might come as a shock to them to learn that the income tax which is popularly supposed to soak only the rich, has been playing particular havoc with their own take-home pay.

One man, however, who has been alert to the trend is Congressman at Large ANTONI N. SADLAK who has introduced into Congress a tax reform bill, H. R. 6452, which deals with this problem. Its adoption by Congress would supply a powerful incentive to the economy and prosperity of Connecticut, and the rest of the country as well.

In brief, the problem arises from the fact that 2 wars in the past 20 years have forced the Government into extreme measures to raise truly staggering sums of money. To accomplish this, the sliding scale surtax was boosted to the point where it took—and still takes—91 cents out of every dollar.

There is not, however, a great deal of revenue in this tax bracket. As high as the percentages are, there are simply not enough top-bracket incomes to tax. Consequently the bottom or entering wedge of the surtax was forced lower and lower until it reached $2,000 of taxable income. It is still there, and 15 million Americans who had previously regarded the surtax as an academic subject now found themselves directly involved.

It is not surprising that these taxes were adopted in the first place; the Congress at the time was trying desperately to finance military operations. What is alarming however is the fact that now, 12 years after World War II and 4 years after the Korean war, essentially these same wartime taxes are still on the books.

For the progressive tax no longer soaks the rich. The rich, after all, have ample access to tax-exempt securities to protect financial reserves already acquired. It is now the middle-income brackets which are exposed, and the 15 million Americans in this category are effectively being prevented, not just from becoming rich, but from any realistic accumulation of savings for any purpose—for their children's education, for their own small business needs, or for investment.

Some idea as to how punishing the surtaxes are may be seen in the following examples. Suppose we take a young man just starting in business for himself. Like everyone else, he pays 20 percent or one-fifth of his net, taxable income to the Government. This is the basic income tax. But this young man has a taxable income of $4,000 after deductions and exemptions, and that puts him in the surtax brackets as well.

The next year his business does well; he increases his taxable income to $8,000. His basic tax doubles as you would expect; his surtax increases 9 times.

His business continues to thrive. Again his taxable income doubles—to $16,000. His basic tax also doubles, of course, but this time his surtax has increased not 9 times but 50, repeat, 50 times.

In other words, the surtaxes climb faster than either the income or the basic tax. At $2,000 of taxable income, the tax rate is 20 percent. At $8,000, it is 34 percent. At $16,000, it is 50 percent, and from that point on the Federal Government gets more than he does of every additional dollar he makes. And it is through the middle-income range that the surtaxes now rise so steeply and with such devastating effect.

Some might think this young man would find tax relief in incorporating his business. This is not necessarily the case. The basic corporate tax is 30 percent, on everything from $1 to $25,000, and above that is a 22-percent surtax, total 52 percent. This is one reason why it is so difficult for small business, in Connecticut and elsewhere, to follow the time-honored American custom of plowing back earnings to finance growth.

Yet growth we must have, if only to maintain our current standard of living. Here in Connecticut, for example, our population boom means we have a net increase of about 13,000 in our labor force each year. One way or another, we have to create that many new jobs to keep pace with the population.

"I believe the time has come," Representative SADLAK said in explaining his measure,

"when the Congress must seriously review the problem of high taxes which are being used to support more and more Federal spending. The time has come to enact a realistic program of forward scheduling of tax reductions for all income taxpayers, individual and corporate. I am convinced that achievement of a moderate schedule of income-tax rates is necessary to the continued vitality and growth of our Nation's economy."

Briefly, Mr. SADLAK is calling for uniform annual reductions for each bracket of individual income tax rates and for the corporate tax, spread over 5 years beginning next January 1. The basic 20-percent tax would be cut to 15 percent. The surtaxes would also be lowered in each bracket so that by the end of 5 years, the peak tax rate would be not 91 percent, but 42.

The corporate tax would also be trimmed: the basic tax from 30 to 22 percent, and the surtax from 22 to 20 percent. Thus the combined top rate would drop from 52 percent as at present to 42 percent, the same level as the individual tax.

Best of all, these tax cuts would be financed, not by shifting the tax burden to any one group or new tax device, or even necessarily by reducing the present level of Federal spending. The cuts would be paid for instead by the annual growth factor in our economy which historically has been about three percent each year.

In other words, the Government annually takes in several billion dollars more than the previous year, even when the tax rate remains constant. This is the result of our growing economy. Mr. SADLAK is proposing to use this money for tax reduction, rather than allowing it to remain as an annual windfall for Government spenders.

Two-Way Street

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of Friday, May 17, 1957, from the Parsons (Kans.) Sun, by Clyde M. Reed, Jr.:

TWO-WAY STREET

The House has voted to end the soil bank at the close of the current year, inserting such an amendment in the Department of Agriculture appropriations bill.

The soil bank is the chief vehicle by which the Federal farm program currently operates and only now is getting a start. Why, one asks, is it killed so quickly?

The reason is not to be found in the conviction that the soil bank is not a good thing, because it hasn't been in operation long enough to receive a fair trial.

Nor does it involve the principle of Federal support for agriculture. That hardly figured in the debate on the amendment to lay the soil bank to rest.

The reason lies in another direction. It is politics, which is ever present in the consideration of farm matters in Congress.

A big majority of House Democrats voted to stop the soil bank, probably with the idea of embarrassing the Republican administration. The bulk of opposition to the amendment on the other hand came from GOP Members of the House.

This proves not much at all, except that politics and the farm problem are inseparable and the temptation to inject partisan consideration into it is an irresistible one in Congress.

Certainly, too, the procedure is open to serious question. The House majority used an appropriation measure to set policy and that is a bad practice. It substantiates the charge that the whole business can be laid on the doorstep of politics.

In view of their past record, Democrats were not voting against the soil bank because of a belief that the Federal Government should cut off aid to agriculture. They simply were executing a political maneuver.

And in politics, there are few one-way streets. By acting to remove the major plank from the Eisenhower administration's farm program, the Democrats have taken unto themselves the burden of proposing something better or more effective. Unwittingly, perhaps, they have put themselves in a position of responsibility they did not occupy before their vote of Wednesday.

America's Other Citizens

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ROOSEVELT. Mr. Speaker, one of the best articles I have seen on the plight of those many workers still not covered under the terms of the Fair Labor Standards Act appeared on Thursday, May 16, 1957, on the editorial page of the Washington Post and Times Herald. Entitled "Fuller Life Sought for 'Fringe' Family," it was written by Miss Malvina Lindsay, one of the outstanding observers in American journalism of the political and economic climate of our time.

Her column discussing the "bleak, deprived, anxious and inadequate" living standards of those workers—millions of them—who still receive less than the $1 minimum wage brought home to many perhaps unaware of this serious social problem and the need for corrective action.

In her customary fair manner, Miss Lindsay is careful to list some of the arguments of those who oppose the pending bills to expand coverage under the minimum wage laws to include large groups now exempt, including the rather shop-worn argument voiced by some groups that this is an invasion of States rights, and the claim that bringing these workers under the Fair Labor Standards Act would be damaging to some businesses or cause them great inconvenience.

The article points out, however, that 19 of our States have no minimum wage regulations and only 8 have such regulations for men; hence, "national action presents about the only hope for bettering the lot of the fringe worker in American society."

Extension of the Fair Labor Standards Act on an intelligent basis to take in additional groups is an important need in our economy today. We cannot boast of our record-breaking prosperity when so many of our workers are still earning less than $1 an hour and, in many cases, working unconscionably long hours because their employers do not have to observe and conform to the Wage-Hour Act.

In this connection, Mr. Speaker, I believe it would be most useful to have included in the CONGRESSIONAL RECORD this excellent objective, clear-thinking report, and under unanimous consent, I submit it for inclusion in the RECORD.

FULLER LIFE SOUGHT FOR FRINGE FAMILY
(By Malvina Lindsay)

So much has been said and written about American prosperity that it is widely assumed in this country, as well as abroad, that virtually everyone here has a split-level house and a two-color car and is well fed, well dressed and well doctored.

Yet a reminder that many hard-working persons still live on the fringes of material supply, health, recreation, has come in testimony in congressional hearings on bills to expand coverage of minimum wage laws to groups now exempt.

Both political parties have come out for extending this coverage. But there is Senate controversy over the number of workers—10 million, 6 million, or 2½ million (as provided in different bills) that should be brought into the $1 minimum hourly wage classification. This may hold up action until next year.

Who are these shadowy people who never figure in any movie or magazine pictures of the American scene? They are not the ragged or the hungry. They are ordinary, neat-looking citizens who may work 50 to 60 hours a week for $25 to $30 a week.

They work in retail chain stores, restaurants, hotels, big laundries and dry-cleaning establishments, in canneries, seafood processing firms, on big farms, and as white-collar workers.

These people get by economically. Their way of life might be envied by the masses of many other countries, including Iron Curtain ones. But by minimum American standards of living their lives are generally bleak, deprived, anxious, and inadequate.

Health is one of the first things those who live on the fringes neglect, testimony in the current House hearings shows. Needed operations are delayed, visits to the doctor put off. Usually, this means bigger bills later for someone to meet—probably society.

Dental care of both children and adults is neglected. Adults who need spectacles go without them. What milk is bought must go to the children. Vitamins cannot be afforded.

In a survey in Pennsylvania, Missouri, and North Carolina, fringe workers were asked how they would spend their money if their hourly wages were raised to $1. Their replies generally were: pay back debts, buy better food for their children, obtain medical and dental care.

Often the fringe family gets involved in debt to a loan company when hit by any crisis, as sickness, death, unemployment, the need to buy furniture, or to move. It lacks any backlog of funds to meet the unexpected.

In some families husband and wife both work, and if there are children they may work in different shifts, the husband working daytime and the wife at night, or vice versa. Most of these families have from 2 to 5 children.

The high norms of living for children in American society in regard to nutrition, clothes, schooling, social life, present a special problem to the substandard wage earner. Parents often go without adequate (and morale building) clothes themselves to provide apparel for their children. Also rents are often exorbitant in the fourth or fifth class apartment buildings in which they live.

Three bills are in the Senate to extend wage and overtime provisions of the Fair Labor Standards Act. One, backed by Senator MORSE, would bring in about 10 million more workers, one by Senator KENNEDY, about 6 million. An administration-backed measure would extend coverage to 2½ million. Current House hearings are on a bill introduced by Representative AUGUSTINE KELLY, which is the same as the Morse bill.

Opponents of the proposed extension of minimum wage coverage say it would cause some firms to go out of business, would be hard on other firms, and would cause great inconvenience in the adjustment to new wage and hour requirements. They also contend it is an invasion of State rights.

Since 19 States have no minimum wage regulations and only 8 have such regulations for men, national action presents about the only hope for bettering the lot of the fringe worked in American society.

Exodus From Public School

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. GATHINGS. Mr. Speaker, there appears in the American Mercury for June 1957, an article written by Russell Maguire which is an unbiased and thought-provoking statement on the effect of the United States Supreme Court's mandate of judicial lawmaking of forced integration in the Nation's public school system. This splendid article was called to my attention by a good friend, Mr. Egbert Jones, of Crawfordsville, Ark.

But of even more interest is the reaction to this judicial decree by the teaching staff of New York's Columbia University.

They are for integration of the public schools as long as it does not apply to members of their immediate families. It is all right when the other fellow's children accept the attendant downgrading in public school standards as long as there are private schools for the well-to-do to patronize.

The sheer hypocrisy of some prointegrationists is exposed in all of its snobbiness and superiority in the short but lucid article by Russell Maguire, and I recommend it as required reading for all who now support this Supreme Court fiat "for the other fellow."

The article follows:

EXODUS FROM PUBLIC SCHOOL

(By Russell Maguire)

Not long ago, married members of the Columbia University teaching staff gathered in a conference to resolve a problem that deeply concerned them all as parents of school-age children.

The problem concerned the local Morningside Heights public school, serving most of the resident faculty staff. In recent years, the enrollment in that city-operated school had seen a rapid increase in the numbers of Puerto Rican and Negro pupils, until together they approached two-thirds of the classroom membership.

As a result, many members of the faculty staff had taken the momentous step of removing their children from that public school and sending them to private schools, no small sacrifice when tuition fees of six or seven hundred dollars must be paid from teaching salaries.

Expense, however, was not the point that the group was brought together to discuss, but principle: It was felt that Columbia University and the liberal tradition which it had come to represent were on trial.

Since the days when Franze Boas ruled the anthropology department of Columbia and introduced the new anthropology of environmentalism, Columbia had been in the forefront in the struggle for equality among the races. Far and wide, through its famed school of education, Columbia had proclaimed that the differences between the races were the differences of cultural training. The firm cornerstone of this philosophy was the idea that the public-school system would in time bring about the real equality of the races.

Were they going to fail to support the institutions which they had proclaimed as the true hope of the future? Were they to practice private-school segregation for their children, after they had so long led the fight to end segregation—and at a time when that struggle was rising to a white heat in the South? Never had their ideals been so clearly put to the test.

The faculty members rose to the challenge. It was resolved by the entire group that it was their duty to support the public-school system of New York City by continuing to send their children to its schools. It was reaffirmed that the Morningside Heights school had one of the best teaching staffs in the city and with patience and understanding the problems of the school could be resolved. The meeting ended in full agreement, with an arrangement to meet again at a later date.

Time went by and when this group met again at the arranged date, it was discovered that every member of the group had removed his or her offspring from the Morningside school and was now sending them to private schools.

Other members of the faculty, unable to pay the necessary fees, were moving to other colleges where their children could avoid participation in the great social experiment. The advance of the integrated school, which liberal Columbia has so long advocated, has routed the Columbia liberals almost to a man.

The disastrous decline in training and educational standards in the newly integrated public schools of Washington, D. C., is common knowledge. The result has been a general exodus of the better off families from the Washington school districts. Amongst those fleeing the integrated public schools are numerous public officials. Morningside Heights and the District of Columbia schools are not isolated incidents.

In all such cases those who cannot afford to flee remain behind. The poor are reminded again that those who lead causes and those who endure their consequences are not always the same people.

The leadership in the fight to end segregation is supplied by those best able to protect their children from the full effects of this policy. Wealth is the perfect insulation against the common herd of all colors. The Harrimans and Roosevelts in their zoned neighborhoods and country estates, accustomed to sending their children to private schools, need fear nothing from the effects of this policy.

It is not surprising that rejoicing over the Supreme Court's decision on schools is apt to be greatest among those least likely to pay the price of putting it into practice. Those of wealth are easily zoned out of the poorer neighborhoods where mixed races are to be found. Failing this, where integration lowers the standards of the public schools, the wealthy can and are moving in numbers to the private schools.

The rapid rise of these schools in America in the last few years is directly correlated to the rise of the integrated school and the decline of public school standards. Only a few professional educators appear to be disturbed by the fact that our public school system is sagging under the ever-increasing load that the socialist state places upon it.

This program is lowering the educational levels of the schools in the poorer neighborhoods, emphasizing the educational differential between the poor and the wealthy.

As so often happens with a program of equalitarianism, the effect is to exaggerate differences, not to lessen them.

The wealthy can escape the consequences of this decision, the poor cannot. As a result we are already seeing the further strengthening of the class structure of America, a fact noted by many observers. Not for the first time an effort to force a complex society into a common mold results, not in a classless society, but in a more complex class structure.

The people of America, seeing their community of race being dissolved by legal action, may commence to question whether a community of wealth has any more legal validity than a community of race.

The thought may not have escaped the minds of our "selected" Supreme Court.

Address of Adm. Arleigh A. Burke, Chief of Naval Operations

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by the distinguished Chief of Naval Operations, Adm. Arleigh A. Burke, delivered before the South Carolina Bankers Convention in Charleston, S. C., on May 18, 1957, concerning America's vital role for control of the seas. Admiral Burke knows whereof he speaks. He is one of the great heroes of modern warfare and the leader of the greatest Navy civilization has ever known.

The address follows:

ADDRESS BY ADM. ARLEIGH A. BURKE, USN, CHIEF OF NAVAL OPERATIONS, BEFORE THE SOUTH CAROLINA BANKERS CONVENTION, CHARLESTON, S. C., MAY 18, 1957

It is an honor to be here this morning. It is a particular pleasure to meet with a vigorous, public-spirited group such as the South Carolina Bankers. Your outstanding support of the United States Savings Bond program is well known. All Americans are indebted to you for your patriotic efforts.

Armed Forces Day is always a good time to review some of our national security problems and to be brought up to date on the status of our defense team.

Our defense team, as you know, consists of an Army, a Navy, an Air Force, and a Marine Corps. Each service makes a tremendous contribution to the defense of the United States. Each has a highly specialized part to play. Each is carefully balanced in relation to the other members of the team. No single service can win, without the sup-

port and close cooperation of the other services.

Our Nation's defense team is very powerful. We have enough nuclear striking power to completely destroy any aggressor.

We are approaching a situation in which both we and our possible enemies can mutually destroy each other. With our present forces we could—regardless of the effects of an unprovoked surprise attack on their part, regardless of their defenses, regardless of anything else—we could not be prevented from destroying the important parts of the U. S. S. R. and literally ruining it completely, if we were attacked. On the other hand, in the near future, they may well have a similar capability in relation to us.

Defense costs are rising steeply.

The world is haunted by the specter of a nuclear exchange between rival population centers. In fact, many have become so mesmerized by the possibility of massive devastation that other more practical, and perhaps less futile, solutions to our problems are being overlooked.

In times like these, we are compelled to search for better answers to our problems. If enough of us—those of us in civilian life and those of us in uniform—work together and search hard enough, better answers can be found.

In our search for better answers—we can be sure of one thing. The world is changing. Some of the changes are so far-reaching as to prevent us from comprehending their full impact.

The world population, for example, is increasing at a very rapid rate. It looks as if it may triple in the next hundred years.

Land frontiers of the world have all but disappeared. About the only areas on the surface of the earth which remain to challenge man's pioneering spirit and ingenuity in the years ahead are the oceans.

Technological change is accelerating. Land transportation, water transportation and air transportation technology is progressing at a very rapid rate. The need to transport people and material among nations is expanding year by year. We are finding the means to do it.

Nuclear power is being developed for transportation purposes. Take our nuclear-powered submarine, *Nautilus*. On a few pounds of uranium she made the equivalent of 24 Atlantic crossings, 2½ times around the world, without refueling. *Nautilus'* first nuclear core has been replaced now, and she is back at sea again, ready for many more thousands of miles.

These are some of the changes that are taking place. Let us now look at some of the things that are not changing. I shall mention only a few.

First of all, geography—the basic geography of this planet—has not changed very much. Land areas constitute less than one-third of the surface of the earth. The water areas cover the rest of the world. The water areas of the world still remain relatively unused.

Another thing which has not changed very much is human nature. People are still land conscious. They spend most of their lives on land. As a rule, they understand land problems more readily than they do sea problems. They understand the operation of land-based weapons more readily than they do sea-based weapons.

Most of the research and development talent of the human race is naturally devoted to the solution of land problems. That portion of the total human effort which is devoted to sea matters still remains very small. That is perhaps one of the reasons many nations overlook many opportunities to make better use of the vast ocean spaces, which are available to all nations.

Nevertheless, human liberty and national independence seem to bear some kind of relationship to an understanding of the sea. Nations who have been sea-conscious have usually been able to maintain their security and independence longer than nations who have not been sea-conscious.

Today, from the interior of Asia, a totalitarian land power again threatens the maritime world. This threat has taken many forms over the years, as it alternately pressed against the maritime world and then receded. Today, again, another totalitarian, Communist totalitarianism, is reaching out, seeking to subjugate more people and to control more territory. The cycle has begun again.

The maritime world, when threatened with totalitarian aggression, has invariably found itself united, sometimes consciously and sometimes unconsciously. More often than not, this unity has been rather loose and informal. It has been a unity born of common ideals and common purposes, in the face of a common threat. It has been a common advance toward common goals. Rarely have all members of this maritime coalition proceeded along precisely the same path, or at the same rate, or in rigid cadence. Yet, the fact remains that this loose, informal maritime association has been, almost from the beginning, one of the most powerful, consistent and constructive influences in the history of civilization.

In order to withstand the totalitarian pressure free nations must stand together. Survival, in the event of attack, depends on the ability of free nations of the maritime world to come quickly to the support of beleaguered nations by sea, with modern Army, Navy and Air Force teams.

The ease with which the United States Sixth Fleet, with its hard-hitting Marine combat forces, was dispatched to Eastern Mediterranean waters in recent weeks, is a good example of what can be done. It is a good example of the kind of action that can be taken quickly, by forces prepared to move on the seas, to look after United States interests or fill any other role that national policy might call for.

The free world can stand together against the threat of aggression so long as we are able to use the surface of the seas for mutual support. The fact is that there can be no free world unless we can use the surface of the seas.

In order to do this, our navies must be kept up to date. For example, guns can no longer shoot down modern, high-flying planes. Guided missiles are needed. The Navy's surface-to-air guided missiles, such as Terrier and Talos, have already demonstrated phenomenal accuracy against aircraft targets.

New weapons and new techniques have naturally increased the vulnerability of all types of forces and installations. This is particularly true of fixed bases which can be accurately located well in advance of attack. We in the Navy are very much concerned about the vulnerability of fixed bases which support our forces at sea. Fortunately our forces at sea, our carrier striking forces, are on the move and cannot be pinpointed for attack. A moving base is much harder to find and to hit than a stationary base. To us in the Navy this means greater emphasis on moving forces, such as mobile carrier striking forces, and less reliance on stationary bases for support.

New technologies have done something more. They have revived the ancient claim that a weapon has at last been found that will sweep surface ships from the seas.

This is, of course, an old story to sailors. For some reason or other, the development of a new weapon has almost invariably been accompanied by a claim that navies were finished.

To take only recent examples, in the 19th century, it was the rifled gun that was to do us in. Then it was the torpedo, the submarine, the airplane, and the atomic bomb. Now the nuclear-powered submarine and the megaton bomb are weapons that finally are to sink all ships at sea.

Let us not underestimate the threat of the nuclear-powered, missile-firing submarine, or the megaton bomb. However, new weapons like the nuclear-powered submarine, and the megaton bomb, are being adapted by our own Navy to assist in controlling and using the seas. Instead of spelling the doom of navies, powerful new weapons invariably add to our strength at sea.

Technologically we in the Navy now feel that we are moving ahead rapidly. We look forward to still more naval progress as the sea-consciousness of our country increases, as it surely will and must. Everything possible must be done to interest more of the creative and industrial genius of our country in the solution of oceanic problems.

We in the Navy are convinced that an ever-increasing portion of the offensive and defensive power of the future will be deployed in the ocean spaces of the world. We hope that this great power on the oceans will continue to be United States power. However, this is something that cannot be taken for granted.

In the nuclear-missile age, even more than in the past, the side which commands the seas will not be defeated. One need only contemplate the tremendous Soviet naval program, and their persistent efforts to gain access to ice-free coastal areas, to conclude that they recognize this.

The massive Soviet naval-building program was started at a time when they were short of everything, at a time when they were still rebuilding from World War II devastation. They are learning fast about the importance of the oceans. They are hard at work, building a powerful force, designed ultimately to take the oceans away from us. If they ever gain that ability, they will have achieved their goal of world domination, and we will be in very serious trouble.

The Soviets are emphasizing submarine construction. They are building them in huge numbers. They apparently see in the submarine a means of launching guided missiles against the United States. They see in the submarine an opportunity to inflict terrible losses on free-world shipping, perhaps even exceeding the tremendous toll taken by Hitler's submarines, which destroyed millions of tons.

The large number of submarines in the Soviet fleet are a grave menace today to the sea communications upon which our free world coalition and our own forces overseas depend.

The need for sea communications is greater today than ever before. The tonnage of material moved on the surface of the sea continues to increase year after year. Over 99½ percent of the total world volume of peacetime trade moves by sea. In time of war, the percentage remains approximately the same.

In event of nuclear war, the power to survive the initial assault, the power to recover, the power to shift resources, and the power to carry on to victory, depends on the ability of the Navy to move on the surface of the seas, and to bring tremendous power to bear where it is needed, when it is needed.

Turning now to the problem of defending the United States in the nuclear-missile age, it s becoming clear that we must make the best possible use of the ocean spaces to give us additional time and space. Our main defenses must be advanced as far toward the enemy threat as possible in order to gain the maximum time and space advantage. The ocean areas of the world present opportunities to gain more time and space for defense. The location of ships at sea is generally unknown to an enemy. Ships must be searched for and located before they can be attacked. This takes extra time.

Ships are deployed away from home, away from population centers of the homeland,

near possible trouble areas. This gives the free world extra space. The side which has extra time and space has a decisive advantage.

Our powerful weapons must be deployed as close to the source of the threat as possible. This provides another significant time and space advantage in event of attack. It adds subseantially to the weight of fire that can be delivered on target for a given expenditure of resources. This means superior economy of force, more attack capability for the amount of money expended.

Additional dispersal and maneuvering space must be found. The one remaining area of the world where space is relatively inexpensive and where unlimited dispersal can be achieved without interfering with people, is the oceans of the world.

Today, the ocean spaces clearly hold the key to the future. They provide unused opportunities for solution of many of our future security problems, at a price we can afford to pay. Our greatest danger as free people lies in the failure to recognize our oceanic opportunities.

The oceans give us the mobility which we need to move with superior force to the aid of those who are threatened with aggression. They provide vast spaces to disperse and maneuver the powerful offensive-defensive complexes of the future. They provide the communications necessary to bring together the superior power of the free world. They provide the means of deterring or defeating nuclear aggression and the means of keeping local wars localized.

Your Navy is devoting every ounce of effort, within the resources made available to it, to increasing our country's capability on the oceans. In that way we are able to make the best possible use of our splendid Armed Forces team, and we can continue to keep the first line of defense overseas. We can continue to confront the forces of aggression with overwhelming force and overwhelming resources, and with better scientific and industrial manpower. These things we can do at minimum expenditure of our own resources, if we take advantage of the opportunities which the oceans provide.

Your help and understanding are needed in these matters if we are to be successful.

Dr. Ernest V. Abbott Honored for Outstanding Service to Sugar Industry

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. WILLIS. Mr. Speaker, it is a great pleasure and most gratifying to me, as Member of Congress from Louisiana's Sugar Bowl, and to the entire sugar industry, to join in congratulating and commending Dr. Ernest V. Abbott, of Houma, La., who on yesterday received a superior service award from the United States Department of Agriculture.

Among employees recognized for their outstanding service and presented with awards by Secretary of Agriculture Benson during the Department's annual honor awards ceremony, Dr. Abbott was cited for leadership in the production of improved disease-resistant commercial sugarcane varieties and for basic research on sugarcane diseases, establishing him as a world authority in this field.

Dr. Abbott, who is in charge of the sugarcane research station at Houma, has been employed by the Department of Agriculture for 26 years. He entered the Government service as an assistant pathologist in 1930, was promoted to pathologist in 1942, and to senior pathologist in 1948. In 1950 he was promoted to his present title as principal pathologist.

Through the high quality of his research and leadership which he has demonstrated in the field of pathology, Dr. Abbott is recognized as an outstanding authority on sugarcane diseases, throughout the world. His ability is indicated by the fact that he is called upon for advice by his colleagues in the Department of Agriculture, by State experiment stations, and by sugarcane pathologists and breeders in many parts of the United States and foreign countries. He has served as consultant on sugarcane problems in Formosa and South America and has been a leader in connection with the work of international committees on diseases and the evaluation of their importance. An honorary life membership in the American Sugar Cane League was bestowed upon him in appreciation of his distinguished service to the sugarcane industry of Louisiana.

Among Dr. Abbott's specific accomplishments is his work in sugarcane breeding activities that have resulted in producing high yielding disease-resistant varieties for Louisiana and other areas. This serves as an outstanding example of the control of epidemic plant diseases through breeding. Some of the principal varieties developed commercially as the result of these investigations are C. P. 44–101, C. P. 29–116, C. P. 29–320, C. P. 34–120, C. P. 36–105, C. P. 47–193, and C. P. 48–103.

According to Department reports, C. P. 44–101 occupies more than 50 percent of the current acreage devoted to sugarcane production in Louisiana, while C. P. 48–103 has the highest sugar content early in the season of any variety ever produced by the Department and grown commercially in Louisiana.

For these and other very valuable contributions, Dr. Abbott is indeed deserving of the honors that have been paid him, and the sugar industry is fortunate indeed in having the great benefit of his talent and services.

A City's Growth in Brotherhood

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ROOSEVELT. Mr. Speaker, it is always gratifying to know that one's home community is appreciated by an outside unprejudiced source. Besides the constructive part of this report, I believe its value lies in its account of the success that can be achieved by communitywide efforts to cooperate and produce within a given locality the true spirit of brotherhood. I respectfully submit the following article by Kimmis Hendrick entitled "A City's Growth in Brotherhood," from the Friday, May 17, 1957, issue of the Christian Science Monitor, to the attention of my colleagues:

A CITY'S GROWTH IN BROTHERHOOD
(By Kimmis Hendrick)

LOS ANGELES.—Yesterday a stranger and I fell into a long casual conversation about the wistful theme, "Los Angeles isn't what it used to be." We recalled the days when Wilshire Boulevard was lined with palm trees; "symphonies under the stars" when Hollywood Bowl was chock full of music lovers; and the leisurely tempo of life in general.

We compared that time with the present, when a few downtown business houses are commendably planting sidewalk trees at huge expense; when the first consideration for any Hollywood Bowl evening is whether one wants to cope with the traffic; and the man who buys a new house and inquires about the bookshelves is thought somewhat eccentric. "Book shelves?" asked the agent. "What do you want with bookshelves?"

Then I attended the 13th annual meeting of the Los Angeles County Committee on Human Relations and listened to reports by dedicated citizens on what is surely one of the significant developments of our time. And it took place here.

This is the genuine cosmopolitanism—the harmonious, unobtrusive intermingling of all kinds and sorts of people—that has been taking place in Los Angeles since the start of World War II. So far as I know, it is unique. It has occurred under circumstances that may not have obtained anywhere else. But as a sample of what can and does happen in the United States, it has received worldwide attention deservedly.

People have come here from the North, the South, the East, and from other parts of the West. They have come from original backgrounds as various as Eastern Europe, central Africa, the Orient, and Spanish-America, not to mention such contrarieties as England and Ireland. They have come from public schools and Ivy League colleges, from wealth, from poverty, from the Midwest Dust Bowl, from marginal lands in Dixie, from Texas ranches, and New Hampshire farms. And they are getting along as though it were the most natural thing in the world to do so.

Everybody informed about this agrees that one extremely favorable factor has been present for a long time now—almost 20 years of continuous employment opportunities for all who want to work. California has known times of bitterness between peoples when jobs were scarce. Oriental exclusion, distrust of Negroes, prejudice against Mexican-Americans, hatred of Jews—these things have all been felt in times when competition threatened majority survival. But since 1941, it's been the other way.

Nothing illustrates this better than real estate.

One section of the city that was ultrafashionable 30 years ago is practically all Negro occupied now. It is still attractive. Its new residents, by and large, are well off. Property values are high. One white woman who pioneered in its real estate development told me that she couldn't recall a case where any previous owner was hurt financially by the change. She explained, of course, that the area had begun to deteriorate because the fashionable trend was moving toward Beverly Hills and Westwood. The Negro influx restored it.

Then there is the case of a much newer area that was all white 5 years ago but is a mixture of Caucasian, oriental, and Negro residents now. It was pretty then; it still is. One can drive up and down its streets for

miles and see no yard neglected, no forgotten garden, no house that needs paint. It is a place that sparkles with community pride. New houses on 1 street—5 rooms, 2 baths, built-in stoves, electric dishwashers, intercoms—are selling from $24,000 to $28,000. When I asked the builder what bearing the mixed neighborhood has on their sellability, he said emphatically, "Not a bit."

It would not be accurate to describe Los Angeles, county or city, as a community where nobody is intolerant, or where nobody suffers any losses because things change, or where tensions don't threaten. I know of instances. It has taken patient work by coordinating councils, PTA's, YMCA's, YWCA's, service clubs—in all, 63 such groups belong to the Human Relations Committee—to prevent misunderstandings from flaring into troubles. Schools and churches have often had to show great forbearance—and willingness to change.

The Committee on Human Relations, which the county established in 1943 to bring citizens and officials together, takes no complacent view. It points out that when 1 of every 3 new residents here is a Negro—and this has been so since 1950—the challenge to understanding is obviously very great. And it foresees the likelihood that in the years just ahead, the challenge will be even greater.

But it notes that Los Angeles has had marked success in containing divisive forces and extending the ideal of brotherhood and equality—a record that makes even higher achievement seem fully possible. As for my friend and me, certainly this is no day for looking backward.

Regulation of Natural Gas Prices by the Federal Power Commission

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. VANIK. Mr. Speaker, during the past 12 years the use of natural gas for space heat in the Greater Cleveland area has skyrocketed and at the present time approximately 80 percent of the homes in the Greater Cleveland area use natural gas for home-heating purposes.

This tremendous natural gas consuming market must depend exclusively upon such gas supplies as are made available through the local distributing company which, in turn, looks to the great gas-producing areas of the Southwest. Our people have no other alternative but to use the gas that is brought through the distributing pipelines of the Southwest and there is no other area for competitive gas.

The people of northeastern Ohio are very apprehensive and concerned that the proposed amendments to the Natural Gas Act will only result in increasingly rising costs of natural gas. In addition, the vital industries of northeastern Ohio have a tremendous stake in the availability of low-cost gas so that they can reasonably compete with other industries which are located near other sources of energy.

The City Council of the City of Cleveland in recognition of the tremendous stake and interest of the citizens of Cleveland, on May 17, 1957, passed the following resolution memorializing the Congress of the United States to defeat legislation which proposes to amend the Natural Gas Act so as to exempt the production of natural gas sold in interstate commerce from regulation by the Federal Power Commission:

Resolution 1077–57

An emergency resolution memorializing the 85th Congress of the United States to defeat proposed legislation, House bill 6790 and House bill 6791, which proposes to amend the Natural Gas Act by exempting the production of natural gas sold in interstate commerce from regulation by the Federal Power Commission, by conferring limited jurisdiction over producer contracts for the sale of natural gas, and by incorporating into law the fair field-price concept in administration of the Natural Gas Act

Whereas the Natural Gas Act of 1938 was passed by the Congress for the primary purpose of protecting the consumers of natural gas against exploitation at the hands of natural-gas suppliers; and

Whereas the city of Cleveland participated actively in behalf of the public interest in obtaining passage of the Natural Gas Act of 1938; and

Whereas the city of Cleveland contains more than 300,000 residential and commercial consumers of natural gas who have a vital interest in the production and distribution of natural gas; and

Whereas since the passage of the Natural Gas Act of 1938, the independent producers of natural gas have obtained the introduction of at least six major legislative proposals in the various Congresses for exemption from the provisions of said act; and

Whereas the last of these legislative proposals was the Harris-Fulbright bill which was passed by the 84th Congress but vetoed by the President of the United States; and

Whereas proposed legislation has been introduced again in the present session of the 85th Congress of the United States, House bill 6790 by Mr. OREN HARRIS and House bill 6791 by Mr. JOSEPH P. O'HARA; and

Whereas these legislative proposals have as their purpose the exemption of independent producers from the jurisdiction of the Federal Power Commission, save a limited jurisdiction over producer contracts for the sale of natural gas, and would establish the fair field-price concept in the administration of the Natural Gas Act; and

Whereas such legislation would not be in the public interest because it would violate the basic intendment of the Natural Gas Act of 1938; and

Whereas the city of Cleveland has traditionally opposed similar legislation on behalf of the consumers of natural gas whose interests require effective regulation of the natural-gas industry; and

Whereas Mayor Anthony J. Celebrezze has accepted appointment on the United States Mayors' Committee on Natural Gas Legislation, and Ralph S. Locher, director of law, has been named to a committee of the National Institute of Municipal Law Officers to represent the public in opposition to the proposed legislation; and

Whereas this resolution constitutes an emergency measure providing for the usual daily operation of a municipal department: Now, therefore, be it

Resolved by the Council of the City of Cleveland—

SECTION 1. That the 85th Congress of the United States be, and it hereby is, respectfully memorialized to defeat the legislative proposal contained in H. R. 6790 introduced by Representative OREN HARRIS, and H. R. 6791, introduced by Representative JOSEPH P. O'HARA, to amend the Natural Gas Act by exempting the production of natural gas sold in interstate commerce from regulation by the Federal Power Commission, save for a limited jurisdiction over producer contracts for the sale of natural gas, and which would incorporate the fair-field-price concept in the administration of the Natural Gas Act of 1938, and to defeat any other proposed legislation which would undermine the effective regulation of the interstate commerce of natural gas.

SEC. 2. That the clerk of council be, and he hereby is, directed to transmit a certified copy of this resolution immediately upon the adoption thereof and the signing by the mayor, to Senators JOHN W. BRICKER and FRANK J. LAUSCHE, and to Representatives FRANCES P. BOLTON, MICHAEL A. FEIGHAN, WILLIAM E. MINSHALL, JR., CHARLES A. VANIK.

SEC. 3. That this resolution is hereby declared to be an emergency measure and, provided it receives the affirmative vote of two-thirds of all the members elected to council, it shall take effect and be in force immediately upon its adoption and approval by the mayor; otherwise it shall take effect and be in force from and after the earliest period allowed by law.

Adopted May 13, 1957.

JACK P. RUSSELL,
President of Council.
THAD FUSCO,
Clerk of Council.

Approved by Mayor Anthony J. Celebrezze, May 16, 1957.

I, Harvey B. Atkins, acting clerk of Council of the City of Cleveland, do hereby certify that the foregoing is a true and correct copy of resolution 1077–57, adopted by the Council of the City of Cleveland, May 13, 1957.

Witness my hand and seal at Cleveland, Ohio, this 17th day of May 1957.

HARVEY B. ATKINS,
Acting Clerk of Council of the City of Cleveland.

International Atomic Energy Agency

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. GWINN. Mr. Speaker, I have been requested to provide opposition arguments to our participation in the International Atomic Energy Agency. They are as follows:

PROVIDENCE, R. I., *May 13, 1957.*
Re International Atomic Energy Agency.
HONORABLE MEMBERS OF THE SENATE OF THE CONGRESS OF THE UNITED STATES,
Washington, D. C.

GENTLEMEN: It is with the greatest apprehension that I have read the reports of the pending hearings on the International Atomic Energy Agency.

Let me state my understanding of the facts as I have obtained them from various reports.

In 1953 President Eisenhower made his "Atoms for Peace" proposal to the United Nations.

On October 26, 1956, President Eisenhower said in New York City: "The United States will make available to the International Agency * * * 5,000 kilograms of a nuclear fuel uranium 235 from the 20,000 kilograms of such material allocated last February by the United States for peaceful uses by friendly nations."

According to one estimate 20,000 kilograms of this material costs roughly $500 million. One-quarter of this amount, which is to be

given immediately, would cost $125 million. In addition to this, the President has promised to give an additional 15,000 kilograms during the next 3 years, provided a similar amount is given during that period by all the other nations of the world combined.

Russia was the first nation to ratify the charter of the agency.

The charter has been submitted by President Eisenhower to the Senate for ratification and hearings are now being held. As it is a treaty, action by the Senate alone is required. The House is not called upon to act.

The question that strikes one at the outset is: From what source does the President derive this power to give away the people's money? The gift to which he proposes to commit the Nation can be paid for only out of taxes levied on the American people. But the power to impose taxes is given by the Constitution to the Congress, which means both the Senate and the House. It is not given to the President and the Senate.

Aside from the disturbing implications of this assumption of power by the President there is the fact that the uranium given by us to this International Agency can be used for the purpose of making atomic bombs. True, it is intended that it shall be used only for peaceful purposes. But once having gotten into the hands of other nations, what effective means can possibly be devised to prevent its use for war purposes?

The Soviet Union and its satellite nations are eligible for membership in the agency. All of these nations, and even Red China, could be given a part of the uranium that we supply.

Since we would constitute but one out of a possible 80 or 90 nations eligible for initial membership in the agency, our wishes could readily be overruled.

Various statements have been made as to the number of atomic bombs that could be made out of our initial gift to the agency. The smallest estimate I have seen is that it would make 100 bombs of the power of the bomb dropped on Nagasaki.

It is all very fine to talk about atoms for peace and our desire to help the other nations of the world. Unfortunately, we are not living in a peaceful world. On the contrary, we are presently engaged in a life and death struggle with a nation controlled by an unprincipled group of international gangsters bent upon our destruction.

Anyone having the least familiarity with the facts knowns that we are losing the cold war with Russia. Starting with a nation of 200 million people a decade ago, Russia has since steadily increased her influence until today she controls in one way or another about half the world's population. Our own population is but 6 percent of the total.

This increase in Russian power has been due principally to the unbelievable conduct of our foreign affairs, whereby we turned over the control of China to the Communists and suffered 150,000 casualties in a Korean war we were not permitted to win.

And now to cap the climax, the administration proposes to put within the control of our mortal enemies the means of our own destruction.

To quote a great and much abused American patriot, the late Senator Joseph R. McCarthy: "Offering to share our atomic wealth is in a class with the Chicago Police Department offering to share its pistols and submachineguns with the Dillinger mob."

I earnestly beg you and your colleagues to oppose the ratification of this treaty.

Respectfully yours,

ROBERT B. DRESSER.

Here is a telegram from Mr. Holman of Seattle:

SEATTLE, WASH., *May 19, 1957.*

COMMITTEE FOR CONSTITUTIONAL GOVERNMENT, INC.,
New York, N. Y.:

The administration's proposal to use the treaty process involving action by the President and the Senate only to appropriate American tax dollars to an international atomic organization disregards the constitutional safeguard requiring action by the House of Representatives on all appropriations and again discloses the need for a constitutional amendment clearly stating that any treaty or executive agreement violating the Constitution shall be of no force or effect.

FRANK E. HOLMAN.

A study made by the committee for constitutional government of New York City:

THE CASE AGAINST PARTICIPATION BY THE UNITED STATES IN THE INTERNATIONAL ATOMIC ENERGY AGENCY

Participation in this Agency is not necessary to prove our peaceful intentions in furthering the use of atomic energy for peace and health throughout the world. Existing legislation permits the AEC to enter into bilateral agreements with any nation willing to agree to safeguards for our mutual protection and we have 37 such agreements. The IAEA would merely permit nations unwilling to comply with our requirements on safeguards to secure the benefits of our knowledge, and a share of the materials which we might contribute to the Agency, without asking us.

We would have only a minor voice in the operations of the Agency, although the major contributions are expected to come from us. The initial membership can number 90 (80 have signed), all members of the United Nations and its specialized agencies being eligible. These nations after signing and ratifying the statute compose the overall governing body in which the United States has but one vote. The U. S. S. R. has three plus its satellites.

The general conference is the title for this group. Its powers and duties include the following:

To elect 10 members of the Board of Governors (5 each year after the first year).

To approve States for membership.

To suspend a member.

To approve the budget.

To approve amendments to the statute.

To approve appointment of the Director General.

The Board of Governors has the broadest powers of administration with reference to carrying out the avowed purposes of the Agency. It will decide on the distribution of fissionable material and approve its proposed uses. It may acquire and operate plants and laboratories. It could establish a world atomic university. The Board is to be composed of 23 members. The United States has only 1 vote certain on this Board, Canada has 1 vote certain, and Latin America 2 votes certain. The entire Western Hemisphere can be held down to four votes. It is technically possible, even probable, that the Communist nations, with neutralists and anti-American nations, will control this Board. Here is the reason:

All membership, except 4, are distributed geographically to 8 areas listed in article VI, paragraph A-1 of the statute. These areas are North America, Latin America, Western Europe, Eastern Europe, Africa and the Middle East, south Asia, southeast Asia and the Pacific, the Far East. The designated memberships in this paragraph give 2 members to North America (Canada and United States), 2 members to Western Europe (United Kingdom and France), 1 to Eastern Europe (Russia), and 1 each to the other 5 areas.

Paragraph A-2 provides for 2 members to be designated from 4 nations that are named. There is no reason to assume that these 2 members would not be Czechoslavakia and Poland, adding 2 members from Eastern Europe. This paragraph also provides for one member, not assigned geographically, as a supplier of technical assistance. This could be Russia, France, or United Kingdom, just as readily as the United States.

Paragraph A-3 provides for 10 members to be elected by the general conference for 2-year terms, except that 5 shall have 1-year terms the first year, so that 5 are elected annually thereafter. Seven of these members are to be elected to represent the 7 geographical areas other than North America. No member from North America can be elected to the Board. Central American countries have no chance of membership on the Board unless one could qualify as a supplier of technical assistance (paragraph A-2) which is unlikely. Each of 7 areas therefore gets 1 more member under this paragraph, leaving 3 geographically unassigned memberships to be fought for. The 19 memberships limited to areas could be distributed as follows: North America, 2; Latin America, 2; Western Europe, 3; Eastern Europe, 4; Africa and Middle East, 2; South Asia, 2; Southeast Asia and Pacific, 2; Far East, 2.

There is no assurance where 4 nongeographical memberships (A-2 and A-3) will go. Technically it is possible for Russia to have 6 members on the board though this is unlikely and unnecessary for Soviet domination because Russia exercises as much power through its satellites and neutralists as directly. The initial designations of members under paragraphs A-1 and A-2 are to be made by the Preparatory Commission composed of Argentina, Australia, Belgium, Brazil, Canada, Czechoslovakia, Egypt, France, India, Indonesia, Japan, Pakistan, Peru, Portugal, Union of South Africa, United Kingdom, U. S. S. R., and United States. Thereafter, the designations are by the outgoing Board of Governors. State Department representatives say that the Board will be stacked in favor of the United States, but this is based on hope and wishful thinking.

The Director General heads the staff of the Agency and is responsible for its appointment, organization and functioning, including of course the inspectors necessary in connection with safeguards. He is appointed by the Board of Governors, with the approval of the general conference, for a term of 4 years, and is to be governed by regulations made by the Board of Governors and rules approved by the general conference. The odds are all against the Director General being selected from North America or even the Western Hemisphere.

This agency is a definite threat to our national security. The uranium 235 which is proposed to be furnished by the United States is only two steps removed from weapons material. Ninety percent of the processing necessary to be done in making it useful for this purpose has been done. This plan will make it possible for nations who might not otherwise be able to produce a bomb to now get into the act. The present situation with reference to the supply of bombs is a deterrent to their use. Some overly ambitious nation, misusing agency assistance, can upset this status quo.

Power reactors can be diverted to military uses. There is no prohibition on development of nuclear power for propulsion even though easily diverted to military uses. The safeguards are only applicable to materials furnished and projects approved by the agency. A parallel project might be started by a nation on its own, using materials not furnished by the agency, which would not be subject to inspection, although benefiting from information or technical assistance furnished on the Agency approved project.

To be realistic we should consider that any nation in the future can become an enemy, or so anti-American as to support an enemy. At present the U. S. S. R. is considered the primary threat to the peace of the world. With the U. S. S. R. must be grouped all other nations which are under Communist rule or domination. All of these, with the exception of Communist China, are entitled to initial

membership. Russia is said to have made five unsuccessful efforts to have Red China admitted to membership since conferences were started to create the Agency. Those who think this eliminates any chance for Red China membership deliberately choose to ignore Soviet strategy and persistence.

Safeguards provided in the statute to prevent the use of fissionable material for nonpeaceful purposes are inadequate and impossible of enforcement. Most American physicists agree there are no ingenious devices whereby an inspector can detect atomic armament concealed by any nation; that you cannot distinguish military from peacetime considerations when a high-powered reactor is producing plutonium; that the only chance of reliable inspection of an operation is continuous inspection, 24 hours a day, every day. Experience with the Korean Truce Commission should be sufficient warning of the futility of inspecting a Communist beneficiary of agency help.

During debate in the conference that preceded adoption of the draft statute, the U. S. S. R. claimed that the safeguard provisions were uncalled for in the absence of an agreement on the abolition of nuclear weapons and constituted an invasion of sovereign rights. By supporting amendments submitted by Ceylon, Egypt, India, and Indonesia, which were defeated, the U. S. S. R. forced the adoption of compromise amendments watering down safeguards. The attitude of the U. S. S. R. on safeguards is, therefore, disclosed.

The agency has no power to stop a violation if it is detected. It can only do these things: (1) Warn the violator; (2) refuse further assistance; (3) demand the return of material; (4) suspend membership of the nation, provided the Board of Governors recommends it and the General Conference approves by a two-thirds vote; (5) advise the U. N. Security Council of the violation. Experience also indicates the futility of this. Any nation, therefore, can secure all the materials and assistance it needs, then expel inspectors and proceed to use the facilities for production of bombs, warheads, and other military purposes.

Our costs will be one-third of the administration and operating expenses of the agency, plus about half a billion dollars which it has cost us to produce the fissionable material proposed to be delivered by us, plus the cost of furnishing information and scientific and technical assistance and personnel, plus the future expenditures to members to satisfy demands made for financial help in acquiring reactors, powerplants, laboratories, and general equipment. The principle used is communistic—take away from the one that has and give to those that have not.

In order to quell objection to our giveaway of fissionable material as first planned, it is now claimed that it will be made available on terms to be agreed upon with the agency. It is possible that some token payment may be made by the agency, not commensurate with the cost to us, but to stress the independence of the agency in its use.

No member of the agency is bound to contribute fissionable materials or furnish information or technical assistance. The United States will play the sucker role. If the U. S. S. R. gives anything it will be strictly for propaganda purposes. No one really knows how much of Russia's claim to mastery of the atom is just gigantic bluff. This is the opportunity for the U. S. S. R. to really come abreast of the United States in knowledge. The ready acceptance of the statute by the Soviet proves that they expect to get more than they give in this agency. The recent open-sky proposal from Russia illustrates their bargaining principle—all for us, nothing for you.

The distribution of atomic energy throughout the world will not promote industrial development of other countries. It will be useless unless we supply more billions necessary to create industrial facilities in backward countries, and the technicians, engineers, and scientists to operate the facilities. Then, if we are successful in building industry elsewhere, we will have to subsidize our own industries so they can compete with foreign plants underwritten by the American taxpayers and operated by cheap labor.

Increasing the industrial potential of the world will not assure world peace. The nations devoted to agriculture are of necessity usually peaceful. The nations whose governments control industry, as would result from this agency, are more prone to devote their production to materials of war than to consumers' goods.

Although this agency is claimed to be autonomous, its tieup with the United Nations appears evident in its origin, the qualifications for initial membership, the provisions in the statute for future agreements with the U. N., the reports required to be made to the U. N., and the reporting of violations to the Security Council. This is another step in the direction of world government. Proposals will come next for international agencies controlling the use and distribution of food, steel, oil and everything else that has a possible use militarily.

Ratification of this statute as a treaty will substitute again treaty law for the legislation of Congress. The State Department says we must do this to maintain our prestige. It is difficult to acept this argument. Donating $60 billions to build up the economy and independence of other countries has not given us prestige. Instead, animosity against us has increased in many countries. Making an arrangement whereby our knowledge and fissionable materials will be distributed by an international agency will not change this or bring prestige.

Additional comments:

Power produced through use of fissionable materials can certainly be used for military purposes in production of military goods.

There is no definition of military purposes. The Board of Governors could include the production of the hydrogen bomb as a peaceful purpose on the ground that possession of it is a deterrent to its use by anyone. It would prevent a war of extermination.

The whole purpose of the agency could be changed by amendment and this amendment would not need to be presented to the Senate for ratification.

A nation can be a member of the agency, enjoying its privileges, for 2 years without payment of anything; longer if General Conference excuses payment on ground of inability.

Director General has a 4-year term—no provision for his removal for cause.

There is no compulsion for a member to do anything—the language being permissive. That each member should make available or a member may supply material, etc. It would seem that having offered to supply fissionable material could change or withdraw the offer before actual delivery. A chance for Russian to talk big and do little.

This is not the beginning of open inspection of anything in Russia. It will not ask for anything but will act through stooges. Then, a stooge can be encouraged to violate the agreement and be backed up by Russia in the General Conference and Board of Governors.

It would be a good idea to let Russia carry this ball and see how it flops. Without our 2½ or 3 millions a year and half a billion of uranium 235 it will languish a-borning.

The United States Steel Foundation

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. FULTON. Mr. Speaker, it is a real pleasure to rise today in Congress to compliment the United States Steel Corp. on its progressive, forward-looking management. We remember the excellent personnel relations established by Ben Fairless and David McDonald in their now-famous trip to visit together the various United States Steel Co. plants. The 20,000 steelworkers and their families in my congressional district appreciated this democratic display of real teamwork between management and the United Steel workers.

Today we should give a hearty pat on the back for their acceptance of public responsibility and assistance to the education of young people, to Roger M. Blough, as chairman, Clifford F. Hood, as president, and R. C. Tyson, as chairman of the financial policy committee of the United States Steel Co. These men, together with others in management of the United States Steel Co., have prepared a broad 1957 program to assist higher education in hundreds of United States institutions by operating aid funds, capital grants, assistance for medical schools, project grants, and post graduate study fellowships.

A United States Steel press release follows:

PROGRESSIVE MANAGEMENT OF UNITED STATES STEEL CORP.

United States Steel Foundation, Inc., announced a program of aid to education with grants payable in 1957 totaling nearly $1.8 million to over 600 of the Nation's privately supported liberal arts colleges, universities, technological institutes and medical schools.

In making the announcement, Roger M. Blough, chairman of the board of trustees of the Foundation, said: "The action of the trustees represents an effort by this Foundation to extend aid in some form to almost every voluntarily supported institution of higher learning which has clearly demonstrated both its desire and ability to help itself through the crisis presently facing higher education."

The Foundation's seven-part program embraces the following:

Accredited liberal arts colleges, $500,000: Unrestricted operating aid to all the 430 accredited 4-year-member colleges of all the State, regional, and national college fund-raising groups. Similar aid direct to 70 other selected institutions unaffiliated with those groups.

Nonregionally accredited liberal arts colleges, $100,000: Operational and capital-aid grants, to be administered through the Association of American Colleges, to a number of colleges not yet fully accredited, but seeking to provide greater community service.

Universities and engineering institutes, $110,000: Operational aid of an unrestricted character for 55 major private universities and engineering schools throughout the Nation.

Medical schools and medical teaching, $190,000: Operational assistance of $65,000 for all 82 medical schools and the balance for 2 capital-facility grants for medical teaching centers to enhance and strengthen their programs.

Postgraduate study fellowships, $150,000: Continuation and expansion of the Foundation's present doctoral-level graduate-study program covering the humanities, social sciences, biological and physical sciences, and engineering, with grants and allotments equally divided between public and private institutions.

Project grants in aid of education, $70,000: Previous project grants were continued and new ones were added, including provision for the Commission on Colleges and Industry of the Association of American Colleges, the Council for Financial Aid to Education, the Institute for International Education, the Association of College and Reference Libraries and a project for stimulating of alumni giving.

Major Capital Grants: Authorization of $665,000 for payment in 1957 and, additionally, commitments of $525,000 payable in later years, for endowment, building, equipment and other facility needs of 16 outstanding universities, liberal arts colleges, women's colleges, engineering schools, and other institutions.

"It is the hope of the Trustees," Mr. Blough continued, "that their course of action will encourage others—according to their interests and abilities—to increase substantially the present level and scope of assistance to higher education. Adequate means must be found for meeting the needs of institutions, if both quality and quantity educational goals are to be balanced with the requirements of a rapidly expanding nation."

With respect to the operational aid to all members of accredited status within the college fund-raising groups, Mr. Blough said the Trustees were pleased with the success to date of the national group movement. The 430 members will receive, subject to their own group arrangements, an average of $1,000 each, as will also the 70 selected colleges unaffiliated with the groups. In recognition of their larger enrollments and other factors, the 55 recipient universities and engineering institutes will receive direct aid of $2,000 each. In extending unrestricted operating grants to virtually all private general-purpose accredited institutions, the Trustees expressed the hope that funds would be usefully applied toward the growing problems of faculty and staff recruitment, development, and incentives.

Assistance to the small, not fully accredited colleges included continued provision of previous operational aid to selected institutions, as well as $10,000 for the new Council for the Advancement of Small Colleges, and funds for the awarding of $25,000 each to two colleges for quality-improvement purposes. Additionally, one non-regionally accredited college showing high promise will receive an award through a jury of educators selected by the Association of American Colleges and its affiliated Commission on Colleges and Industry.

The Foundation's 1957 assistance to medical education is payable to member schools to the extent of $65,000 through the National Fund for Medical Education. The balance of the allocation to medical teaching covers a capital grant to the Women's College of Medicine in Philadelphia and to Stanford University for improvement of its teaching facilities incident to the construction of its new medical center.

United States Steel Foundation Fellowships were increased from 20 to 30. Each fellowship carries a maximum benefit of $7,200 (including a $1,200 allotment to students married at time of selection.) These grants provide for two years of graduate study, typically at the doctoral level. Within areas only broadly specified any desired course of study may be elected by the fellowship holder. Half the basic sum is available to the student selected by the institution and the balance, at the discretion of the institution, is for additional student aid or for helping to close the generally prevalent gap between tuition fees and the actual cost of providing advanced instruction. Fellowships are operative at the following institutions:

Pennsylvania State, Purdue, Illinois, Ohio State, Alabama, Amos Tuck School of Dartmouth, Yale, Princeton, Harvard, Stanford, Minnesota, Pennsylvania, California Tech, Georgia Tech, Michigan, Cornell, Columbia, Massachusetts Institute of Technology, Alabama Polytechnic, Lehigh, California, Texas, Johns Hopkins, New York University, Wisconsin, Southern California, Vanderbilt, Indiana, Notre Dame, and Virginia Polytechnic.

The Foundation's 1957 project grants are designed to assist in spreading the base of support for higher education and to strengthen teaching aids for ever-higher quality of education, with $5,000 going to each of the following: The Commission on Colleges and Industry for its coordination work in assistance of all the private colleges; The Council for Financial Aid to Education for its current program, in cooperation with the Advertising Council, of alerting America to the needs of all forms of higher education; and the Institute of International Education for its program of assisting foreign students resident in the United States. For the third successive year, a grant of $30,000 was made to the Association of College and Reference Libraries for its administration of about 100 grants to colleges for improving libraries and services as valuable adjuncts to teaching. A $25,000 grant, previously announced, will support a program to stimulate trustee, alumni and parent support of higher education by making cash awards to institutions evidencing outstanding self-help performance. It is expected that this program will be activated in 1957.

The Foundation's 16 new capital grants, which range from $25,000 to $100,000, payable in part during 1957 with balances spread over several years, may be used at the discretion of recipients toward increased endowment, new classrooms, libraries, administrative and general-purpose units, scientific centers and engineering laboratories. Additionally, a small emergency grant was made to one institution to replace in part campus facilities recently destroyed by fire. One of the recipients of a capital-aid grant will use the money to endow the Council for the Humanities. The universities, liberal arts and women's colleges, community, and engineering institutions receiving capital grants are: Yale, Princeton, Carnegie Tech, Cooper Union, Fenn, Howard, Birmingham-Southern, Youngstown, Occidental, Chatham, New York University, Wabash, Vanderbilt, Rensselaer, Stevens Tech, Knox and Valparaiso. A grant was earlier announced for Northwestern University.

"Recognizing the increased need for funds for non-self-liquidating capital needs of our universities, colleges, and institutes," Mr. Blough said, "the trustees decided to expand the Foundation's 1957 program of capital aid. The trustees will continue their experimental and flexible policy of encouraging education to remain free and vigorous."

What's Happening to Your Dollars?

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill Evening Herald, South Carolina, of May 16, 1957:

WHAT'S HAPPENING TO YOUR DOLLARS?

Most of us aren't doing as well as the national figures on prosperity seem to indicate.

Housewives who wisely watch their pennies know how prices are creeping upward. One local housewife notes these recent changes:

The price of pancake mix went up 4 cents a box and bacon advanced 2 cents a pound. The price of pineapple rose 3 cents a can; ginger ale advanced 3 cents a bottle; graham crackers moved upward 2 cents a box.

The Bureau of Labor Statistics says the cost of living has gone up steadily for the last 7 months. Yet, for most of us, the size of our paychecks has not changed.

In other words, the purchasing power of your dollars—the amount your dollars will buy—is falling month after month. This has the same effect as cutting your wages, unless you get a rise to match the cost-of-living rise.

Workers are not the only people hit. Folks who are living on fixed incomes are hurt even worse. Their pensions, or social-security payments, or welfare payments don't change, regardless of what happens to living costs.

And people who are putting money aside in savings accounts or in Government bonds are hurt by the squeeze, too. The dollars they save this year will be worth less next year.

These are some of the things that inflation is doing to Americans. For most of us, this is not an era of prosperity.

Outwood Veterans' Administration Hospital

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. NATCHER. Mr. Speaker, on May 12, 1957, the Outwood Veterans' Administration Hospital celebrated its 35th anniversary. When the hospital was dedicated on February 22, 1922, its estimated cost was $2,730,481.38. The first patients were admitted in April of 1922, and since that time some 31,000 persons have been treated at Outwood. The hospital has been in continous operation since its inception, and a majority of the patients admitted have been treated for tuberculosis. Tangible evidence of the success of Outwood is manifested in the fact that over the last 5 years, 1,174 tubercular people have been completely cured.

Since its opening, Outwood Veterans' Hospital has had 14 managers. The hospital is now under the guidance of Dr. Albert T. Hume who is ably assisted by a medical and administrative staff composed of 17 outstanding men and women. The untiring efforts of these dedicated men and women has been rewarded in that the death rate has steadily decreased and the rehabilitation rate has steadily increased. The staff of Outwood Hospital has been supported by the Veterans' Administration and the fine citizens of Outwood, Dawson Springs, Madisonville, and the other communities in Hopkins County.

The distinguished mayor of Madisonville, David Parish, expressed his gratitude on behalf of the city of Madisonville as follows:

We, of Madisonville, deem it a great honor and privilege to have a part in the observance of the 35th anniversary of the Outwood Veterans' Administration Hospital.

The services rendered here to the sick and disabled veterans have done much to alleviate the pain and distress of those unfortunate ones that have had to enter this institution. Since the opening of the hospital, approximately 31,000 patients have been admitted, most of them for the treatment of tuberculosis.

The Outwood hospital furnished, through its staff and attendant, the medical care and other services that restored a great majority of these veterans to health and normal life.

The idea for the hospital was first conceived by two men, one of whom was our fellow townsman and former Congressman, David H. Kincheloe; the other, a gentleman from Hopkinsville, Mr. Theodore Troendle. To these two men and all others that had anything to do with the erection of the hospital, all concerned should be eternally grateful.

To those that have operated this institution in any capacity, whether paid personnel or volunteer workers, to those that have so ably served their fellowman, it seems fitting that we of the community gather at the hospital on the birthday of Florence Nightingale, which is also nationally observed as Hospital Day, to pay homage to these people and celebrate the 35th anniversary of the Veterans' Administration at Outwood, Ky., the day of May 12, 1957.

As Mayor of Madisonville, I wish to extend my sincere thanks to all for their efforts and services given for the welfare of others and to extend every good wish for the future.

We in Kentucky are proud of the splendid achievements of this hospital, and its remarkable record justifies all past expenditures. Every effort should be made to acquire additional personnel and facilities as they become necessary for future expansion. Insuring the continued success of Outwood Veterans' Administration Hospital is of the utmost importance.

Steamship "Matsonia" To Strengthen American Merchant Marine

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. HILLINGS. Mr. Speaker, it was recently my pleasure to inspect the steamship *Matsonia*, the fourth and newest of the Matson Lines "white ships," recently reconstructed at Newport News, Va.

Interior design was carried out under the direction of Harry Neafie, a New York industrial designer and stylist who spent 2 years researching the colors of the Pacific with the aid of 19 prominent American artists. Hawaiian motifs have been carried out in bamboo, teak wood, leather, Venetian glass mosaic, gold and silver leaf, and lava stone, as well as abalone shells, feathers, and flowers. Indirect lighting has been installed throughout the ship, unusual effects being achieved with the use of mirrors and tropical plants.

The ship is complete in special shops and services, some of which are a swimming pool, beauty and barber shop, photo workshop and print shop, motion-picture equipment, a hospital complete with operating table and 4 separate wards, and kennels accommodating 12 pets.

Completely air-conditioned, the *Matsonia* provides its 760 first-class passengers with facilities to select the temperature of their own staterooms. Safety as well as comfort is a prime feature of this liner which totals 638 feet in length and 82 feet in width. Two radar sets and a thermostatically controlled sprinkler system are present in addition to the latest aids to navigation. There are 560 telephones, 1 in each stateroom and in all public areas, shops, offices, and officer quarters. Three hundred loud speakers are strategically installed throughout the ship for programs and announcements. The all-electric galley is one of the most modern kitchens to be found anywhere and is furnished with eight ranges, a bakery, and a butcher shop.

The *Matsonia* will travel the California-Hawaii route made famous by the Matson Navigation Co., currently under the very able presidency of Mr. Randolph Sevier. Her 26,000 tons will be driven by a twin-screw, geared turbine propulsion plant to maintain a cruising speed of 20.5 knots. Alternate crossings from Los Angeles and San Francisco will be completed in 4½ days, thus the *Matsonia* with 165,693 cubic feet of dry cargo space is forging another link in our trade with the Pacific and Hawaiian Islands. In addition to this contribution to increased trade, the *Matsonia* will help strengthen the United States Merchant Marine, inasmuch as she will be readily available as a troop carrier in the event of war.

Having Known Communism, She Pleads for Ike's Budget

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following letter to the editor which appeared on the editorial page of the Des Moines Tribune of May 18, 1957:

HAVING KNOWN COMMUNISM, SHE PLEADS FOR IKE'S BUDGET

President Eisenhower has proved time and time again that he can be trusted, since World War I as a young officer to the days he became President of the United States.

The budget he presented sounds very reasonable compared with the results we expect from it. As he says, this budget is absolutely necessary for our own security. Our demands are high. So is the cost of these demands. We want, first, quality in everything we ask. Are we willing to pay for this?

SUBS NEAR OUR COAST

Communism is knocking at our doors. Russian submarines are circulating freely around our shores. It will be easy for them to release guided missiles and rockets on our cities, towns, and farms, succeeding where Hitler's U-boats failed. It will take only minutes for this to happen in this age of remote controls and atomic warfare if we are not thoroughly prepared for defense.

In the first, second, and Korean wars the sons of our country died in foreign lands for our safety. This time, their families and homes will die too. A future war will be fought in our backyards. Do we want this? No American can honestly say "This cannot be" because it certainly would if left up to the Communists.

HELP PRESIDENT KEEP US SAFE

President Eisenhower is trying to prevent this from happening. Let us give him a helping hand. Let us all write our Senators and Congressmen who claim to act upon the will of the people. This is no time for politics. This is the time for safety first.

Although I am an American-born citizen, I grew up in Rumania. Ten years ago I was finally able to return to my country. The last 3 years in Rumania, I lived under Russian occupation and Communist government. My father died there 2½ years ago and my mother still lives there—if one can call that "living." My husband comes from one of the Baltic States which Russian communism just simply erased off the map. We both have seen a lot and gone through a lot. We appreciate our freedom today and the country where we now live. We are not likely to take anything for granted—not even the ability to walk to the corner drugstore whenever we wish.

LIVED UNDER RED REGIME

Please believe me fellow Americans. Think. Thank God we are all well in this country and above all we are free; free to think; free to speak our thoughts; free to travel; free to eat or sleep; free to choose our own education and jobs; free to walk in the streets; free even to complain; free to enjoy the sun and the beauty of nature around us; and, above all else, free to elect our own government and religious faith. May God keep us alert and grateful for all these gifts.

Please, fellow Americans, be wise, give our President the help he so richly deserves. For my part he has "carte blanche." Any time he will make decisions for our own security, he is to be trusted. This is exactly what he is trying to do now and not many of us seem to understand it. Let us help him keep our country and the world safe for the present and the future.

Mrs. CORNELIA V. ARO.
DES MOINES, IOWA.

American Veterans Committee Convention Endorses Antisegregation Amendment to Federal Aid to School Construction Bills

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr, POWELL. Mr. Speaker, it is gratifying to announce that the American Veterans Committee, at its 10th National Convention held on the weekend of April 26–28, 1957, in Washington,

D. C., overwhelmingly endorsed the inclusion of an antisegregation amendment to the bills providing Federal aid for school construction. This amendment, as you know, is commonly referred to as the Powell amendment.

A. V. C.'s national board and officers, as well as its State and local leaders and other representative veterans had previously endorsed this amendment, and some of their statements on this matter were inserted by me in the CONGRESSIONAL RECORD of March 7, 1956 (p. A-2124, daily issue) and February 6, 1957 (p. A-807, daily issue). At the recent 10th National Convention of A. V. C., veterans from all over the country assembled and debated the matter vigorously and at great length. They explored all its aspects, not only from the point of view of constitutional and and administrative law, but also with respect to their national, international, educational, moral, social, and economic implications. After such thorough debate, and by an overwhelmingly decisive vote, the AVC convention placed the following sentence in its permanent national platform:

We urge a program of Federal aid to education to assist in meeting these objectives, that is, improvement and expansion of public schools, scholarships for training and research, and increasing teachers' salaries, provided, however, that Federal funds shall be withheld from any school district which discriminates, by segregation or otherwise, on the basis of race, creed, or color.

In addition, the AVC convention also adopted the following resolution, also by an overwhelming vote:

Whereas the American Veterans Committee, ever since its first national convention in 1946, has opposed segregation in public schools and has urged that moneys from the public treasury "shall be appropriated and expended on a nondiscriminatory basis"; and

Whereas the American Veterans Committee, in platforms repeatedly adopted in previous national conventions, has supported the enactment of Federal legislation to aid school construction and at the same time has urged that "all Federal legislation making grants to States, municipalities, or private institutions" shall contain "a provision requiring these grants to be used without discrimination on the basis of ancestry" and has further urged "the enactment of legislation to prevent denial of equal opportunity in the use of public facilities"; and

Whereas we have endorsed the decision of the Supreme Court in the school segregation cases (a decision which we of AVC helped to bring about) and have pledged ourselves to work, and we have worked, to carry it into effect and to provide education to each child regardless of race; and

Whereas the school construction bill now pending in Congress would provide about $2 billion to finance new schools over a 4-year period: Now, therefore,

The American Veterans Committee, assembled in plenary session at its 10th National Convention in Washington, D. C., hereby resolved that AVC endorses the enactment of Federal legislation granting funds for school construction, provided the law contains adequate guarantee that the funds be available only for school districts which do not exclude or segregate children on the basis of their race, and that funds which are withheld because of such exclusion or segregation shall be held in escrow and paid if such practices are ended at any time before expiration of the law.

The American Veterans Committee has long been in the forefront of the struggle to improve and strengthen the civil rights of all the people of this country. AVC has a magnificent record of accomplishments in this field. It is indeed heartening to everyone who believes in the American promise of equality and freedom, to see this splendid organization of American veterans speaking so precisely and vigorously on this very important subject.

Splendid Participation of United States Firms in the Poznan Trade Fair

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ZABLOCKI. Mr. Speaker, during the last few months, I have noted with keen interest the arrangements being made for the United States participation in the 26th Industrial Fair in Poznan, Poland, to be held from June 9 to June 23 of this year.

Statements emanating from the Office of the Secretary of Commerce and from the Office of International Trade Fairs, as well as articles which appeared in the press and in our various magazines, contained much interesting information about this forthcoming event. I would like to briefly summarize these developments, and to commend several of these releases and reports to the attention of the membership of this body.

Before doing this, however, I want to commend Mr. Frank Elkins, of the Office of International Trade Fairs, Department of Commerce, who has prepared these releases, and whose energetic and conscientious endeavors have contributed much to the bringing of these facts before the public.

DECISION TO PARTICIPATE

Early in December 1956, the United States accepted the invitation of the Polish Chamber of Foreign Trade to participate in the Poznan Fair. This marked the first time that our country decided to make a fair appearance behind the Iron Curtain. This was an important decision, and one that may prove of particular significance in the years to come.

It is interesting to note that our fair exhibit will be located in Poznan, that same ancient city in which, almost a year ago, the freedom-loving people of Poland staged an uprising, and marched through the streets demanding bread, peace, and freedom.

Perhaps this consideration was weighed by Mr. H. C. McClellan, Assistant Secretary of Commerce for International Affairs, before he announced that the United States exhibit at the Poznan Fair will feature a comprehensive variety of American consumer products.

It is the intent of this country—

Said Mr. McClellan in making the announcement—

to show Polish fairgoers the enormous range of commodities, foods, clothing, and appliances which, in their totality, reflect the American standard of living.

Through this emphasis in our exhibit, we have a fine opportunity to show the Polish people and visitors to the fair those products which contribute materially and culturally to our living—the things we wear, use, and consume.

TRIBUTE TO AMERICAN INDUSTRY

At this point, I want to pay my sincere tribute to the private industry of our great Nation for its wholehearted support of this undertaking.

I understand that our private industry has cooperated energetically and enthusiastically with the Government in helping to make our first venture in this important fair in Poznan a most successful one.

I know that when private industry was asked to join the Government's trade fair team, it did so by providing a long list of goods in routine use in United States offices, homes, farms, playgrounds, and transport mediums of the land which many Europeans consider fabulous America.

Some 300 American firms, several of them from the city of Milwaukee and the State of Wisconsin, voluntarily made gifts and loans of "Made in U. S. A." commodities, valued at a quarter of a million dollars, for this all-American show.

Through their cooperation and enterprise, some 2 million Poles and citizens of other Eastern European countries are now expected to get their first direct view of hundreds of American products which show how we, both as consumers and citizens, enjoy great freedom of choice.

This is an imposing record of cooperation and achievement in an undertaking which will bring credit to our entire Nation, and which will concretely demonstrate the vigor, the enterprise, the initiative, and the resourcefulness of our private industry.

I am particularly pleased by this outstanding performance of our private industry because this is one instance in which the Government has actively encouraged the private sector of our economy to participate in these international fairs, in the hope that eventually the role of the Government in these projects will be diminished.

PRODUCTS CONTRIBUTED

In order to show what an interesting exhibit we will have at the Poznan Fair, I would like to quote from a release prepared by Mr. Frank Elkins, of the Office of International Trade Fairs, which lists many of the items contributed by our private industry:

Products contributed range from ladies' hats to a 4-ton tractor, and include 1957 "power model" cars, television sets, high-fidelity equipment and a range of frozen foods displayed in the best supermarket manner. Other exhibits show American clothing styled for women and children and many types of home furnishing and appliances displayed in a 7-room, suburban type house.

The American hi-fi exhibit in Poznan is an impressive display of the latest findings of United States electronics research. The agricultural section shows 8 tractors of various sizes with full assortments of plows, harrows and other attachments. It includes a display of farm feeds, pesticides and disinfectants. A technical expert will explain the latest techniques of animal husbandry.

The industrial and mine safety exhibit shows a fully equipped trailer-mounted industrial fire-fighting unit complete with heat-resistant clothing.

Sports-loving Poles will be given a picture of the American enthusiasm for sports and outdoor living in a huge display called "Hall of Recreation."

The variety of recreational items includes an 18-foot swimming pool, a display of skin-diving equipment, boats with outboard motors. Other displays show eight different types of outboard motors, various models of sportswear and outdoor clothing, fishing equipment, water and snow skis, surfboards; basketballs, footballs, equipment for soccer, tennis, baseball, boxing and archery, plus a variety of shotguns, camp stoves, hunting clothes, sleeping bags, barbecues, grills and picnic equipment. Demonstrators will make clear that this equipment is available to Americans of all income levels.

To catch the fancy of fairgoers as they leave the American exhibit will be vending machines dispensing coffee, hot chocolate and hot soup, plus a jukebox offering a choice of 100 records. Other machines provide soft drinks, cigarettes and candy bars.

The world's largest prefabricated dome with a diameter of 124 feet and a height at center of 50 feet, providing 12,000 square feet of floorspace, will house the central United States exhibit. The dome, covered with translucent plastic-coated nylon, glows vividly at night and is considered an attraction in itself.

All these products of private American enterprise will make the United States exhibit at the 26th Industrial Fair in Poznan not only attractive but outstanding as well.

PRAISE FOR PARTICIPATING FIRMS

The contribution of the American private industry to our exhibit at the Poznan Fair has been praised by Mr. Harrison T. McClung, the Assistant Secretary of Commerce for International Affairs, and acknowledged by our press. Under leave to extend my remarks in the RECORD, I would like to include and call to the attention of the membership of this body an article which appeared in the May 19 edition of the Milwaukee Journal, dealing with this subject:

PRAISES FIRMS IN POLISH FAIR—UNITED STATES EXHIBITS PROVIDED

WASHINGTON, D. C.—American industry was commended Saturday by Harrison T. McClung, Director of the Office of International Trade Fairs, for supporting the Government's first participation in an international fair in Poland. The fair will open in Poznan, Poland, June 9.

"Our first venture in telling the American story through exhibits in Poland presented problems," McClung said. "It was our intent to show Polish fairgoers the enormous range of commodities, foods, clothing, and appliances which in their totality reflect the American standard of living.

"The display problem was eased when 300 American companies voluntarily made gifts or loans of 'Made in U. S. A.' commodities valued at a quarter of a million dollars for this all-American show."

STATE FIRMS PARTICIPATE

Wisconsin companies are among those providing their products for exhibits. Mercury Motors International, Milwaukee, and Doughboy Industries, New Richmond, will furnish sports and recration items for the "hall of recreation."

Kimberly Clark Corp., Neenah, will provide building materials and the John Oster Manufacturing Co., Milwaukee, minor appliances. American Motors Corp. will furnish automobiles and the A. O. Smith Corp. a frozen food display and model American house furnishings from its Kankakee (Ill.) plant.

Two million Poles and citizens of other eastern European countries are expected to get their first view of hundreds of widely known American products.

UNITED STATES TRADE MISSION

When private industry was asked to join the Government's trade fair team it did so by providing a long list of goods in routine use in United States offices, homes, farms and playgrounds.

Commerce Secretary Weeks expressed pleasure Saturday that a United States trade mission, composed of prominent executives of American industry and commerce, will take part in the fair.

This mission, which will serve without compensation, will discuss with the Poles the potentialities for future friendly trade relations between Poland and the United States.

LIST OF PARTICIPATING FIRMS

Mr. Speaker, I believe that it is proper, in paying tribute to American industry for helping our Government put on a fine show at the Poznan Fair, to list the firms which contributed or donated products and services to this undertaking. The list, compiled by the Office of International Trade Fairs, reads as follows:

Automobiles and trucks: American Motors Corp., Detroit, Mich.; Chrysler Corp., Detroit, Mich.; Ford Motor Co., Dearborn, Mich.; International Harvester Export Co., Chicago, Ill.; Clark Equipment International, C. A., Battle Creek, Mich.

Balcony exhibits: Ohrbach's, Inc., New York City (Fashion Show); McCall Corp., New York City (Patterns-Catalogs); Bates Fabrics, Inc., New York City (Wrinkle Resistant Clothing Display); Budd Insulated Products, Inc., Larchmont, New York (Insulated Clothing Display); Millinery Institute of America, Inc., New York City (Women's Hats); Leather Industries of America, New York City (Women's gloves and Shoes); Chadbourne Gotham Sales Corp., New York City (Lingerie); Eye-Ful Lingerie, Inc., New York City (lingerie); Vanity Fair Mills, Inc., New York City (lingerie); The Singer Manufacturing Co., New York City (Singer Sewing Machine).

Radio, Hi Fi, TV equipment: Admiral International Corp., Chicago, Ill.; Ampex Corp., Redwood City, Calif.; Emerson Radio & Phonograph Co., Jersey City, N. J.; RCA International Division, New York City; Westinghouse Electric Co., New York City; Zenith Radio Corp., Chicago, Ill.

Frozen food display: Tyler Refrigeration International, C. A., Niles, Mich.; Campbell Sales Co., Camden, N. Address by Victor Andrade, Ambassador of Bolivia

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH OF VICTOR ANDRADE, AMBASSADOR OF BOLIVIA, AT MORGAN STATE COLLEGE, BALTIMORE, MD., APRIL 17, 1957

I appreciate the opportunity of being here today. I know something of the work of this school and of its contributions over the years to the Negro race and to your country. Your reputation is an excellent one, and it is well deserved.

Today I want to talk to you about my country of Bolivia and, in particular, about the problems of the Indian in my native land. In many ways this problem of the Indian is the fundamental one, not only in Bolivia but in several other countries of Latin America. The Indian masses never have been absorbed into the mainstream of culture, political, and economic life. They remain remote and submerged aliens in their own country. In several states they constitute the bulk of the population. Obviously the future stability and prosperity of these nations depend upon the integration of the Indian.

There is an interesting story—a series of them, in fact—in the rift between the Spanish conquerors of Bolivia and the surrounding area and the native Indians. In North America the white man found relatively fierce and barbarous tribes, with a primitive culture dependent mostly upon hunting and fishing.

In Mexico, parts of Central America, and in Bolivia, Peru, and Chile, the Spaniards found a well advanced civilization. My country, for example, comprises most of the territory of Collasuyo, one of the four large states which made up the Empire of Tahuantinsuyo, better known as the Incan Empire, which covered an area almost as large as the United States. This empire was a most curious mixture of theocracy, technocracy, totalitarianism, and democracy. The stories handed down to us indicate that the empire's ruling class consisted of children from over the Incan territory, children selected on the basis of ability and carefully trained. On the other hand, there was a large measure of autonomy in local affairs, and some of the villages were communal.

In any event, the Incan Empire fell to the Spaniards. In most of North America the Indians were killed, or driven farther and farther westward. The white man's liquor and the white man's diseases helped to decimate them. The legend of Indian wars persists in the United States, but actually the natives never had a chance. Their case was hopeless from the start. But in Mexico and the Incan Empire the Indians might have driven the whites into the sea if they had been able to bring their strength to bear upon the invaders. After the Aztec and Incan Empires fell, the Indians still constituted the majority in numbers; it was a question whether the Spaniards were going to be able to keep them permanently subdued.

Following the death of Francisco Pizarro, who, as you know, conquered the Incas, one of his brothers, Gonzalo Pizarro, rebelled against the man sent by the Spanish King to rule over the lands given him by the Pizarros. The native Indians watched, hating both Spanish factions. Gonzalo Pizarro defeated the King's representative. Some of his lieutenants proposed that he found a new dynasty by marrying an Aztec princess. The idea was to combine the manpower of the Indians with the military and industrial techniques of the Spaniards.

Gonzalo resisted temptation and surrendered to the King's forces, expecting, at the least, a pardon. Instead he was beheaded. The incident opened the eyes of the Spanish leaders to their danger. They set about systematically destroying the Incan social and political order. The Indian was subordinated. This was done in spite of the fact that King Ferdinand and Queen Isabella had specifically instructed that the Indians were to be treated as subjects of the Spanish crown and were to have the same rights as other citizens.

Shortly after the conquest, silver in great quantities was discovered in what is now Bolivia and in other part of the newly acquired territory. Near Potosi, Bolivia, there is a hill called Cerro Rico—the rich hill—which was almost literally composed of silver. From this great silver deposit alone, hundreds of millions of dollars' worth of the precious metal flowed to Spain. The Spaniards needed workmen for the mines and they dragooned the Indians into service. In effect, the Indians were slaves and, in chains they died by the thousands in the mines.

They did not submit tamely. Many Indian and halfbreed leaders led uprisings and gave their lives in a hopeless struggle. The Spaniards were pitiless. They crushed these uprisings in blood and they fought them in other ways.

One of the most subtle was the theory that the Indians and the halfbreeds were basically inferior. One of the early Spanish viceroys, Francisco de Toledo, prohibited the intermarriage of the Spaniard and the Indian on any basis of equality. Prior to Francisco de Toledo, a Spaniard could establish a perfectly legitimate and respectable family by marrying a woman belonging to the ruling class of the Incas. The viceroy put a stop to that, although illicit union with the Indians was condoned.

A new class appeared in the Spanish colonies, the halfbreed, neither Indian, nor Spaniard. They were outcasts and many persons, including some of the most prominent Latin-American writers said they possessed the worst qualities of both races. It was a long, long time before the realization came

that the intermarriage of the Spaniard and the Indian and the combination of their cultures were sources of strength and not weakness.

Eventually, all the Spanish colonies won their independence but their separation from the homeland did not mean independence for the Indians. During the rebellions which led to the formation of the Latin American States there was a good deal of talk of Indian rights. A representative of the Indian communities was included as a member of the Junta which organized a provisional government in La Paz, Bolivia, in 1809. Once the revolts were successful, democratic ideals were forgotten and the natives were relegated to the role of serfs. The ruling classes were the whites and the mestizos, persons of white and Indian blood.

For almost 100 years, the intellectual leaders in most of the countries with large Indian populations clung tenaciously to the idea that the Indians and mestizos were inferior. Some persons felt that the Indians must be displaced by white immigration, although obviously this solution of the problem was completely impractical. The prevailing view was summed up by Alcides Arguadas, a Bolivian writer, in his book, Pueblo Enferom:

"Out of the fecund embrace of the dominating white race and the dominated Indian was born the mestizo, bringing as his inheritance the characteristic features of both, which, mixed in that strange amalgam, determined strange contradictions of character that are sometimes difficult to explain, since it drew from the Spaniard his delicacy, his idolatry, his pride and vanity, his accentuated individualism, his pompousness and his invincible nepotism; from the Indian, it brought his submission to the stronger power, his lack of initiative, his passivity toward evil, his undeniable inclination to lie, cheat, and to hypocrisy, his exasperated vanity based on pure appearances with no ideals and, as a combination of all of these, his tremendous disloyalty."

In the light of modern anthropological and sociological studies, Arguadas' observations constitute a lot of nonsense but they help explain why Bolivia's Indian farm workers remained until only 3 or 4 years ago.

But a significant change in attitudes began long ago. A Peruvian writer, Mariategui, in his Seven Essays of the Peruvian Realty said after World War I:

"To await emancipation of the Indian pending a vigorous intermingling of the native races with immigration from Europe is an antisocial naivete only conceivable in the mind of an importer of pedigreed sheep."

In Mexico, Jose Vasconselas, in his work, Cosmic Race, said:

"The days of the pure white victors of today are numbered as were the days of their ancestors. In fulfilling their role of mechanizing the world, unconsciously they themselves have formed the basis of a new era, an era of the fusion and mixture of all peoples. The Indian has no other door to the future than the door of modern culture, and no other way than the path sketched by Indian civilization. Also, the whites will have to surrender their pride and seek progress and redemption in the souls of their brothers of other races."

As time went by, ideas of the Indian's inferiority dissipated to a large extent among the intellectual leaders in Latin America. Furthermore, the Indians themselves began to be restive and to resent their isolation from the modern world. The development of the automobile and highways over which it could be driven brought the Indians in touch with the cities. What they saw had a profound effect upon them. The Mexican revolution prior to World War I and in the 1920's was primarily an Indian revolution. So were upheavals in other parts of Latin America. But in Bolivia the Indian remained subordinated for reasons other than race.

The discovery of tin in Bolivia and its rise in importance as an industrial metal in the 1900's shaped Bolivian history. Simon Patino, half Indian, himself, built the first great tin fortune and after him two other families, the Aramayos and the Hochschilds, also grew wealthy through tin.

Unfortunately, the country did not grow wealthy. The Indians worked in the mines under conditions which made their life span very short indeed. As they died, or went home broken in health, others succeeded them but they remained poor and so did the country. My country has one of the shortest life spans, one of the highest infant death rates anywhere, and also one of the world's lowest per capita incomes.

Bolivia is about half again as big as Texas and its resources, aside from tin, are very great. But the Patinos, the Aramayos, and the Hochschilds were not interested in Bolivia's rich land, timber, or other minerals which they did not own. They paid strict attention to their tin business, and they also held strictly to the old theory that the poorer and more ignorant people are, the less trouble they are likely to cause the ruling classes.

The Chaco War between Bolivia and Paraguay in the early 1930's revealed clearly the cynicism and selfishness of the little clique which ruled my country's economic and political life. This clique, composed mainly of the tin-mine owners—the tin barons—and a few wealthy landowners, did not seem to mind that Bolivia lost the war. They paid little attention to the deaths and sufferings of the Bolivian masses; highlanders who left the mountain areas to fight a war in the disease-infested jungle. But they were careful to keep control of the country and to see to it that nothing interfered with the profits from tin.

Bolivia suffered tragically from the war, and in the wake of that suffering rose the determination to institute basic reforms which would end the serfdom of the Indian farmers and would make the Indian masses citizens of their homeland.

The history of modern Bolivia is a history of the struggle between the people and the tin barons and their followers.

In 1952, a revolution overthrew a military junta which ruled Bolivia in defiance of a victory at the polls the previous year for the MNR party, headed by Victor Paz Estenssoro.

The Bolivian Government in 1953 nationalized the mines owned by the tin barons. It did so, not because it believed in nationalization of property, but to get rid of the influence of the mine owners. Otherwise, they would bribe or bully their way back into power. They then, as they had often done in the past, would wreck all efforts at reform.

In addition to nationalizing the tin mines, the Government was dedicated to certain basic reforms. Among these were:

1. Abolition of the old army and organization of a new army which was to be the servant of the state instead of its master.

2. Extension of the right to vote to all, regardless of sex, income, military service, or illiteracy.

3. Land reform, with the objective of incorporating all the population, including the Indians, into the economic and social life of the country.

The reorganization of the army and extension of the right to vote took place without too much opposition. However, the enemies of the Bolivian regime concentrated on land reform. Along with nationalization of the tin mines, this step was described as the action of dangerous radicals.

The land tenure system in Bolivia at the time of the revolution in 1952 was incredibly archaic. It was a medieval system. The landlord was like the nobleman of the Middle Ages; the worker was his serf.

The worker was assigned a particular plot of land, to which he was bound; he also had the responsibility of working on the land which the owner reserved for himself. Furthermore, the worker and his family were obligated to do certain personal services for the owner. They tilled garden plots for him, cared for his stables and horses, and the women did the cooking, cleaning and washing. They were tenants and body servants at the same time.

There was little or no incentive for improvement of the land assigned to the tenant. If he developed it, the owner took it over and assigned him another tract.

I realized that what I am telling you sounds quite incredible, but I am not exaggerating. That's the way it was. The lack of incentive for the worker to increase his output accounted in part for the failure of Bolivia to produce enough food for its own needs. Agricultural production was further discouraged by importing food and selling it to the miners at comparatively low prices. This was done to allay unrest among the mine workers and to increase profits. The step did not accomplish its purpose of soothing the miners, but it did reduce agricultural output.

The government took one further step in the case of the farmers. It divided up the big estates and sold them to the men who actually tilled the soil. In as many instances as possible, the farmer got the land he had been working.

The land taken over was not confiscated; the owner was paid in government bonds.

I think the program, in view of the antiquated land tenure system in my country, was a very moderate and conservative one. But it is even less drastic than it sounds because of the amount of land available in Bolivia. As I have stated, the country is half again as big as Texas; it has less than four million people. The majority of these are on the great highland plateau in the west, a plateau which averages more than 10,000 feet in height. Most of the good land is in the valleys and the llanos east of the valleys.

There is plenty of good land for anybody who wants to farm it. But the Indian farmers had to own their own plots and had to be taught modern methods of cultivation in order to increase agricultural output. They now own the land and are being taught how to farm it.

Obviously, if the program succeeds, it will not only greatly increase Bolivia's agricultural production, but it will be a force for social and economic stability. Landowners are not known for radicalism. In fact, probably the weakest point of the Communist programs has been the inability to make collectivism work in agriculture.

Meanwhile, Bolivia struggles with the overall problem of ending its dependence upon imports. Our tin mines are pretty well worked out, and tin can be produced in other areas of the world a good deal cheaper than in my country. Most of the tin mined since 1952 has been at a loss. Eventually, oil may replace tin as the principal source of foreign exchange, but the development of the oil potential takes time. So do other projects, including the development of mineral wealth other than tin.

The United States has helped Bolivia since 1953, and that help has enabled us to survive, but it has been hard going even so. Inflation has been very bad, and inflation always is hard on poor people—and most of the people in Bolivia are poor.

Without going into detail, I might say that we recently inaugurated a program aimed at stabilizing our currency. We have systematically tried to make foreign investment in Bolivia attractive because we feel the right kind of private enterprise can help us a lot. At the same time we have opposed communism, for in it we see only the exploitation of the hardships of our people for the benefit of others.

If we succeed in making Bolivia a modern and progressive state, we will have solved several problems at once. We will have found

a way to deal with the problems of undeveloped Latin-American countries without resorting to dictatorship. We will have found a way whereby a rich and powerful country can help a poor one like Bolivia to the mutual benefit of both. This will help meet the charges of imperialism which the Communists use against you in this hemisphere and abroad.

And, not the least important, we will have found the answer to a race problem which has plagued Bolivia and some other Latin-American countries for a long time. Land reform in Bolivia will be followed by land reform in other countries and the elevation of the Indian to the status of a first-class citizen.

The Negroes of the United States have made tremendous strides within the past few generations. You have your own problems, but I am hopeful that some of you will find time to grasp some of those which confront Bolivia. Your sympathy and assistance would indeed be a boon to us.

Middle East Conference

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the following address by the distinguished Chief of Naval Operations, Adm. Arleigh A. Burke, delivered before the Dallas Works Affairs Council at Dallas, Tex., on May 17, 1957, entitled "Middle East Conference":

ADDRESS BY ADM. ARLEIGH BURKE, USN, CHIEF OF NAVAL OPERATIONS, BEFORE THE DALLAS WORLD AFFAIRS COUNCIL, DALLAS, TEX., MAY 17, 1957

It is a very great pleasure to be here this evening. I appreciate this opportunity to meet with you and to share in this very productive Middle East Conference which the Dallas World Affairs Council and Newsweek magazine have joined forces to sponsor.

There is little that takes place anywhere in the world today that does not affect our Nation. It is difficult for busy citizens to follow everything that affects our national security in these rapidly changing times. The work this group is doing to stimulate interest and to promote understanding of international affairs is of inestimable value to our entire Nation. The Dallas Council and Newsweek are to be congratulated for this timely and stimulating examination of the problems confronting us in the Middle East.

This particular part of the program deals with the defense problems of the Middle East. It would seem well to begin then with a strategic appraisal of this area which has claimed such deep interest for so many centuries. What is the strategic significance of the Middle East? Why is it so important that nations there remain free and independent of totalitarian domination?

First of all, it is in the interest of people everywhere to prevent the spread of totalitarianism. It is not in the interest of the free world, or in the interest of the United States, for any additional territory or people to be shut up behind the totalitarian curtain, no matter where they are. This means no further retreats. Every gain by totalitarianism is a loss to the cause of freedom. The totalitarian world would get stronger and the cause of freedom would get weaker with every Communist encroachment on independent peoples. The effect is cumulative.

The Middle East is particularly vulnerable to Soviet penetration. It is probably the least stable of all independent areas of Europe and Asia at the present time.

The Middle East is also a focal point, a crossroads, of world communications. It is the land bridge between Europe, Asia, and Africa. Of even greater importance, it is the salt-water shortcut between the peoples of the Atlantic and Mediterranean community and the peoples of south Asia and east Africa. We already have ample evidence of the importance of the Suez lifeline to the economies of Western Europe and South Asia.

Loss of the Middle East would bring Communist totalitarianism to the shores of the Indian Ocean and the Mediterranean Sea. It would shatter the right flank of NATO, and leave Turkey in an indefensible position. It would open up the whole continent of Africa with all its vast resources to Communist exploitation. It would do this at the very time when the peoples of Africa are most vulnerable to the predatory advances of Communist totalitarianism.

Of immediate interest to Western economies, of course, if the oil of the Middle East, which Mr. Coleman discussed earlier in such an interesting and informative manner. We have the lesson of the Suez crisis still fresh in our memories to remind us of how critical the delivery of Middle East oil is to Western Europe, even in peacetime. Europe needs Middle East oil today. She will continue to need it in steadily increasing quantities for some time to come. Control of this oil would be a tremendous weapon, both military and economic, in the hands of an aggressor power seeking dominion over free Europe.

It is more important than ever great Middle Eastern countries be permitted and helped to develop into stable, independent nations, free of Communist-totalitarian domination. It is United States policy to be helpful in the achievement of this aim. We have many means by which to pursue our objective.

One of the first things to be said of these many means available to us is that they are all interrelated and interdependent. What we might attempt in a miltary way has to support our activities in the political, economic, and cultural fields. The reverse is also true. The steps we take in nonmilitary spheres have a big influence on the kind and effectiveness of military actions which might have to be taken later. No segment of our tremendous national effort can afford to operate in a parochial vacuum.

It is hardly worth mentioning here that no nation can be defended or helped unless its people and government are willing to accept help. A political and economic climate is needed in which the desire for national independence is well-developed.

One of the basic tasks in defense of the Middle East is to develop a satisfactory state of internal security in the countries of that area. We have seen enough of this recently to understand how the Communists operate to undermine and destroy independent governments. Many governments in this area need help. Sufficient military and technical support must be provided to enable constituted governments to sustain themselves against armed conspiracies, subversion, and mob action, Communist or otherwise.

Once the internal security problem is in hand, we have the problem of achieving and keeping some sort of general neighborliness among the various Middle Eastern states. The Middle East is an area torn with traditional grievances and hatreds, of sensitive and emotional leaders, of rampant nationalism. This is a local problem quite apart from the larger one of regional security against Communist aggression. The task is complicated by the difficulties between Israel and the Arabs. But these difficulties are by no means the only ones which threaten the peace.

Finally there is the task of securing the Middle East against direct aggression by the Soviet Union. The American Doctrine for the Middle East is a general pledge to help any Middle East nation requesting our assistance to resist Communist aggression. This, of course, is a commitment of major proportions, particularly if it involves direct Soviet aggression. If invoked it would amount to virtually the same degree of involvement for us as would a Soviet attack upon Enrope. In either eventuality the United States could become directly involved in open hostilities with the Soviet Union.

The general group of commitments which constitute the American Doctrine for the Middle East form the newest link in the free world collective security system.

Let us consider briefly some of the problems connected with the support of military operations in the Middle East area.

First, relative distance. The eastern shore of the Mediterranean is just about as far from New York as Korea is from San Francisco. Thus the logistic problem would be roughly of the same dimensions as that of operations in Korea. A distance of some 5,500 nautical miles is involved. It is twice that distance from New York to the Persian Gulf around the south of Africa. By way of contrast, it is only a matter of some 500 miles from the foot of the Caspian Sea to the oilfields at the head of the Persian Gulf. It is about 1,000 miles from the Caspian Sea to the Suez Canal.

This distance factor might at first seem to be a large differential in favor of the Soviet Union. But the advantage really lies with us, just as it did in Korea. Between the Caucausus and the heart of the Middle East lies some of the most difficult terrain on the face of the earth. Mountain ranges higher and more rugged than any we have in the United States lie directly athwart the line of march. There are deserts which support no human life other than a handful of nomadic tribes.

Modern roads are virtually nonexistent in this area. Only a single rail line connects northern Iran with the Persian Gulf. Troops might be dropped from air transports, but to be effective they must be supported continuously and massively in every category of supply. All this cannot be done by air. Bombs can be dropped, but worthwhile targets are few.

The logistic problems of supporting any sizable military operation over these long land lines would be staggering, even if we interposed no resistance. It would be easier to support extensive operations in this area from the sea than it would to support them by land and air from the north.

The conclusion is obvious. In terms of effective, timely support, the Middle East can be thought of as being closer to the United States than it is to the Soviet Union. This is simply an extension of the general truth that validates all our alliances with countries in Europe and Asia. Sea communications put our allies closer to us than to their land-locked enemies.

The ability to move force rapidly into an area by sea is of critical importance when the area has virtually no capability to defend itself against an initial onslaught. Even those Middle East nations with the best military forces, such as Turkey and Pakistan,

could not stand up alone against a Soviet attack. Banded together in a regional defense arrangement like the Baghdad Pact, they would still need help. The Middle East nations must rely upon outside assistance, assistance brought in by sea.

In today's fast moving world, so very much depends on what the parties at issue are able to do right away, with forces that can be immediately deployed to the critical areas. Fateful decisions hinge on planners estimates of how quickly a position can be occupied, how readily an advantage can be pressed home. Last November during the Suez crisis our forces in the eastern Mediterranean were ready for anything, and the world knew it.

In recent weeks the United States 6th Fleet again returned to eastern Mediterranean waters. The stabilizing effect it had on a dangerous situation was dramatic.

The defense of the Middle East involves the same twofold problem common to so many of the free world's security problems, especially in Asia. The first is the problem of direct Soviet bloc aggression. The second is the problem of violence within and among the Middle Eastern states.

We are probably going to be far more actively concerned in the immediate future with trouble within the area itself. Some of it will be Soviet directed or Soviet inspired. Most of it will be designed to create a climate favorable to Communist penetration.

The Middle East is a restless, explosive area. It has inherited enough trouble to keep things stirred up for a long time. It is not the kind of trouble that is susceptible to specific, clear-cut solutions, military or otherwise.

There is a definite requirement for military power, but it must be graduated power, flexible power, power that is instantly responsive to the political nuances of the situation.

The defense problem in the Middle East is a part of the general defense problem of the free world. As such it is subject to the same basic factors which influence the larger problem.

Chief among these factors is that the principal areas of decision between Soviet communism and the free world are the peripheral areas of Europe and Asia. Thousands of miles of blue water lie between these critical areas and the United States. Our allies, our opponents, and the areas of decision, including the Middle East, all lie across the seas from us.

The strength of the free world, its ability to resist the outward thrusts of Soviet aggression, depend on our continued ability to use the seas—to reinforce and support our allies, to supply our troops and air forces, and to project the kind of power needed at the moment into the critical areas of military decision.

Implicit in all our mutual security pacts and guaranties of assistance, including those recently made to the Middle Eastern countries, is the assumption that we shall always have the power, come what may, to use the seas and to project our military power ashore where needed, from secure bases in international waters.

There are two relatively secure roads open to us to the Middle East. The most direct road is through the Mediterranean. The other, through the Indian Ocean, is longer but is the more secure of the two. Over these roads can be projected, at minimum cost, the political, economic, and military assistance needed to keep the peoples of the Middle East free of totalitarian domination.

The strategic advantage clearly lies with the free world, provided we have the means to control the intervening seas. A great deal of wisdom and foresight are needed to make the best use of our advantages.

Address by the Honorable Anthony F. Tauriello

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I know my colleagues will be interested in the following thoughtful address by the Honorable Anthony F. Tauriello, who represented the 43d District of New York in the 81st Congress and who is now a member of the Council of the City of Buffalo. The speech was delivered on April 27 at the convention of District No. 1 of the United Rubber, Cork, Linoleum and Plastic Workers of America, attended by delegates from every State east of the Mississippi River.

Jack Tauriello won the admiration and affection of all who served with him in the 81st Congress. He revealed a most able mind, a warm heart, and great courage and determination in working for legislative measures in the interest of all the people. Jack has continued his distinguished record in his present high office in which he has rendered outstanding service to the great city which he so deeply loves.

The address reads:

ADDRESS BY HON. ANTHONY F. TAURIELLO

I have been in public life for better than a quarter of a century. And I have been privileged to serve the people of this community, as a Member of Congress, and other legislative elective bodies in this city. There have been occasions when I have been tendered the signal honor of speaking before various groups. This morning, I can honestly say, and with deep conviction, that this is one invitation to speak that I not only welcome but cherish.

Gathered here are men of labor. What are men of labor? Who are the people of labor? There is an onerous interpretation of the word "labor" in the minds of too many of our fellow Americans. When one sees a labor union or a labor group, there is a tendency upon the part of those who are opposed to labor's aims to see labor unions as a people apart from all the people. Labor, to me, and, I am sure, to you, means the people—all the people. The man in the steel mill, the white-collar worker, whether he works in government or private industry, is part and parcel of labor. The charwoman, the craftsman, the technician, and the salesman. These are the Americans, each and every one of them, who make up the family of labor. So let no one get the idea that labor unions and their membership are a special group of Americans. This family of labor today faces one of its darkest moments, but out of the darkness comes daylight, and in the light of day let us look at the problem or problems that plague the family and the house of labor. Headlines scream of the evil ways and the evil doings of certain labor leaders in certain unions. Radio commentators, news analysts, and others shout that all labor is emeshed in wrongdoing. This, my friends, is furthest from the truth. There are members of the family—trusted members—who no longer can be trusted. This does not condemn or convict the entire family. Time and again history records similar problems that were faced by this Nation—by big business and other industries—that make up the American way of life.

This problem I refer to is the unscrupulous—the greedy among us—who would by their actions and their misdeeds destroy the greatness of a nation and destroy its people. This is exactly the position labor finds itself in today. We hear the enemies of labor calling for the destruction of the family of labor. They ask that the house of labor be torn down, that the hard-fought gains for the decent way of life be denied to men and women who organized to build a better America. Let me give you the examples I have reference to and let us see how similar problems and situations were handled. In the early days of our Nation when we fought for independence we had our Benedict Arnold, and out of that tragic phase of history this Nation grew strong, and the people found freedom. Because one general was corrupt did we condemn all of our generals? Did we disband the Continental Army, and did we give up hope for the great liberties that were made possible back in that era? No. We survived. Isn't this the same thing today in the house of labor? There are the Benedict Arnolds who would deceive, cheat, and rob the individual man and woman of labor of his dignity, his prestige, and his hard-won liberties. Just as one Benedict Arnold could not destroy the American spirit, no single individual, or group of individuals, who have managed to lock themselves in high places can destroy labor. No, my friends—they canont destroy this house of labor for they will be rooted out as you are doing now. Your members will grow in greater numbers, you will achieve greater benefits from the productivity of your own efforts.

Now, let us look at another phase of the American pattern of living. You recall, my friends, the stock exchange when a corrupt president of the stock exchange was indicted and sentenced to prison. Was there a hue and cry that all stock brokers were thieves? Was there an onslaught to crumble the vast business of the stock exchange? Did they besmirch the integrity and the reputation of those who dealt in the stock markets of our Nation? Here, once again, the parallel situation is evident. The stock exchange had its Benedict Arnold, but this phase of our business exists and our economic life operates today soundly and in behalf of the people. So, here was a phase of management, in business, that went through the growing pain stages and lived and prospered in spite of its evil ones.

The pattern is also the same as faces labor today, and do you recall when a great drug concern, McKesson & Robbins by name, because of dishonest leaders went bankrupt. Did we hear then any loud voices calling for the destruction and the dissolution of this business venture and the people who conducted it? No, we did not. You see this company had its Benedict Arnolds too, and when they were brought at bay, this concern came back with a great resurgence and operates its multi-million-dollar concern bigger and better than ever before. I could go through a long list of businesses, such as the Samuel Insull swindle, and others. What I am trying to point out—what I am trying to say—is this: That every part of our economic life was threatened at one time or another by leaders who could not be trusted, by dishonest men with dishonest tendencies, who made the innocent suffer by their actions. But in every instance where faulty leadership had resulted in scandal the guilt was placed where the guilt belonged. But lo and behold, a guilty few in the house of labor now stand before the court of public opinion and there are those who are ready to condemn each and every man and

woman who carries a union card. No, my friends, this is not a fair American practice. Let us look at a little more recorded history. This time in Government, where scandal rocked this Nation to its very foundations. There was the Teapot Dome scandal where trusted public servants reached out with clutching and thieving hands, who robbed and stole what belonged to the public. Did we at that time condemn every man who held public office? Did we look at the colleagues of the scoundrels, and did we say by association they were scoundrels too? Did our Nation crumble and fall? In the terms of the popular Elvis Presley record we were "all shook up" but did not crumble. We rid ourselves of those in high Government posts who could not be trusted, those in high Government posts who were by their lack of honesty unable to serve the people. Once again the pattern is the same, once again the problem is the same. We had our Benedict Arnolds in time of war. We have had our Benedict Arnolds in the economic and industrial growth of this Nation. We had our Benedict Arnolds in Government, and today, you are faced with a few Benedict Arnolds in labor.

But no matter what the crime—no matter what the charges that are placed against once trusted leaders—I plead with my fellow Americans not to pass judgment, not to convict the accused without allowing the accused to stand trial under the American concept of justice. Let us not convict by newspaper. Let us not convict by innuendo. Let us not convict by slander. When the guilty among you is brought to light let it be done through legal procedures. Let us not close the door to the right of any man to have his day in court. There is no difference in this problem today than there was in the problems that paralleled us through recorded history. Labor has enemies on the inside and the outside. There are those in this nation today who would have cause to celebrate for they would spend millions of dollars to destroy organized labor, and they are using today the fact—that a member of the family who is guilty of crime and wrongdoing—makes every member of the family just as guilty. As sure as we are gathered here and as sure as God is our judge we may rest assured and be reassured that never as long as this Nation shall exist will labor lose any of its rights and its privileges nor shall they be taken away through legislative acts.

If we were to examine the labor movement from its early days to its present crucial period we would be amazed to find how little scandal and how little dishonesty there really was in the conduct of labor's business. The scandals of Government, the scandals of business, are gigantic monsters in comparison to the little evils that have afflicted labor in its growing period. I did not come here today to defend labor. It needs no defense. Labor will rid itself of its rotten apples and labor will continue to provide the services that puts the timber into the backbone of this Nation. Earlier I asked the question, What is labor and who are the people of the family of labor? My friends, let me expand on my thought for a moment. Labor is as American as apple pie. The men and women of labor are the first line of defense when our Nation is threatened. They make the guns, the plows, the tanks, the battleships, and the airplanes so that this Nation may remain strong. They sweat and they toil in the factories of this Nation and they bring forth the good things of life—the radios, the television sets, the refrigerators, and all the conveniences that came from American inventive genius.

The men and women of labor not only produce the weapons for war and defense, but they and their children have shouldered these weapons that they made with their own hands. They have done so in every war and they laid their lives down on foreign shores the world over for the right to belong to a union, and this is a right that no single group has cause to attack. There was a time in this Nation when cliques and vested interests amassed tremendous fortunes while their fellow Americans lacked the needed money for the essentials of life. There was a period before the creation of organized labor that the children of the workingman could not gain an education. Today our doctors, our lawyers, our scientists, are not the sons and daughters of the idle rich, they are the sons and the daughters of the men of labor. This, gentlemen, is a monument to your achievement. Labor has written a glorious page across the face of American history. Labor has been more clean, more decently operated, in spite of its present dilemma created by the few. Labor's business has been conducted through the years with more fairness, more equality, more dignity, and more decency, than any other branch of operation. It has been more clean than big business and government. And now that we stand at the threshold of a new day labor will emerge more triumphant and with greater acclamation than ever before.

The critics and the enemies who would condemn the whole family of labor will be silenced by the weakness of their own tirades.

In closing, gentlemen, I would like to pay tribute to your union, its leaders, and its membership. In all the years of your existence there has never been one instance where your leaders or your rank and file members have been accused of any wrongdoing. Isn't it remarkable that your union and others like you have lived without the taint of scandal while other ventures and other branches of our economic life were steeped in the backwash of dishonesty? And isn't it discouraging that when an instance appears such as has appeared in one of the organized branches of labor that there are those who would destroy all that is good in labor.

As I leave here this morning I know in my heart and soul that it will not come to pass, for just as there are enemies of labor, there are more friends of labor in and out of government, and these friends will stand by to aid you whenever called upon to do so.

I thank you most kindly for your invitation. I shall treasure these memories.

New York Postmaster Robert H. Schaffer

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. FINO. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a statement issued by Branch One of the United National Association of Post Office Craftsmen in regard to the resignation of New York Postmaster Robert H. Schaffer.

The statement follows:

UNAPOCS REGRET RESIGNATION OF POSTMASTER ROBERT H. SCHAFFER

The news of the forthcoming resignation of Postmaster Robert H. Schaffer on June 15, 1957, has left a depressing effect on the officers and members of the United National Association of Post Office Craftsmen in this area.

In a statement to branch officers and members of Branch One, UNAPOC, Andrew T. Walker, president, has taken note of the top-notch E for efficiency of the Schaffer administration of the postal service in New York, N. Y. Mr. Walker also spoke highly of the humane and understanding approach Mr. Schaffer had applied to the problems of the service and of the high degree of success it attained. Particularly, Mr. Walker added, was the installation of labor-management teams in large mail terminals. The inauguration of these employee-management arbitration teams helped considerably in solving problems at the point of origin.

The resignation of Mr. Schaffer will leave a definite mark in the annals of history of the New York post office. His dynamic personality and willingness to meet with all of the postal groups, socially and otherwise on his off hours from duty, illustrated well his democratic outlook.

The employees will miss him and well can it be said that the service and its workings will miss his keen observations and attention, for it was remarkable, indeed, for the few short years Mr. Schaffer had been with the postal department he had amassed an unusual background of knowledge and its application.

A tribute well deserved and earned is that Mr. Schaffer in his resigning from the postal service takes with him the fond affection and esteem of over 35,000 New York postal men and women. Good luck to you, Mr. Postmaster.

From Tree Nursery to Gravel Pit

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. JOHNSON. Mr. Speaker, last January during hearings on the soil bank program before the House Agriculture Committee I asked Department leaders including the Secretary how many tree nurseries had been disposed of since 1952. At the time their answers ranged from 3 to 5 but they promised to list all of them later in the record upon my request. That list shows that 11 of these nurseries were closed by the Government as follows: Thorsby, Ala., Brooksville, Fla., Rock Hill, S. C., Gretna, Va., Ankeny, Iowa, Winona, Minn., San Antonio, Tex., Kearney, Nebr., Albuquerque, N. Mex., San Fernando, Calif., and Bellingham, Wash. What happened to one of those nurseries after it was closed is reported by Drew Pearson in his May 11 column taken from the Eau Clair (Wis.) Leader. Under leave to extend my remarks I would like to submit that report here:

BENSON REVERSES SELF ON TREE NURSERIES
(By Drew Pearson)

WASHINGTON.—Ezra Taft Benson has run into trouble on his somersault on tree-growing. First he killed all Government nurseries; now he is urging more money for nurseries. The trouble comes primarily from his fellow Republicans.

Shortly after he became Secretary of Agriculture, Ezra junked all Department of Agriculture nurseries. He claimed it was not the job of the Government to grow trees, and he turned the nurseries over to the States—even if the States didn't want them.

At Winona, Minn., Benson gave a thriving United States nursery to the State of Minnesota. The State proceeded to remove all trucks, tools, tractors, the overhead irrigation system, and some of the choice nursery stock. Then Minnesota abandoned the site.

The site is now owned by the Winona Sand and Gravel Co., which purchased the once-thriving United States Government nursery for the bargain price of $3,000. The price included a building valued at $12,000, plus all irrigation equipment that could not be moved, including a pump, motor, etc., plus other minor buildings.

In brief, the nursery which once grew thousands of trees is now a gravel pit.

But 3 years later, when Secretary Benson started his soil bank plan, he suddenly discovered he would need trees.

So, because it's too late to start United States nurseries and because he doesn't want to reverse himself that much, Benson is now pumping $6 million of Federal funds into State nurseries whether the States want the money or not.

Benson is giving the $6 million in direct grants to the States, without any matching funds, a policy directly contrary to the Eisenhower policy of making the States put up matching money for Federal aid.

The House Appropriations Subcommittee, discovering what Benson was doing, objected. They found that the grants were made by the Secretary of Agriculture himself.

"Why did you oppose such subsidies in 1955," asked Congressman Budge of Idaho, "yet now you have them in the budget?"

Congressman JENSEN, of Iowa, also objected. He doubted whether the Agriculture Department had legal authority to subsidize State nurseries to sell trees at below cost to farmers.

The plan for United States funds for State nurseries is going ahead anyway, with the expectation that farmers will plant 5 million acres in trees under the soil bank plan. Actually farmers have signed contracts to plant only 7 percent of that number in 1956–57. Since 1940 farmers have planted only 10 million acres of trees, and their rate of planting prior to the soil bank had reached about 1 million acres per year.

So they will have to do a lot of planting to hit 5 million acres per year any time in the near future.

Arab Refugees

EXTENSION OF REMARKS
OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include a thoughtful article by the Very Reverend James A. Pike, dean of the Cathedral of St. John the Divine, and adjunct professor of religion and law, Columbia University, entitled "Key Piece in the Mideast Puzzle." This article appeared in the New York Sunday Times magazine section of May 19, 1957. Dr. Pike is the coauthor of the book, "The Church, Politics and Society."

The article follows:

The peace of the world may turn on a vicious circle in the Middle East. The vicious circle is this: there can be no lasting peace until the Arab refugee problem is solved; and the Arab refugee problem cannot be solved until there is a real peace. Is there any way out of this circle?

I pondered these things a little over a year ago as my wife and I visited a large refugee camp south of Bethlehem. The misery these establishments represent has been too frequently described to require exposition here. But the dreadfulness of the situation is more psychological and spiritual than physical. The United Nations Relief and Works Agency for Palestine Refugees in the Near East has seen to it that there are 1,600 calories per day per person—higher than some, at least, of the residents had before. The tin huts (ovens under blazing summer sun) and skimpy tents (chilly diggings in the winter) are no worse than many Arab accommodations elsewhere.

But even if the food and lodging were fit for kings, the situation would be tragic. I remember our passing, near the entrance to the camp, a tall lean Arab just sitting in front of his hut looking off into space—and an hour later, as we passed the same place, he had not moved or changed his expression. Nothing to do—except to dwell on his situation, to nourish his resentment over the past, to reflect on the apparent hopelessness of the future and, when he gathers with his fellows, nothing to talk about—except to go over the same ground, and fan the resentment. This is a living death.

It is an existence suffered by an unknown number of people who fled or were dislodged from their homes during the partition of Palestine and the subsequent fighting. Estimates of the refugee population run from 800,000 to 900,000, including the children born in the camps. These Arabs are now living in Jordan, Syria, Lebanon and the Gaza Strip, which is officially Egyptian.

Whose fault is it that the refugees got where they are in the first place? Whose fault is it that they are still there? And what can be done about it?

As to the first question, we received conflicting answers. From the Arabs: "We were driven out of our homes and lands by the Jews." From the Israelis: "We urged them to stay; the Arab nations urged them to leave and promised them their lands—and ours—when they returned." Who is right? Interestingly enough, both statements are true.

To grasp this apparent contradiction, you must put yourself in the position of the individual Palestinian Arab in 1948. He was confronted with a rapid—and confusing—series of events. (1) The U. N. had voted the partition of Palestine into a Jewish state and an Arab state, it being contemplated that there would be Arab and Jewish citizens in each. (2) The British abandoned their mandate before arrangements were worked out for the two new states to take over. (3) The state of Israel was forthwith declared; no Arab Palestinian state was organized. (4) Immediately the surrounding bloc of Arab states attacked Israel. Out of the resulting insecurity of Jew and Arab alike came conflicting pressures on the Arab in Israeli territory:

Fear of his fate under the Jews: Jewish terrorists groups were operating—albeit unofficially. The ruthless massacre in the Arab village of Deir Yassin was vivid in memory. Arabs in some localities were threatened. Why? Fanaticism, fear of an internal fifth column, desire to clear the property for Jews.

Fear of his fate under Arab rule: The invading Arabs put pressure on him to leave and threatened him if he would not. And most people thought then that the Arabs would win the war.

Hope of gain: If he left and then returned, which he was most sure to do once the Jews were overwhelmed, he would share in the booty—the Jewish properties.

Arab solidarity: After all, he was an Arab, and his brother Arabs were fighting Jews. And this cleavage had old roots.

The promises of the Jews: The official Israeli attitude was clear enough. The government urged the Arabs to stay, spreading this word throughout the land by soundtrucks and handbills. They were promised an equal place in the new nation.

Under these pressures the individual Arab could hardly be blamed for making either decision—to go or to stay. As it turned out, those who stayed fared better than those who left. In terms of economic and educational opportunity, health, and sanitation, the Israeli Arabs are, by and large, considerably better off than other Arabs in the Middle East. And because Israel is a democracy, they have more voice in the government of their nation than do the Arabs in Saudi Arabia, or, for that matter, than do the Palestinian Arabs in Jordan—now that the Trans-Jordanian (largely Bedouin) minority is in absolute power there.

However, there have been certain limitations on the Arabs in Israel, such as freedom of movement. This is justified by the government on the ground of security, but this factor may be exaggerated; indeed, the Supreme Court of Israel has the zeal of the military administration of Galilee; and during the Sinai operation there was no report of any rebellion of Israeli Arabs. But American critics are somewhat estopped from making too much of all this because the Arab in Israel is by and large in a better position that the American Negro in large parts of our country.

But the fact is that the majority of the Arabs left—and hardly for capricious reasons.

Why the present standstill in this situation? Many refugees in other areas have been settled with useful work and with a real future in their adopted homelands. Israel itself, less than one-hundredth the size of the Arab world, has settled some 900,000 refugees from many nations. There is a crucial difference. For example, in the case of the recent exodus of Hungarians to the United States, our Government and the refugees regard the situation in Hungary as a fait accompli and their future is planned accordingly. But neither the Arab nations nor the Palestinian refugees so regard the situation in the Middle East. They will not accept the fact of the existence of the State of Israel. Its extermination is the top priority in the foreign policy of the Arab nations and in the heart of the individual refugee.

So the failure to develop constructive plans for permanent resettlement is not attributable simply to the lack of the necessary wit or means. The Arab states don't want the refugees settled, for if they were they would lose their most potent propaganda piece against Israel. As Ralph Galloway, until recently head of United Nations relief in Jordan, has said, "The Arab states do not want to solve the refugee problem. They want to keep it an open sore, as an affront to the United Nations and as a weapon against Israel. Arab leaders don't give a damn whether the refugees live or die."

Recently, Henry Labouisse, director of UNRWA, declared that the Arab States have placed so many obstacles in the way of U. N. help for their own fellow Arabs that it may be necessary soon to suspend such relief entirely. The Arab aim is to foster in the refugees the notion that return to their former homes is the only desideratum.

But is that a real possibility? Assume that there is a minimum of 800,000 refugees (it is hard to get a firm figure: there were probably 500,000 to 600,000 to start with). The population of Israel today is 1,900,000. No nation, regardless of past rights and wrongs, could contemplate taking in a fifth column of such size. And fifth column it would be—people nurtured for 10 years in hatred of Israel and totally dedicated to its destruction.

We can get a hint of what the presence of this large block of dissidents would mean to Israel's stability from what the acquisition of the Palestinian Arabs has done to Jordan's stability; the gulf between their orientation and objectives and those of the Bedouin

population of the former Trans-Jordan has been the prime factor in the explosive situation in present-day Jordan. For an analogy, we must think of this: the scrupulosity with which the United States examines the views of each potential immigrant does not encourage us to imagine that we would be willing to take in nearly 71 million sworn enemies of the nation, which is what the proportionate figure would be.

But doesn't this argument prove too much? It could be said that the very magnitude of the refugee group as compared with the present population of Israel argues for their return, whatever the consequences to the State of Israel, since the figures prove that there should never have been a Jewish state in Palestine.

Actually, as a non-Zionist, I was and am less than convinced by the arguments for the establishment of Israel in the first place. But the fact is that it was established—and its right to exist is grounded on two bases of paramount validity: first, it was established by action of the only international authority, the U. N.; and, second, it won a war brought against it by the Arab States.

We can't turn back the clock of history. Literally, the territory that is now Israel is not the same country that the refugees left. Nine years of intensive development, urban and rural; nine years of heavy immigration; nine years of the shaping of a way of life—all this rules out the possibility of an Arab's return, in any realistic sense, to what he left.

If return is ruled out, then what? Equally unthinkable is the continuation, year after year, of the demoralizing—and ever-explosive—status quo. The only live option then is permanent resettlement. And the barriers to that are not so formidable as has often been asumed. These are the barriers:

1. In Jordan and the Gaza Strip, where the bulk of the refugees reside, there is not enough arable land or enough available employment in commerce and industry to support anywhere near the total number of refugees.

2. Resettlement (in contrast to relief) would require a large capital outlay.

3. The Arab nations do not want resettlement.

Serious as these barriers are, they surely are not insuperable. Yet any solutions must take them into account. Foolhardy as it may seem for me to say so, I believe there is a solution—if the United Nations and United States get behind it—and that it involves these elements:

The signing of a permanent peace treaty. There is only an armistice now, dating from the 1948 war, and Iraq has not even signed that (this is one reason Israel is nervous about the possibility of Iraq's absorbing Jordan and thus becoming her eastern neighbor). A peace treaty would acknowledge once and for all the existence of the State of Israel and make her less trigger-happy, an attitude born of anxiety. And it would permit border readjustments which both economic and military realism require. The border now is so quixotic that it is difficult to defend and, since it is virtually unmarked (the Arab nations have so required, since they do not recognize that there is an Israel), many innocent trespasses—both ways—have occurred, with bloody results.

More than that, there would be eliminated one of the persistent sources of Arab hate—the plight of Arab farmers whose villages ended up on the Jordanian side and whose groves and fields ended up on the Israeli side. And there would be removed the resentment of the Israelis at being barred from Mount Scopus in Jerusalem, important because of the buildings and great library of the Hebrew University and the Hadassah Hospital.

Mutual development, with outside aid, of water projects: The arable land in both Israel and Jordan would be much increased by the diversion of the waters of the Jordan River. And this is only one of several practical possibilities.

Economic union and mutual planning: This was contemplated by, and included in, the terms of the U. N.'s 1948 partition plan. As things now stand, to take one example, Israel imports beef from Argentina, Jordan exports meat via a tortuous route through Syria and Lebanon. Thus Israel's cost is increased. Jordan's profit is cut, and both lose. And neither can afford it. Another example: the Gaza Strip is economically viable only when linked to Israel. Economic planning—and outside assistance in development—would bring about fullest use of the resources of the whole area, with an increase in employment opportunities.

Resettlement of the refugees: Her borders secure, her existence recognized by her neighbors, the development of her economy linked with theirs, Israel could with less risk grant total equality, including complete freedom of movement, to her Arab citizens, and proceed to admit a proportion of the erstwhile Arab residents of her territory—perhaps the number 100,000, which back in 1949 Israel offered to take, though the offer was declined. If the offer is made, it will probably turn out that not so many will in fact want to go back. But, this quota filled, let the rest be settled in Arab nations on new arable lands made available by new water and in the new industry and service trades that will follow.

The pattern for this has already been set by Israel in its resettlement of some 400,000 Jews from Arab lands in western Asia and north Africa who abandoned their property and whatever wealth they had and arrived penniless in Israel. There have been refugee camps in Israel all along—but with this difference: they have been temporary reception centers, because Israel really wanted to settle the newcomers.

How to finance all this? Assuming that the preceding steps have been taken, this is the easiest part. In 1952, the U. N. allotted the sum of $200 million for this purpose, and less than $7 million has been spent because the Arabs refused even to complete preliminary studies on how their own people could be helped. But more than this will be needed.

Let Israel add to the fund the value of the Arab property which it now utilizes for others, and which is not, under the plan proposed, reoccupied by returning Arabs. Then let the Arab countries add to the account the value of the property of the 400,000 Jews who fled Arab lands into Israel. Then let our own Nation which has such a stake in peace in the Middle East, contribute, at least, the cost of the technical assistance needed. And, once the job is under way, there will be saved the enormous cost of direct relief each year, since the resettled persons will have been enabled to support themselves.

But can Arab and Jew ever live peacefully together? Is the enmity undying? I don't think so. Maybe it was just a straw in the wind, but when I visited with a class at the new university of Tel Aviv, I observed that an Arab student seemed to be well received and he was friendly enough to the others. And at the Mandelbaum Gate, at the Jordan-Israel border in Jerusalem, we observed something that is a foretaste of what could be.

On the Israeli side I saw a pile of new Arab picture magazines. "Where did you get them?" I asked the guard. "From the guards on the Jordan side," he answered. "We trade them." I pressed further. "When you do that, do you smile at each other?" "Of course," he retorted. "We're friends; we have coffee together." Individuals can always get along with each other—or at least can judge each other for what each one is—once the official tensions are relaxed.

But there is no hope that they will be unless the United Nations and the United States broaden their conception of the Middle East problem. We should expand the Eisenhower doctrine to include the development and presentation to the Middle East countries of an overall plan which includes something like the elements outlined above. I am not suggesting that the hostilities can be bought off; but if we are firm and consistent in our influence and if the interest and energies of the whole region can be redirected toward the development of the entire area by the availability of a tangible, practical plan, the various groups of Arabs will find that they can like each other (something yet to be attained as recent events have shown) and that Arabs and Jews can like each other—and even have coffee together.

Among the narrow, winding streets of old Jerusalem (in Jordan), shared as they are by native Arabs, tourists, and donkeys, is a tiny side street surmounted by a large sign which reads, "For people only." This provides a good slogan for any plan for the resettlement of the Arab refugees and the consequent chance of peace for all in the Middle East—not pro-Israel, not pro-Arab, but for the sake of people.

Remarks of Arthur M. Lang

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. DINGELL. Mr. Speaker, a distinguished American journalist, the publisher and editor of the Detroit Jewish News, recently received the Concepts of Americanism award from the Detroit Jewish War Veterans Post No. 135. The award was presented to my good friend, Philip Slomovitz, by Arthur M. Lang, past commander of Detroit Post No. 135, whose remarks I ask unanimous consent to insert in the RECORD at this point:

I consider it a great honor to be a participant in a program honoring Philip Slomovitz. Even though he is not a veteran, due to circumstances beyond his control, he has at all times been most sympathetic with the problems confronting veterans and especially the Jewish War Veterans of the United States of America.

Our distinguished guest of honor has at all times exemplified the high objectives of JWV of rendering service to America, service to Judaism and the protection of the Jew wherever and whenever attacked and assailed.

He has by his endeavors proved that the pen is mightier than the sword and that words are more lasting and more effective than bullets.

As a newspaperman of integrity he has earned the love of his fellow Jews and the admiration of the other members of the community, locally and nationally.

He is a fighter for every good and righteous cause in the community and especially in the fight for justice, equality for his brethren and fellow men regardless of creed. Long ago he raised his voice against racial discrimination and the echos are still reverberating and the results obvious.

His articles and lectures on various topics of deep concern to the welfare of the Jewish people and especially on Israel have been effective in the moulding of favorable public

opinion. His devotion and dedication to the rebirth of the Jewish state has been a great inspiration to non-Jews as well as Jews.

Philip Slomovitz is imbued with a keen sense of public service and justice for all men. He abhors the word "tolerance" and has been heard clear and loud in his objections. He believes in the concept that every man is entitled to basic rights as a matter of right and not by the condescension of his fellowman.

Most of his adult life has been devoted to the service of his fellowman by deed and word. Let injustice rear its ugly head and he will be among the first to squelch it by the use of printer's ink. His journalistic abilities have made him one of the outstanding Judaic-American newspaper publishers. His editorials on the subject of Jewish rights have influenced the thinking of many persons in high places and especially in Government.

Our city has become enriched by his manifold contributions to its many facets. There is no important community activity in which he has not participated in, be it religious or secular.

It was my pleasure and privilege to have become acquainted with him and his family many years ago. I knew his parents of blessed memory. I first became acquainted with him in my teen years when he was one of the founders of the Young Judea movement in Detroit. He will recall with pleasure the Knights of Judea and the Roses of Zion. Many of our leaders in the forefront of the fight for the establishment of Israel learned their love for Zion from him. The results of his teachings and influence are today bearing fruit. May the good Lord give him the health, wisdom, and strength to carry on for many more years in the future in the service of righteous causes.

It is therefore fitting and proper that our honored guest be recognized by Post No. 135, because in honoring him we honor ourselves.

It is my great pleasure to present to Philip Slomovitz, outstanding citizen, this Americanism award in recognition and appreciation of his many services to America, Judaism and furthering the principles of freedom and democracy.

Michigan Week

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. DIGGS. Mr. Speaker, throughout the State of Michigan this week, May 19–25, citizens will be celebrating Michigan Week, a special observance calling to mind the rich heritage, resources, and opportunities of Michigan, as well as its contributions to the rest of the Nation and world. Special tributes and celebrations will take place in educational, civil, social, and political groups, being highlighted by an exchange of mayors in 48 communities, and recorded by press, radio, and TV.

The theme of this celebration, appropriately enough, is It's Great to Live in Michigan. Michiganders mean this—for Michigan has much to offer. It has amazing variety in both types of industry and in the varied origin of its people. It is an example of dynamic progress—in both astounding production of material goods as well as enlightened ideals and goals.

Michigan's variety is reflected in its three leading industries—manufacturing, agriculture, and the tourist trade. Michigan ranks first in the manufacturing of automobiles, pharmaceuticals, adding machines, foundry products, machine tool accessories, ranges and heating devices, paint and heavy chemicals. Detroit, its largest city, is the industrial capitol of the world. No other major city, on a per capita basis, has as many factory workers or as large a volume of manufactured products. Michigan is also a leading producer of such products as furniture, paper products, furnaces, chemicals, and cements. Already America's largest inland world trade center, Michigan is eagerly awaiting the completion of the St. Lawrence seaway to realize the vast potential it will bring, enabling Michigan to become an even larger and more effective international trade center.

Simultaneous with a greater production of goods, Michigan has set an impressive example by its constant striving for recognition of the dignity, rights, and human worth of every individual, and a higher standard of living for all. The struggle to realize these ideals is being waged by the practical idealism, imagination, and industry of dedicated labor unions, enlightened management, numerous social organizations, and State and local government. Recent concrete evidence of the effectiveness of their efforts is a fair employment practices law, and that thousands of refugees have found new lives in Michigan.

Agriculturally, Michigan leads the Nation in the production of sour cherries, navy beans, cantaloups, celery, cucumber pickles, and strawberries for market, and ranks second and third in many other fruit and vegetable categories. Hand in hand with food production, however, one notes that Michigan is also a leader in agricultural research and development. Michigan established the first agricultural college, Michigan State College, which itself founded the first horticultural laboratory, first short course in dairying, first hybridization of corn, and first building in America for teaching scientific agriculture. Not only does MSU continue exploring new horizons in agriculture and horticulture, but it is sharing its knowledge with the rest of the world, as evidenced in educational missions established in such far-flung places at Okinawa, Colombia, and India.

The tourist trade, which ranks as the leading industry in two-thirds of the State, balances the concentration of mechanical industry perfectly by offering 11,037 lakes, the longest shoreline of any State—3,121 miles—bordering 4 of the 5 Great Lakes, scenic farm and forest land, and renowned fishing and hunting facilities. All types of sports abound, from skiing to swimming, golf to baseball. Supplementing these natural resources, Michigan leads the Nation in number of State parks and prepared campsites—5,200—available to the public, topped off by a friendly and generous people, happy to greet visitors and help them enjoy the wonders of their State.

In addition to contributions through industry and natural resources, Michigan has contributed in large measure to the cultural, intellectual, and social advancement of our country. From her early schools, libraries, and cultural and philanthropic groups have emerged many illustrious scholers and statesmen, and institutions such as the Detroit Symphony, Museum of Art, Cranbrook Academy of Art, Greenfield Village, and the Edison Institute, to mention a few. Michigan boasts an excellent and expanding school system with several outstanding State and private colleges. The University of Michigan has consistently forged ahead with important "firsts": the first major university to admit women—1870—first school of public health, first school of natural resources, the only center for Japanese studies in tht United States. The Ford Foundation supplies one outstanding example of philanthropic work on a worldwide basis, making a profound contribution on the present and future by supplying funds to organizations doing research in the field of social advancement.

Although justly rejoicing in accomplishments of the past and present, Michigan gives every evidence of being well aware of the revolutionary future fast dawning: the perils and promise of automation, atomic energy, revolutionary concepts of time and space, the dangers of communism, and the crusade of civil rights for all, as aptly described in the Michigan Declaration of June 2, 1956. Proud of past accomplishments, and cognizant of the present, Michigan is quietly and diligently working forward toward a new era of peace and prosperity for all.

Address of Hon. Herbert C. Bonner, of North Carolina, at Maritime Day Celebration

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by the Honorable HERBERT BONNER on the occasion of Maritime Day, Charleston, S. C., May 21, 1957.

Mr. Speaker, no man in the Nation has done more for our fourth arm of defense—our merchant marine—than has this distinguished chairman of the great Committee on Merchant Marine and Fisheries. He is rightfully entitled to the name of "Mr. Merchant Marine." Mr. BONNER knows what it means to be without this indispensable force of security. He is in the process now of bringing our American-flag vessels into the greatest tonnage in the world. His

wonderful address to my people in Charleston reflects his understanding and knowledge of this important national defense organization.

Mr. Speaker, also included herewith is a newspaper account of Mr. BONNER'S speech from the Charleston News and Courier, May 22, 1957.

The address and article follow:

REMARKS BY HON. HERBERT C. BONNER, DEMOCRAT, NORTH CAROLINA, CHAIRMAN OF THE HOUSE COMMITTEE ON MERCHANT MARINE AND FISHERIES, AT MARITIME DAY CELEBRATION AT CHARLESTON, S. C., MAY 21, 1957

I am pleased to be your guest in the great and historic port of Charleston to celebrate National Maritime Day and to commemorate the 138th anniversary of the sailing of the American steamship *Savannah* across the Atlantic. This history-making event, originating in your neighboring State in the Port of Savannah, was the first voyage by a steam vessel across any ocean.

As Chairman of the Committee on Merchant Marine and Fisheries in the House of Representatives, I am particularly concerned about the growth and development of the port cities of our country—and their adequacy to serve the needs of the Nation in both peace and war.

As a North Carolinian, and your neighbor, I view with personal pride the growth and increasing importance of the South Atlantic ports, and the significant contribution which they are making to the economic welfare of the Nation.

Because this harbor afforded a natural haven for ships and could be easily defended by both land and sea, Charleston became an important port in earliest colonial times following the settlement of the Carolinas.

As early as 1682, she was sending steady supplies of naval stores, tar, pitch and rosin to the islands in the Carribean. In the days prior to the Revolutionary War, rice and indigo became her chief items of commerce, while in the succeeding years to come, cotton and tobacco were to gain considerable prominence.

Although a leading port, Charleston did not develop without difficulty. With mounting pressures from other port areas in an expanding economy, coupled with the disadvantage of unfavorable rail rates, ocean tonnage declined.

The proud part played by the port and city of Charleston through the War Between the States—a struggle against tremendous odds—left scars that were not fully healed until the early part of the century when she became an important military center.

Since World War II, your port has made remarkable progress. Under the guidance of your progressive-thinking Ports Authority, she has managed to more than double the amount of her pre-World War II tonnage.

Today, she ranks among America's leading ports, and great quantities of cargoes move across her highly mechanized and modern facilities.

Maritime Day is a major national anniversary, one of deep significance to this country whose origins and growth developed from commerce on the seas. Our gathering here tonight is being repeated all over the country by thousands of informed Americans who know the part that our maritime commerce has played in making the United States—from pioneer beginnings—the greatest Nation on earth.

This occasion is being celebrated in recognition of the lessons of history that have taught us that we must develop and maintain a strong merchant marine if we are to continue to enjoy the bounteous blessings of this great and productive country of ours and remain secure from forces from without that would destroy our culture and our way of life.

Usually when we talk of the progress of our merchant marine we talk in terms of commodities, of tonnages and dollars of exports and imports, of deadweight tons and speed of ships, of numbers of shipways and area of terminal facilities. In time of war we talk of ships sunk compared with ships built. The statistics and figures on these things are impressive and revealing as to our progress.

But, in this year of 1957 when we are enjoying a growth and expansion of economy unprecedented in the history of the world, I want to talk about people and not statistics. I want to pay tribute to the men of the American merchant marine who build and man our ships in peace and war.

Three times in the past 40 years the American merchant marine has been called upon for seemingly superhuman efforts to meet the common enemy. Each time our maritime industry has met the challenge and performed miracles of production to speed the final victory.

Today, in the midst of peace and prosperity, let us not forget the thousands of merchant mariners who died without military honor or other recognition when their ships were torpedoed, bombed and shelled during 4 years of World War II—just a few short years ago. These men—over 5,000 of them—died for what we have today. Through their efforts, and those of their brave shipmates, the Allied Forces were able to deliver the most devastating blow any enemy has yet encountered. Indeed, the movement of ships manned by these courageous men was the greatest logistic feat the world has ever known.

The impact of World War II was first felt by American citizens on the night of September 3, 1939, aboard the British passenger liner *Athenia*. As the *Athenia* was calmly steaming on a westward course off the Scottish Hebrides, her 1,400 passengers—800 of whom were Americans—were busy listening to radio reports of the new war. In her wake, 120 miles away, was the American freighter *City of Flint*, also sailing on a westward course. Shortly after 9 p. m., the *Flint's* radio operator was seen rushing to the ship's captain. His message told a tragic tale; the *Athenia* has been torpedoed. While the Berlin radio denied that a U-boat was responsible, and captured German records later showed that Admiral Karl Doenitz, Hitler's chief submarine commander, had ordered to let the *Athenia* pass, this incident foretold what American seamen were soon to face.

After participating in the rescue of survivors from the *Athenia*, the *City of Flint* returned to New York, discharged her passengers, and again sailed westward. But this time, she was seized by a German battleship and ordered to proceed to Germany as a prize of war. Fortunately, before reaching her destination, she was intercepted by the British Navy and released to return home.

Within the first month of the war, German subs had sent over 30 ships to the bottom; Britain had declared a blockade on Germany, which threatened our own shipping; and, over 60,000 Americans were trapped abroad.

The next incident involving an American ship was the attempted seizure of the freighter *Mormacsea*, which was caught by the Germans in a Norway port. The story is told that her captain personally guarded the gangplank and defied the Nazis to pass. After 6 days, she was permitted to sail.

After President Roosevelt's famous "Arsenal of Democracy" speech, in which he declared that the United States would supply any nation who fought against Germany and Italy, things grew worse. On November 8, 1940, we lost our first merchant vessel, the freighter *City of Rayville*. As she sailed along the Australian coast, she is said to either have struck a mine or was torpedoed. Following this incident, in May 1941, the United States freighter *Robin Moor* was torpedoed off Africa. During the same month, the President declared a national emergency, followed by his famous "shoot on sight" order. In the succeeding months, just before Pearl Harbor, 3 more United States ships were torpedoed.

Shortly after Pearl Harbor, the Matson liner *Lurline* sailed from Honolulu under strict naval orders not to deviate from course. As she journeyed along, her 800 passengers were told of a distress message received from the United States freighter *Cynthia Olson*. Since that time, no one has ever heard from the *Olson's* crew of 33 and 2 soldiers.

A more terrifying incident occurred when the United States freighter *Lahaina* was sunk. On the night of December 10, 1941, as she was steaming off the Hawaiian Islands, shells from the deck guns of a Jap sub tore into her without warning. The survivors of her crew quickly manned lifeboats. The Japs approached one of the boats, trained a machinegun on her helpless crew, then suddenly submerged. Although most of her crew were able to escape in open boats, this incident was the beginning of a merciless campaign, marked by the ruthless slaughter of helpless survivors.

As more and more of these incidents occurred, seamen began to shout "give us the guns" and "give us the chance to fight back." But the Navy was needed elsewhere, a goodly portion of our fleet having been destroyed at Pearl Harbor.

In these first frantic days of open warfare, there were few reports of victory over the enemy.

The situation became so bad that President Roosevelt in January of 1942 asked Congress for appropriations to build some 1,700 ships within a 2-year period. This was the beginning of our Liberty fleet, affectionately called by the late President "the fleet of ugly ducklings." These ships were destined to carry over 75 percent of our total overseas cargo.

But, before this program could be launched, the Germans had already begun their Atlantic coast massacre. Up to that time, over 1,000 Allied ships had been sunk with only 66 German losses. Under the personal direction of Admiral Doenitz, the Atlantic operation started with the sinking of the United States tanker *Allen Jackson* off Cape Hatteras, which claimed the lives of 22 men. Within 2 months, this operation caused the loss of 145 ships and 600 lives.

With complete mastery over the Atlantic, the Germans next moved into the Caribbean and the Gulf. Here, they concentrated on tankers which were supplying the RAF with high octane gasoline. Only five naval vessels had been assigned to this highly strategic area. The enemy assault was led by the sinking of the United States freighter *Virginia*, with 13 casualties off the Mississippi River; followed by the torpedoing of the United States tanker *David McKelvy* which was making way out of Corpus Christi.

And, I am sure there are those among you here tonight who saw the oil-soaked, tragic litter of our South Atlantic beaches, grim reminders of the fate of unsung heroes within sight of their own shores.

A New York Times editorial graphically gave this picture of the merchant sailor in wartime:

"Tankermen and other men of the American merchant marine literally go through fire to carry supplies to our Armed Forces in remote lands. Each week they are pulled or washed up out of the sea, after incredible hardships, or after death amid vast stretches of flaming oil. Quietly, when their burns are healed, their long thirst or hunger satisfied, the survivors slip out of port again with more supplies, with more oil and gas-

oline for our fighting planes and tanks. Many come through 3 or 4 sinkings, yet do not hesitate when new ships are ready. No one turns in the street to admire their uniforms. They wear no uniform. No one steps up to the bar to buy them drinks. No moist-eyed old ladies turn to them in the subway to murmur "God bless you." The cop on the beat, gentle with the tipsy soldier or the unsteady gob, is apt to put his night-stick to the britches of a merchant sailor who has tippled heavily in the town's bars to celebrate his rescue from the sea."

By Independence Day of 1942, 3,000 merchant seamen had been killed, and before this operation was over, 3 million tons had been sunk.

From 1942 through 1945, the Allies maintained perhaps the most dangerous supply line of the entire war—on this run to the free Russian port of Murmansk, American seamen delivered over 16 million tons of cargo in over 1,000 separate convoys. The objective was to stave off Hitler's attacks on the Russians. Veterans of Arctic convoy duty truly deserve recognition as heroes. Not only did they encounter heavy enemy opposition, but they were also opposed by extremely adverse weather conditions.

In late June of 1942, Hitler personally directed the attack against the ill-fated convoy PQ-17, composed of 36 ships, 22 of which were American. With some 200 German planes in the air, the convoy commander was forced to order his ships to scatter and proceed. As the surviving ships altered course, German U-boats, lurking in the background, moved in. Before the end of this tragic engagement, 23 ships had been sunk.

The vicious struggle to cut America's vital supply lines was fought throughout the world.

In the lonely waters of the Southern Hemisphere, the Axis claimed 86 United States ships and 1½ million tons of cargo.

In this ruthless warfare, friend often could not be distinguished from foe until it was too late. As the Liberty ship *Stephen Hopkins* sailed out of Capetown, she met two merchant vessels, both flying neutral colors. Both vessels quickly unmasked and fired direct hits on the *Hopkins*. Before the surprised Liberty went down, 1 of her crew, an engineroom cadet, chose to remain on board. Singlehanded, he fired five 50-pound sheels scoring hits on 1 of the enemy vessels. In an open boat, a few yards away, his shipmates saw him destroyed by the enemy. Only 15 survived, after 2,000 miles in an open boat. Time after time, Allied shipping was caught off guard in this theater of battle.

One of the few ships caught by the Japs in these waters was the United States freighter *Henry Knox*. After sinking her, the enemy removed the food and water from the lifeboats, and only 28 men survived after 11 days afloat. This was one of many examples of cruelty experienced by American seamen in fighting the Japs.

Although the Navy had won notable victories in the Pacific, it was realized that final victory was dependent upon the occupation of Japanese territory. To this end, merchant seamen were required to maintain a supply line of over 6,000 miles across the Pacific. In support of our troops at such unfamiliar places as Guadalcanal, Attu, Kiska, Okinawa, Luzon, and many more, merchant mariners served valiantly.

In the meantime, over 100 merchant and naval vessels had formed in the Mediterranean for the Allied invasion of Africa. And, nearly 500 more were to participate in the next jump to Sicily.

The winning of the war depended upon gigantic supply movements in American built ships, manned by American merchant mariners who went to the fighting fronts side by side with their brothers in the Armed Forces. In his book, Crusade in Europe, President Eisenhower spoke of the services of the American merchant mariner as being "with a devotion to duty and a disregard to danger and hardship that defies any attempt to describe."

Although the loyalty and heroism of the American seafarer was responsible for delivering the goods to feed our global military machine, there are many others whom we should remember and pay tribute to on this Maritime Day.

Foremost among these is our late great President, Franklin Delano Roosevelt, who, when others were criticizing the American maritime industry and complaining of the cost of Government aid, had the understanding and foresight to call for legislation to reestablish our merchant fleet on the high seas and rehabilitate our impoverished shipbuilding industry. The Merchant Marine Act of 1936, sometimes called the magna carta of the American merchant marine, resulted from Roosevelt's dynamic call for action. As the result of his insight and perception the outbreak of war in Europe found us with a sound nucleus of shipbuilding skills from which to expand into the gigantic merchant ship construction program which spelled the difference between victory and defeat. The enactment of the 1936 act and President Roosevelt's direction for the commencement of a destroyer building program in the middle thirties found us at the entry of the war with an invaluable, though not numerically large, pool of fast modern ships.

Then I want to mention another of the great ones in our maritime war effort—Vice Adm. Emory Scott Land—who was Chairman of the Maritime Commission and War Shipping Administrator throughout the conflict. It fell to dynamic Jerry Land's lot to guide and execute our vast program of ship construction which astounded the world with a fabulous output of nearly 6,000 large merchant ships in less than 4 years; to establish a recruitment and manning program and a system of training schools for all classes of seamen; and to operate, in coordination with our allies, the farflung global supply system to satisfy the competing demands of the military leaders in the several theaters of war. The President's directions to Admiral Land were brief and concise: "Give me ships as fast as you can." That was all. But Jerry Land and the devoted men around him overcame all obstacles. His outstanding performance deserves the praise and gratitude of every American.

Others who fought the good fight on the home front were the hundreds of thousands of Americans in our wartime shipbuilding industry who performed production feats never before dreamed of. With only a small nucleus of management and skilled personnel in our shipyards at the start of the war, we had to create new yards all over the country and train patriotic citizens in the many difficult and unfamiliar shipyard trades. They, too, met their challenge and their production record will forever stand as a monument to American vitality, as well as a reminder that we must have, at all times, a strong and adequate American-flag merchant marine.

It is to all of these people, great and small, who took part in all of the phases of our wartime effort that I salute and pay tribute to tonight.

With the coming of peace again most of those who served during the war returned to other pursuits when their services were no longer needed. Time may never again be on our side, so in remembering the men of the merchant marine in war, let us never forget our need for those same men in our merchant marine in times of peace.

I think it would be appropriate to close with the lyrics of the King's Point Academy song, "Heave Ho":

"Heave Ho! my lads, Heave Ho!
It's a long, long way to go.
It's a long, long pull with the hatches full,
Braving the wind, braving the sea
Fighting the dangerous foe.
Heave Ho! my lads, Heave Ho!
Let the seas roll high or low.
We can cross any ocean,
Sail any river,
Give us the goods and we'll deliver.
Damn the submarines!
We're the men of the Merchant Marine."

[From the Charleston (S. C.) News and Courier of May 22, 1957]

ROLE OF MARITIME SERVICE IS CITED—JOINT MEETING OF SEVEN GROUPS HEARS BONNER

Tribute was paid here last night to the American Merchant Marine at a meeting of seven maritime groups. The fleet was cited as an arm of war and an economic base for peace.

United States Representative HERBERT C. BONNER, Democrat, of North Carolina, told a banquet meeting that much of the Nation's prosperity depends on continued growth of the Merchant Marine. The event, held at the Country Club of Charleston, commemorated World Trade Week and National Maritime Day.

BONNER traced the growth of the United States merchant fleet and made special note of such vessels during World War II. He is chairman of the House Committee on Merchant Marine and Fisheries. He also noted the importance historically and the development of the port of Charleston.

RIVERS ATTENDS

About 150 persons attended the banquet. BONNER was introduced as "Mr. Merchant Marine" by Representative L. MENDEL RIVERS of Charleston. James J. Lamb, president of the Propeller Club here, presided.

Other sponsoring organizations represented were the Port of Charleston, Greater Charleston Chamber of Commerce, State Ports Authority, Charleston chapter of the National Defense Transportation Association, Maritime Development Association of South Carolina, and the Charleston Pilot's Club.

BONNER said he was particularly concerned about the growth of port cities and their adequacy to serve the Nation in peace and war.

"As a North Carolinian, and your neighbor," he said, "I view with personal pride the growth and increasing importance of the South Atlantic ports, and the significant contribution which they are making to the economic welfare of the Nation."

He said the local port rose in importance during Colonial days and during the War Between the States. But he said the port did not develop without difficulty.

TRACES PROGRESS

"Since World War II," he continued, "your port has made remarkable progress. Under the guidance of your progress-thinking Ports Authority, she has managed to more than double the amount of her pre-World War II tonnage."

"Today, she ranks among America's leading ports, and great quantities of cargoes move across her highly mechanized and modern facilities."

He noted the economic importance of sea commerce as commemorated by Maritime Day. Bonner then traced the struggle and heavy losses in ships, cargoes and crews during World War II.

"Today, in the midst of peace and prosperity, let us not forget the thousands of merchant mariners who died without military honors * * * during World War II—just a few short years ago."

LEADERS PRAISED

Bonner praised leaders in building the merchant fleet, the shipbuilding industry and the seamen. He said:

"It is to all these people, great and small, who took part in all of the phases of our wartime effort that I salute and pay tribute to tonight."

He and Representative RIVERS were commissioned "6-star admirals" in the naval section of the Sumter Guard. They also were given $100 and $200, respectively, in Confederate money to take back with them to Washington.

Special guests included local Naval, Air Force and Army officers, State and local officials and business and maritime leaders.

Mary McLeod Bethune Commemoration Week

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. DIGGS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement issued by the National Council of Negro Women:

MARY MCLEOD BETHUNE COMMEMORATION WEEK, MAY 19–25, 1957—STATEMENT ISSUED BY THE NATIONAL COUNCIL OF NEGRO WOMEN, MRS. WILLIAM THOMAS MASON, NATIONAL PRESIDENT

May 19–25, 1957, marks the second observance of Mary McLeod Bethune Commemoration Week by the National Council of Negro Women, the organization founded by Mrs. Bethune on December 5, 1935. She was the national president until 1949 when she was succeeded by Dr. Dorothy B. Ferebee.

The life and works of this remarkable woman reflect glory not only upon her as an individual but upon all people who struggle against almost insurmountable odds but are determined that they will not be deterred from accomplishing the things they have set their hearts upon.

Mary McLeod Bethune came from the humblest beginings. She was born in Mayesville, S. C., July 10, 1875, a short decade from the devastating Civil War, of parents who had been slaves. At an early age she felt the crippling inequities of her environment, for she was unable to obtain schooling until a compassionate missionary saw something unusual in this 12-year-old girl and helped her to attend the Presbyterian Mission School near her home. From then on Mrs. Bethune was on her own. She never lost an opportunity to further her education—working and singing her way through Scotia Seminary, finally completing her formal education at Moody Bible Institute in Chicago just 62 years ago.

The desire to help others was a dominating characteristic of this woman. She knew how vital an education was and she also knew that thousands of her race were unable to obtain even the rudiments of learning in those days. This was the motivation that enabled her to start a school with $1.50, 5 little girls, 5 orange crates, and a heart that was overflowing with love and faith in God and her fellow man. From this incredible beginning, she built Bethune-Cookman College at Daytona Beach, Fla., where thousands of young men and women have been taught the fundamentals of education of heart, mind, and hands. "Enter to learn, depart to serve" is the motto engraved on an arc in the chapel. The students at this college and people throughout this country and other countries remember Mrs. Bethune with gratitude for she taught and lived this philosophy that to serve others is the primary reason for man's existence.

Her own life brilliantly exemplified service. She founded organizations, that are flourishing today, sustained by her spirit and the practicality of the programs she advocated. She was a beacon light for youth, for her administration of the National Youth Administration program in the thirties transformed their despair and fear into hope and courage so that these children of the depression were given a chance to learn trades, to earn a living and to continue their education when all other opportunities vanished. She was a member of the board of directors of numerous business enterprises which she helped to organize. She served as a member of the governing boards of such organizations as the National Urban League, the NAACP, Florida State Teachers Association, Commission on Interracial Cooperation, and others. She was an active member of several organizations and an honorary member of outstanding groups representing various religious and professional societies.

Her writings were expressive of the wisdom and force of her personality for she was articulate and fearless. This excerpt from a column appearing in the Negro History Bulletin, published by the Association for the Study of Negro Life and History, is typical: "We all want the same things. We all intend to get them. We've all been hurt and the hurt affects us in different ways. Hurts are sometimes very useful and serve us better than we sometimes realize. They have drawn us together. They have drawn friends to us. They have made us organization minded. They have solidified us and our organizations with the organizations of others on an intelligently aggressive front.

"All racial barriers, as such, may not fall today or tomorrow but they will not be able to stand long before the determined advance of citizens of all races, shedding their cumbersome, outgrown racial complexes, in the mach toward democratic living."

The American people and people of other lands held Mrs. Bethune in rare esteem and profound affection. She has received scores of citations and honorary degrees from colleges, organizations and governments both here and abroad. Mrs. Bethune was a symbol, a symbol that might well be a symbol for free people everywhere in the world today. She was a Negro but she was first a human being who was passionately concerned with the well-being of her fellow human beings. No person whatever their race, color or creed left her presence empty handed. She gave them respect and courage, she shared their troubles or grief, she opened doors that were closed, she created new avenues of service, she taught the meaning of human rights and the corresponding responsibilities.

She believed in the equality of man as a spiritual inheritance which must be translated into day by day living. Segregation based upon race, color, creed or previous condition was an adhorrence to her. No one knew better than she the evils that sprang full grown from segregated education and housing. She worked and spoke against it, she interpreted logically and rationally the case against segregation in American democracy. These words written not too long before her death on May 18, 1955, summarize the strength of her thinking: "I see no cause for discouragement in viewing the years ahead. Democracy in this country is neither dead nor dying. As every mother knows, the pangs of childbirth are keenest just before the child is born. If our hurts are great now; if our country is torn with controversy over the expansion of social responsibility, over the acceptance of civil rights, it is because a new and more powerful democracy is being born to serve more greatly the people of all races, of this country and of the world."

"Mary McLeod Bethune, educator, organizer of people for human welfare, author, humanitarian, world traveler, spiritual leader and great American, we salute you and shall ever hold in grateful memory the accomplishments of your life and its meaning for all mankind."

Weeks Says Voluntary Pacts May Replace Steel Scrap Export Curbs

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. METCALF. Mr. Speaker, questions of national defense and monopoly are being raised before the Select Committee on Small Business during the current hearings on export of iron and steel scrap.

So far, witnesses have testified that while we face a serious shortage of scrap, a key ingredient in making new steel, we have been exporting beyond the danger point.

Other witnesses have testified that large exporters are doing everything possible to eliminate their small competitors and build a monopoly.

Here are reports on the hearings from the Wall Street Journal and the New York Times of May 21, 1957:

[From the Wall Street Journal of May 21, 1957]

WEEKS SAYS VOLUNTARY PACTS MAY REPLACE STEEL SCRAP EXPORT CURBS—FOREIGN AGREEMENTS WOULD AVOID NEED FOR PERMANENT QUOTAS, HE STATES

WASHINGTON.—Commerce Secretary Weeks told Congress he expects future voluntary agreements to reduce high-grade steel scrap exports would replace recently imposed shipment limits and avoid the need for permanent quotas.

Testifying before the House Small Business Committee, Mr. Weeks said the United States faces a "serious short supply" of high-grade scrap, but that as matters now stand the Government probably will be able to work out with foreign consumers through voluntary means, an equitable distribution of what can be spared.

The Secretary was called before the panel to discuss the Department's May 6 decision to limit for the time being exports of heavy melting scrap grades to last year's export total. The order will be in effect pending conclusion of talks with major importers—Japan, the United Kingdom, and the European Coal and Steel Community—to determine their needs for the material. So-called No. 1 heavy melting steel scrap is a key ingredient in making new steel.

"Should our determination of the real need be more than we find can be safely exported, I see no alternative but to impose quotas," Mr. Weeks declared. However, he expressed confidence voluntary agreement with the nations would be reached and that quotas would not have to be imposed.

Harold C. McClellan, Assistant Secretary of Commerce, told the committee "the real danger confronting us is the potential shortage" of the prime scrap. "This shortage already exists throughout the rest of the free world," he said.

Last year, a record two-thirds of United States scrap exports were of the heavy melting variety, he said, asserting that this "has generally been considered to be beyond the danger point."

During the first 4 months of this year, he noted, export license applications were nearing the level of last year's total shipments. "In our judgment," the official testified, "simple prudence required us to notify the countries involved that pending conclusions of our discussion of the potential shortage ahead, licenses for exports beyond last year's volume in the heavy melting grades would not be granted."

According to Assistant Secretary McClellan, the Department has received "only a dozen or so complaints" from all sources on the decision.

Both Government officials denied that this country would reach any secret agreement with foreign nations on scrap export levels. Mr. Weeks asserted that while the discussions themselves can't be held in a goldfish bowl, everybody knows what the general goals are, and the industry would be informed when a final decision is made.

In other testimony, a New Orleans scrap exporter charged large exporters are attempting to throttle slowly small companies' outlets and operations. Stanley Diefenthal, executive vice president of Southern Scrap Material Co., Ltd., accused major exporters of buying out competition, pirating key employees of small outfits, dominating industry trade associations, and threatening foreign consumers with reprisals if they don't deal with them.

The witness told the committee he has heard reports Luria Bros. Co., Inc., New York, tried to sew up the entire scrap export business with Japan. Mr. Diefenthal said that according to reports from his agent in Japan and talks he has had with Japanese industrialists, Luria Bros. sought, unsuccessfully, to have the exclusive contract to supply all of Japan's scrap needs. At present, he said, Luria supplies almost all of Europe's scrap imports from this country and some 40 percent of Japan's.

The witness also testified "there are rumors" that major scrap shippers have told the Japanese that United States export restrictions would be less severe if the importers dealt with major United States suppliers.

The Government's interim action on scrap exports in effect placed an embargo on Japan's imports from the United States of No. 1 heavy melting scrap. That's because Japan already has received an amount equal to all of last year's total for this grade.

LURIA FIRM'S REPLY

NEW YORK.—Ralph E. Ablon, president of Luria Bros. Co., Inc., emphatically denied Luria sought or has exclusive rights to supply steel scrap to Japan.

"None of it is true," Mr. Ablon said. "Luria Bros., just like all other scrap concerns, including Mr. Diefenthal's, is trying to get as much business as it can, but we have no exclusive contracts."

The Luria Bros'. president said the company testified previously before the Federal Trade Commission that it did not seek at any time the exclusive right to supply Japan with that nation's steel scrap needs. "We have no contract, and we would not accept one from Japan if it was offered, which it has not," he said.

Mr. Ablon also denied his firm has any contract to supply European scrap needs, and "I do not know the percentage of our exports as compared with others. We compete with many companies for the European business."

He related that there had been a joint steel scrap export venture—Luria Bros. Co., Inc., Schiavone-Bonomo Corp., and Western Steel International Corp.—to supply scrap to Europe under a contract that lasted from July 1, 1954, to December 1, 1955. After contract was canceled, he said, the three companies' joint venture has continued to supply steel to Europe.

[From the New York Times of May 21, 1957]

WEEKS SAYS SALES OF SCRAP OVERSEAS MAY SQUEEZE UNITED STATES

WASHINGTON, May 20.—House investigators heard another story about foreign trade troubles today—only this time the picture was reversed.

Sinclair Weeks, Secretary of Commerce, told the Small Business Committee that foreign consumers want more American iron and steel scrap than can be sold them without hurting supplies here.

Mr. Weeks and Harold C. McClellan, Assistant Secretary, said Japan, for instance, bought 2,100,000 tons of United States scrap last year—300,000 tons more than a nonmandatory limit set in discussions with the Japanese and other major foreign purchasers.

Mr. Weeks indicated that he personally felt mandatory export quotas should be imposed, but said it now seemed that the problem could be worked out by voluntary means.

MEMBER NOTES SWITCH

Congressional committees often hear complaints from American producers about too much foreign goods coming into the country. Japan is frequently named as a source of low-priced imports.

Representative WILLIAM S. HILL, Republican, of Colorado, told Mr. Weeks, "You put me in a very strange atmosphere." He noted that it was commonplace for congressional groups to be figuring out how to step up exports of United States goods, such as surplus farm items, rather than how to restrict them.

Committee Chairman WRIGHT PATMAN, Democrat, of Texas, said any limitation on scrap exports "contracts the market for one of our vital industries: several thousand scrap dealers and brokers who are, for the most part, small independent business people."

Mr. Weeks said scrap was potentially in serious short supply, and discussions had been held with the major foreign takers, Japan, Britain, and the countries of the European Coal and Steel Community.

"Should our determination of the real needs be more than we find can be safely exported, I see no alternative but to impose quotas," Mr. Weeks said. "As matters now stand it appears, however, that we probably will be able to work out through voluntary means an equitable distribution of what can be spared and to avoid the necessity for quotas."

SCRAP PRICE RISES

The price of No. 1 heavy melting steel scrap advanced at least $1 a ton yesterday in New York to $51, delivered in Pittsburgh. Dealers described the market as strong. One said: "Most steelmakers apparently have very low inventories of scrap and don't want to touch what they have, afraid of getting caught short."

Yesterday's quotation compared with the 1957 low to date of $46.50 a ton, set in early April, and with the high of $67, at the beginning of the year.

Mr. Speaker, the Federal Trade Commission has been holding hearings for a number of years on alleged monopolistic practices in the scrap export business. There are indications that these hearings will continue for years.

The current hearings before the select committee will afford another opportunity for everyone interested to be heard. Once again, the Select Committee on Small Business is performing a great public service.

Excise Tax Exemption for Neighborhood Nonprofit Swimming Pool Groups

---

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, in March 1956 I introduced a bill, H. R. 10113, 84th Congress, to exempt amounts paid as dues and initiation fees to neighborhood nonprofit swimming pool organizations from the 20 percent Federal excise tax imposed on "social, athletic, or sporting clubs" under section 4241 of the Internal Revenue Code of 1954. The Internal Revenue Service had previously held that such payments to these nonprofit swimming pool groups were subject to the 20 percent excise tax.

As I told the House on March 21, 1956, I feel that these organizations serve many useful purposes in providing healthy recreational outlets for our children, young people and their parents. They furnish, on a privately financed, nonprofit basis, recreational facilities which many local communities have been unable to supply because of already burdensome tax rates. The purpose of the bill was to provide the needed incentive to assist such local organizations to build their own swimming pool facilities.

It was my feeling that these nonprofit swimming pool organizations, because of their many unique characteristics, were not intended to be taxed within the definition of this section of tax law relating to "social, athletic, or sporting clubs." The proposed legislation was designed to give these groups statutory exemption, just as is now enjoyed by certain fraternal societies, orders, and associations under this section of the law.

The bill was referred to the Subcommittee on Excise Tax, Technical and Administrative Changes of the House Ways and Means Committee, whose chairman is the able and distinguished gentleman from Rhode Island [Mr. FORAND]. After a study of the organization and purposes of these nonprofit neighborhood swimming pool groups, the subcommittee made language revisions in the bill and made it a part of the omnibus excise tax measure introduced by Congressman FORAND last July (H. R. 12298, 84th Cong.).

The subcommittee conducted hearings on this omnibus excise tax bill in late November and early December of last year. Several witnesses representing nonprofit swimming pool groups testified in favor of the tax-exemption provision of the bill. They described the objectives, recreational values, and operating procedures of their groups and stressed the adverse effects of the 20 percent Federal excise tax on the growth of swimming pool associations in other communities. Many other such groups filed statements and resolutions in support of the tax-exemption provision of the bill.

In its report to the full committee the Forand subcommittee recommended favorably the repeal of the excise tax on dues and fees paid to these nonprofit swimming pool organizations. This exemption was also approved by the full committee and is now included in the current excise tax revision bill, H. R. 7125, introduced on May 2, 1957, by Congressman FORAND. It is my understanding that the formal report is now being prepared and that the bill will soon be favorably reported to the House.

Meanwhile, coincidental with the above-mentioned action on the bill to give statutory tax exemption to these groups, a petition for refund of a payment of this tax was filed by a Mr. and Mrs. Robert J. McIntyre, of Rockville, Md. They were required by the Commissioner of Internal Revenue to pay $25 excise tax on their initial payment of $125, by which they were granted membership in the Twinbrook Swimming Pool Corp., a nonprofit neighborhood swimming pool group of the type referred to in my bill. The petition for refund was not acted on by the commissioner within the required 6 month period, and suit was filed for recovery of the tax in the United States District Court for the District of Maryland, Baltimore. The plaintiffs were represented by Mr. Ralph R. Sachs, a Washington attorney residing in the Rockville community, who himself is a member of the Twinbrook swimming pool group.

The decision in this case was rendered by Judge W. Calvin Chesnut on May 14, 1957. Judge Chesnut ruled that dues and fees paid to this nonprofit swimming pool organization are exempt from the 20 percent Federal excise tax because it is not, in effect, a social, athletic, or sporting club or organization. He therefore directed a refund of the $25 tax to the plaintiffs.

I was naturally elated at Judge Chesnut's ruling in this case because it upholds the position taken in seeking statutory exemption for these groups. His ruling takes into account the beneficial purposes of nonprofit swimming pool organizations in providing needed recreational facilities in the community and, in my opinion, is a sound, equitable, and logical decision.

Judge Chesnut's decision in this case does not, however, eliminate the necessity for enactment of the statuatory exemption from the tax on these groups, as provided in H. R. 7125. The Government has 60 days from the date of the decision to file an appeal. This action would, of course, withhold refunds under this decision of the court, pending the outcome of the appeal. However, if the pending legislation is acted upon favorably by the House in the interim period, an appeal may not be taken, since in view of the subsequent congressional action the matter would then be moot.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of Judge Chesnut's decision in this case. I am sure that the many interested swimming pool groups and individuals all over the country will want to read this decision.

The decision follows:

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND—ROBERT J. MCINTYRE AND CLARE MCINTYRE v. UNITED STATES OF AMERICA, FILED MAY 14, 1957, CIVIL ACTION NO. 9125

CHESNUT, DISTRICT JUDGE

This is a suit to recover an excise tax which the plaintiffs were required by the Commissioner of Internal Revenue, to pay under title 26, United States Code Annotated, section 4241, which imposes a 20 percent tax on initiation fees and annual membership dues in excess of $10 paid by members of social, athletic, or sporting clubs, or organizations.[1] (The full text of the statute is set out in the margin.) The plaintiffs' husband and wife, became original members of the Twinbrook Swimming Pool Corp. and made an initial payment thereto of $125 for so-called life membership. They also paid $25 to cover the 20 percent tax on their initial payment, which was paid by the corporation to the district collector under protest. A petition for refund was duly filed and not having been acted on within 6 months, this suit has resulted. All procedural requirements for the suit have been duly met.

The principal question in the case is whether the Twinbrook Corp. is a social, athletic, or sporting club or organization. The case has been submitted for decision on a written stipulation and a considerable amount of oral testimony, from which I find the following relevant and important facts:

1. The Twinbrook Corp. was duly formed in 1955 under the general incorporation laws of the State of Maryland. It conducts a swimming pool with appropriate bathhouse facilities situated in a generally residential area of the city of Rockville, which is the county seat of Montgomery County, Md., the population of which is said now to be about 15,000. The size of the pool is 60 by 165 feet with a depth of 2½ to 5½ feet. It is situated on a tract of land of about 5 acres acquired by the club after, on its application, the city authority had rezoned the particular land to allow its use for the particular purpose. The land was acquired and the pool facilities constructed at a cost of about $125,000.

2. The purpose of the club as stated in its certificate of incorporation was "to provide a swimming pool or pools and other facilities to its members." It is a nonprofit, nonstock corporation. Its organization, membership, and government are provided for by its bylaws.

3. The principal provisions of the by-laws which are relevant here are:

Membership is limited to 600 persons or families owning residential property or business places within a designated portion of the city of Rockville. The holders of each original membership were required to pay an initial fee of $125 and an additional sum of $25 to be applied to the payment (under protest) of the 20 percent excise tax referred to. The privileges of membership involving principally the use of the swimming pool were accorded to the holders of the 600 initial memberships upon the payment of annual dues of $10; and the pool could be used by them and their dependent children and by certain occupants of their respective households, not including employees. The holders of these initial membership certificates were designated as "life members" in the by-laws. The certificates of membership were transferrable on certain conditions, not here important or relevant. Permission could be given by the corporate authorities on prescribed conditions for the use of the pool by children sponsored by various civic or philanthropic organizations, without charge, or at times for a very nominal charge to defray extra cost of maintenance.

4. The motivation for the formation of the corporation was due to the public-spirited initiative of a few civic leaders who realized the importance of having additional recreation facilities for the Twnbrook area. At first an effort was made to have the public authorities of Rockville provide for the swimming pool at the taxpayers' expense; but when this proved to be impossible of accomplishment, these civic leaders determined to provide for the creation of a swimming pool at private cost of those members of the local community who would be willing to provide funds for the project. Very shortly the 600 memberships were acquired ahd the necessary funds raised for the acquisition of the land and construction of the pool, aided by a mortgage loan obtained from private banking sources. Much of the work in building the pool was performed either at cost or gratuitously by interested parties. In one sense the project was in substance a community enterprise. This is well expressed in a summary by a quotation from the brief of counsel for the Government as follows:

"The plaintiffs have sought to go behind the certificates of incorporation and the by-laws. They have introduced evidence to show that the organizers of the pool project acted with the highest possible motives in organizing and carrying through their scheme to build a pool facility. They showed that the members of the corporation were interested in providing a wholesome summer meeting place for themselves and their children. They demonstrated the appeal of their project by showing that many people gave their labor free of charge to build the pool and that others contributed materials and land at cost. The use of the pool has been in keeping with the high motives of those who organized its construction. Many worthwhile organizations have been allowed to use the facility at a minimal charge.

"The plaintiffs have proved and the Government has not disputed that by a concerted community effort the 600 members of the pool corporation have provided themselves with a pool facility which was not forthcoming from the local government of Rockville, Md., and have demonstrated a willingness to let worthwhile outside organizations share the fruits of their efforts."

5. The only activity of the corporation has been the operation of the pool. The evidence does not show that there have been any other entertainments of a social nature such as dinners or other meetings of the membership. The only social features are those which naturally occur in connection with the use of the pool. With respect to athletics, there have been no competitive or purely athletic features for the use of the pool other than the bathing and swimming therein.

Coming to the applicable law, I find that the statute (now title 26, s. 4241) was originally enacted in substantially its present form as a tax excise measure in 1917. The Government contends, and the plaintiffs deny, that on the principles established by the adjudicated cases the corporation should be classed as a social, athletic, or sporting organization. I do not conclude that the Government's contention is sound under the controlling facts.

There have been many judicial decisions applying the statutory provision to the varied facts of particular cases with naturally varying results. There seems to be no Supreme Court decision upon the subject but some principles are, I think, well established. (1) Particular cases are not to be decided merely upon the literally stated name or purpose of the club; but rather from the nature and particular character of its actual activities;

Footnotes at end of speech.

(2) a club or organization not originally properly classified as a social or athletic organization may nevertheless by a change in its activities become properly so classified; (3) the mere fact that there is some kind or degree of social intercourse between the members is not of itself controlling because every organization of individuals which brings the members into personal contact from time to time must necessarily include to some extent social relationships; (4) if the predominant purpose and activities of the club are primarily for the promotion of some common interest or objective and the social contacts of the members in connection with the furtherance of that object are only incidental, the organization should not be classified as a social club.

After reviewing many of the decided cases, I think the most clearly and concisely stated principle to be applied is to be found in the opinion of Judge Green, speaking for the Court of Claims in one of the earlier cases dealing with the application of this section. *Army & Navy Club of America* v. *United States* (53 F. 2d. 277 (1931)). It is this case which has been cited by counsel for the Government in support of its position. The facts of that case are, however, quite different with regard to the social aspects of the club as compared with those in the instant case. At page 282 the opinion in that case summarizes the matter by saying:

"* * * if the predominant purpose of the organization is not social, and its social activities are merely incidental to the furtherance of this different and predominant purpose, then the club is not a social one within the meaning of the law. But both of these matters must exist in order to create an exemption from the tax."

In that case the facts found by the court warranted the conclusion that the Army & Navy Club was a social organization within the meaning of the statute. Certiorari was applied for but denied by the Supreme Court. (285 U. S. 548 1932.)

In adopting and applying that principle to the facts here found, I conclude that the Twinbrook Corp. is not a social organization. Its predominant purpose is not social but the conduct of a swimming pool as a recreation center for the benefit of residents of a certain community area. Its qualifications for membership are based on local and not personal considerations. The personal contacts that necessarily occur from the use of the pool by its members and their children and other so-called underprivileged children, to whom the facilities of the pool are accorded by permission of the officers and directors of the corporation, are only those incidentally arising from the use of the pool.

I think it unnecessary to review in any detail the facts appearing in the many judicial decisions which have been cited respectively by counsel for the parties. It will be found that in those cases where the club has been held to be a social organization, the basis of the conclusion is to be found in the degree and extent of the social features in proportion to the whole activities of the club. It is not necessary that the purely social gatherings or entertainments constitute a majority or even a very large minority of the whole activities; provided the social aspects are in and of themselves, while possibly only a byproduct, yet nevertheless are an important substantial feature of the club promoting membership therein of those who may be more interested in the social acquaintances and contacts to be formed than in the major functional purposes of the club. Thus a downtown luncheon club in a large metropolis with luxurious dining rooms, reading rooms, with elaborate cuisine and lounging facilities and opportunity for recreational activities such as billiard and card tables, has been held to be a social club within the meaning of the statute. But in such a situation the social aspects of the club are, I think, more than merely incidental as in the present case. See *Duquesne Club* v. *Bell* (127 F. 2d 363 (3d Cir. 1942)); *Turks Head Club* v. *Broderick* (166 F. 2d 877 (1st Cir. 1948)). Some other cases where the club has under the facts been properly classified as social are: *Lake of the Forest Club* v. *United States* (137 F. 2d 843 (10th Cir. 1943)); *Town Club of St. Louis* v. *United States* (68 F. 2d 620 (8th Cir. 1943)).

On the other hand where the social aspects of the club are only minor and subordinate and principally incidental, the organization has been held not to be social in its nature within the meaning of the statute. *Washington Club* v. *United States* (49 F. 2d 656 (Court of Claims, 1930)); *Builders' Club of Chicago* v. *United States* (58 F. 2d 503 (Court of Claims, 1932)); *California State Auto Association* v. *Smyth* (77 F. Supp. 131 (D. C. N. D. Cal. 1948)); reversed on other grounds (175 F. 2d 752, cert. den. 338 U. S. 905); *Squantum Association* v. *Page* (7 F. Supp. 815 (D. C. R. I. 1934)); *Engineer's Club of Dayton* v. *United States* (133 F. Supp. 72 (D. C. S. D. Ohio, 1955)); *Rockefeller Center Luncheon Club* v. *Johnson* (131 F. Supp. 703 (D. C. S. D. N. Y. 1955)); *Furniture Club of America* v. *United States* (67 F. Supp. 764 (D. C. N. D. Ill. 1946)); *Malibu Lakeside Mutual Water Co.* v. *United States* (97 F. Supp. 542 (D. C. S. D. Cal. 1951)).

I have examined the Treasury regulations applicable to the statute. I do not find in them any provisions inconsistent with the principles heretofore stated; but on the whole the judicial decisions are generally consistent with them. Section 101.24 provides in substance that organizations having social, athletic, or sporting features are presumed to be included under the statute unless and until it appears to the contrary. Section 101.25 with respect to social clubs provides in part:

"Any organization which maintains quarters or arranges periodical dinners or meetings, for the purpose of affording its members an opportunity of congregating for social intercourse, is a 'social * * * club or organization' within the meaning of the Code, unless its social features are not a material purpose of the organization but are subordinate and merely incidental to the active furtherance of a different and predominant purpose, such as, for example, religion, the arts, or business. The tax does not attach to dues or fees of a religious organization, chamber of commerce, commercial club, trade organization, or the like, merely because it has incidental social features, but if the social features are a material purpose of the organization, it is a 'social * * * club or organization' within the meaning of the Code."

Counsel for the Government has not pressed the point that the Twinbrook Corporation is an athletic club, if it is held not to be a social club within the statute; and I do not find any adequate basis for classing it as an athletic club. No case has been called to my attention by counsel that would support the contention that it is. While swimming is, of course, a kind of athletics in the general sense of that term, I do not think that the nature of this swimming pool is such that it makes the corporation an athletic or sporting organization within the statute. In its actual activities the use of the pool is largely for children, and the evidence is that there have not been any competitive swimming events. The athletic exercise involved in swimming is, of course, a merely muscular activity incidental to the exercise itself, which is primarily a matter of recreation similar to that of tennis, golf, or other unorganized amateur sports. And in support of this view, counsel for the plaintiffs call attention to the tax regulation effective January 1, 1956, s. 101.26—

"Athletic or sporting clubs: The possession and use of a gymnasium, swimming pool, or other athletic facilities by an organization having religious or philanthropic social service for its exclusive or predominant purpose do not bring the organization within the class of athletic or sporting clubs or organizations."

I think the same principle must apply in determining whether a club is an athletic organization within the statute that we have seen to apply in the case of whether it is a social club; that is to say, where the athletic features are only incidental to the main purpose and activities, the organization should not be classed as athletic within the meaning of the statute. For the converse on the facts, see *Block Hall, Inc.* v. *United States* (57 F. 2d 918 (Court of Claims, 1932)).

The plaintiffs also contend that, even if the Twinbrook Corporation should be classed as a social organization, nevertheless the tax paid by the plaintiffs should be recovered by them because it was based on the amount paid by them for acquisition of a life membership in the corporation. On the contrary, counsel for the Government contend that the sum of $125 paid by the plaintiffs on the organization of the corporation was an initiation fee and not a fee for life membership. The statute, 26 USCA. s. 4241 (a) (2) provides that the 20 percent tax is payable on initiation fees where the amount is in excess of $10; while section 4241 (a) (3) provides—

"Life memberships—In the case of life memberships, a tax equivalent to the tax upon the amount paid by active resident annual members for dues or membership fees other than assessments, but no tax shall be paid upon the amount paid for life membership. In such a case, the tax shall be paid annually at the time for the payment of dues by active resident annual members."

It will be remembered that the amount of dues paid by active resident annual members does not exceed $10 a year, and therefore under the statute no tax is payable upon the amount paid for life membership. But if the payment of $125 made by the plaintiffs was an initiation fee and not a fee for life membership, then the tax was payable if the corporation was a social or athletic organization. As I have decided that the Twinbrook Corporation was not a social, athletic, or sporting organization, it is not necessary to decide this second question; but as it has been fully argued by counsel on both sides, I will state my opinion upon it.

The principal factors to be considered here are the incidents and characteristics of the membership certificate issued to the plaintiffs for which they paid the sum of $125. This appears from the bylaws. In the first place it is to be noted that the certificate is called a life membership although this is not of itself conclusive. While the certificate gives to the holders the privileges of membership in the corporation so long as they respectively live and hold the certificate as husband and wife, subject, however, to termination of membership upon transfer of the certificate to others on the conditions provided for in the bylaws (not seemingly important here), or until expulsion from membership under stated conditions, it is important to note that the certificate does not of itself entitle the holders or their children to the use of the swimming pool except upon the payment of annual dues of $10. Counsel for the Government argues that the term "life membership" as used in the statute should be read in the light of common understanding of what constitutes life membership in a club; and contend that this common understanding is that a life member of a club is one who is exempted during his lifetime from the payment of annual dues. It is said to be a commutation of the amount of annual dues. In addition the argument

is that on looking at the conditions leading to the formation of the Twinbrook Corporation and its objective of obtaining and operating a swimming pool, it is apparent that the cost of the undertaking was met only from the initial contributions in the way of payments of $125 for each of the 600 membership certificates; and that therefore in reality the money so paid by each holder of a certificate constituted in effect if not in name an initiation fee. In addition attention is called to the Treasury Regulation No. 101.28 relating to initiation fees.[2] It provides in part that "under the code the term 'initiation fees' includes any payment, contributions or loan required as a condition precedent to membership, whether or not any such payment, contribution, or loan is evidenced by a certificate of interest or indebtedness or share of stock, and irrespective of the person or organization to whom paid, contributed, or loaned."

The scope of this definition of initiation fees seems to be broad enough to include the payment by the plaintiffs in this case, despite the bylaws provision that the certificate constitutes "life membership," which, as I have said, is not conclusive; and despite also the fact that the kind of payment made in this case by the plaintiffs is probably not within the ordinary understanding and practice of what is an initiation fee. Probably the general understanding of an initiation fee required to be made to acquire membership in a club is where a new member is elected to membership in a going club and the initiation fee is required in the nature of equalizing the position of the old members with the new members, with respect to their interests in the club assets.

If, therefore, the common understanding of the terms "initiation fee" and "life membership" are to be applied here, it seems that the kind of payment made by the plaintiffs does not clearly come within the general understanding of either.

There is no evidence in this case that the terms "initiation fees" and "life membership" have any certain and definite meaning in their application to the subject matter here involved; and counsel have not referred the court to any applicable judicial opinion as to the meaning of either term, with the exception of *Biddle* v. *Rothensies* (C. C. H. 1942, 2 U. S. T. C. Civil No. 1762, U. S. D. C.), Eastern district of Pennsylvania, dealing with what was called a proprietary membership in the well-known Merion Cricket Club of Philadelphia. While in that case the membership was held to be equivalent to a life membership as referred to in the statute, I do not find the conclusion reached necessarily controlling in principle of this case where there is a different factual situation.

It is clear enough from what has been said that there is a very meager basis in the evidence for the decision on the point. Looking at the matter from a practical and realistic standpoint, what occurred is simply this. Certain residents and property owners of a particular neighborhood decided to build and operate a swimming pool as an additional recreation facility. To defray the cost, individuals owning in whole or in part 600 separate properties in the neighborhood, agreed to contribute the sum of $125 each to the project. In carrying out the plan a corporation was formed which authorized the issuance of so-called life-membership certificates to 600 house or property holders, and evidently to meet the current cost of operation of the pool when built, the certificate holders were required to pay annual dues of $10 for the use of the pool. The question is whether payments so made are more properly to be called initiation fees or the acquisition of life membership. Neither term would seem to be precisely applicable. Clearly the mere designation of the certificate as constituting life membership is not of itself controlling. The nature and effect of the whole transaction is the more important consideration.

While the question is certainly not free from great difficulty, I take the view that looking at the realities of what occurred, the payments are more nearly to be considered initiation fees than constituting life membership. As the statute does not define the term "life membership" (which is nontaxable) and as the regulation as to initiation fees does in terms seem to include the kind of a payment made by the plaintiffs in this case, the better view seems to be that the payment would be taxable as an initiation fee, if the Twinbrook Corp. should be held to be a social, athletic, or sporting organization.

For these reasons I conclude that the plaintiffs are entitled to a judgment in their favor for the return of the $25 tax paid by them. The clerk is instructed to enter judgment accordingly in favor of the plaintiffs for $25.

W. CALVIN CHESNUT,
United States District Judge.

---

[2] 1: S. 4241. Imposition of tax.

(a) Rate: There is hereby imposed—

(1) Dues or membership fees: A tax equivalent to 20 percent of any amount paid as dues or membership fees to any social, athletic, or sporting club or organization, if the dues or fees of an active resident annual member are in excess of $10 per year.

(2) Initiation fees: A tax equivalent to 20 percent of any amount paid as initiation fees to such a club or organization, if such fees amount to more than $10, or if the dues or membership fees, not including initiation fees, of an active resident annual member are in excess of $10 per year.

(3) Life membership: In the case of life memberships, a tax equivalent to the tax upon the amount paid by active resident annual members for dues or membership fees other than assessments, but no tax shall be paid upon the amount paid for life membership. In such a case, the tax shall be paid annually at the time for the payment of dues by active resident annual members.

(b) By whom paid: The taxes imposed by this section shall be paid by the person paying such dues or fees, or holding such life membership.

[2] Sec. 101.28 (as amended by T. D. 5349, 1944 Cum. Bull. 639):

Initiation fees: Any amount paid as initiation fees to a club or organization coming within the provisions of section 1710 is subject to the 20 percent tax imposed by the code, as amended (a) if such fees amount to more than $10, or (b) if the dues or membership fees (not including initiation fees) of an active resident annual member are in excess of $10 per year.

Under the code the term "initiation fees" includes any payment, contribution, or loan required as a condition precedent to membership, whether or not any such payment, contribution, or loan is evidenced by a certificate of interest or indebtedness or share of stock, and irrespective of the person or organization to whom paid, contributed, or loaned. It is not material whether the applicant has any hope or expectation of a return of his payment upon resignation, death, or other circumstances, nor is it material to whom he pays the money. For instance, if a golf club requires incoming members as a condition precedent to membership to purchase either from it or from retiring members a share of stock, the tax attaches to any such payment for the stock regardless of the fact that it represents a property interest in the assets of the club. Likewise, if the purchase of a share of stock in a landholding corporation is a necessary precedent to membership in the club, the amount paid for such share of stock is taxable. In the case of a transfer of stock from a retiring member the club should collect the tax on the amount paid by the new member for the stock as well as tax on any transfer fee required from the new member.

More on Less Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. MINSHALL. Mr. Speaker, in view of the current and tremendous interest in the budget, I should like to insert in the RECORD, what in my opinion are two most excellently written editorials; one from the Cleveland Press of May 15, the other from the Cleveland Plain Dealer of May 16. The editorials follow:

[From the Cleveland Press of May 15, 1957]

IKE'S BUDGET APPEAL

In listening last night to President Eisenhower's defense of his record peacetime budget, anyone could believe he was wholly persuaded of the arguments he made.

He believes the budget was fashioned by the yardstick of the national interest. He believes any material cut in "security" appropriations would be a "needless gamble." He believes "a good defense is not a cheap defense."

Eisenhower was all earnestness when he said the budget is based on "the proper dividing line between national danger * * * and excessive expenditures," and when he promised never to let the Armed Forces sink to the low level which caught us with our guns down when the Korean war erupted.

All these things the President, measured by his speech, warmly believes.

But he also warmly believes the "stern fact that the real military power can rest only on a sound economy."

And right there is the rub—in this seventy-odd-billion-dollar budget.

There is the rub—not only because the 1958 budget itself is so much bigger than any other Eisenhower budget, but because it blueprints still bigger spending to come.

Part of the budget rise the President attributed, logically, to programs long ago started by Congress, programs which have grown and grown (as the school-building program will grow, if enacted). These programs, he said, "our people have decided through the Congress to adopt."

But some of the programs were started by the Eisenhower Administration, last year, and this year, and more are in the new budget. The high spending trend the President reversed when he came into office 4 years ago now has been reversed again—upward and upward.

So the people have decided, and because of their protests Congress seems determined, that the President was right in 1954 and 1955, when he got Government spending down to less than 65 billion dollars—on his way, it looked then, to that 60-billion-dollar maximum he promised when he was running in 1952.

Yes, the President last night seemed plausible and persuasive. But the issue will be decided on his budget—which the people, and apparently Congress, have decided is neither plausible nor persuasive.

[From the Cleveland Plain Dealer of May 16, 1957]

THE BATTLE OF THE BUDGET

The Battle of the Budget is now going on in Washington. It's the budget makers against the budget trimmers and, although the outcome won't be decided until the last appropriation bill goes through Congress, it

looks to us as though the budget trimmers have a decided advantage.

Last weekend President Eisenhower and Field Marshal Montgomery rehashed the Battle of Gettysburg and concluded that mistakes had been made by both Union and Confederate generals. It won't be necessary to wait 94 years to analyze the mistakes of the 1957 budget makers. They started with a record high peacetime budget, which really was a shocker to people who had been conditioned to expect further government economies and lower taxes, and continued with administration doubts about the size of the budget, including Treasury Secretary Humphrey's hair curling depression warning if the Government didn't stop taking so much out of the economy.

Now the general of the budget-making forces has rallied his army and has launched a counterattack with the heaviest artillery in his arsenal—his great and undisputed personal popularity. The theme of his television and radio message to the people Tuesday evening was this: Most of the budget is earmarked for defense; to cut defense spending would be a fearful gamble with the safety of the Nation; therefore, the budget should not be cut.

There are loopholes in this argument. Of course, no one wants to gamble with the safety of the Nation. But on the other hand, not even proposed defense appropriations are untouchable; there have been too many examples of wastefulness in military spending, too much costly rivalry among the services, which have been triplified rather than unified. The budget trimmers think some money can be squeezed out of these appropriations.

But even if the budget trimmers leave the defense funds untouched, there are other economies that can be made. The President himself acknowledged last week that $550 million could be safely cut out of the foreign-aid program, making it obvious that the original request was far, far too high.

Then there are the new programs in the budget, such as reclamation and dam building in the Far West to bring new land into production, while another department of Government is trying to retire millions of acres from agricultural production through the soil-bank program. The soil-bank program itself has been criticized, on the ground that some farmers have been getting soil bank and drought-relief checks for the same land. Reminds us of that tall story from Texas about the farmer complaining about the floods because they had washed out the roads and he couldn't get to town to pick up his drought-relief checks.

One of the new programs is Federal aid for school construction. The President is still arguing for it, although local school districts and States are doing very well at financing school construction, and the tax burden on their citizens is less than it would be if the Federal Government did the financing. Two billion dollars could be saved over a 4-year period if the school program were dropped.

During the fall campaign one of the most potent arguments was made by Vice President NIXON when he urged his listeners to "ask yourselves whether you are better off now than you were 4 years ago." An overwhelming majority concluded that they were better off, and they voted accordingly. Why, then, do so many people seem to be dissatisfied with the Eisenhower spending program?

The answer, we think, is that they do not believe they are sharing in the prosperity they see all around them to the extent they think they should, and this applies equally to low-, middle-, and high-income groups. The Government still takes a huge tax bite out of their incomes and inflation continues to gnaw away at them.

These people are not demanding new Government programs and services; what they want is to be allowed to spend more of their own money and they want what the Government leaves them to buy as much as it would a year ago. And they think that less Government spending, leading to another tax reduction and a brake on inflation, can be accomplished without endangering national security.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Canada Council and Drew Pearson

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in his syndicated column Drew Pearson on Sunday, May 19, 1957, made a statement which I feel must be rectified or it will do untold damage to the friendly relations that have existed from the very beginning between the United States and Canada.

In fairness to Mr. Pearson, I am confident that it is misinformation rather than ill will which is responsible for this egregious error.

Mr. Pearson said this in the course of an article on American-Canadian relations at this time: "Parliament just voted $200 million to set up the Canada Council, ostensibly 'to encourage Canadian arts, letters, and sciences' but actually to combat United States influence in Canda."

As soon as I read this I got in touch with the Canadian Embassy in Washington and, fortunately, was furnished with articles from several leading Canadian newspapers which puts the matter in the proper light.

In view of these articles, which I include here, I think it is up to Mr. Pearson to review the matter in an early article which will present the true facts about the Canada Council.

The Members of this House are, of course, aware of the fact that the arts are an international language whose ends are peace and understanding between peoples.

The international exchange of art and artists is carried on under the Fulbright Act, the Smith-Mundt Act, and the Humphrey-Thompson Act, measures adopted by the Congress in recent years.

As a matter of fact, President Eisenhower told the Congress in his 1955 message on the state of the Union that—

> In the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities.

In an historic speech before the Conference on the Arts and Exchange of Persons, held by the Institute of International Education in New York City on October 4 and 5, 1956, Senator J. WILLIAM FULBRIGHT had this to say:

> So, I feel, the more I see of it, that exchanges in the field of the arts can be made a very important influence in our international relations. Perhaps that should not be said. I suppose one should be interested in art for art's sake. It is an interest and end in itself and that is a perfectly legitimate attitude for those of you who practice it. For my part, I want to use art to help the human race avoid committing suicide.
>
> It was an extraordinary, mysterious thing that in 1914, after 100 years of relative peace, the most civilized peoples of the world fell upon one another and tried to commit suicide. I have never heard a satisfactory reason for it, nor do I know why they fought. None of the reasons, economic, racial, or political, make any sense to me. I think it was a wholly irrational thing. Perhaps the human race is not capable of ever achieving peace or a rational international relationship. But I think there is sufficient chance to justify exerting ourselves in a field which has never been tried; that field is the exchange of persons and exchanges of the arts. Such exchanges may result in mutual understanding and sympathy.
>
> Contemplation of the fine arts or even competition among peoples in this field does not lead to bloodshed and hatred, as competition in the field of economics tends to do. I often think of the story they tell about Lenin who refused to listen to music because it tended to soothe his passions and made him less forceful and cruel. If that story is true, and I rather think it is, it encourages me in the direction I hope we are moving.

I include here articles from the Financial Post, Toronto; the Toronto Star; the Ottawa Journal, and the New York Times which may be helpful to Mr. Drew Pearson in arriving at a true assessment of the aims of the Canada Council.

The Reverend Sister Elizabeth Parente, MPF, music director of Villa Victoria Academy, Trenton, N. J., recently wrote me, in part, as follows, re my own interest in the arts:

> Permit me at this time to commend you most highly for introducing a bill for Federal aid for the arts. It is one of the finest moves ever made. The arts and sciences should work together, and there should be equal emphasis on both. Our country should never hesitate to make great use of the one and only universal language—music. There are no boundary lines with this art.

If there is one thought I can leave today with those leaders in Government and private life who have worked so fruitfully to establish the Canada Council, it is this line by the Reverend Sister Parente:

> The arts and sciences should work together, and there should be equal emphasis on both.

The United States and Canada should never hesitate to make great use of the one and only universal language, music. There are no boundary lines with this art.

In the hands of the Canada Council for the Arts, Humanities, and Social Sciences the vast sum of $100 million has been placed to develop ways for the arts and sciences to work together with an equal emphasis on both.

A new day is dawning in Canada; indeed, the sun that is lighting Canada may encourage leaders in the United States to give new emphasis and importance to our own cultural activities to peaceful ends.

The above-mentioned articles follow:

[From the Toronto Financial Post of March 2, 1957]

SUBSIDY OF ARTS NOTHING NEW, BUT NATIONAL PATTERNS VARIED

(By John P. Maclean)

OTTAWA (Staff).—When the Canada Council starts distributing money to support Canadian art, music, drama, and letters, it will be following a course which most of the Western nations have followed for a long time.

It will probably look abroad for some guidance about what other countries do, and it will find great variation both in the amount of public funds devoted to cultural activities, and in the way they are distributed.

In the United States the only relevant comparisons are with private foundations like the Guggenheim, Rockefeller, or Ford Funds. And none of them can provide a complete parallel to the Canadian problem.

(The chairman-designate of the Canada Council, Brooke Claxton, has already been quizzing the directors of the principal United States foundations.)

But the United States is about the only major country of the West where private bequests are adequate to provide the main support for arts, letters, and social sciences.

In most countries, the private patron of the arts has long been too rare and too poor. Public funds have been filling the gap, more or less fully, in most of Western Europe for generations.

The Canadian plan is characteristically Canadian. It seeks as usual to blend the methods of the Old World with those of the dominant country of the New World.

The public is to provide an original endowment of $50 million. (And this, incidentally, is a precedent new to the democratic world. Cultural funds are usually a straight part of the parliamentary appropriation each year.)

But the Government recognizes this is quite inadequate for the development of Canadian talent. It is relying on private donors to supplement it.

If Canadians are not rich enough to establish huge foundations of their own on the United States model, at least some of them can add to the thin Government capital.

One such offer has already been received—prematurely, since it came before there is a Canada Council. It was from a Toronto widow, offering $200,000 for the encouragement of ballet. Government hopes this first swallow will herald a real summer of private gifts and bequests.

The most culture-conscious nations of the West now include: United Kingdom, France, Italy, Germany, Austria, Russia, Belgium, Holland, and the Scandinavian countries.

ITALY

In Italy, the federal authority cooperates with local authority in many projects, keeps a close eye on culture through a part of the Ministry of Instruction.

Since World War II the National Government has spent an average of $5 million a year just to refurbish war-damaged buildings. Top-rated movie companies get special tax deals (for instance the proceeds of a special levy on foreign films) to spur pro-

duction of such cinematic gems as Bicycle Thief.

WEST GERMANY

In West Germany, plays, operas and ballet in a recent year received subsidies of $22 million; museums and art galleries got $5.3 million. Chief support comes from the provinces or states, plus private donations.

RUSSIA

In Russia, the Bolshoi Theater, operating two large theaters in Moscow, receives about $11 million a year in subsidies for opera and ballet. Live drama in some 30 theaters in Moscow is subsidized, while provincial theaters also receive assistance.

Here's how the United Kingdom and France have and are aiding culture on a nationwide scale:

UNITED KINGDOM

Guide and mentor of British culture at present is the Arts Council, chartered in 1946. It grew out of the World War II-spawned Council for the Encouragement of Music and the Arts.

CEMA began in late 1939, was set up in 1940 with an initial £25,000 grant from the Pilgrim Trust, then headed by Lord Macmillan, Minister of Information. John Maynard Keynes, the economist, headed CEMA from 1942 to his death in 1946.

In 1945, the British Government decided CEMA should be continued in peacetime. Treasury, instead of Education, took it over, renamed it the Arts Council.

It's not a government department, doesn't resemble some foreign ministries of art. It is composed of not more than 16 persons, experts in one or more fields of art, who are picked by the Chancellor of the Exchequer but are not responsible to him.

It has a small specialist staff: Secretary-general, deputy secretary, and finance officer; directors for art, music, and drama. Staff totals 97.

Arts Council money comes in annual grants from Parliament. The hope is that as soon as United Kingdom finances are past the wolf-at-the-door stage the annual grant will become a statutory amount.

At present the Arts Council submits its requests to Parliament, has them scrutinized by committees on public accounts and on estimates. The auditor-general checks the books.

In 1955–56 Parliament granted £820,000 (up from the first, 1945–46 grant of £235,000). Simplified, the books show the money went £614,000 to general art expenditure, £97,000 to general operating costs, £76,000 to the Scottish committee, and £33,000 to the Welsh committee.

The £614,000 was split:

1. Music, £514,000.

Covent Garden got £250,000; Sadler's Wells, £100,000; Intimate Opera Society at the lower end of the scale got £1,000.

Three of the big orchestras, London Philharmonic, Liverpool Philharmonic, and City of Birmingham Symphony each got £12,000, and the Society for the Promotion of New Music got £800.

2. Drama, £65,000.

Old Vic got a total of £18,500 and Royal Vic got £10,000. The Playhouse, Kidderminster, got £39 9s.

3. Art, £23,000.

Exhibitions took £19,000 but grants went to such as the Finsbury Art Group (£40) and the Open Air Exhibition of East Anglian Sculpture (£20).

4. Poetry, £1,000.

Help for Spoken Poetry got £497 10s. 4d. and the Cley Women's Institute got £3 11d.

5. Festivals, £6,000.

Bath Festival Society and Cheltenham Arts Festivals each got £1,000; at the bottom of the list, Hovingham Festival drew £90.

6. Arts centers and clubs, £9,000.

7. General arts activities, such as Langley Moore Museum of Costume (£350) were given close to £2,000.

All groups which are subsidized are nonprofit. In fact, the Arts Council is incorporated as a charity and prohibited from using its money for profit-seeking purposes.

All money goes to the support of professional, not amateur activity.

MAIN PURPOSE

Main purpose of the arts council, according to its charter, is to preserve and improve standards of performance in the various arts. This means, in effect, support of a limited number of institutions where the highest standards can be developed. Prime example is the Sadler's Wells Ballet at Covent Garden.

Intention is to get—and keep—powerhouses of opera, music, and drama in London, see that culture is spread throughout the nation by frequent tours.

Outlook in the United Kingdom is for more money to go to the arts council. It now, with local authorities' help, spends only about £1 million.

This compares with about £485 million for education (it's calculated about £50 million of this goes into in-school culture), £13 million for public libraries, £3 million for art galleries and museums.

Arts council is, therefore, bucking for about £2.5 million a year. This, it thinks, would support a proper program plus a long-term capital projects rebuilding plan.

The projection of British culture abroad is conducted by the British council.

In 1955–56 it spent £2.8 million, broken down: £1.8 million in foreign countries, £.5 million in colonies, £.4 million in Commonwealth countries, and £.1 million in colonial development and welfare.

FRANCE

Culture in France comes under a special branch of the ministry of education called Direction-Generale des Arts et des Lettres.

Head is a secretary of state for fine arts who reports to the minister of education still, although there's a growing feeling education and culture shouldn't be mixed.

Arts et Lettres has five divisions:

1. Direction des Musees de France.

There are about 900 museums, including 30 considered national ones like Le Louvre.

Close to $3 million was spent—$1 million for salaries, $400,000 for maintenance expenses, $300,000 in subsidies to local museums, and about $1 million in capital construction and equipment. Six $300-a-year scholarships were given to students at the Louvre school.

2. Service des Spectacles et de la Musique.

Promotion of theater attractions and musical programs isn't allowed to clash with artistic freedom.

Money distributed in 1956 went to L'Opera and L'Opera-Comique (total of more than $3.5 million), Comedie-Francaise ($1 million), and the Theatre National Populaire ($200,000).

Regular subsidies are given on the advice of a panel of experts to the best performances in private theaters and to talented young playwrights looking for a push to get started. There's an annual $3,500 prize for the best play produced by an amateur society. Total cost, about $200,000.

Another $200,000 goes to help various drama festivals throughout France. The International Festival, now a regular feature of the Paris season, gets $125,000.

Some $300,000 goes to other theatrical enterprises throughout the country, for general expenses. In addition, about $285,000 went to provincial organizations to produce operas of various kinds.

About $1 million went into capital project subsidies for the building of theaters, conservatories, art and music schools.

The National Conservatory of Dramatic Art got $300,000.

More than $600,000 was spent to support music. The National Conservatory of Music got about $360,000 and another $100,000 for scholarships; various other municipal groups a total of $130,000; Les Jeunesses Musicales, $35,000; ballet companies, $15,000; and composers (who also get help with the cost of printing their scores), $20,000.

Writers get little, but are in line to get more. At present there's an annual prize of $1,800 awarded to a well-known writer as a kind of recognition for general excellence. A newly formed Culture Bank will begin providing social-security benefits to struggling young writers from state funds and with revenue from established writers' royalty contributions.

3. Service des Lettres.

Important among its activities is a general responsibility to promote celebration of special literary events. Some $70,000 was spent in 1956.

4. Service de l'Enseignement et de la Production Artistique. Under teaching and artistic production come: Schools of fine arts, decorative arts, and architecture; state-controlled tapestries and ceramics industries; official commissions to painters, sculptors, engravers and tapestry makers.

Some $1.4 million in salaries and $500,000 in maintenance went into the state schools—Ecole Nationale des Beaux-Arts and the advanced Ecole Francaise de Rome, for example. Each has a strong program of scholarships.

Official commissions worth $450,000 were ordered in 1956 for decoration of public buildings, official residences and universities.

5. Direction de L'Architecture.

In 1956 this bureau spent $7.2 million on maintenance of historical monuments and $5 million on restoration; for example: $2 million for the Chateau de Versailles.

Total budget for archeological works ($70,000 in 1956) and preservation of historical sites and general expense is a substantial $30 million.

[From the New York Times of January 9, 1957]

CANADA PLANNING CULTURE COUNCIL—ENDOWMENT OF $50 MILLION AND FUND FOR COLLEGES ASKED OF PARLIAMENT

(By Raymond Daniell)

OTTAWA, January 8.—The Government's plans for aiding the cultural development of Canada were revealed today at the opening of the 5th and last session of the 22d Parliament.

They included the establishment of a Canada Council for the Arts, Humanities, and Social Sciences with a $50,300,000 endowment for scholarships and assistance to artists, musicians, dancers, writers, and scholars.

Another grant of $50 million was requested for the council to help Canadian universities' construction projects to keep pace with the increasing demands upon them.

The Government also sponsored a measure to provide for the division of the National Museum of Canada into two institutions to be known as the Canadian Museum of Human History and the Canadian Museum of Natural History.

The cultural council was proposed 5 years ago by the Royal Commission on National Development in the Arts, Letters, and Sciences, headed by Vincent Massey, now Governor General.

SPEECH FROM THRONE READ

It was he in his tricorn hat and full regalia as representative of Queen Elizabeth II, who read the speech from the throne, containing the Government's recommendations. The speech was delivered in the red upholstered senate chamber before an audience that included most of the diplomatic corps.

ECONOMIC REPORT MADE

For years the Liberal government of Prime Minister Louis St. Laurent has hesitated to propose the council, because of uncertainty

about the reaction in Quebec, a party stronghold.

[From the New York Times of May 5, 1957]

CANADA COUNCIL INITIATES ACTION—GROUP WITH $100 MILLION FUND TO PROMOTE CULTURE HOLDS FIRST MEETING

(By Tania Long)

OTTAWA, May 4.—The Canada Council, which recently was armed with $100 million for the promotion of Canadian culture, got down to work last week to plan a program that will go into effect this fall.

The first meeting of the newly appointed Council was attended by Governor General Vincent Massey and four executives of United States foundations.

It was Mr. Massey, before he became representative of the Crown in Canada, who headed the royal commission that recommended the establishment of the Canada Council to assist the arts, humanities and social sciences.

The guests from the United States were Dean Rusk, president of the Rockefeller Foundation; W. McNeil Lowry, vice president of the Ford Foundation; Stephen H. Stackpole, executive associate of the Carnegie Corp., and John Marshall, director of the Rockefeller Foundation.

One of the first acts of the council was to establish a factfinding body to conduct a survey into what is already being done by private and public bodies for the promotion of cultural matters in Canada.

An executive committee of seven also was set up to deal with the day-to-day developments of interest to the council between full council meetings, which are planned to take place three times a year. The permanent staff will consist of five officers under Dr. A. W. Trueman, former National Film Board commissioner, and about a dozen stenographers.

Brooke Claxton, chairman of the council, has said the council will make every effort to keep operational expenses down.

The Canada Council will have $50 million to invest, the revenue from which will be used for grants to deserving cultural enterprises. These grants are estimated at about $2 million a year.

Mr. Claxton said at the close of the 2-day meeting that the council in 4 years would have as much money to devote to the arts as the Rockefeller Foundation has spent in Canada in 44 years.

The remaining half of the $100 million will be used to assist universities in constructing more buildings for the teaching of the arts and sciences. University building is drastically insufficient for the growing demand in Canada.

A meeting with university heads will be held by the council in June to work out a formula for making the grants.

Extravagant Hoover Commission Recommendations for Savings

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD, I include reply to the letter of Chairman Clarence Francis, of the Citizens Committee for the Hoover Report, received May 16, 1957, as follows:

MAY 16, 1957.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR MR. CANNON: I am writing with reference to your remarks on the floor of the House on May 14, 1957. In your address you seriously questioned whether actual economies can result from the recommendations of the bipartisan Hoover Commission. The citizens committee has looked into this question with considerable care and would like to furnish you with the results of its study.

In this connection, our research department prepared th eattached special research memorandum No. 11, entitled "Specific Examples of Savings, Capital Returns, and Increased Revenues Resulting From Reports and Recommendations of the Bipartisan First (1947–49) and Second (1953–55) Hoover Commissions." This study covers only a part of the total recommendations but it does document some $2.8 billion in savings. All of these figures are either taken directly from, or based upon, statements made by officials of the executive branch or by the Comptroller General of the United States.

With respect to the first Hoover Commission, the committee has looked into five specific areas of economy. The results of the survey indicated that economies in these five areas had resulted, as follows:

	Million
General Services Administration	$677.0
Veterans' Administration (cancellation of hospital beds)	545.0
Post Office Department (post and postal cards only)	72.0
Reconstruction Finance Corporation (abolition of)	474.4
Defense Department	569.5
Total	2,337.9

Additional results of the work of the first Hoover Commission would doubtless be found in other areas of Government but I think these figures are sufficient to make the point. Definite economies of substantial size are traceable to the first Hoover report through the statements of the agencies themselves.

With respect to the second Hoover Commission, the Citizens Committee has also made a study of some of the savings which so far can be attributed directly or indirectly to the Commission's findings. The results of this survey are as follows:

	Million
Treasury Department	$20.3
General Services Administration	131.7
Federal Housing Administration	.5
Interior Department	.6
Commerce Department	19.3
Veterans' Administration	13.6
Post Office Department	56.0
Health, Education, and Welfare Department	2.2
Defense Department (10 percent of total economies)	235.9
Total	$480.1

Here we would like to point out that only 39 percent of the 314 recommendations of this second Commission have been installed in whole or in part. Many of them have been installed rather recently, so that considerable time must pass before results can become evident. An example is the legislation providing a cost-accounting system for the Federal Government. Installation alone will take several years.

May I emphasize that these figures cover only a part of the total Federal operation and that they are meant simply to illustrate the fact that substantial savings have been certified by responsible governmental agencies. To study completely the budgets of all departments and agencies over a span of 9 years would involve the task of compiling and comparing material on approximately 11,000 pages, with an average of at least 50 items per page, or more than 550,000 separate budget items. In our view, there are additional and very substantial savings which would be divulged by a more thorough study than that which we have been able to undertake.

In conclusion allow me to refer to the subject of appropriations on an annual accrued expenditure basis as provided in H. R. 2494 currently before the House. Varying estimates have been made as to the savings which might come to the taxpayer through this measure. We would like to point out that substantial economies might flow from a reduction in the so-called "carryover" funds—that is, unspent funds available from appropriations in previous years. These funds are today estimated to be in the neighborhood of $50 billion. As a most conservative estimate, a thorough scrutiny of such funds might lead to a reduction of only 1 percent—and this is a minimum. This alone would be $500 million per year. It is our feeling that the savings would be considerably more substantial.

Thank you very much for hearing our views on this matter.

Sincerely yours,

CLARENCE FRANCIS.

SPECIAL RESEARCH MEMORANDUM NO. 11, CITIZENS COMMITTEE FOR THE HOOVER REPORT—SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) AND SECOND (1953–55) HOOVER COMMISSIONS

Much current controversy centers around the record peacetime Federal budget of $71.8 billion for fiscal 1958. There is general agreement on the need for economy but widespread debate over specific cost-cutting proposals.

The question then arises: "Are substantial savings available through adoption of the recommendations of the bipartisan Hoover Commission?"

In the following pages, the Research Department of the Citizens Committee lists some examples of concrete economies, capital returns, and increased revenues clearly attributable to the work of the bipartisan first (1947–49) and second (1953–56) Hoover Commissions.

Four points should be noted:

1. This list traces $2.3 billion in aggregate economies to recommendations of the first Hoover Commission and $480.1 million to the second—a total of some $2.8 billion for both to date.

2. This is a partial list, intended only to illustrate broadly the principle that specific economies are available through adpotion of Hoover Commission recommendations.

3. These examples are based almost entirely on official reports of the Federal departments and agencies concerned.

4. Most of the examples are based directly on Hoover Commission recommendations, but some are byproducts of the Commission's work, illustrating the ways in which a document like the Hoover report can stimulate economy-consciousness in governmental operations.

Five Congresses and two administrations have had a hand in the bipartisan effort through which some 72 percent of the proposals of the first Hoover Commission and, to date, 39 percent of the second have been adopted. The process of effectuation following adoption is often a long one and the results, when obscured by sudden developments such as the Korean action, are difficult to identify.

The fact remains that definite savings of a major nature, far greater than the totals shown by these examples, have been made. It may be reasonably concluded, therefore, that substantial additional economies re-

main available in the unenacted 61 percent of the second Commission's recommendations.

Attached are:

1. Appendix A (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan first (1947–49) Hoover Commission).

2. Appendix B (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan second (1953–55) Hoover Commission).

An examination of these two appendixes indicates the figures are almost entirely official statements of the Federal departments and agencies. In only two of the scores of specific figures here quoted has the Citizens Committee's Research Department posed its own estimate; and in these two cases, the estimates are premised upon official figures.

APPENDIX A

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) HOOVER COMMISSION

The first Commission on Organization of the Executive Branch of the Government was created by unanimous act of Congress on July 7, 1947. The Commission was empowered to "study and investigate the present organization and methods of operation of all departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the executive branch of the Government."

The Commission divided up its total project of studying the executive branch into a series of major-purpose activities and functional problems. Twenty-four task forces were created. Some of these dealt primarily with Cabinet departments, while others centered on broader categories of interest. The task force reports were completed in the late summer and autumn of 1948; and the Commission reported to Congress during the first 6 months of 1949. Most of the reports had minority opinions and dissents, proving that the recommendations were not accepted without a good deal of examination.

In enumerating the savings, capital returns and increased revenues attributable to the first Hoover Commission, the Citizens Committee covers five major areas. They are: the General Services Administration, the Veterans' Administration, the Post Office Department, liquidation of the Reconstruction Finance Corporation, and the Department of Defense. These estimates are not all encompassing of the whole area of savings affected by the first Hoover Commission. They are chosen merely to illustrate some of the financial benefits which demonstrably have resulted from the recommendations of the Commission.

1. THE GENERAL SERVICES ADMINISTRATION

It should be remembered that there would be no General Services Administration had it not been for a specific recommendation of the first Hoover Commission. In February 1949 the Commission recommended to Congress that responsibility for three internal service operations, Supply, Records Management, and the Operation and Maintenance of Public Buildings, be placed in an Office of General Services with a director appointed by the President (Report on Office of General Services—Supply Activities, Recommendation No. 1). The agency was created by the Federal Property and Administrative Services Act later in that year.

The agency's annual reports have stated economies, as follows:

Fiscal year and savings [1]

	Million
1951	$81.0
1952	127.3
1953	130.6
1954	147.6
1955:	
(a) Personal property	$168.7
(b) Real property	14.6
(c) Records	3.6
(d) Administrative	3.6
	190.5
Total	677.0

[1] Stated officially by Jess Larson and Edmund Mansure, the 1st 2 General Services Administration Administrators, and found in the GSA Annual Reports.

2. THE VETERANS' ADMINISTRATION

Cancellation of congressional authority to build 16,000 hospital beds for the Veterans' Administration was the biggest savings item in this field. (Report on Medical Activities, p. 6.) There are various methods by which nonrecurring or onetime savings like a hospital cancellation can be amortized. The Citizens' Committee used a 5-year basis in making its estimates, believing that the normal patient load accretions would cause such construction to be authorized again toward the end of such period. However, good economic conditions, important reductions in the incidence of tuberculosis, new drugs and medical techniques, and a number of other factors have mostly deferred this construction program, perhaps indefinitely. Hence, while the committee's 5-year amortization estimate seemed a reasonable basis when the estimate was made, it may have been too short for this particular case.

The aggregate saving of $545 million is shown as follows:

Fiscal year and savings [1]

	Million
1951	$67
1952	97
1953	127
1954	127
1955	[2] 127
Total	545

[1] Bed construction amortized without interest factor over a 5-year period; operation and maintenance costs carried on an annual basis, starting in 1952, at ⅓ of full annual figure of $60,113,000; and at full figure thereafter.

[2] Construction cutback was fully amortized according to Citizens' Committee basis by June 30, 1954, but annual operation and maintenance savings of $60,113,000 would continue thereafter.

3. THE POST OFFICE DEPARTMENT

The most notable achievement here was the increase in the price of penny post and postal cards from 1 cent to 2 cents. (Report on the Post Office, Recommendation No. 8.) Congressional action on this Hoover Commission proposal led to an average annual revenue increase of $7.4 million—$5 million in fiscal year 1952, and an aggregate total of $32 million thereafter on postal cards. The aggregate revenue thus added has been $37 million through fiscal 1956.

To this can be added revenues from increasing penny post cards from 1 to 2 cents, which are estimated by the Post Office Department to have returned another aggregate of $35 million. This is necessarily an estimate since the postal accounting system compounds these revenues into the normal sale of 1-cent stamps.

The total, thus, is $72 million.

The rate on postal cards and post cards had stood at 1 cent since May 13, 1873, except for a temporary 1-cent increase during World War I.

4. THE RECONSTRUCTION FINANCE CORPORATION

In its report to Congress on Federal business enterprises in March 1949, a task force of the first Hoover Commission recommended the liquidation of the Reconstruction Finance Corporation. The Commission itself recommended drastic cutbacks in lending, but did not recommend total liquidation. However, the combined efforts of these two groups resulted in its termination effective September 28, 1953.

For the most accurate description of the capital returns realized from the Reconstruction Finance Corporation in liquidation, a direct quotation is taken from the 1956 annual report of the Treasury Department:

"After giving effect to assets transferred to other Government agencies under the provisions of the RFC Liquidation Act and Reorganization Plan No. 2, of 1954, there remained for liquidation loans, securities, and commitments amounting to $592,200,000. By June 30, 1956, this portfolio had been reduced to $117,800,000. The total reduction of these assets was $474,400,000, of which $114,300,000 was accomplished during the year.

"The proceeds realized from liquidation of the Corporation's assets are returned to the Treasury. In the fiscal year 1956, there was paid into the Treasury from cash on hand and amounts realized during the year a total of $150 million." [1]

5. THE DEPARTMENT OF DEFENSE

The major segment of savings and budget reductions achieved from the original Hoover Commission fell within the Department of Defense, and these were most substantial. Some were annually recurring and some were nonrecurring, but, in the 1949–50 period, $569,675,000 of a total of over $1.5 billion saved in the Defense Department can be linked with Hoover Commission recommendations.

Due to the outbreak of hostilities in Korea, many of these Defense savings were immersed in the necessarily increased expenditures for war. Thus it is impossible to go beyond this point with regard to savings. Most savings effected by the Defense Department after the Korean war relate to the work of the second Hoover Commission and are dealt with later in appendix B of this memorandum.

The savings of $569,675,000 for 1949 and 1950 and stemming in whole or in part from the Commission and its task force are as follows:

	Savings [1] *(million)*
Lowered cost of recruiting program	$2.3
Lowered cost of printing and binding	2.3
Inactivation of administrative vehicles and substitution of civilian type vehicles for heavy military type vehicles	11.9
Inactivation of facilities surplus to peacetime needs	169.2
Lowered cost of petroleum reserves	.5
Lowered cost of classified project	2.1
Restrictions on civilian travel	.4
Bringing the rating structure of enlisted men into line with actual distribution and the structure plan for fiscal year 1951	9.9
Institution of the monetary maintenance allowance system in lieu of issue-in-kind	13.8

[1] From Semiannual Report of the Secretary of Defense, July 1–December 31, 1949, pp. 53–55.

---

[1] Annual Report of the Secretary of the Treasury, for the fiscal year ended June 30, 1956, p. 138.

	Savings (million)
Curtailing and closely examining requirements for issuance of change of station travel orders	$3.6
Lowered cost of quarters allowances for enlisted personnel resulting from adjustments in the rating structures	1.9
Early discharges, releases to CAD officers, and lower requirements for recruit outfits	9.5
Reduced requirement for operation of aircraft	5.0
Decrease in depot and base supply and maintenance	4.2
Lower fuel requirements from reduction in steaming hours of the active fleet and operation of a smaller fleet	2.6
Rescheduling and combining cargo shipments	7.9
Lowered operating expenses of ships other than fuel	3.0
Adjusting schedules for ship overhauls, reevaluation of scope of work required for individual ships, and accomplishment of increased self-maintenance by ships' crews	10.0
Decrease in the total communications requirements for the Department of Defense including those resulting from the operation of AFSA	6.6
Reduced procurement of organizational clothing, motor transport spare parts, general supply items, signal supply items, and curtailment of repairs, upkeep, and improvements for Marine Corps	$1.0
Lower level of support for courts-martial, chaplain supplies, miscellaneous schools, etc	.7
Curtailment of major repairs and replacements and general maintenance of naval facilities	7.6
Savings through consolidation of Reserve training facilities, joint use of facilities and inactivation of some smaller training vessels while at the same time extending the training schedules of some of the larger vessels which will accommodate greater numbers of Reserve personnel for training	13.5
Reevaluation of research and development projects	17.2
Cancellation of the quinquennial overhauls of reserve fleet vessels and reduced preservation and maintenance of other war reserves	13.5
Curtailment of information and education activities	.3
Employment of better traffic policies and procedures in the operation of a central Military Land Traffic Office	1.6
Reduction of leased space after consolidation of activities	.07
Reduction and unification of military attaché office staffs	1.4
Lower cost of planned field exercises	.5
Savings in maintenance and operation of hospital facilities	5.3
General appropriation reprograming by deferred maintenace, personnel reductions or turn-over, lower level of operation in order to absorb wage board and other pay increases	156.5
Flying hours reduced	57.7
Reevaluation of industrial mobilization	25.9
Total	569.5

CONCLUSION

It will be noted that all the examples cited in appendix A, except those relating to the Veterans' Administration and the Post Office, are taken wholly from official reports and releases of executive branch departments and agencies, and, in those two cases, the estimates are based upon official figures.

These examples, to repeat, are simply intended to illustrate the point that concrete economies can be substantiated. They do not by any means represent the probable total of all such economies if all departments and agencies could have been included in this study.

The total of this partial list is itself impressive, however:

	Million
General Services Administration	$677.0
Veterans' Administration	545.0
Post Office Department	[1] 72.0
Reconstruction Finance Corporation	[2] 474.4
Department of Defense	569.5
Total	2,337.9

[1] Increased revenues.
[2] Capita returns.

APPENDIX B

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN SECOND (1953–55) HOOVER COMMISSION

The second bipartisan Hoover Commission was created in cognizance of the need for continued study and improvement of Federal administration. The Brown-Ferguson Act (Public Law 108, 83d Cong., 1st sess.) provided for a second Commission on Organization of the Executive Branch of the Government. It was passed without a dissenting vote in either House. President Eisenhower signed the bill on July 10, 1953.

The new Hoover Commission was assigned the responsibility of recommending methods and procedures for: Reducing expenditures to the lowest amount consistent with efficient performance of activities; eliminating duplication of functions; consolidating services of a similar nature; abolishing those activities not necessary to efficient conduct of Government; eliminating those functions which compete unnecessarily with private enterprise; defining responsibilities of officials, and relocating independent agencies directly responsible to the President into departments or other agencies.

The major difference between the first Hoover Commission and the second lies in the fact that, while the first Commission was directed to concern itself with the procedural aspects of Federal administration, the second Commission was, in addition, instructed to go beyond this, to raise the substantive question of whether a given Federal activity should be continued or discontinued regardless of the efficiency or lack of efficiencies with which that activity was being administered.

The Citizens Committee estimates that $480.1 million has resulted in savings from the second Hoover Commission recommendations already put into effect. The figures listed in this appendix reflect those savings made during the year 1955 and thereafter, with a few from 1954.

The examples here cited are all taken from official reports. While most are directly attributable to the Commission's recommendations, some are byproducts, due in whole or in part to the stimulus of the Commission's proposals.

1. THE TREASURY DEPARTMENT

New management programs were installed as well as audit studies, evaluation of the revenue accounting system, operatfonal cost reports, and workload statistics. These and other managerial information leading to savings resulted wholly or in part from the recommendations of the second Hoover Commission.

Total net space requirements were reduced. Programs were carried on to provide more suitable and efficient space and facilities. Related activities have been put under one roof to provide for more efficient operations. Much effort has been devoted to improving and modernizing accounting systems within the Department. In many Treasury activities new, modern equipment was installed.

The origin of these savings can be traced to the stimulus of Hoover Commission recommendations on central accounting and reporting, spread of workload, discontinuance of detailed appropriation and receipts accounts, and methods of recovery of capital sums to the Treasury. The savings for 1955 and 1956 are detailed as follows:

Fiscal year 1955 [1]

	Million
Savings in cartage costs	$0.1
Reductions in export control operations	.1
Procedural and organizational realinements in the Bureau of the Public Debt	.4
Conversion of disbursing accounts	.2
Closing of four regional accounting and disbursing offices	.2
Installation of mechanical equipment in the Division of Disbursement	.2
New system for correspondence control	.6
New form of index card maintenance	.2
Reduction in supervision by Internal Revenue storekeepers	.4
Discontinuance of coinage operations at two offices	.4
Disposal of excess properties by the Coast Guard	.9
Transfer of three Coast Guard supply depots to the Navy	.2
Decommissioning of 10 Coast Guard vessels	1.6
Better utilization of personnel	.2
Overall reduction due to improved methods and procedures	4.6
General management improvement program in the Bureau of Accounts	.6
Reorganization improvements in the Bureau of the Mint	.6
Total	11.5

[1] Annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1955.

Fiscal year 1956: Improved management actions saved a total of $8 million—Annual recurring savings—$6 million [1]

Revised procedures for the examination of printed products in the Bureau of Engraving and Printing	$0.3
Revisions in taxpayer-assistance programs in Internal Revenue	2.8
Extended use of mechanical and electrical equipment	.1
Transfer of Coast Guard supply facilities to the Navy	.2
Disposal of one supply base	1.0
Transfer of 46 parcels of property to General Service Administration for disposal	.4
Disposal of surplus vessels by the Coast Guard	.2
Space and equipment utilization survey in the Bureau of Customs released space valued at and declaration of surplus equipment	.5 .1
Customs Bureau reductions in manpower, space, and equipment	.8
Management improvement program in the Division of Disbursement	.6
Savings on an annual basis (recurring) from the Management Improvement program	.6
Elimination of duplicate sets of records [2]	1.0
Reorganization of the Bureau of Accounts and the Savings Bond Division (recurring)	.2
Total	8.8

[1] Items 1 through 11 obtained from the annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1956.

[2] Accounting and Auditing Developments in the United States General Accounting Office—United States Government Printing Office, 1957.

2. THE GENERAL SERVICES ADMINISTRATION—FISCAL YEAR 1956

Many new savings factors have been introduced into the General Services Administration since the second Hoover Commission completed its work. An accrued cost system of accounts was established, and large reductions in paperwork resulted from the creation of a single fund for administrative operations. Expansion of electric accounting-machine operations brought about savings in several accounting processes throughout the administration. A performance-analysis system was installed to measure performance in terms of accomplishments and cost. Finally, the internal audit program was more clearly defined so as to emphasize the review of internal controls on an agencywide basis.

These improvements embrace the Hoover Commission recommendations for storage and distribution, paperwork management, procurement, property management, records management, stockpiling and warehousing, and surplus-property distribution within the General Services Administration. The record of savings for the General Service Administration in 1956 is listed below:

	Million
More efficient telecommunications service [1]	$1.0
Continued utilization of real property transfers	5.7
Records management surveys	4.3
Releasing of storage space	.7
Curtailed expenditures for new cabinets	2.3
Curtailed expenditures for transfer cases	.4
Transfer, instead of new procurement, of property	95.0
Repair and rehabilitation of equipment instead of new purchase	1.2
Improved audits and financial management	1.0
Reduction of motor vehicle fleet (recurring) [2]	20.0
Improved payroll procedures [3]	.1
Total	131.7

[1] Annual report of the Administrator of General Services for the year ending June 30, 1956 (items 1 through 9).

[2] GSA press release, February 17, 1956.

[3] 8th Annual Progress Report under the Joint Program To Improve Accounting in the Federal Government, 1956.

3. THE FEDERAL HOUSING ADMINISTRATION

The opportunity for administrative savings does not exist in as great a degree in the Federal Housing Administration as it does in other Departments or agencies.[1]

However, management improvements for FHA in 1955 were responsible for savings of approximately $0.5 million.

It is as a result of recommendations of the first Hoover Commission that the Housing and Home Finance Agency embraces all Federal activities in the housing field except the Veterans' Administration and the Farmers' Home Administration. The Federal Housing Administration naturally falls within the scope of the Agency. Recommendations of the second Hoover Commission regarding the Federal Housing Administration are, for the most part, concerned with authority and studies of mortgage-loan insurance. These would be extremely hard to evaluate in terms of savings. General management improvements are most indicative of the savings made by the Federal Housing Administration and appear below.

[1] Also the FHA is essentially a self-supporting Federal agency.

Fiscal year 1955 [1]

	Million
Management improvements in Comptroller's Division—expected to effect annual savings in personal services of	$0.2
Records management economies	.2
Better use of space, and printing economies	.1
Total	.5

[1] Twenty-second annual report, Federal Housing Administrator, for year ending December 31, 1955.

4. DEPARTMENT OF THE INTERIOR

The Interior Department also participated in accounting reviews and cost-type budgeting. The Department also continued to examine internal functions in order to discontinue those activities which were in competition with private enterprise. This directly follows the recommendations of the second Hoover Commission. In addition, the Department proceeded to dispose of unneeded real property and to better organize field organizations. Much progress was made in records management and also in the area of general administration.

Evidence of the influence of Hoover Commission recommendations on business enterprises, paperwork management, and disposal of surplus property can be clearly seen in the savings shown here.

Fiscal year 1955 [1]

	Million
Decrease in volume of reclamation records	$0.1
Disposition of excess property, Bureau of Mines	.2
Total	.3

[1] 1955 Annual Report, Secretary of the Interior, Partnership in Resource Conservation and Development, for the fiscal year ended June 30, 1955.

Fiscal year 1956 [1]

	Million
Reduction in volume of stored records, releasing space and equipment worth approximately	$0.2
Transfer of surplus property to other agencies	.1
Total	.3

[1] 1956 Annual Report, Secretary of the Interior, the Conservation of Natural Resources, for fiscal year ended June 30, 1956.

5. THE DEPARTMENT OF COMMERCE

A modified accrual basis of accounting is also being used by the Commerce Department. The full benefit of this system is yet to be realized, but some economies have been made. The Department has also installed modern electronic machines which have greatly simplified paperwork management. Space transfers, reduction of inventories, new filing methods, consolidation of records space, and sale of surplus property have effected savings of more than $19 million. Again, these management improvements are in accord with recommendations of the second Hoover Commission. Those savings which can clearly be identified are set down as follows:

Fiscal year 1955

	Million
Transfer of space from Army to Panama Canal Company [1]	$0.8
Reduction of inventories of the Panama Canal Company [1]	3.0

Footnotes at end of table.

Fiscal year 1955—Continued

	Million
Simplified methods and modern electronic aids in taking the 1954 business census [2]	4.0
Reorganization and clearance of filing systems [2]	0.2
New cost control study by the Maritime [2]	
Elimination of paperwork in Bureau of Public Roads [2]	0.5
Reduction of records storage space [3]	1.5
Sale of the Inland Waterways Corporation [3]	9.0
Total	19.3

[1] Annual Report of the Comptroller General of United States, 1955, 84th Cong., 2d sess., H. Doc. No. 255.

[2] Commerce Department release, Apr. 8, 1956, G655.

[3] Contained in special report to congressional committee.

6. THE VETERANS' ADMINISTRATION

Improvements in management and administration in the Veterans' Administration brought about significant results. Cost studies and new purchase practices were established, as well as control summaries and cost-type budget schedules. Procedural improvements in hospital administration were highly gratifying in light of the Hoover Commission recommendations. Progress was also made in the transfer and destruction of records and in the application of work simplification techniques.

The savings made by the Veterans' Administration clearly reflect the second Hoover Commission's recommendations applying to administrative procedure, medical supplies, storage operations, supply depots and distribution, and business-type services. The Veterans' Administration has adopted the Hoover Commission's principle that paperwork management places heavy proper emphasis on controlling the creation, maintenance, and use of records as well as storage and disposal. Achievements along these lines have been noteworthy, as may be seen by the savings figures:

Fiscal year 1955 [1]

	Million
Reduction in ratio of employees to patients in VA hospitals resulted in saving in salaries of approximately	$6.0
Cost studies in Department of Medicine and Surgery stimulated improved management at field stations	.7
Improved purchasing practices of items such as proprietary drugs and hearing aids	.4
More economical use of office space—release of excess space	.3
Redistribution of supplies	.2
Transfer of VA records to GSA Federal Records Center	.3
Disposal of unnecessary records	.2
Application of work simplification techniques	.2
Reduction of depot inventories within VA	.2
Transferring accounting functions of loan guaranty divisions to finance divisions in regional offices, resulting in elimination of approximately 65 positions	.4
Redistribution of excess personal property within the VA	2.1
Total	11.0

[1] Administrator of Veterans' Affairs—Annual Report, 1955.

Fiscal year 1956 [1]

	Million
Development of electric accounting procedures for loan accounting	$0.2
Procurement of thorazine at one depot with direct delivery to each station	.2
Microfilming of records eliminated annual expenditures for microphotographic equipment	.2
Transfer of adjustment and refund functions	.2
Release of filing equipment for other VA departments	.1
Reorganization of regional offices and transfer of work	.9
Consolidation of divisions at 10 VA hospitals	.5
Disposition and transfer of records	.2
Improved procedures and controls in supplies and services	.1
Total	2.6

[1] Administrator of Veterans' Affairs, annual report for fiscal year ending June 30, 1956.

7. POST OFFICE DEPARTMENT

The first Hoover Commission recommended improved accounting and budgeting procedures, and a comprehensive cost-control system for the Post Office Department. The new Hoover Commission emphasized real-property management and maintenance along with general reorganization of the Department. In following these recommendations the Postal Establishment has made substantial savings. Considerable progress has been made in modernization of controllership and management programs, conversion to punched card checks, the establishment of a reports management program, development of accurate measures of cost, improved classification of accounts, transportation procedures, and paperwork management. Savings stimulated in whole or in part by the Commission for the years 1955 and 1956 are as indicated.

Fiscal year 1955 [1]

	Million
Discontinuance of over 1,100 post offices	$1.5
Consolidation of 333 rural delivery routes with other rural routes	1.0
Change from advance authorization of space to "space used" agreements with railroads	10.0
Discontinuance of city distribution in 180 railway post offices	.4
Replacement of RPO service by closed pouch or star route service on 193 trains	4.0
Elimination of duplication in weighing magazines and newspapers	1.8
Total	18.7

[1] Annual report of the Postmaster General, fiscal year ending June 30, 1955.

Fiscal year 1956

	Million
Discontinuance of 813 post offices [1]	$1.1
Revised plant arrangement and mechanization of New York City west side terminal [1]	.8
Survey of all star routes in the southeastern States [1]	.2
Special agreements with rail and highway carriers for moving mail equipment [1]	.7
Modernization of financial and accounting practices [2]	20.0
New Procedure for controlling overages from the sale of stamped envelopes [2]	.2
Discontinuance of city distribution for 120 cities in 200 RPO's [2]	.5
Discontinuance of RPO and closed pouch service on 900 trains [3]	8.0
Improved practices in dispatching and loading [3]	.1
Authorization of multielement rates and mileage equalization and 13 trunkline carriers [3]	5.1

Footnotes at end of table.

Fiscal year 1956—Continued

	Million
Centralization of money order audit operation [3]	.5
Reduced printing costs through adoption of punch-card certificate form [3]	.1
Total	37.3

[1] Annual report of the Postmaster General, fiscal year 1956.

[2] Interim report, the Postmaster General to the President of the United States, September 30, 1956.

[3] Report on installation of industrial-type controllership, July 1, 1953, to June 30, 1956, Bureau of Finance, Post Office Department.

8. THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

This department, although relatively new, has made significant contributions in its measures of economy. Improvements have been made in accounting operations and general management procedures.

Fiscal years 1955 and 1956 (2-year totals) [1]

	Million
Freeing office equipment for reuse elsewhere in the Government	$0.7
Reduction in floorspace	.2
Reduction in motorized equipment	.2
Abolition of offices and divisions	.1
Management improvements in Bureau of Old-Age and Survivors' Insurance	1.0
Total	2.2

[1] Contained in special report to congressional committee.

9. THE DEPARTMENT OF DEFENSE

Two-thirds of the second Hoover Commission's recommendations apply to the Department of Defense. Improvements were underway in the Department even before the Commission completed its report; and, during the period the Commission was working, many were developed in cooperation with the Commission's task forces. Others have resulted directly from the recommendations of the Commission.[2]

Economies shown here are taken from official Defense Department reports and also from reports on the joint accounting program by the Comptroller General. While not all the economies listed can be directly attributed to the Hoover Commission, a substantial portion directly flows from the recommendations of both the first and second Commissions. It is here estimated—and most conservatively—that 10 percent of the total economies reported in the following pages can reasonably be attributed to the Commission's work. In fact, a logical case could be made for a far higher percentage. The total reported by the Department was $2,359 million, 10 percent of that is $235.9 million.[3]

[2] Action already taken on the second Commission's recommendations regarding food and clothing will eventually lead to substantial economy. This applies primarily to the "head count" on a service installation whereby the number of meals served is restricted to the number of personnel on that post. Food was ordered and meals prepared on the basis of an estimated total number of personnel. Because substantial percentages of the estimated total number were on leave, ill, or not present for a variety of reasons, this led to a great waste of food. The task force on food and clothing estimated that if this and other of its recommendations were fully implemented, a savings of $200 million a year would be possible.

[3] The use of the conservative 10-percent estimate also takes account of duplications (e. g.) as between reports of the Department and of the Comptroller General.

Fiscal year 1955

During the fiscal year 1955, major emphasis was placed on improvements in supply management. In the field of standardization of stocks the beneficial effects of a new cataloging program were immediately evident. Standardization actions eliminated many items from military supply systems and developed common standards and specifications for commercial and military components. The Department estimated that savings from standardization of stocks in 1955 were $29 million.[4]

Similar improvements were made in the management of excess stocks. Increased efficiency was also achieved in the use of storage space. The introduction of uniform reporting systems made possible more cross-servicing in storage activities and the transfer of facilities from one department to another. An annual saving of $30 million resulted from the closing of 17 Army supply depots. When 6 of these depots were transferred to the Air Force, $16 million was saved in lieu of new construction costs. Improved transportation rate negotiations saved approximately $48 million.[5]

Work simplification is an integral part of the overall management improvement effort of the Army. The Defense Department estimated that a $13 million saving resulted from improvements installed by supervisors trained in this field.[6]

The Army financial management plan brought about many improvements in installation accounting and better use of stock inventories. Cutbacks in inventory levels have brought about the greatest monetary savings, according to Defense Department figures; $585 million in excess capital was relinquished in 1954 through reductions in stock, and $700 million in 1955.[7]

The Navy also contributed greatly to general economy and management improvements within the Department of Defense. Studies were made of the accounting features of cross-servicing and monetray accountability procedures. Audits of contractors' claims and other accounting and audit work brought about substantial savings. The Navy was able to save an estimated $123.5 million in the cost of materiel procurement.[8]

Air Force management underwent the same comprehensive study, and the Secretary of the Air Force estimated that $440 million was saved in contract costs resulting from improved audit procedures (this combines actual and potential reductions).[9]

Fiscal year 1956

The joint accounting improvement program carried on during the period January 1, 1956, to September 30, 1956, is illustrative of savings made in the Defense Department during that year. According to the Comptroller General of the United States, better management practices and financial improvements in the Department resulted in savings of $202 million.[10]

Improvements in inventory control resulted in the relocation of supplies and the saving of 250,000 square feet of space. It eliminated 187 different records for various financial inventory categories and brought about discontinuance of overlapping stocks of similar supply items. These measures reflected an estimated saving of approximately $133,000 per year. Method improvements based on a management study of in-transit

[8] Ibid., p. 207.

[9] Ibid., p. 270.

[10] The Eighth Annual Progress Report Under the Joint Program To Improve Accounting in the Federal Government, 1956, by the Comptroller General of the United States.

warehouse procedures effected an estimated saving of $150,000. The indirect material inventory has been decreased by $381,000.[11]

Improved direct labor efficiency in the Department brought about a saving of $625,000.[12]

An internal review of inventory at the Long Beach Naval Shipyard resulted in a reduction of approximately $307,000 in shop stores insurance items. A ship stores inventory purification program at the San Francisco Naval Shipyard resulted in a reduction of approximately $386,000.[13]

At the Pearl Harbor Naval Shipyard, elimination of duplicate records and the abolition of 74 supply department positions through transfer of items saved $339,000.[14]

This joint program to improve accounting to which we refer, also highlights the internal audit program within the Department of Defense. It estimates that savings in the cost of Government procurement amounted to $166.4 million in fiscal year 1956.[15]

A navywide review of records, resulting in the elimination of duplicate records, saved an estimated $400,000. Reduction of stock-fund inventory at one naval activity amounted to $2.8 million as the result of an audit. At still another activity, disposition of excess stocks in the amount of $600,000 was instituted.[16]

CONCLUSION

As in dealing with the first Hoover Commission, it must be emphasized here that the departments and agencies used do not constitute the total areas of economies. While these figures are merely representative, they are perhaps the most illustrative ones obtainable.

Savings and financial returns are primarily limited to the years 1955 and 1956 because the second Hoover Commission's recommendations were mainly implemented in those years.

It is evident that savings in the Department of Defense constitute the greatest proportion of savings in the areas covered. This is valid because two-thirds of the second Hoover Commission's recommendations directly apply to the Defense Department.

The compilation of savings from recommendations of the second Hoover Commission and the corresponding departments and agencies is condensed as follows:

	Millions
Treasury	$20.3
General Services	131.7
Federal Housing	.5
Interior	.6
Commerce	19.3
Veterans	13.6
Post Office	56.0
Health, Education, and Welfare	2.2
Defense (at 10 percent)	235.9
Total	480.1

MAY 20, 1957.

Mr. CLARENCE FRANCIS,
Chairman, Citizens Committee for the Hoover Report, Washington, D. C.

DEAR MR. FRANCIS: Am glad to have your letter of May 16 concerning the Hoover Commission recommendations and my remarks on them in the House on Tuesday, May 14, 1957. Am especially glad to have a copy of the study made by your committee listing certain savings claimed to have resulted from the two series of Hoover Commission reports.

Permit me to correct you on one point. At no time have I said that no economy whatever can be expected to result from adoption of Commission recommendations. Certainly out of the multitude adopted, there will be some savings, somewhere, however small. Have at no time contended otherwise. So you erroneously conclude when you state that I "seriously questioned whether actual economies can result from the recommendations of the bipartisan Hoover Commission." I have stated or inferred, or both, and offered support thereof, and now repeat that—

1. The second Hoover Commission pointedly failed to list specific estimates of savings.

2. Failing this, it prominently listed the bloated estimates of savings made by the various task forces, and then made the sweeping and unsupported statement that adoption of the recommendations would produce enough savings to balance the budget and reduce taxes.

3. These grossly exaggerated, unbelievably fantastic claims have been advertised and sold to the American people. The people have been sold a bill of goods by your Citizens Committee and others. This is unfair to them and to their representatives in the Congress. Furthermore, it is a disservice to whatever worthwhile suggestions the Commission may have made.

4. Thus misled, the people have been bombarding the Congress demanding adoption of all the Hoover Commission recommendations and thus save billions—the most oft-used figures are five or five and one-half billion dollars.

5. The Hoover Commission recommendations to the contrary notwithstanding, Federal expenditures have consistently increased since the first Commission reported in 1949. All recommendations adopted, so far as can authoritatively be determined, have had no appreciable effect in reduction of the budget.

6. Perhaps the most absurd claim of all is that billions can be saved merely by adopting the budget and accounting reforms, the key feature of which is the proposed change to the so-called accrued expenditure basis of making appropriations. The original claim of savings was advertised as $4 billion.

Sound appropriating processes are so vital to protection of the people's tax funds, and the claim of savings attributed to the proposed changes therein are so utterly groundless, that the fallacy of this accrued expenditure proposition must be exposed. I consider it in the public interest to undertake to persuade you and the Citizens Committee to see the preposterous dimensions of both the claim of savings and the shortcomings of the proposal itself. You are of course aware of the genesis of the $4 billion estimate of savings. The task force merely expressed "belief" that such savings could "reasonably be expected." At your national conference here in Washington last February, the Commission Chairman stated that "there are savings estimated at over $3 billion to be had" by adoption of the accrued expenditure technique. Basis for that estimate was not given.

This accrued expenditure idea was apparently conceived in ignorance of certain budgetary and legislative facts of life. Those who persist in stirring the people to agitate for its adoption have seemingly accepted without question the faulty premises on which the idea rests. The first premise is that the Congress has lost control of the purse strings by reason of existence of billions of unexpended appropriation carryover balances and that adoption of the accrued expenditure method would eliminate or at least drastically reduce such balances, thus recouping control of the purse. Every day the Committee on Appropriations receives letters, pamphlets, and bulletins from across the country so stating. But they are sadly in error—exactly 180 degrees off. This system, if adopted, would not result in any reduction whatsoever in carryover balances. What would happen would be a large reduction in "appropriation" balances and an equally large increase in contract authorization balances, with no change in total unexpended carryover balances. That is an indisputable fact—it simply cannot be successfully denied. And contract authorization balances are just as important as appropriation balances. A Government obligation or contract can and would be just as valid under one as under the other and, furthermore, once granted would result in just as much eventual spending. So the first premise is completely without substance. It is unnecessary here to discuss the question in detail, but there is no substance to the contention that control of the purse has been lost merely because of large carryover balances or, for that matter, lost at all. Congress has absolute power in its hands, right now, to appropriate, or not appropriate, as it sees fit.

You state that "as a most conservative estimate, a thorough scrutiny of such funds (carryover balances) might lead to a reduction of only 1 percent—and this is a minimum. This alone would be $500 million per year. It is our feeling that the savings would be considerably more substantial." This statement unmistakably shows that you, like so many others, apparently do not fully understand present procedures. And unfortunately, it also shows that you make the mistake of indulging, as did the task force and others, in broad, unsupportable generalizations in this respect. You twice indicate that reduction of carryover balances might lead to savings—a minimum of $500 million, you say. You feel that the savings would be considerably more substantial. Mr. Hoover says over $3 billion in savings are to be had through adoption of the plan. Why do you say might—why not offer some specific evidence of the basis for whatever estimate you produce?

You suggest thorough scrutiny of carryover balances. The Hoover Commission and those who advocate its recommendations have led the people to believe that Congress does not now scrutinize these carryover funds when considering requests for additional appropriations, or at best gives inadequate attention to them. Nothing could be further from the truth. It is standard operating procedure of the Committee on Appropriations to do so. Carryover balances should of course be held to absolute minimum and so should new appropriations. It is amazing that anyone would suggest that a mere change in the way appropriations are now stated would somehow more or less automatically assure closer examination of carryover balances. They are examined now. If it be contended that such examination is sometimes inadequate, certainly it is somewhat naive to expect that a mere procedural change would impart closer scrutiny.

Possibly the worst feature of the plan is that it would mean automatic return to the use of contract authority, a procedure abandoned generally some years ago. The Committee on Appropriations found from hard experience that contract authority costs the taxpayers more money in the long run. It has a certain appeal, and that is its principal defect. Experience demonstrated time and again that a request for direct appropriation received more searching scrutiny than a request for contract authority. It was often easier to secure acceptance of what was frequently said to be merely contract authority. But once granted it results in eventual expenditure just as much so as under the usual direct appropriation method. It is the more costly method and for that reason, not only would the accrued expenditure idea not save $4 billion, or $3

[12] The Eighth Annual Progress Report Under the Joint Program To Improve Accounting in the Federal Government, 1956, by the Comptroller General of the United States, p. 41.
[13] Ibid., p. 45.
[14] Ibid., p. 45.
[15] Ibid., p. 49.
[16] Ibid., p. 50.

billion, or $500 million, it would not save a single dollar. The Director of the Budget, Mr. Brundage, went so far as to say he always carefully avoided any mention of savings. When pressed to elaborate, he said he felt satisfied that the plan would save several million dollars. It not only would save money, past experience with contract authority suggests beyond reasonable doubt that it would actually cost money. Assume you are aware than just 2 months ago the Committee on Appropriations approved a report of a special subcommittee appointed to study the proposition because it so importantly concerns the business of the Committee. The members of that subcommittee are experienced in legislative matters. They know something about the business of appropriating. They concluded that the idea has disadvantages and offers no improvement.

The propaganda campaign to pressure the Congress into enacting the second Hoover Commission reports is strikingly similar to the one following the first Commission reports several years ago. That became so confused and ridiculous that, as you doubtless know, the Senate Committee on Government Operations issued a report in January 1953, reviewing the situation. The committee, the report stated, was "unable to find any sound basis for the unsubstantiated estimates of savings claimed by some of the proponents."

Have not had time to fully evaluate the many pages of detailed savings included with your letter, totaling $2,337.9 million for the first Commission and $480.1 million for the second Commission. They are described as being clearly attributable to the work of the two Commissions. First inspection of the lists, however, discloses some amazing items. For example:

1. Lower fuel requirements from reduction in steaming hours of the active fleet and operation of a smaller fleet. Claimed savings, $2.6 million.

2. Flying hours reduced. Claimed savings, $57.7 million.

This is the first knowledge at hand that steaming and flying hours or size of the fleet of the Navy was ever influenced by the Hoover Commission.

3. Lowered cost of classified project. Claimed savings, $2.1 million.

Did the Commission in fact secure this saving?

4. General appropriation reprograming by deferred maintenance, personnel reductions or turnover, lower level of operation in order to absorb wage board and other pay increases. (Defense Department.) Claimed savings, $156.5 million.

Is it a certainty that the Hoover Commission secured this item?

There are many others in the lists. You submit no conclusive evidence on which they can be accepted as a whole at face value.

The proposition at issue, however, is the recommendations of the second Commission. On these you fail to substantiate the exaggerated claims of savings being made in their behalf. That is the issue.

Sincerely,

CLARENCE CANNON,
Chairman.

Justice for the American Serviceman

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. DEROUNIAN. Mr. Speaker, of interest to all Members of Congress is the following editorial which appeared in the New York Journal-American on Monday, May 20, 1957:

NO SCAPEGOAT

Defense Secretary Wilson has wisely stepped in and blocked the transfer of an American soldier for trial in the Japanese courts for an act performed on official duty and under orders of his superiors.

Despite Japanese insistence that the soldier be turned over to them for trial on accidental manslaughter charges, Secretary Wilson has ordered a complete review of the case. In Washington a congressional storm is brewing up over the status-of-forces agreement with Japan. And in Tokyo a former member of General MacArthur's legal staff says turning the soldier over to the Japanese would be like "throwing the Christians to the lions."

The news that Sp3c. William S. Girard, of Ottawa, Ill., was to be tried in the Japanese courts was received initially by the American public with disbelief and then disapproval.

What happened is this: A blank mortar shell was fired on the Camp Weir firing range to warn Japanese civilians out of the area, and a Japanese woman was killed. The civilians had no business in the area, and were there at their own risk and were aware of the danger, and in fact were there for the purpose of stealing scrap.

But the point is that Girard fired the warning shot, not on his own responsibility, but simply because he was ordered to do so.

ADMIRAL'S DECISION

Rear Adm. Miles H. Hubbard, second in command of American operations and administration in the Far East, had said that Girard was not subject to Japanese law, but nevertheless he decided to turn him over to Japanese authorities for civilian trial. We believe the admiral's decision was a gross and cruel travesty on American concepts of justice.

Girard had no choice whatever in the situation. In fact, he would have been in serious trouble if he had failed or refused to act as ordered. If there is serious trouble in consequence of what was done, it is the burden of somebody much higher up in the chain of command than Specialist Girard.

The situation is not even remotely related to the old problem of what to do with Americans on foreign military service who get into off-duty troubles with the laws of the countries in which they are stationed.

The American people have never fully accepted the idea that GI's on foreign military duty should be triable in foreign courts in any circumstances, but at least there are two sides to that argument. The American overseas serviceman who breaks the local laws and winds up in the local jail is the author of his own plight.

But none of these facts apply to Specialist Girard, and American public opinion is not going to stand still for the plight in which he has been placed.

Admiral Hubbard's decision was wrong, and we are pleased that Defense Secretary Wilson has taken steps to countermand it.

Digest of Owen J. Roberts' Memorial Lecture by Justice Frankfurter

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. CLARK. Mr. President, on March 20, 1957, the Owen J. Roberts' memorial lecture was delivered in Philadelphia by his former colleague, Supreme Court Justice Felix Frankfurter. The Justice's talk was as interesting as it was scholarly, and I invite the attention of my colleagues to a digest of Justice Frankfurter's provocative analysis of the makeup of our highest Court, which I ask unanimous consent to have printed in the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

THE SUPREME COURT IN THE MIRROR OF JUSTICES

(By Felix Frankfurter)

During the 167 years since the day appointed for its first session, 90 Justices have sat on the Supreme Court. Of the 90 Justices I shall consider 75, omitting contemporary or relatively recent occupants of the Court. My concern is not with the substantive views of these Justices. I am dealing with externally ascertainable factors. One of these has been intermittently urged and in recent years revived in an extreme form. I refer to the suggestion, indeed the assumption that, since the Supreme Court is the highest judicial tribunal, prior judicial service is not only a desirable, but an indispensable, qualification.

What is the teaching of history on this? Of the 75 Justices, 28 had not a day's prior judicial service. Seven more had sat on some bench from a few months to not more than 2 years. Nine sat 6 years or less. Several bills have in recent years proposed judicial service of not less than 5 years in a lower Federal court or as a member of the highest court of a State; some bills would require 10 years of such service. A 5 year requirement would have ruled out at least 35 of the 75 judges, and the 10 year requirement would have barred certainly 45 of our 75 Justices.

Who were these Justices who came on the Supreme Court without any judicial service? They begin with James Wilson and include Bushrod Washington, Marshall, Story, Taney, Curtis, Campbell, Miller, Chase, Bradley, Waite, Fuller, Moody, Hughes, Brandeis, Stone and Roberts. Of the 12 Chief Justices within our period, 5 had not had any judicial experience at the time of their appointment as Chief Justice and 2 more had had none when they first came on the Court.

Apart from the significance of a Chief Justice as the administrative head of the Court, what of the quality of judicial service of the men who came on the Court totally devoid of judicial experience? It would indeed be a surprising judgment that would exclude Marshall, William Johnson, Story, Taney, Miller, Field, Bradley, White, Holmes, Hughes, Brandeis and Cardozo in the roster of distinction among our 75. I myself would add Curtis, Campbell, Matthews and Moody. (Some might prefer Harlan I, or Brewer or Brown). Of the 12, 5 had had judicial experience and 7 none, before coming on the Court, and of the others only Matthews can be counted a judge, for a brief period, before he came to Washington. Of the 16 Justices whom I deem preeminent, only 6 came to the Court with previous judicial experience, however limited. It would require discernment more than daring, it would demand complete indifference to the elusive and intractable factors in tracking down causes, in short, it would be foolish, to attribute acknowledged greatness in the Court's history either to the fact that a Justice had had judicial experience or that he had been without it.

The notion that prior judicial experience is a prerequisite for the Supreme Court deserves closer scrutiny than its ad hominem refutation. To an uncritical mind judicial experience carries emanations of relevance in that it implies that a man who sat on a

lower court has qualifications for sitting on a higher court, or, conversely, that a man has not the qualifications for sitting on a higher court unless he has had the experience of having sat on a lower court, just as a man presumably cannot run a mile in less than 4 minutes unless he had already run it in 6.

Need I say that judicial experience is not like that at all? For someone to have been a judge on some court for some time, having some kind of business resulting in some kind of experience, may have some abstract relation to the Supreme Court conceived of as an abstract judicial tribunal. It has no significant relation whatever as such to the kinds of litigation that come before the Supreme Court, to the types of issues they raise, to qualities that these actualities require for wise decision.

To begin with, one must consider the differences in the staple business of different courts and the different experiences to which different judicial business gives rise, and the bearing of different experiences so generated on the demands of the business of the Supreme Court. Thus, there is a vital difference so far as substantive training is concerned between the experience gained on State courts and on the lower Federal courts. There are the so-called Federal specialties whose importance, so far as the Supreme Court is concerned, has significantly receded since the Evarts Act of 1891, but is still relevant to the work of the Supreme Court. One would suppose that if prior judicial experience would especially commend itself for Supreme Court appointments, the Federal courts would furnish most materials for promotion. History falsifies such expectation. Of the 47 Justices who had had some kind of prior judicial experience, no matter how short, 15 came from the Federal courts, whereas 32 had only the experience on State courts.

How meagerly the experience on a State court, even if of long duration, prepares one for work on the Supreme Court is strikingly borne out by the testimony of the two Justices who are indubitably the two most outstanding of those who came to the Supreme Court from State courts. After having spent 20 years on the Supreme Judicial Court of Massachusetts, part of it as its chief justice, in the course of which he write more than a thousand opinions on every conceivable subject, Mr. Justice Holmes found himself not at all at home on coming to the Supreme Court. Listen to what he wrote to his friend Pollock after a month in his new judicial habitat:

"Yes—here I am—and more absorbed, interested, and impressed than ever I had dreamed I might be. The work of the past seems a finished book—locked up far away, and a new and solemn volume opens. The variety and novelty to me of the questions, the remote spaces from which they come, the amount of work they require, all help the effect."

Nor did Cardozo, after 18 years on the New York Court of Appeals, 5 of them as chief judge, in the course of which he gained the acclaim of the whole common-law world, find that his transplantation from Albany to Washington was a natural step in judicial progression. On more than one occasion he complained to friends that he should not have been taken from judicial labors with which he was familiar and which were congenial to him, to types of controversies to which his past experience bore little relation and to which, though these were the main concern of the Supreme Court, he was not especially drawn.

But, it may be suggested, if experience on a State court does not adequately prepare even the greatest of judges for the problems that are the main and certainly the most important business of the Supreme Court, judicial experience intrinsically fosters certain habits of mind and attitudes, serves to train the faculties of detachment, begets habits of aloofness from daily influences, in short, educates and reinforces those moral qualities, disinterestedness and deep humility, which are indeed preconditions for the wise exercise of the judicial function on the Supreme Bench. Unhappily, history again disappoints such expectation. What is more inimical for good work on the Court than for a Justice to cherish political, and more particularly presidential ambition? Sad and strange as it may be, the most numerous and in many ways the worst offenders in this regard have been men who came to the Court from State courts, in some instances with long service on such courts. Their tempermental partisanship and ambition were stronger than the disciplining sway supposedly exercised by the judiciary.

Even though the history of the Court may demonstrate that judicial experience whether on State or Federal Bench ought not to be deemed a prerequisite, what of the lower courts as a training ground for the Supreme Bench? The fact is that not one so trained emerges over a century and a half among the few towering figures of the Court. Oblivion has overtaken almost all of them.

More immediately relevant to our subject is the fact that even Justices who have come to the Supreme Court fresh from a longish and conspicuously competent tenure on the lower Federal Courts do not find the demands of their new task familiar. Their lower court experience does not make the transition an easy one. Thus Phillip Barbour, despite the deserved reputation that he brought to the Supreme Court from his years on the United States district court, felt it necessary to fit himself by conscientious study for his duties on the Supreme Court.

Mr. Justice Moody, who had had exceptional preparation for the Court's work as lawyer, legislator, and member of the Cabinet, including forensic activity as Attorney General, turned to his classmate, Prof. Eugene Wambaugh, of the Harvard Law School, for guidance in the study of constitutional law and the jurisdiction of the Supreme Court as eagerly as any avid neophyte. Again, Mr. Justice Brandeis used to say that no one can have the right kind of feel regarding the distinctive jurisdictional and procedural problems touching the Court's business in less than 3 or 4 terms of actual service on the Court. He set about to acquire mastery of this essential aspect of the Court's business by studying the reports from Dallas down. These modern instances are recognition of the truth discerned from the beginning of the Court, that membership on it involves functions and calls for faculties as different from those called for by other judicial positions as those called for by private practice or public service.

The practical workings of the Supreme Court not only in our governmental scheme but in the influences it exerts on our national life to no small extent are determined by the effective administration of the appellate jurisdiction allotted to the Court, the manner in which it conceives what issues are open on review, and how it deals with them—the articulation of its jurisdiction with that of the lower Federal courts and the State courts. These are subtle matters carrying deep implications that do not lie on the surface. Partly because of their seemingly technical nature and partly because they have few dramatic ingredients, they are hardly appreciated by the laity and all too little by the profession at large. The proper treatment of these problems has far-reaching consequences, but they do not bulk big in the work of lower courts and, therefore, do not become part of the experience of judges either on the State courts or on the lower Federal courts.

Not only is the framework within which the judicial process of the Supreme Court operates drastically different from the jurisdictional and procedural concern of other courts, but the cases that now come before the Court, and will increasingly in the future be the Court's concern, present issues that make wholly irrelevant considerations in the choice of Justices that at former periods had pertinence. Mastery of the Federal specialties by some members of the Court was an obvious need of the Court in days when a substantial part of the Court's business related to such specialties. Thus, when maritime and patent cases appeared frequently enough on the Court's docket, it was highly desirable to have a judge so experienced in these fields as was Judge Blatchford when he was named to the Court. The extent of the Court's maritime litigation naturally brought Henry Billings Brown, an outstanding admiralty judge, to the Court. And since the business that came to the Court in times past reflected to no small degree sectionally different economic interests, geographic considerations had their relevance. Thus, when the western circuit, consisting of Ohio, Kentucky, and Tennessee, was established at a time when litigation dealing with land title and other local property questions was so important, it was natural to select one who was conversant with these problems.

All this has changed. Not only in the course of a hundred years but in the course of 50 years. There is a totally different flow of business to the Court from what it was a hundred years ago and predominantly different from what it was 50 years ago.

A comparison of the litigation of the past 2 terms with that of 50 and a hundred years ago reveals the great change that has taken place. Analysis of the written opinions of the Court a hundred years ago in the 1854 and 1855 terms discloses that, aside from questions of Supreme Court practice and procedure, four major categories of litigation, comprising two-thirds of the cases decided by written opinion, occupied the Court's time. The four categories were: (1) estates, and trusts, (2) admiralty, (3) real property, and (4) contracts and commercial law.

Fifty years later, not only had the volume of the Court's work increased greatly but its nature had changed considerably, especially because of the 14th amendment, the Judiciary Act of 1875, and the Circuit Court of Appeals Act of 1891. Constitutional law had become by far the major item of the Court's business, involving approximately one-third of the cases decided by written opinion. And questions under the 14th amendment comprised one-half of all the constitutional cases. Aside from constitutional questions, the Court's business was almost equally divided between questions of public and private law.

Examination of the work of the two most recent terms (348–351 U. S.) indicates how complete the reversal of the character of the Supreme Court's business has been. Whereas a hundred years ago, private common-law litigation represented the major part of the Court's business, and 50 years ago, constitutional cases apart, public and private law business was equally divided, today private litigation has become virtually negligible. Constitutional law and cases with constitutional undertones are of course still very important, with almost one-fourth of the cases in which written opinions were filed involving such questions. Review of administrative action and especially enforcement of Federal regulatory statutes constitues the largest category of the Court's work, comprising one-third of the total cases disposed of on the merits. The remaining significant categories of litigation—Federal criminal law, Federal jurisdiction, immigration and nationality law, Federal taxation—also all involve largely public-law questions.

It is essentially accurate to say that the Court's preoccupation is with the application of rather fundamental aspirations and what Judge Learned Hand calls "moods," embodied in provisions like the due process clauses, which were designed not to be precise and positive directions for rules of action. The judicial process in applying them involves a judgment on the processes of government. The Court sits in judgment, that is, on the views of the direct representatives of the people in meeting the needs of society, the views of Presidents and governors, and by their construction of the will of legislatures the Court breathes life, feeble or strong, into the inert pages of the Constitution and the statute books.

Such functions surely call for capacious minds and reliable powers for disinterested and fair-minded judgment. It demands the habit of curbing any tendency to reach results agreeable to desire or to embrace a solution of a problem before exhausting its comprehensive analysis. One in whose keeping may be the decision of the Court must have a disposition to be detached and withdrawn. To be sure, these moral qualities, for such they are, are desirable in all judges, but they are indispensable for the Supreme Court.

If these commonplaces regarding the reach of the powers of the Supreme Court and the majesty of the functions entrusted to 9 mere mortals give anyone the impression that a Justice of the Court is left at large to exercise his private wisdom, let me hasten to say as quickly and as emphatically as I can that no one could possibly be more hostile to such a thought than I am. These men are judges, bound by the restrictions of the judicial function, and all the more so bound because the nature of the controversies that they adjudicate inevitably leaves more scope for insight, imagination, and prophetic responsibilities than the types of litigation that come before other courts.

This is not abstract talk. The great men in the Court's history give proof of its truth. Will anyone deny that the four most distinguished minds of the latter part of the period under review were Holmes, Hughes, Brandeis, and Cardozo? All four had the largeness of view so essential for adjudicating the great issues before the Court. But is it just a coincidence that all four were to a superlative degree technically equipped lawyers? They built on that equipment for the larger tasks of the Court; they were not confined by it. Again, is it mere coincidence that all four were widely read and deeply cultivated men whose reading and cultivation gave breadth and depth to their understanding of legal problems and infused their opinions?

Since the functions of the Supreme Court are what they are and demand the intellectual and moral qualities that they do, inevitably touching interests not less than those of the Nation, does it require an explicit statement that in choosing men for this task, no artificial or irrelevant consideration should restrict choice.

The search should be made among those men, inevitably very few at any time, who give the best promise of satisfying the intrinsic needs of the Court, no matter where they may be found, no matter in what professional way they have manifested the needed qualities. One is entitled to say without qualification that the correlation between prior judicial experience and fitness for the functions of the Supreme Court is zero.

There is another irrelevance, regard for which may lead to a narrower choice than that to which the country is entitled—geographic considerations. The claims of uncritical tradition led President Hoover, who had the most impressive recommendations for naming Cardozo as Holmes' successor, to hesitate because there were at the time already two New Yorkers on the Court. When the President urged that difficulty on Senator Borah, the latter, to the President's astonishment, said that Cardozo was no New Yorker. When asked to explain, the Senator replied that Cardozo belonged as much to Idaho as to New York. Men fit for the modern functions of the Court should not be sought among men who have professionally a merely parochial significance. There was something to be said for geographic considerations years past. From the point of view of intrinsic considerations, any geographical consideration has long since become irrelevant. The pride of a region in having one of its own on the Court does not outweigh the loss to the Court and the country in so narrowing search for the most qualified.

Selection wholly on the basis of functional fitness not only gives the greatest insurance that the Court will best fulfill its functions. It also will, by the quality of such performance, most solidly establish the Court in the confidence of the people, and the confidence of the people is the ultimate reliance of the Court as an institution.

How the American Merchant Marine Serves Our Country

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 23, 1957

Mr. JOHNSON of Texas. Mr. President, the Propeller Club of the United States has announced that Miss Jo Evelyn Denton, a high-school student of Brownsville, Tex., has been awarded a prize, in the 1957 Harold Harding Memorial Essay contest, for her paper on the subject, The American Merchant Marine—Its Importance to the American Farmer, Miner, Manufacturer in World Trade.

This young Texan's essay shows a remarkable grasp of the effect of the merchant marine on the lives of Americans generally. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE AMERICAN FARMER, MINER, MANUFACTURER IN WORLD TRADE

(By Jo Evelyn Denton, Brownsville High School)

In reading the adventures of Robinson Crusoe, we all feel thankful on coming to the part where he is saved from the sea. But when he settles down on his island, gloom at first comes upon us, for there he is in that desert spot, alone, surrounded by the sea. It is a dreadful position for a human being—so lonely, so helpless.

With no ships the sea would be a source of horror to us. It would be a fearful void, shutting us off from communication with other parts of the world. And that is just what the sea was to men before such great economic and social forces as the American merchant marine came into existence. Since then the ocean has become one of our best friends, a medium through which we can carry on world trade, supported by our merchant marine.

Shipping and shipbuilding are not infant industries in America. Rather they are the industries of our infancy. During the year of the first permanent settlement at Jamestown and 13 years before the Pilgrims landed at Plymouth, George Popahn's colony in Maine launched the first vessel of the American merchant marine at the mouth of the Kennebec. Upon these waters they floated the 30-ton pinnace *Virginia*. Little did our forefathers realize at the dawn of American history that they were starting an industry of such vital importance—one that has served its Nation valiantly and well. It is serving it today in almost every field and manufacturers, farmers, and industrial workers are becoming more and more dependent upon the services of the merchant marine.

Aside from the coastal and intercoastal trade, foreign trade is a vital necessity to the United States. There are many markets throughout the world for excess products. These must be fully developed; and we must buy to make up for our shortages. Economic isolation for us is an impossibility. The constant flow of imports and exports is as necessary to us as the movement of blood through the human body. The development and nurturing of our foreign trade is an exercise of not only good business, but also commonsense. This trade not only enables manufacturers to keep their business moving, but it also serves to better trade relations.

During the war, teeming millions of persons in China, India, and Africa had intimate contact with the manufactured goods of the United States and many thousands have seen some of the so-called luxury items that the members of our Armed Forces received from home as gifts at Christmas and other times. In these countries there are roads to be built, factories equipped, and a market of great masses of population whose living standards can be raised with American products. The business is there for whoever goes after it, and it is necessary to our future prosperity that we must keep our merchant marine opening new frontiers of business and carrying our products to these far corners of the world.

We have learned that this country is not self-sufficient. The imports of raw materials and foodstuffs that cannot be grown in our own country will be brought here in our own ships under our own control to the end that our manufacturing processes and our standards of living can be integrated to our needs. Although our country stands third among the countries of the world in area of productive land, we easily stand first in the total amount of our crops. Our country grows more than half of the entire corn crop of the world. We grow more wheat than any other country except, perhaps Russia. In rice-growing we fall behind many other countries. We grow only a small part of the sugar beets and sugarcane of the world, but we lead all the other countries in the number of bales of cotton produced. We grow, most years, more than one-half of the cotton of the world. We also produce about one-third of the tobacco of the world, one-fourth of the oats and hay, one-fifth of the world's wheat and flaxseed, more than one-eighth of the barley, and one-twentieth of the potatoes. Americans can well be proud of such an agricultural record, but not being self-sufficient, America must export a good deal of her crops to be able to import crops from other countries. Ships must carry these food supplies to countries around the globe. Not only to foreign countries must our merchant marine ships travel, but also they are dependent upon again and again to provide a means of shipping within our own country's boundaries.

We have seen how the merchant marine is serving the manufacturers and farmers of our Nation in transporting their products, but what about our mining industry: What could our miners today use for importing and exporting their ores if there were no merchant marine? Practically every manu-

facturing industry is dependent upon ships to import raw materials. Imports such as copper, cobalt, tin ore, antimony ore, chrome ore, lead-bearing ores, and iron ores are carried by our merchant ships. The Nation's rapid industrial development requires ships to bring from foreign shores the essential materials that must go into every ton of steel. Of 20 alloying materials that are essential to industry, the United States is dependent on imports for 12.

A person could give many examples of the great work our merchant marine is doing for the farmers, manufacturers, miners, and many other workers of our country, but these workers through the merchant marine are doing something for our country that no one else could do. For someone has said, "Where goods cross international boundaries, soldiers don't go." And now instead of waving our flag over tanks and artillery or battleships and carriers, it is flying over the cargo ships of our American merchant marine and the factory products of our land "Made in U. S. A" stencilled on an article is just another way of waving our flag and, perhaps in future years, enabling peace to envelop the world.

Prize-Winning Essay, by Carol Loebe, on Highway Safety

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an unusually fine essay written by Carol Loebe, an eighth grader, of Belle Fourche, S. Dak.

It is easy to see why her essay, entitled "Alcohol Is a Menace to Highway Safety in South Dakota," won the top prize of $100 in the State.

I commend it to the attention of the Senate.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

"I saw 4 kids die last night, 4 nice kids. Headon collision. Smell of alcohol. The place to save those kids' lives was not in the hospital, but in legislature, in the courts. I can tell you right this minute how to cut the death toll on the highways. By eliminating the drinking driver, we could save 10,000 lives a year."

These words were spoken by Dr. Charles Frankel, a professor at the University of Virginia, who has been studying the causes of highway fatalities and injuries.

Our laws for punishing a drunken driver are not strict enough to eliminate this hazard of the roads. A murderer or kidnaper, after taking the life of one of his fellowmen, would be imprisoned; while, on the other hand, a drunken driver may not even have to stand trial. Or, if he is found guilty, the punishment is usually just a fine.

There are two main ways in which to cut down on accidents caused by drinking drivers.

First, machines to test drinking drivers to see if they have enough alcohol in their blood to harm their driving, with State laws to back these machines up. Then secondly, sufficient punishment for those found guilty.

There are four mechanical devices to test the drivers for drunkenness: the breathalyzer, and the drunkometer, the alcometer, and the intoximeter. These all measure the amount of alcohol that has been absorbed into the bloodstream. You are supposedly under the influence of alcohol if your blood registers fifteen one-hundredths of 1 percent.

South Dakota is 1 of 23 States in the Nation that will accept the result of a chemical test as evidence in court. It is not required in our State that a driver suspected of drinking take such a test.

Alcohol does not, as many people think, stimulate the mind, but it definitely will dull both the senses of judgment and responsibility. It is known that if a person took three drinks, and started driving, he would be a highway menace. He wouldn't be drunk, far from it; he would be legally sober, but his sense of caution would be gone. He would be inclined to react more slowly in emergencies; he would take more chances; he would drive at greater speed. But police records prove that the drinking driver—and not necessarily the drunken driver—is more vulnerable to accidents than a nondrinking driver.

Are severe penalties for drunken drivers the answer to South Dakota's problem of highway accidents?

Out of 114 fatal accidents, 57 drivers are reported to be under the influence of intoxicating liquor. Of the 47 who survived, only 15 were charged with drunken driving.

It is said that in a family of 4, 1 member will be in an accident caused by alcohol, in which someone is injured or killed.

Yes, the answer to our problem of South Dakota's traffic accidents is stronger laws against the drunken driver, and sufficient punishment, and enforcement of our State laws.

Remember; the driver should not drink, and the drinker should not drive!

Distinguished Service to Journalism

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. WILLIAMS. Mr. President, on April 17, 1957, Mr. Pat Munroe, a newspaper reporter in Washington, D. C., was presented with the Raymond Clapper memorial award by Chief Justice Warren.

I notice in the New York Times that the same individual, along with four others, is now being further honored for "distinguished service to journalism" by the Alumni Association of the Graduate School of Journalism of Columbia University.

Mr. Munroe's recognition develops from his work in conducting a campaign to make public the costs of congressional travel.

This is a well-deserved recognition, and I ask unanimous consent that the article appearing in the New York Times of Tuesday, May 21, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOURNALISM ALUMNI TO HONOR FIVE

A Washington correspondent, an author, and a reporter will be honored for distinguished service to journalism by the Alumni Association of the Graduate School of Journalism at Columbia University.

Oliver S. Gramling, president of the association and assistant general manager of the Associated Press, announced yesterday that citations would go to Pat Munroe, Gerald Green, and Ralph L. Lowenstein, all alumni of the school.

Special awards will be given to two former faculty members for their long and dedicated service to the school and the profession. They are Robert E. Garst and Theodore M. Bernstein, who each taught for 25 years. Both are assistant managing editors of the New York Times.

The five winners will be honored at the association's annual meeting tomorrow night at the Columbia University Club, 4 West 43d Street.

Mr. Munroe, head of the Munroe News Bureau, will be cited for his successful campaign to make public the costs of congressional travel.

Mr. Green, a television producer with the National Broadcasting Co., will be honored for his novel The Last Angry Man.

Mr. Lowenstein, of the El Paso (Tex.) Times, will be cited for his passionate campaign to reunite 50 families of divided nationality under the interpretation of indefinite parole in immigration laws.

The Carlisle Barracks

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. MARTIN of Pennsylvania. Mr. President, C. H. Masland & Sons, of Carlisle, Pa., weavers of rugs and carpets, publish a most interesting magazine with much interesting historical information. The May issue devotes considerable space to the Carlisle Barracks, which are 200 years old this year. The Carlisle Barracks are now the seat of the United States Army War College. This is one of the oldest Army posts in the United States, if not the oldest. I ask unanimous consent that an editorial by Frank E. Masland, Jr.; a statement by Maj. Gen. Max S. Johnson, commandant of the War College; and a brief résumé of the history of this post, be printed in the Appendix of the RECORD.

There being no objection, the editorial, statement, and article were ordered to be printed in the RECORD, as follows:

WE SALUTE YOU

It was fortunate for Carlisle that in 1757 Indian pressure forced Col. John Stanwix to give up his Ohio plans and instead to build "the camp near Carlisle." I am reasonably sure that, except for what then was regarded as an unfortunate deviation from plans, Carlisle some 194 years later would not have been chosen as the site of the Army Postgraduate School.

And so, because of that "moment in history," we are now privileged to salute "our barracks" upon the completion of 200 years of honorable service, and our War College for its outstanding contribution to our community and our Nation.

Founded before the birth of our Nation, from the days of the Pennsylvania rifle and the War for Independence to the age of the atom and global strategy, the barracks has played a prominent and an honorable part. Its history and that of Carlisle are inextricably interwoven.

Today the War College provides postgraduate training for top bracket officers, graduating annually some two hundred upon whose shoulders rests a great responsibility—that of playing a major role in the prevention of universal destruction.

We are especially happy that, on the occasion of the 200th anniversary of the founding of the barracks, the school should be commanded by one who not only merits and enjoys the respect of the community, but its deep and sincere affection as well.

Never have we had greater cause to be proud of "our barracks," of the product it turns out or of those who are responsible for its administration and its product.

We salute you, "our barracks," and we wish you well down through all the years of the next two centuries.

FRANK E. MASLAND, Jr.

MAY 1957.

CARLISLE BARRACKS AND CARLISLE

In 1757, when Col. John Stanwix began to build earthworks around his camp near the village called Carlisle, he wrote to the Colonial Lieutenant Governor of Pennsylvania, William Denny, saying in part, "it (the camp) is now supposed to be a camp of continuance, either now or hereafter." Today, 200 years later, Carlisle Barracks is very much a "camp of continuance."

Originally built to protect the Cumberland Valley settlers against raids of the Indian tribes to the north, Carlisle Barracks serves today as the site of the United States Army's senior educational institution, the United States Army War College. Here each year, 200 senior officers from the armed services are prepared for duty as commanders and general staff officers at the highest levels. The 10-month college curriculum assists the students in raising their sights to higher levels of intellectual consideration; develops their powers of analysis; requires them to engage in both individual and committee research, analytical efforts, to present clearly and convincingly their own convictions; and brings under critical consideration the major problems related to national strategy, its supporting military strategy, and the present and future roles of the Army which derive therefrom. This college endeavor epitomizes the Army's current measures to develop an alert, clear-thinking, hard-working, dedicated continuum of officers who will provide military leadership of which the Nation may be justly proud in the atomic era we have entered.

A particularly important reality of life at Carlisle Barracks, one which exemplifies the attitude of the Army, is the desire of military personnel to affiliate themselves with the people of the Borough of Carlisle and neighboring communities. This participation takes place in civic, educational and charitable organizations; as speakers for religious, reserve, and other organizations; and as parents of children enrolled in the public and parochial schools.

We of the garrison are grateful to our civilian neighbors of central Pennsylvania for their gracious hospitality and the warm spirit of friendliness with which we transients have been received. We are confident that this feeling of kinship between the military and civilian communities here in Carlisle will continue undiminished in the years to come, to the benefit of both Carlisle Barracks and Carlisle, as well as of the State and Nation.

MAJ. GEN. MAX S. JOHNSON,
Commandant,
United States Army War College.

CARLISLE BARRACKS, 1757–1957

(By Col. N. M. Martin, Chairman, United States Army War College Historical Committee)

A short 6 years after the Borough of Carlisle was established, one of the Nation's oldest military posts, still in use by the United States Army, was founded by Col. John Stanwix, of the British Army, 1 mile east of the public square. Carlisle Barracks, established May 30, 1757, has figured prominently in the educational system of the Army since Col. Henry Bouquet, a Swiss soldier of fortune, arrived here in May of 1758 to train British and Provincial troops for Indian warfare.

In view of its long history as a training center, it is most appropriate that today Carlisle Barracks is the home of the United States Army War College, the Army's senior educational institution. It is also interesting to note that the barracks was the site of what is believed to be the United States Army's first formal school, established under Capt. Isaac Coren in 1777 to train artillerists.

Originally known simply as the camp near Carlisle, the post was named "Washingtonburg" during the Revolutionary War, and was the only military post ever to be named for Gen. George Washington. In later years, the post gained its present-day name.

Carlisle's early settlers became the victims of many Indian raids in the mid-18th century. Colonel Stanwix and his forces had intended to march on to Ohio Valley positions, but while in Carlisle he received word of an expected attack by the French and Indians and consequently remained to establish defenses for the budding community.

At the turn of the 19th century, the post was considered as a site for the United States Military Academy and was highly favored by General Washington. However, after 8 years of congressional debate, the proponents of the West Point, N. Y., site won the battle.

In 1802 the Government finally purchased the military reservation from the heirs of William Penn. The purchase price was $664.20 and included "27 acres and 108 perches, exclusive of the old mill lane."

In 1838 the School of Cavalry Practice, forerunner of the Armor School, was established at Carlisle Barracks and continued until 1861. Hundreds of well-trained cavalrymen (both Union and Confederate as it turned out) were schooled here. During the early years of the Civil War several "false alarms" of raids by the Confederates on the community occurred, but in June 1863 the 17th Virginia Cavalry arrived in the city. The Confederate troops set up a headquarters at the barracks, requisitioned supplies, and quietly departed on June 29. On July 1, Confederate Gen. J. E. B. Stuart marched on Carlisle, fired on the city and burned the barracks.

1st Lt. Richard H. Pratt established the Carlisle Indian Industrial School here in 1879. In the 39 years of its existence, the school grew rapidly, and in addition to academic studies, the Indians were taught the mechanical arts, farming, cooking, sewing, and many other practical courses. It was at the school that Glenn S. "Pop" Warner fostered some of the best athletic teams in the Nation. While training here Jim Thorpe reached his peak in football and track achievements; later to be named as the Greatest Athlete of the Half Century (1900–50). The fabulous Philadelphia baseball pitcher, Chief Bender, "fleet footed" Tewanima and countless other famed Indian athletes also began their careers at the Carlisle Indian School.

On September 1, 1918, the school was discontinued, and General Hospital 31 took over the original part of the reservation, remaining here until the close of World War I. The Army Medical Field Service School was established at the post in 1920 and remained until 1946, when it was moved to Fort Sam Houston, Tex. During this 25-year period, over 30,000 officers and enlisted men were educated at Carlisle Barracks.

The Army's top school, the United States Army War College, now commanded by Maj. Gen. Max S. Johnson, moved here from a temporary location at Fort Leavenworth, Kans., on July 1, 1951. Established by Secretary of War Elihu Root in 1901, the college was founded so that selected officers could be given instruction to prepare them for top staff and command positions in the Army. The student body is composed of 200 senior officers. The majority of students are Army officers, but there are representatives from the Navy, Marine Corps, Air Force, Department of State and certain other civilian government agencies. The 10-month course of instruction is conducted at the top postgraduate level through addresses by prominent military and civilian guest lecturers, committee work, and conferences. The academic year culminates in June with a national strategy seminar, during which leading Americans from all walks of life join the students in consideration of problems relating to future national strategy.

Hells Canyon Dam—Rapid Tax Amortization

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. CHURCH. Mr. President, the State of Idaho is abundant in land space but is limited as yet in industry and population. As a result, there are only a dozen daily newspapers in our State, but approximately 80 weeklies. These papers are a potent influence in their communities, and many editors are alert and capable observers of State and National affairs.

Among these is Gideon H. Oppenheimer, the publisher of the Meridian (Idaho) Times. When the Idaho Power Co. recently was granted a rapid tax amortization in connection with the building of dams in the Hells Canyon of the Snake River, Mr. Oppenheimer was quick to get at his typewriter and express in no uncertain terms that the taxpayer would pay the bill.

I ask unanimous consent that this editorial from the Meridian Times be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TAXPAYING POWER COMPANIES

The recent revelation that the Idaho Power Co.'s dam construction projects would be the beneficiaries of a fast tax writeoff would not have come as such a shock if the power industry had not, in its propaganda, continually stressed that it always paid its share, or better, of the tax load. The impression the power industry likes to convey is that it is

cruelly milked by the tax collector. The result then, when facts leaked out, was a general outcry.

It is true that other industries have benefited from tax concessions. However, these industries do not stress their virtue vis-a-vis the Internal Revenue Service.

The fact remains that any amount of taxes withheld in any given year—whether through writeoffs, depletion allowances, or similar artifices—has to be made up that same year by other taxpayers. Consequently, even the privately constructed dams are not entirely free of taxpayers' contributions. The only difference is that in the case of a privately owned beneficiary of tax concessions the other taxpayers own nothing. In the case of a Government project the taxpayers own the result of their contributions.

Take the case of TVA. This grandiose project has indirectly returned to Uncle Sam more than its cost in tax money. TVA has created new industries which do pay taxes. Its multipurpose dams have prevented floods year after year. That has meant that no Federal funds have had to be supplied to tide over stricken areas. Lack of flood damage has eliminated this as a factor in business losses.

That, however, is not all. TVA, in its 23-year history, has netted $365 million. This money all goes to Uncle Sam. The $365 million is enough to pay all the Federal income taxes a private power company would pay on a similar operation and also have $43 million left over as income. In the case of TVA, however, this net belongs to the Federal Government. As the Federal Government is not a separate entity, it means that all this belongs to the people, all the people, of the United States. In addition, TVA has paid $41 million in State and local taxes. It also has set aside $227 million in depreciation reserves.

And TVA, a living, functioning entiey, belongs to the people of the United States—you and me.

President Eisenhower has called TVA creeping socialism. The power industry propaganda has called it worse than that. If a case where tax benefits result in wealth for all the people is reprehensible, what then, is a case where tax benefits result in wealth for only a few?

Pro Patria Mori

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very befitting editorial for Memorial Day, which appeared in the National Tribune-Stars and Stripes, on May 23, 1957.

PRO PATRIA MORI

Pro patria mori—to die for one's country. These words are taken from a Roman saying which, translated liberally, says: It is good and befitting to die for one's country.

May 30, which comes 1 week from today, has been designated as the day on which all citizens of the United States shall gather in national and private cemeteries, throughout the land, to pay homage to those who have fallen in defense of their country.

On May 5, 1868, Gen. John A. Logan, then national commander of the Grand Army of the Republic, in General Order No. 11, set aside May 30 as the day on which the surviving veterans of the Civil War should visit the graves of their fallen comrades and decorate them in memory of the service they had rendered.

Said General Logan, in part: "Let us then, at the time appointed, gather around their sacred remains and garland the passionless mounds above them with choicest flowers of springtime; let us raise above them the dear old flag they saved from dishonor; let us in this solemn presence renew our pledges to aid and assist those whom they left among us as sacred charges upon the Nation's gratitude—the soldier's and sailor's widow and orphan."

There's no doubt that Memorial Day is the most meaningful national holiday for every veteran. Although first observed on May 30, 1868, as a tribute to the men who died in the Civil War, it has come to be recognized as a day of remembrance for all our war heroes—from the American Revolution to Korea.

More than 1 million Americans were killed and many more wounded and disabled in wars fought by the United States. Their willingness to sacrifice and to give up their lives for liberty helped to make America a beacon of hope for all mankind. Ever since, we've been trying to show our deep appreciation for their sacrifice.

To many of our people, we regret to say, May 30—Memorial Day—is just another holiday—a day for them to hie to the seashore, to the mountains, to the golf course or to the ball game. Without thought they ignore the very reason for which this particular day was set apart.

Unfortunately, we live in a crass and materialistic age and too many of us have forgotten that the liberties we now enjoy are due to the sacrifices of the men who lie in heroes' graves in every burial ground in the land.

But these great heroes of our past wars will not go unhonored on Memorial Day. Thousands of patriotic citizens will visit their resting ground and see that flowers and the flag of their country decorate their graves.

Some will visit the graves of their own dear departed. Some, inspired with patriotism will join with them to pay tribute to the men who have made our way of life possible. Boy Scouts will join with the older veterans to help in the decoration of the graves and, in this manner, be instilled with a realization of what these honored dead have done to make this country great.

Patriotic organizations of every kind will join in the tribute with marching bands and appropriate speeches to pay reverence to their comrades of the past. The veterans of our recent wars and their auxiliaries have not forgotten their fallen comrades and their action should be an inspiration to the inconsiderate who look upon this memorable day only as a day of pleasure.

Those who have gone before us and who now rest in sacred ground only hoped for a peace based on individual liberty and respect for human rights.

Veterans, because of their numbers and influence in community life, are in the best position to make sure these goals are achieved. The living veterans and their affiliated groups will never forget their dead and will always pay tribute to them on the day set aside in their memory.

Their example is one worthy to be followed by more of our citizens who, in their joy of present living, forget those who have made such a life possible in this great land of ours. Pro patria mori—it is good and befitting to die for one's country. This should be the thought uppermost in the minds of all Americans on May 30—Memorial Day.

Senator Joseph R. McCarthy—Right or Wrong

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. SHEEHAN. Mr. Speaker, in the May 19 issue of Our Sunday Visitor, the Reverend Richard Ginder wrote an editorial on the late Senator Joseph R. McCarthy which is as follows:

RIGHT OR WRONG—SENATOR JOSEPH R. MCCARTHY, R. I. P.

In the obituaries about the late Senator McCarthy, there was much talk about his leap from relative obscurity into the headlines, about what a power he was in this country until his censure by the Senate.

The peculiar fact is that the power and stature of Senator McCarthy were built up by his enemies, by the very publicity intended to destroy him. For a year or two, every time you picked up a magazine of a newspaper you had McCarthy's picture beaming out at you, accompanied by a rabid, hate-slanted article describing the Senator's most recent activities. The daily press seemed to have become quite unbalanced on the subject, the result being that their writings were spoiled by all the vices they attributed to McCarthy and thus they only succeeded in discrediting themselves rather than him.

A friend once asked how it is that the daily press is so unanimous in taking a clearly predictable view on any given point. "It seems controlled," he said, "as by one supreme boss, who sits somewhere dictating the line to be followed as each issue arises."

The fact is that it takes very few people to control the American press. A handful of men in key positions with the wire services (UP, AP, INS), the Washington reporters who hash things out together over their bourbon at the National Press Club, and perhaps the editorial writers on the New York Times and the Herald-Tribune. The rest of the press throughout the country takes its cue from them.

Then, alas, once it has been decided in the Press Club bar that any certain individual is a dirty so-and-so, he's had it. He's through. He couldn't redeem himself even if he joined the Trappists.

Of the people who read newspapers, it seems to me that there are three types: the critical and articulate readers—the clergymen, doctors, lawyers, professors, etc., who are informed students of public affairs and subscribe to several journals of opinion. These will often differ from a printed opinion, denounce it among their friends, and write an occasional letter to the editor.

But too many millions, unfortunately, allow themselves to be led around by the nose. They believe everything they read in the papers and it never occurs to them to challenge a slanted writeup, to ask for proof, to evaluate adjectives and adverbs.

(Compare: "Flabby Senator Nobody lounged laxily across the desk, idly picking his nose."

"Hale and hearty, a picture of vigorous optimism, Senator Nobody relaxed at his desk, stroking his nose in a gesture of momentary reflecting.")

Such reportorial skulduggery is swallowed whole by millions of the uncritical. For instance, one of the most amazing phenomena of the last campaign was the overnight acceptance of the liberal canard that NIXON

was somehow—not just the less desirable of the two candidates for the Vice Presidency, but that he was somehow immoral, untruthful, perfidious, someone who really ought to be behind bars: "Tricky Dick."

Whenever I heard that expression used, I made it a practice to ask, "Why? What has he done? What's wrong with him?"

It was pathetic in practically every instance (cab drivers, filling-station attendants, waitresses, etc.) to see the jaw drop and the baffled look creep over the face. Then the stammering and, finally, something inane: "I dunno. Seems like you always hear 'Trick Dick.' Nobody likes him. 'Tricky Dick.' That's all you hear. I dunno. * * *"

Those are the uncritical millions who are manipulated by the press. They think and talk as they are told—though they sometimes have a nasty way of voting against instructions and so the press is occasionally surprised by the election returns.

Finally, there are the millions of good people not gifted with a talent for expression. They read their daily paper and they think their own thoughts. In the bull session at work, they let the glib fellows do all the talking, because they themselves don't have the gift of the gab. But they do form their own opinions, and they pray for their friends in public affairs, and they vote.

Senator McCarthy was destroyed by his own integrity. He was advised again and again to lay off the Army. But he was stubborn and he kept pressing the question "Who promoted Peress?" even when he saw that he was embarrassing that whole branch of the Service.

Now in this country, the Army is always right. It never makes a mistake. It cannot be allowed to lose face. Especially when there is a general in the White House. In a conflict between anyone and the Army, it is not hard to predict whose side the President would take.

Thus, McCarthy had the choice of letting up or being broken. He would not let up.

But such was the man's integrity and persistence that when the principal of that case came up recently for a promotion in the Army, the others treated his difficulties with the Senate committee as so much cold coffee, ancient history—although they were careful not to say that he perjured himself, they admitted that the officer had been less than candid, that he had not told the truth. Senator McCarthy could not forget the man's lack of cooperation with a senatorial committee, and so, out of the whole Senate, he alone voted against the promotion.

During the days when the pack was in full cry against him, the shibboleth was "I like what he is doing but I don't like his methods." As far as this writer could see, his methods were exactly those used by every other Senate investigator over the years, used by Senator McCLELLAN against Dave Beck just recently: McCarthy asked questions. Pointed questions.

Nevertheless, in those days I wrote to Washington and asked for some transcripts of the hearings. They made a 2-foot stack on my desk. Then I sat down and did my homework. I read through that stack and ended with the conclusion that there was nothing wrong with McCarthy's methods.

After that, whenever I would hear a Liberal sounding off about McCarthy I would ask, "Have you read the transcripts of the hearings?" The answers varied: "I don't need to"—"I saw Ed Murrow's show"—"I heard him on the radio"—"I read his Chicago talk"—but (and this is God's truth), I did not find one Liberal who had done his homework.

I have a friend who is a lawyer and who made a practice of writing to Catholic Liberals and putting precisely that question to them: Have you read the record? Practically all of them answered him, and you should read those letters—all the fumbling, hemming-and-hawing, excuses and apologies, all adding up to the preposterous idea that you really don't have to study the sources before making up your mind. His friends have often urged that lawyer to publish all that correspondence, but he is too charitable.

There are many who think that Senator McCarthy's religion and nationality were against him. This is undoubtedly true. When you think of the influence he enjoyed back in 1953 and 1954—how he secured the defeat of Maryland's Senator Tydings and was even mentioned for the Presidency. (I doubt that he would have run, but at the time it looked as though his large popular following would have given him some bargaining power at the convention and, who knows? Perhaps a Cabinet post in the new administration.

All this must have struck terror in the hearts of the bigots and the ignorant. They were unquestionably among those who hated him.

There were the snobs, too. If only the Senator could have been lean and elegant, a graduate of some ivy-league school, with a fine old Anglo-Saxon name instead of that hopelessly Irish "McCarthy." Why, it practically reeked of peat smoke and Roman Catholicism. Perish the thought. Perish the man.

Viewed in retrospect, Senator McCarthy's only fault was patriotism—his only vice, hatred of communism. May God have mercy on his soul.—Father Richard Ginder.

Let's Have Some Action on the Immigration Law

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. MAY. Mr. Speaker, it is obvious that several matters of importance to my district have been so far withheld from action by the 85th Congress. One of them is the revision of the immigration quotas. I believe the following editorial, from the Hartford Courant, dated May 8, 1957, covers the subject quite well:

LET'S HAVE SOME ACTION ON THE IMMIGRATION LAW

The visit of Italian Ambassador Manlio Brosio to Connecticut has spotlighted again the unfair and shortsighted provisions of the McCarran-Walter Immigration Act. Signor Brosio spoke to the general assembly the day before the last shipload of some 1,042 refugees admitted under emergency regulations sailed past the Statue of Liberty into New York Harbor. The coincidence was not planned, for the Ambassador was more concerned with a continuing injustice—the effect of the national-origins quota system on immigration from Italy and other south European and Mediterranean countries.

He did not consider it as a political matter, of course, Italy's concern is her own problems, including a million and a half unemployed. But the nations that face the discrimination written into the immigration law are sensitive to it. And anyone who examines the provisions learns quickly that the law needs change. So President Eisenhower recommended in January, as he has in the past, that the law be corrected. He wants the present allowable annual intake of immigrants to be doubled—the economy can easily absorb that number—and he wants changes so that unused quotas can be shifted. Regrettably, it looks as if congressional roadblocks, including the formidable FRANCIS E. WALTER, Democratic House chairman of the legislative committee that has the proposals, are as strong as ever.

About two-thirds of the people of Connecticut stem from forebears who came 100 years ago or less from every section of the world. This State is conscious of the tremendous contributions they have made to our economy, to our culture. Today, when the State is in the grip of a tight labor market, it could use help, particularly skilled help. But it is denied skilled men from abroad by the McCarran-Walter act.

Why should the national-origins quota system be changed? Put aside the suggestion that it is demeaning because it spreads the smell of racial theory. Note instead how senseless it is when we have a bulk quota of 154,000, of which some 60,000 numbers each year expire unused. Why aren't they used? Because they are reserved for West European countries where people are relatively content and don't want to emigrate. Elsewhere thousands clamor for a chance to come to this country. But they are blocked by the tiny quotas.

The episode of the Hungarian refugees who have become entangled in the hard-set immigration policy is a stain on the American tradition. Thousands of Hungarian freedom fighters remain trapped in European camps, without much hope or promise. We have still to regularize the status of almost 25,000 Hungarians who were admitted. But these are fresh issues, still strong in popular support. We need, also, an awakening to the basically wrong national-origins system, and to the delaying tactics of Congressman WALTER. Pierce J. Gerety, former deputy administrator of the refugee program, recently warned here that American good will is being dissipated. The Italian immigration issue, fixed in circumstances that few Americans care to recall, is only one in which prompt and forthright correction is needed.

United States Armed Forces—A Power for Peace

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my speech for the Armed Forces Day on May 18, 1957, which was carried over several Boston radio stations.

UNITED STATES ARMED FORCES—A POWER FOR PEACE

Ladies and gentlemen of the radio audience, Saturady, May 18, is Armed Forces Day.

It marks the eighth annual observance of the day that we set aside to salute our fellow Americans who are serving in the Armed Forces.

They in turn, at their duty stations throughout the world, will emphasize our country's power for peace, during the period from May 12 through May 19.

On Sunday, May 12, your attention was called to the religious aspect of our Nation's 20th century crusade for international understanding and peace.

Saturday, May 18, will be devoted to public displays and demonstrations by the Armed Forces.

Sunday, May 19, the power for peace theme will highlight the fact that our capacity to defend freedom gives us the opportunity to work for that day when it will be impossible for any nation to employ aggression as an instrument of national policy.

As civilians, it is incumbent upon us to honor the full significance of Armed Forces Day. To realize that as Europe declines in prestige and power, we have thrust upon us a graver and more weighty responsibility. This responsibility is both moral and military, and the two are sides of a single shield, which is America's power for peace.

Our Armed Forces will be the hosts—and you, the guests—on Armed Forces Day.

Millions of men, women, and children will attend open house programs at our posts, bases, and units all over the world. They will be entertained by service bands, and thrilled by precision parades. They will view some of the latest weapons we have developed for defense. They will learn how the Armed Forces operate—on land, sea, and in the air.

During the ages of sail and steam, with two broad oceans to isolate us from conflicts elsewhere, we only maintained token military forces. With the world wars of this century, our allies bore the brunt of the fighting until we could raise, train, and equip enough military strength to turn the tide of battle.

In this age of atomic bombs and guided missiles, however, we shall not be given any time to make up for lack of preparedness.

Until the Communists abandon their fanatical ambition to enslave the world, we must have the retaliatory force to strike back hard, should they mount a massive and surprise attack against our homeland.

It is no secret that the Commnuists could cripple us in the first few minutes of an attack if our guard is down. Unopposed, they could devastate us in the first few hours of war.

As Gen. Nathan F. Twining, Air Force Chief of Staff, has said: "The long-range airplane coupled with the nuclear bomb has forever erased our ability to buy time."

As a result, we are maintaining the largest peacetime Armed Forces in the history of our Nation.

For this security, the average American has to pay hundreds of dollars each year in Federal taxes.

Much as we have to sacrifice for this purpose * * * we recognize the necessity for it.

Without it we would invite enslavement by the Communists.

The cost of this insurance policy for peace is over $40 billion a year. Ninety percent of this is spent on the upkeep of our own Armed Forces both in the United States and on bases that ring the Communist Empire. The other 10 percent is spent for assistance to our allies.

The rulers of Soviet Russia are engaged in an all-out effort to become superior to us in military power, in their drive to extend Communist control over the rest of the world. They are devoting one-seventh of Russia's gross national productive effort to military expenditures. They are spending over $500 million a year for foreign propaganda alone.

The way in which Russian Communist tanks ruthlessly suppressed the heroic struggle of the Hungarian people to recover their independence, is a recent and frightening example of the fate that we would suffer, if we ever allow the Communists to gain the upper hand in military strength.

United States military bases gird the globe. They stand ready and alert at the frontiers of the free world, all of which is on guard. As Secretary of State John Foster Dulles said: "If we were relatively feeble in relation to the vast military power possessed by unscrupulous men, then we would not be the master of our own destiny."

Thus, we must first be militarily strong if we are to gain lasting peace.

International communism, led by the rulers of Soviet Russia, respects only power. To deal with the Soviets successfully, we must first possess power they will respect. Having such power, we are than in a position to negotiate with them on other issues and strive for measures that will ultimately change their thinking and their actions.

Our Armed Forces possesses this deterrent power.

Our Army today is the largest we have ever maintained in peacetime. It is deployed on 3 continents, and its representatives are stationed in 73 countries. Our soldiers' presence along the iron and bamboo curtains is heartening evidence to our allies that we share their perils; that we stand ready to oppose aggression or to preserve the peace.

Atomic missiles have greatly increased the Army's firepower. The Army is constantly moving forward in the technological race for better weapons and for better organization and tactics for atomic warfare. An example of modernization is the recently reactivated 101st Airborne Division, whose new organization makes it completely air transportable. Also introduced during the past year were the M–56 self-propelled 90–mm gun, the helmet radio, and the mechanical mule.

The Navy, which successfully engineered the first nuclear-powered ship, the submarine *Nautilus*, is constructing others of the same advanced design. These vessels, armed with guided missiles and torpedoes, will be capable of sustained high speeds under water, and almost indefinite endurance without refueling.

Two guided-missile cruisers, the *Boston* and the *Canberra*, have joined the fleet. The heart of the Navy's striking power is the modern attack aircraft carrier, since naval aviation is the most important offensive element of the Navy, as well as being a most necessary defensive element. The aircraft carrier *Saratoga*, sister ship of the *Forrestal*, was commissioned last year, and another, the *Ranger*, was launched, and two more are on the way. Our carrier forces are daily being strengthened as older planes are replaced by new supersonic fighters and high-performance jet medium bombers capable of delivering nuclear warheads at a great distance. Today, our Sixth and Seventh Fleets are standing by in overseas trouble areas, ready for any eventuality, adding another dimension to our total deterrent power for peace.

The Air Force is daily increasing its effectiveness. In its nuclear weapons and its ability to deliver them thousands of miles away, the Strategic Air Command provides the principal deterrent to the Communists * * * our ability to strike back to the heartland of the enemy. The Tactical Air Command, equipped with fighters and light bombers, presents a deterrent to local wars and provides combat air support for Army ground forces. TAC now has nuclear weapons aerial refueling, and the growing ability to move by air from bases in the United States, to bases anywhere in the world. The Continental Air Defense Command, has improved its capacity to destroy attacking aircraft. Supersonic interceptors, equipped with air-to-air guided missiles, are becoming a functional part of our defense units.

As a combat force in readiness, the Marine Corps plays a vital role in preserving our Nation's security. The nature of beach assault has been radically altered by helicopters, which speed up operations, permit easy initial dispersion and then concentration to knock out enemy defenses and lay enemy coastlines open to helicopterborne assault while our ships are well out at sea. At the Marine Corps Development Center at Quantico, Va., still more new tactics, equipment, and techniques are under study, emphasizing speed and flexibility in the use of modern weapons.

The Coast Guard maintains constant watch against possible threats of subversion and sabotage to ships and waterfront areas. Its icebreakers take part in resupply missions to Thule Air Force Base in Greenland, and to weather stations in the far north. The chain of Loran stations, one of the Coast Guard's most important navigational aide systems, extends all the way from Greenland to Tokyo. This provides valuable assistance to transoceanic ships and aircraft.

Power for peace is based first, then on United States military might. It is based, secondly, on a system of alliances and cooperation with other free nations. It depends, thirdly, on the homefront * * * on the productive and technological abilities of our country, and on the unity of purpose and dedication to principle that unite us as a people. And, finally, it is inspired by prayer and Divine Guidance, to give us the strength and the opportunity to secure freedom and promote international cooperation.

Our men and women in uniform invite you to attend their open house programs. To see the reviews, the equipment, and the installations. And, in every way possible, to honor Armed Forces Day.

Witness, for yourself the strength of our defenses.

And appreciate the part that you play in maintaining the power for peace, which is the enlightened policy of the United States.

The Area Redevelopment Bills Versus Foreign-Aid Programs

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mrs. KEE. Mr. Speaker, as I listened to the President of the United States deliver his talk to the American people this past Tuesday evening, May 21, I was forcefully reminded that there is presently pending in the Congress legislation the purpose of which is to establish an effective program of Federal aid to economically depressed areas within the United States where excessive and persistent unemployment, want and deprivation still exist.

Actually, three versions of this proposed legislation have been introduced in the House as exemplified by H. R. 1239 and 2527, H. R. 6215, and H. R. 1949, which I have been privileged to introduce. These bills might best be identified as representing respectively the conservative, the moderate and the liberal points of view with respect to a domestic rather than a foreign-aid program.

Briefly, all of these bills would—to a more or less generous extent—provide for loans and grants by the Federal Government to economically depressed areas of the country which have been officially designated "industrial and rural redevelopment areas." These Federal loans and grants would be used to assist such areas in the financing of industrial and commercial projects, the acquisition of

land sites, the construction, rehabilitation and alteration of industrial plants and useful public facilities, the purchase of machinery or equipment, and the technical advice and planning needed to restore the economies of these depressed areas.

In addition the Federal Government would also be authorized to provide suitable training and retraining programs, and to make weekly subsistence payments to the unemployed workers in these areas during such training periods.

Mr. Speaker, let me assure you that this legislation is of the utmost importance to West Virginia—as it is to the States of Illinois, Pennsylvania, Kentucky, Massachusetts, Minnesota, and other regions of the United States where hardship, hunger, and dire poverty still linger in the shadows of the great overall national prosperity.

I have before me a report to which I would respectfully call the attention of our colleagues. It is the report "Federal Assistance to Labor Surplus Areas" which was prepared by the Legislative Reference Service of the Library of Congress at the request of the Chairman of the Committee on Banking and Currency of the House. Through it there runs, like the recurrent theme in a great symphony, the recorded story of West Virginia's economic woes and unemployment problems.

Tabulated and analyzed in the report are lists of West Virginia's numerous areas of substantial labor surpluses; her 17 counties—representing 25.7 percent of the State's total population—that are among 315 counties nationally, having the lowest farm income and levels of living; the lack of industrial diversification which causes unemployment; and the technological changes and increased productivity in the basic bituminous coal mining industry which has created depressed conditions in Kentucky and Illinois as well as West Virginia. One has only to turn the pages of this report to understand why the enactment of an area redevelopment bill is so essential to the present and future economic progress and prosperity of our State.

Mr. Speaker, President Eisenhower has also indicated his support of such legislation. But the bills he favors—the so-called administration bills—place a limitation of $50 million upon the amounts which can be spent for the purposes of such legislation, whereas the bills which Senator Douglas and I have introduced would provide revolving funds for loans and grants of up to $225 million in any 1 year.

For some time now, I have felt that it was high time we in West Virginia saw something more of the much-vaunted great prosperity of the Nation than a bunch of beautiful statistics. But I never felt more strongly on this subject than I did as I listened to the President address the Nation last week on the subject of his proposed spending for mutual security and foreign aid. Indeed, some of the things he said made me feel for a moment that he must be talking about Scranton and Wilkes-Barre, or Lowell, Mass., or possibly Ronceverte, Welch, and Williamson, W. Va., instead of a foreign land 3,000 miles away across a wide expanse of ocean.

The freedom of nations—

The President said—

can be menaced not only by guns—but by the poverty that communism can exploit. You cannot fight poverty with guns. You cannot satisfy hunger with deadly ammunition.

And a little later in his speech, talking of the burden of poverty borne by the people of the 19 nations which have won their political independence since World War II, he said:

In these lands no government can justly rule or even survive which does not * * * offer its people hope of progress * * *. We seek to help these people to help themselves. We cannot export progress and security to them. Essentially, they must achieve these for themselves. But there are practical ways by which we can help * * *. Because their inherited poverty leaves these people so little for savings * * * they need the help of some capital to begin essential investment in roads, dams, railroads, utilities * * * the sinews of economic strength. Our program of technical cooperation * * * will cost $150 million next year—

He declared.

Mr. Speaker, I am prompted to agree with much that the President had to say in this second of his TV talks in defense of his huge spending proposals for the next fiscal year. Much as I desire to see substantial cuts in the budget and eagerly as I am willing to work for constructive economies in Government spending, yet I am forced to recognize that the mutual security and foreign aid programs are of tremendous importance to this Nation. But not more important than bread and milk for coal miners' children, good jobs for their fathers, new industries and increased business activity for economically depressed American towns and cities, and bigger markets, better roads and higher incomes for American farmers.

I am not willing to vote nearly $4 billion of our taxpayers' money to pay the bills of mutual security abroad and nothing to fight the poverty that communism can exploit—here at home.

Ike's Palace Guard Blasted as "Harry Hopkins Spenders"

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication:

WACHOVIA BANK & TRUST CO.,
Winston-Salem, N. C., May 21, 1957.

Hon. HERBERT C. BONNER,
House of Representatives,
Washington, D. C.

DEAR HERBERT: Don't bother to answer this letter, but I do hope you are going to use your tremendous capacities to cut down the unparalleled Federal budget. I am enclosing a photostatic copy of an article which you may have seen. It certainly expresses my sentiments.

If this country is going to continue to grow, savings must be left with the people which they can invest in new facilities. If the Government continues its tremendous take from the people, there is nothing left for investment. The only way taxes can be reduced is to cut materially the Government spending which is now inordinate. In my opinion the future of this country depends on eliminating this spendthrift tendency which means a lot of the frills that have been put in over the past several years and which will continue to grow. The Democratic Party has now an unparalleled opportunity to bring Washington back to sanity, and I sincerely hope it will meet the test.

In my opinion all postal rates ought to be increased, and certainly the third-class rates. At my house almost every day comes a half bushel of third-class mail from all over the country—practically all of which immediately goes into the wastebasket. Certainly those who are using this facility indiscriminately and making a nuisance of themselves would eliminate a substantial part of this activity, to the benefit of all.

Cordially yours,

ROBERT M. HANES.

IKE'S PALACE GUARD BLASTED AS "HARRY HOPKINS SPENDERS"

SCRANTON, April 24.—Confiscatory taxes resulting from high Government budgets threaten to destroy initiative and replace America's free enterprise system with state socialism, "a blood brother of communism," George E. Stringfellow, senior vice president of Thomas A. Edison Industries, division of the McGraw Edison Co., warned today.

He told the Scanton Kiwanis Club the ever increasing spending by all levels of Government is pushing taxes to levels advocated by Karl Marx and Nicolai Lenin.

Marx, the founded of communism, said that taxation would be "the surest way to destroy the capitalistic system" and Lenin, communism's patron saint, hoped to "force America to spend her way to destruction," Mr. Stringfellow pointed out.

He charged that President Eisenhower has done a "right about face" on the subject of Government spending. The change was "probably brought about by the President's palace guard, who, for the most part entertain the Harry Hopkins philosophy of spend and spend and elect and elect," he asserted.

"Eisenhower proposes to spend in one peacetime year as much as Franklin D. Roosevelt spent in 9 peacetime years," Mr. Stringfellow noted. "It must be apparent to anyone who has studied the record that the difference between the New Deal, the Fair Deal and modern Republicanism is one of degree—the latter being more expensive than the other two."

He praised the proposal by Senator HARRY F. BYRD, Democrat, of Virginia, to cut the proposed $72 billion Federal budget by $6.5 billion.

Even with such a cut the budget for the coming fiscal year would be $5.5 billion more than "Candidate Eisenhower recommended in 1952," Mr. Stringfellow pointed out.

"If you want to reduce the cost of Government, you can do it by telling your Congressmen and Senators that they must cut the cost of Government or you will remove them from the Government payroll at the next election.

"The Government will be as efficient as we demand and as wasteful as we permit. The time has arrived when we taxpayers, if we are to preserve our way of life, must speak out."

Declaration Against Japan's Scheme for Reoccupation of the Ryukyus

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following letter, dated April 20, 1957, from a Mr. Tsai Chang, chairman of the Ryukyus Independence Society, and the enclosed Declaration Against Japan's Scheme for Reoccupation of the Ryukyus:

RYUKYUS INDEPENDENCE SOCIETY,
Chungcheng District, Keelung,
Free China, April 20, 1957.

SIR: I hereby take the liberty of writing you on behalf of the free Ryukyuans and this society in connection with the future of the Ryukyus.

Since we Ryukyuans shook off the yoke of the Japanese colonialism after V–J Day, we have been given an opportunity for self-government and independence, for which we are deeply grateful. In order to lead the Ryukyus to an independent state with healthy economy, we, with the exception of some Communists, sincerely hope that the United States will continue to stay and take charge of the administration in the Ryukyus.

According to newspapers, however, the United States is planning to turn back the Ryukyus to Japan as a gift. It is also reported that Japanese Premier Kishi will probably attempt to obtain a written guaranty from the United States Government while on a visit to the United States in the near future, that the United States give the Ryukyus back to Japan as soon as the former deem it not necessary to keep the Ryukyus as a military base. We were rather surprised at the news.

Frankly speaking, we are deadly against the return of the Ryukyus to Japan. We desire the reconstruction of the Ryukyus instead of being enslaved again by the Japanese. For the future of the Ryukyus, we hate to have our hope frustrated.

On behalf of Ryukyuan patriots, I sincerely hope that you will help us attain our wish for independence, and I will reiterate that we Ryukyuans are desperately against Japan's reoccupation of our soil.

With kindest regards, I am,
Sincerely yours,

TSAI CHANG,
Chairman of Ryukyus
Independence Society.

DECLARATION AGAINST JAPAN'S SCHEME FOR REOCCUPATION OF THE RYUKYUS

Under the ever-advancing aggressive colonialism of Japan toward the Ryukyus since Japan's reoccupation of the Amami Islands, northern territory of the Ryukyus, on December 26, 1953, we hereby solemly declare to the free world that we are fully determined to fight for our political independence, and against Japan's new colonialism and attempted reoccupation of the whole Ryukyus.

In order to justify our determination for this cause, and rebut some distorted opinions, we would like to clarify the following points:

1. The 2,000-year-old historical facts of the Ryukyus are true enough to overthrow the illogical theory that the Japanese and the Ryukyuans are two races of the same ancestry. Archoeologically, the vestige of ancestral similarity has rather proved the introduction of Chinese culture into these two countries instead of blood relations. It is well-known among historians of Oriental civilization that the "Chung Shan Shih Chien," written by Hsiang Hsiang-hsien, a Ryukyuan, some 300 years ago is nothing more than a fabricated pro-Japanese history.

2. It is clearly recorded in Ryukyuan history that Japan's first invasion of the islands in 1609 brought to the Ryukyuans inhuman policies such as imposition of heavy taxes, enslavery of sugar-industry workers, monopoly of foreign trade, and extermination of our racial consciousness. The bloody rule continued until 1873.

3. Japan's second invasion which eventually established her reign over the Ryukyus from 1874 to 1945 was characterized by a colonial policy with such steps as arrest of pro-Chinese elements, pressing movements of "Japanizing" the Ryukyuans, overtaxation, discriminatory treatment in both military and civil services, and monopoly of the administration and commerce on the islands. Historically the so-called close friendship between the Ryukyus and Japan was that between the exploited and the exploiter.

4. After VJ-Day, the United Nations promised to let the Ryukyuans have an opportunity to govern themselves with the future status of the Ryukyus prescribed in article 3 of the San Francisco Peace Treaty. Since that treaty came into force, the Ryukyuans have been free from the yoke of Japan. However, Japan is still obsessed by colonialism, and has tried to justify her ambitious attempt toward the Ryukyus with newly invented expressions such as "the unprecedented anomalous existence of the Ryukyus' status" and "residual sovereignty."

5. The Ryukyus was not originally owned by Japan, nor a piece of land ceded to Japan after a losing battle. It is by all means a racial unit which is entitled to political independence when the time is ripe. Hence, article 78 of the United Nations Charter, on which the United States has based her view of trusteeship for the Ryukyus, is in no way inconsistent with the trusteeship system of the United Nations upon which it is incumbent to help gradually develop self-government and independence.

6. In spite of Japan's claim that her residual sovereignty over the Ryukyus has been verbally recognized by Britain and the United States, it is not provided in the Peace Treaty. Hence, it cannot be interpreted analogically that all participating countries have agreed upon it. According to authoritative views of the world, the sovereignty of the Ryukyus should rest in the hands of the Ryukyuans only. If the residual sovereignty which is in fact used as a cover by Japan to conceal here colonial policy were recognized, it would also be applicable to Taiwan, Korea, and Manchuria. If such an idea is accepted, we can see no ground in international law.

7. It may have been out of what Japan calls national sentiment that Japan has been attempting to have the status of territories once held by her decided by the United Nations, but the Ryukyus is not in such a weak position to thus surrender itself. A proper way to purify that distorted national sentiment would be to replace immediately Japan's southern liaison office in the Ryukyus with a consulate and resume normal diplomatic relations between the Ryukyus and Japan and recognize the political independence of the Ryukyus.

8. The Ryukyuans today are not what they used to be. The return of the Ryukyus to Japan is nothing but a revised version of the initial stage of Japan's southward advance policy which took form some 70 years ago. Japanese colonialists are battling against the strong current of moral support from all of the free nations in Asia which is in favor of the self-government and independence of the Ryukyus. Aside from the Japanese colonialists, only the Japanese Communists are supporting Japan's invasion of the islands.

9. Japan not only has no right to oppose Ryukyuan independence, but has the responsibility to contribute to its recovery. The reappearance of Japan's colonial rule over the Ryukyus will give rise to disturbances in Asia rather than to the establishment of peace. From the point of view of world politics, Japan's advance into the center of the Western Pacific will most probably break the balance of power in East, North, and South Asia. Further attempts by Japanese interests to reestablish themselves in the Ryukyus will serve only as a threat to stability in the Western Pacific and encourage international communism's aims.

10. Our history shows that the Ryukyuans are peace-loving, and, as a natural result, the Ryukus will permanently maintain neutrality in politics. The United Nations should protect the Ryukyus' neutrality and special status as a buffer zone.

(11) All the Ryukyuans were greatly shocked by the statement made by the United States Government on last February 8 on the future status of the Ryukyus, which declared that the Ryukyus would be turned back to the imperialist rule of Japan. Free nations in Asia, especially the Republic of China and the Republic of Korea, as well as Ryukyuan patriots have all adversely criticized the authoritarian United States policy which disregards the will of the Ryukyuan people. First, the United States arbitrarily turned over the Amami Islands to Japan on December 26, 1953, as a "Christmas gift," and now it seems that the United States Government will again ignore the earnest desire of the Ryukyuans for self-government and independence. The Ryukyuans will never recognize such political "transactions." The Ryuyukans will not have their sovereignty infringed upon by any one-sided Nippon-American agreement. The Ryukyuans will never sacrifice themselves for another "gift" policy. We hereby declare that the Ryukyuans will have the sacred right to demand independence at their own will.

The ultimate end of trusteeship prescribed in the United Nations Charter is to promote the welfare and build up an independent political status for the residents of the areas placed under trusteeship. This end should be realized specially by the Ryukyuans which did not originally belong to Japan and is just as entitled to be independent as other areas ceded from enemy countries after World War II. However, the United States has not yet taken any effective measures to meet the desire of the Ryukyuans for political independence. More strange is that the United States Government seems to have openly recognized the "residual sovereignty" of Japan.

From historical relations, the Republic of China should have more claim on the Ryukyus than Japan, but she has always treated the Ryukyuans in a friendly way. The fate of the Ryukyus should therefore be decided by the United Nations, and it is against the spirit of the United Nations Charter that the United States should voluntarily give up the Ryukyus and turn it over to Japan. We are confident that international justice will brighten the future of the Ryukyus more effectively than the United States "dollar" policy.

We wish we could have our own diplomacy. We wish we could be given independent civil rights in the true sense of the term. We emphatically declare that any reactionary influence that hinders us in our feverish desire will be an enemy to international justice, and that the great mission of our independence movement will be to thwart such reactionary influence.

Resolutions Passed by the Board of Directors of the Illinois Federation of Republican Women

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two resolutions passed by the board of directors of the Illinois Federation of Republican Women.

The first resolution covers the subject of the many amendments that have been offered to the Walter-McCarran Act.

The second resolution is significant in that it reflects the sentiments of the many fine and conscientious members of the Illinois Federation of Republican Women with regard to curtailing Federal spending.

I respectfully submit that the members of this federation are those who have devoted their time and energy over the years to preserve our party and the fundamental principles of Republicanism and the American way of life in which they deeply believe.

The resolutions follow:

RESOLUTION NO. 1

Whereas there are now pending in the Congress of the United States literally dozens of amendments to the Walter-McCarran Act; and

Whereas this act in its present form was the result of 4½ years of study and has been in effect only since 1952; and

Whereas this act received sufficient votes in the Congress to override President Truman's veto; and

Whereas the Committee on Un-American Activities recently disclosed that the Communist Party has created over 180 organizations for the purpose of bringing grassroots pressure on the Congress to destroy the Walter-McCarran Act: Be it

Resolved, That the Illinois Federation of Republican Women in session at the spring meeting of May 8, 1957, go on record as supporting the Walter-McCarran Act and opposing all amendments to it;

Resolved further, That a copy of this resolution be sent to Senator EVERETT M. DIRKSEN and to all Republican Congressmen.

RESOLUTION NO. 2

Whereas the Illinois Federation of Republican Women, at its board meeting on February 14, 1957, in Chicago, urged all our Illinois Republican Congressmen to use their energy and influence to cut the Federal budget, particularly in line with the recommendations of the Hoover Commissions; and

Whereas all our Illinois Republican Congressmen have worked both on committees and by rollcall votes to reduce the Federal budget; and

Whereas many of our Illinois Republican Congressmen have declared themselves in favor of large cuts in the foreign-aid program, and all of them have, on rollcall votes, voted for cuts in the budget of the Department of Health, Education, and Welfare;

Resolved, That the Illinois Federation of Republican Women expresses its gratitude to our Illinois Republican Congressmen for their special efforts to reduce the Federal budget and thereby maintain the Republican tradition of economy in Government; and

Resolved further, That the Illinois Federation of Republican Women again urges our Illinois congressional delegation to give strong support to the several bills introduced to implement the Hoover Commission recommendations; and

Resolved further, That a copy of this resolution be sent to Senator Everett M. Dirksen and to all Illinois Republican Congressmen.

Legislative Branch Appropriation Bill, 1958

SPEECH
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. BOLAND. Mr. Speaker, when the roll was called on recommital and on final passage of the legislative branch appropriation bill, I was not recorded. I was unavoidably detained on official business with another Government agency. Had I been present, I would have voted against recommittal and for final passage.

At the time of the markup of this bill by the full Appropriations Committee, I made my views known to my colleagues on the committee. Yesterday, in the Committee of the Whole, I voted against the amendment to strike out funds for the construction of an additional House Office Building. I did so because I recognize the dire need for additional space for committees, committee chairmen, and committee staffs. Committee work is perhaps the most important function of the Members of this House. Without adequate facilities, this function suffers. It would not be economically wise to defer this program. Some $15 million has already been spent and it would be poor judgment to cut it off now.

However, Mr. Speaker, I do find fault and said so in committee with one part of this program. And that is the provision for alterations to the Old and New House Office Buildings. This entails the possible spending as reported in the hearings of some $18.6 million. I am pleased to note that this bill does not carry any money for fiscal year 1958 for remodeling of these buildings. There ought to be another long, careful, and hard look taken with respect to this particular part of the program. Alterations are to be made so as to provide three-room suites for all Members. The vast majority of Members need a three-room suite as much as they need another hole in their heads. Present facilities are entirely adequate to take care of the Members except with reference to committee chairmen. The committee chairmen, as I understand it, will get their needed space in the additional House Office Building. There is absolutely no justification for any alterations to the present House Office Buildings. I hope the House Office Building Commission will come to that same conclusion and will not recommend or approve this phase of the program.

Twenty-fifth Anniversary of the Ordination of the Reverend Father Victor A. Simkonis, of Luzerne, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following part of the program held on Sunday, May 19, 1957, on the occasion of the silver jubilee banquet held in honor of Father Victor A. Simkonis, pastor, St. Ann's Lithuanian Parish, Luzerne, Pa.:

THE LIFE OF A PRIEST
(By Reverend Father Jean Baptiste Lacordiare, O. P.)

"To live in the midst of the world without wishing its pleasures;
To be a member of each family, yet belonging to none; to share all sufferings;
To penetrate all secrets; to heal all wounds; to go from men to God and offer Him their prayers; to return from God to men to bring pardon and hope;
To have a heart of fire for charity and a heart of bronze for chastity;
To teach and to pardon, console and bless always, My God what a life.
And it is yours, O Priest of Jesus Christ."

"COME FOLLOW ME"

Some time ago, a theologian was greatly puzzled on reading the following text: "And he shall sit refining and cleansing the silver. And he shall purify the sons of Levi, and he shall refine them as gold and silver." (Malachias 3:3). It seems he was especially curious about the words sit refining. Accordingly he went to a silversmith and asked him to describe the process of refining and cleansing silver. In answer the old silversmith said that the words were used correctly. The silversmith actually sat before the crucible of moulten silver, patiently watching for impurities that rose constantly to the surface. It was a long and laborious process. Then with a feather or some other light instrument he carefully brushed off these impurities as they appeared on the surface. This process he kept up until at length he beheld his own image clearly reflected in the silver. It was only then that the silver was properly refined and purified.

For 25 years the Divine Silversmith, Jesus Christ sat, as it were, before the crucible of the soul of Father Simkonis, and painstakingly throughout the long years of study and preparation for the priesthood and during the long days and nights of toil for the Lord as a priest, brushed off the imperfections that rose to the surface, until today He sees more and more clearly His own image in the image of one of His priests on this His silver jubilee.

The story is told of a beloved and gentle man, so old that most of his friends were dead, who had laid for each of them in his garden path a flagstone with the name inscribed. He was accustomed to walk this path each day and lovingly recall each of them, friend for stone and stone for friend.

In the garden of his priestly life, at the death of each year, Father Simkonis has laid down a flagstone upon which have been idelibly chiseled all the good works, the sacrifices, disappointments, the joys and sorrows that came with each year. On this happy day he can proudly say that he has laid down 25 flagstones and today in spirit

he treads lightly on each and lovingly recalls the scenes they represent.

On the first flagstones are inscribed his scholastic achievements in the public school of Sugar Notch, St. Mary's High School, Wilkes-Barre, Catholic University in Washington, D. C., Mount St. Mary's College, Emmitsburg, Md. With a surge of joy and gratitude in his heart he calls to memory the great grace of vocation God had conferred upon him when He gently invited him to leave all and follow Him.

In the long climb up the years of study and preparation for the priesthood at St. Vincent's Seminary, Latrobe, Pa., there were many days and nights of serious application, prayer, and struggle. Coloring them all was the overpowering incentive that if in God's Providence he might be privileged to raise his hand in absolution over some wayward sinner, and by that absolution restore one more sinner to the grace and friendship of God, if he could save just one soul, no matter what the cost, it would be a splendid spending.

At long last, the consuming desire to stand one day before the altar of God and offer the body and blood of Christ for the salvation of men found its joyful culmination on May 21, 1932, in St. Peter's Cathedral, Scranton, Pa., when His Excellency the Most Reverend Thomas C. O'Reilly ordained him a priest of God. The long-coveted goal has been finally achieved! Today our jubilarian gazes with awe and gratitude at the flagstone on which is inscribed forever: "Ordained a priest of God."

In his studies as a young theologian in the seminary it was vividly brought home to Father Simkonis that the priest it is who welcomes us into Christ's church, pours the saving waters of baptism upon us and by virtue of the sacrament cleanses us of original sin and makes us members of the mystical body of Christ and heirs of Heaven; the priest it is who restores us to the friendship of God when we defile ourselves by sinning; the priest it is who breaks for us the bread of angels to nourish our souls spiritually to withstand the temptations in the battle of life; the priest it is who counsels, directs, reproaches or soothes us in matters pertaining to our consciences and for eternity; the priest it is who blesses the ring and witnesses the marriage vows that make us one in the sacred bonds of matrimony; the priest it is who brings us viaticum for the long journey beyond. He it is who closes our eyes and annoints our senses in extreme unction. Finally, it is the priest who offers the unbloody sacrifice of the mass for our souls, blesses our bodies, and lays us away to await the resurrection on the last day.

The next flagstone in the garden of our Jubilarian's life has inscribed on it: "Curate—St. Casimirs, Pittston, Pa." and brings back to Father Simkonis the fond memory of his first assignment as a priest. A deep reverence in dispensing the sacraments to the people he loved and a youthful enthusiastic spending of himself filled his crowded days.

One step more on the path of memory and he is reminded of his appointment as pastor of St. Mary's parish, Wanamie, Pa., with the welcomed burden of St. Joseph's Mission in Hanover, Nanticoke, Pa. For 20 long years less 5 months, he faithfully shepherded his 2 flocks through lean and prosperous years alike. For almost 20 years he was tireless in his endeavors to improve his parish and mission both spiritually and materially. During those fruitful years in Wanamie and Hanover extensive interior and exterior improvements were completed and the parish debt was finally liquidated. For all this he has earned, and deservingly so, the love and gratitude of his parishioners. His parishioners cannot forget that many of his accomplishments were directly the result of Father Victor's contributions from his meager personal savings.

And now our reminiscing Jubilarian stands on a freshly laid flagstone on which is engraved: "Twenty-five years in the service of God." In retrospect he fondly recalls his new and present appointment, namely, pastor of the flock in St. Ann's parish, Luzerne, Pa. Here again for almost 4 years he plunged into his new work with the same zeal and enthusiasm. In a very short time he liquidated near $20,000 of an existing debt at Saint Ann's. But close to his heart was the noble project of building a church. Feeling Father Victor's sincerity when again he surrendered his personal savings by cashing his bonds and donating $1,000 toward a new church building fund, the parishioners at St. Ann's generously responded and today this fund was swelled to $85,000. Over $100,000 in less than 4 years, in a comparatively small parish is truly an amazing achievement. When one considers htat in this short period since his new assignment at St. Ann's, all of the contributions have been voluntary cash donations, without any formal solicitations or any pledge campaigns, it really is an almost indescribable feat. Added to it all, St. Ann's parish has grown substantially in size. Surely, it is a fine tribute to his unflagging efforts and the love and faith of St. Ann's parishioners for Father Victor, reflected by their generosity, many sacrifices and their wholehearted cooperation in all of his biddings. Debt-free, with a substantial building fund on hand. The architect is already engaged and plans are in the process of being drawn.

It is not surprising to witness this sincere cooperation of the good people of St. Ann's parish with Father Simkonis, for in him they truly recognize a priest of God who has always manifested a tireless zeal, sympathy and understanding for the problems of others. His heart ever seeks to embrace all his spiritual children. He truly loves his people as only a kindly father can love his children. He may perhaps not always be called upon to participate in their joys and comforts when all goes well, but he is always present and ready to share their trials and tribulations.

And so it is quite fitting, on this the silver jubilee of Father Simkonis' ordination to the priesthood, that we rejoice with him in his great joy and congratulate him sincerely. We who know him as a true and devoted friend, know also that his heart and mind are filled to overflowing with sentiments of deep gratitude to God who has blessed his efforts and thanks to all who have so unselfishly labored with him for the greater glory of God.

Without doubt the devoted parishioners of St. Ann's will offer their earnest prayers that God will spare their beloved jubilarian for many years to come in order that he may be allowed to lay down in the garden of his priestly life more and more flagstones upon which will be inscribed numberless works of love, mercy and justice for God's greater glory and the salvation of souls, and further pray that the Divine Silversmith may one day behold in the crucible of his soul not the silver reflection of Himself, as He does today, but may on his golden jubilee rejoice in a reflection of brilliant gold that will not tarnish forever.

—Rev. Father F. A. Hugal—S. J.

A PRAYER FOR PRIESTS

"Keep them, I pray Thee, dearest Lord,
keep them, for they are Thine,
Thine Thy priests whose lives burn out
before Thy consecrated shrine.
Keep them for they are in the world, though
from the world apart,
When earthly pleasures tempt, allure, shelter them in Thy heart.
Keep them, and comfort them in hours of
loneliness and pain.
When all their life of sacrifice for souls
seems but in vain.
Keep them, and O remember Lord they have
no one but Thee,
Yet they have only human hearts, with
human frailty.
Keep them as spotless as the host, that daily
they caress their every thought and
word and deed, deign, dearest Lord, to
bless. Amen."

PROGRAM

America, audience.
Invocation, Rev. John J. Dastick.
Introduction of toastmaster, Mr. Victor G. Machinist.
Toastmaster, Attorney John R. Verbalis.
Address, Congressman Daniel J. F. Flood.
Selection, St. Ann's R. C. Church Choir, directed by Prof. J. Varaitis.
Remarks, Rev. Joseph A. Aruscavage.
Humorist.
Remarks, Matthew Zujus.
Remarks, Principal Anthony F. Denby.
Remarks, Rev. Edward L. Collins.
Selections, St. Ann's R. C. Choir, directed by Prof. J. Varaitis.
Address, Rt. Rev. Msgr. Joseph V. Miliauskas.
Solo, Mrs. Catherine Uter.
Presentation, James J. Miketinas.
Remarks, Rev. Victor A. Simkonis.
Benediction, Rev. Alfred J. Zukauskas.
Lietuva Tevyne Musu, audience.

Budget Study Needed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a very timely article which appeared in the Chelsea Record, Chelsea, Mass., on May 21, 1957:

BUDGET STUDY NEEDED

The tugging and hauling over the administration's Federal budget has aroused great passions, both political and economic. Most of those intimately involved in the controversy have become so absorbed in advancing their points of view that they have lost all perspective.

It is not likely that the budget picture will be brought back into perspective at this session of Congress. Various items will be cut and restored; compromises will eventually be reached; a budget of sorts will be approved. Then it will be possible once again to think about the matter in the perspective, and to initiate basic reforms. That should be done without delay.

Government spending is rising so fast that it tends to absorb the increased revenues that result from our economic expansion. The Committee for Economic Development recently called authoritative attention to this fact and said that perhaps it was the most pressing domestic problem that confronts the Nation. The CED is a nonpolitical research organization whose statements have won it wide respect.

The time has come for a solid, long-range study of the whole matter. Such a study would not affect the present budget, on which Congress must shortly complete its work. This does not mean that cuts in the present budget are impossible. On the contrary, substantial cuts may be made despite the President's personal appeal.

But the study should consider basic reform; it should involve a thoroughgoing new look both at Federal spending policies and at the means of raising revenue. We cannot afford to drift in Federal tax and budget policy. The way to halt the present drift is to redefine public attitudes toward taxes and the budget, and to overhaul our system accordingly.

The Myth of Domestic Jurisdiction in the Hungarian Revolution

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the February 1, 1957, issue of the publication Free China and Asia, entitled "The Myth of Domestic Jurisdiction in the Hungarian Revolution":

THE MYTH OF DOMESTIC JURISDICTION IN THE HUNGARIAN REVOLUTION

The recent tragic events in Hungary raise a question in international law of whether the Hungarian Government can treat the mass revolt as a matter of domestic jurisdiction. She rejected the proposal of Dag Hammarskjold to permit the entry into Hungary of U. N. observers and the Secretary General to make a fact-finding tour. The rejection of the entry of an alien is certainly an internal matter, but the request from the U. N. of which Hungary is a member state, for the entry of its agents with a special mission of seeking world peace is of unique nature.

Article 2, paragraph 7 of the U. N. Charter provides that nothing contained in the charter shall authorize the U. N. to intervene in matters which are essentially within the domestic jurisdiction of any State, or shall require the members to submit such matters to settlement under the charter. The nebulous reference to "domestic jurisdiction" has been a source of constant dispute among diplomatic agents, inasmuch as the extent of its operation may well determine the sphere of the U. N. activities. It is recalled that the Dumbarton Oaks proposals made explicit provision in the wake of the Government of the League of Nations. Article 15, paragraph 8 of the covenant reads, "If the dispute between the parties is claimed by one of them, and is found by the council to arise out of a matter which by international law is solely within the domestic jurisdiction of that party, the council shall so report, and shall make no recommendation as to its settlement." At the San Francisco conference the sponsoring governments decided to omit the reference to international law as a yardstick of an internal matter. The charter seems to entrust a wide area of discretion to each member state to judge its own cause, yet in construing the charter, it is inconceivable how political expediency can replace the rule of international law. Technically, as Mr. Fenwick puts it, interpretation of a treaty cannot run counter to its manifest object. To construe otherwise would subject the U. N. to the whim of the individual state and defeat the very purpose for which the organization was created.

The foregoing rationale is reinforced by the reasons below:

1. The clause of domestic jurisdiction in the charter is subject to the proviso that this principle shall not prejudice the application of enforcement measures, which involve complete or partial interruption of economic relations of rail, sea, air, postal, telegraphic, radio and other means of communication, the severance of diplomatic relations, blockade, and other operations by air, sea or land forces of members of the U. N. These measures are to be decided upon by the Security Council, and the decisions are subject to the veto power of the permanent members of the Council. Known it is that when the charter was drawn up, it was presumed that the U. N. could function effectively only with the unanimous agreement of the permanent members. This postulate proves untenable in the postwar world; the development of events was culminated in the adoption of the Uniting for the Peace Proposal. It is then not impossible to impose sanctions upon a delinquent state, if the U. N. is determined to apply enforcement measures. With this change of circumstances, the domestic clause is workable only if its contextual meaning is pari passu ascertainable by international law. The dispatch of U. N. agents to the spot of turbulence is merely a prelude to a series of measures leading to international peace and security. There is no justifiable reason for Hungary to reject the U. N. request, especially for a member-state which is bound to fulfill, according to article, paragraph 2 of the charter, in good faith the obligations.

2. In international law, matters of immigration restriction, granting of citizenship and import duties are usually considered as purely internal matters, unless they are regulated by treaties. In the advisory opinion of Nationality Decrees in Tunis and Morocco, the Permanent Court of International Justice decided that a matter ceases to be of domestic jurisdiction if it is regulated by an international treaty.

When the World War I ended, treaties were concluded to protect the interest of the minorities in the postwar Europe. In Poland, for instance, many colonists who were formerly German nationals and domiciled in Polish territory belonging to Germany before the war had acquired Polish nationality following the defeat of Germany. It was agreed by the treaty powers that all Polish nationals should be equal before the law and should enjoy the same civil and political rights without distinction as to race, language, or religion. Polish nationals who belonged to racial, religious, or linguistic minorities were entitled to the same treatment and security in law and in fact as the other Polish nationals. It is particularly noted that in the Minorities Treaty, it contains the provision: "Poland agrees that the stipulations in the foregoing articles, so far as they affect persons belonging to racial, religious, or linguistic minorities, constitute obligations of international concern and shall be placed under the guaranty of the League of Nations." If the minorities' interest is of international concern, the mass revolt in Hungary is a fortiori a matter of international concern, as it symbolizes a revolt against the oppressive Communist rule in search of the beacon of freedom.

Again in international fluvial law, navigable rivers traversing several riparian states are also matters of international concern. In the act of the Congress of Vienna of 1815, the powers whose territories were separated or traversed by the same navigable river undertook to settle by common agreement all questions affecting navigation thereon. The concept of community of interest has released international rivers from the bond of domestic jurisdiction. This community of interest in a navigable river becomes the basis of a common legal right, the essential features of which are the perfect equality of all riparian states in the use of the whole course of the river and the exclusion of any preferential privilege of any one riparian state in relation to the others.

The foregoing portrayed matters of international concern are all regulated by treaties. In fluvial law the right to navigable rivers which traversed two or more States prior to 1815 was not regulated by any general principle, and formed a subject of constant dispute. In the absence of Minorities Treaty the linguistic or racial minorities would have been discriminated against. Under the Charter of the U. N. nothing is of more international concern than threat to peace, breach of peace and acts of aggression. The charter provides for pacific settlement of disputes and enforcement measures in chapter 6 and 7 respectively, to which both Soviet Russia and Hungary agree, as member states, to fulfill in good faith. The Russian conduct of suppressing the Hungarian revolt by armed forces and subjecting the mass civilians to deportation to Siberia testifies to the flagrant violation of its treaty obligations as a member-state of the U. N. which professes to respect human rights and to take effective measures for the prevention of breach of the peace. The Hungarian plea of domestic jurisdiction is an abuse of the discretionary power in international law. It is time for the U. N. to salvage the sinking boat by preventing any recurrence of the Hungarian episode in the interest of the freedom-seeking peoples.

It Is Written—

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. LANE. Mr. Speaker, his name was Joseph A. Reynolds. Profession, chief editorial writer and assistant managing editor. Place of employment, the Evening Tribune, Lawrence, Mass.

The harder he worked, the more Joe enjoyed it, because writing was his life.

Words and phrases, their beauty, power, and clarity—these were his creative tools.

His material was the teeming variety of human experience. Carpenter or doctor; housewife, clerk, or worker on the assembly line; each has its own special skill, its special challenges, its special vocabulary.

Joe Reynolds knew that life in the United States would be 170 million isolated areas of activity, if we did not have the magic of a mother tongue to unite our people so that they would learn to understand and respect differences, and to cooperate where common action is necessary.

Joe thought things out before he reached for the keys of his typewriter.

Then he wrote with the grace and persuasive sincerity that comes only to the few who discover the great potentials of our language, because they search and find its treasures.

These he shared with the widening circle of readers who turned to the editorial page of the Tribune for information and enlightenment on the problems of our times.

From typewriter to printed page to the eyes and minds of his appreciative

audience, the personality and ability of Joe Reynolds flowed, illuminating the art of communication.

Then death struck—suddenly.

The melody of his words has ended, but the memory of them lives on.

In tribute to a warm-hearted human being and a gifted writer, under unanimous consent I include in the CONGRESSIONAL RECORD the story of Joe Reynolds' life, as it appeared in the May 15 issue of the Evening Tribune, published in Lawrence, Mass.:

DEATH ENDS BRILLIANT CAREER OF NEWSMAN

Joseph A. Reynolds, assistant managing editor of the Eagle-Tribune and a member of the reportorial staffs of the two papers since 1929, died unexpectedly early Wednesday of an acute coronary thrombosis. He was 47 years old.

His home was at 127 Garden Street.

Possessed of a very fertile mind together with an interest in everything he undertook, he quickly grew to be a very able reporter. Later, when he became the Evening Tribune's chief editorial writer, he wrote with a facile style that soon won him a host of constant readers.

He was described as having the faculty of being able to extract from a subject something that was worth listening to. He gained the interest of his readers, because he was interested in so many things himself, and was often complimented for his excellent choice of words in a live, colloquial style.

The reason for his successful writing was the fact that he was an avid researcher and constantly sought to improve his knowledge on various matters. Oblivious to the praise of his readers and coworkers alike he was never satisfied and his library of well-thumbed books on many subjects testified to his search for the truth and his eagerness to add to an amazing vocabulary. He firmly believed that to be a writer one has to master the groundwork.

As an editorial writer, he had a very definite human touch, often with just enough humor to make the reading attractive, yet he never clowned. His writings were recommended reading for English students in many classes.

KEEN INTEREST IN POETRY

Quite apart from his newspaper work, Joseph A. Reynolds had a little-known side that led him to a keen interest in poetry, possibly his major interest. He saw beauty in many things and wrote verse for his own edification, releasing but few of his poems for publication.

He was intimately familiar with the works of many poets, but really was a student of the poetry of Robert Frost. An editorial which he wrote on the famed poet some years ago, concerning his schooling in Lawrence, was so well done as the result of painstaking research, that it caused the distinguished New England poet to inquire which of his classmates had done the article.

Within recent weeks he had also been commended for an editorial which he wrote on the late poet, Richard Hovey.

JOINED EAGLE STAFF

Mr. Reynolds joined the Lawrence Daily Eagle staff as a reporter of lodge and club activities on January 3, 1929, and except for a 3-year service with the Air Forces, had been with the paper since that time. He had successfully moved on to more responsible assignments and, prior to becoming chief editorial writer, had covered superior criminal court, including several outstanding murder trials.

Following the death of John A. O'Hearn, managing editor, he was promoted to the responsible position of assistant managing editor September 10, 1956.

Born in Lawrence December 17, 1909, the son of the late Clarence A. and Mary G. (Doyle) Reynolds, he moved with his family to Salem but returned to Lawrence when the home of the family was burned out in the Salem fire. Later, his parents lived for a time in Lynn, but again came back to Lawrence to establish residence. He attended the John R. Rollins school and graduated from Lawrence High School in 1927, with the distinction of delivering the class prophecy as a result of his outstanding marks in English.

SERVED IN AIR FORCES

Mr. Reynolds had a host of friends due to a pleasing personality in addition to his abilities and had endeared himself to the entire staff.

His hobbies ranged over a variety of subjects, but mostly he liked the outdoors and he liked to skate and swim.

His reportorial career was interrupted with the advent of World War II when he entered the Army in November 1942. He was assigned to a squadron in the Ferry Command of the Army Air Forces and received his training in Atlantic City, N. J. Later he served at Buffalo, N. Y., Memphis, Tenn., and Romulus, Mich., airbases before being stationed for 13 months with the Air Transport Command in Nome, Alaska. He was discharged at Great Falls, Mont. in December 1945, with the rank of sergeant.

FUNERAL SATURDAY

He is survived by his wife, Mrs. Anna P. (Pfeiffer) Reynolds; a brother, Edward P. Reynolds, a major in the Air Force stationed at Keesler Field, Biloxi, Miss.; a sister, Marjorie, wife of Walter V. Lake, Walnut Street; two nieces and a nephew.

The funeral will be held from the McAuliffe Memorial, 137 Lawrence Street, Saturday with a solemn high mass of requiem at 9 a. m. in St. Lawrence's church. Burial will be in Ridgewood cemetery, North Andover. Calling hours will be today and Friday from 2 to 5 and 7 to 10 p. m.

Stubborn Boondoggle

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Washington Daily News, May 22, entitled "Stubborn Boondoggle":

STUBBORN BOONDOGGLE

The Senate economizers and budget cutters have just submitted to a test of good faith; and they flunked it 61 to 17.

By that vote they stuck $30 million into a so-called supplemental appropriation bill to buy tungsten at $50 a ton, roughly $20 over the market price.

The main excuse was to encourage American mining of tungsten, used in the manufacture of steel, for a stockpile in case of war. But the largest company to cash in on this handout gets its tungsten from foreign mines, according to a House committee report.

Three times the House has refused to permit this squander. But the Senate seems determined to jam it down the House throat, despite a bristling fight against it by Senators WILLIAMS of Delaware, LAUSCHE of Ohio, and others.

Arthus Flemming, the former Office of Defense Mobilization Chief who was in charge of stockpiling, said the Government had enough tungsten for a 5-year hot war. One of the beneficiaries of the subsidy recently estimated the stockpile was big enough to meet all needs for 18 years.

Well the House—bless its hard-fisted Appropriations Committee—isn't likely to stand for this deal. But in the Senate, economy apparently is no virtue when a pet boondoggle is involved.

Unplanned Policies

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I would like to include an article by Kenneth B. Pomeroy, Chief Forester of the American Forestry Association, which appeared in the May issue of the magazine American Forests.

In this report we are reminded that what appears to be new may be but an extension or a revision of the old. We hear a great deal at this time about policies to terminate Federal supervision of the Indian Tribes so that these first-Americans might assume the full stature of their citizenship. The very title of this article is more indicative of what has actually occurred in this field, and I recommend this review of Indian policy, or lack of policy, to Members who are currently giving study to legislation affecting the Indian tribes still under the supervision of the Federal Government.

The article follows:

UNPLANNED POLICIES

(By Kenneth B. Pomeroy)

By the middle of April 1957 both Houses of Congress had recommended deferment of sales of tribal property involved in Public Law 587 covering termination of Federal supervision over the Klamath Tribe of Indians (see Uproar on Klamath Reservation, American Forests, January 1957). Although the newly amended versions of S. 469 still must go to conference to iron out other differences, there is assurance that all interested parties are being granted a grace period of approximately 15 months in which to answer the $64,000 question: How can Federal supervision be terminated in a way that will (1) be in the best interest of the Indians; and (2) insure sustained-yield management of the timber resource as well as protection of water, wildlife, and other resources?

Although all the facts needed for evaluation of Klamath problems have not been released, the ranks of public opinion already are forming. Poised on one side are those with a financial interest in immediate liquidation of Klamath assets. This means selling the land (timbered or otherwise) on the open market in relatively small lots. Others feel that Federal purchase is the only way to insure protection and wise use of all the resources. Still others contend that private industry should manage the property. They point out that 51.6 percent of the State of Oregon already is in Federal ownership, with accompanying restrictions to

the tax base and to opportunities for free enterprise.

The decisions reached, whatever they may be, will have a significant impact on Indians and their resources for many years to come. The American Forestry Association believes that this case, and others in the offing, must be settled by the Congress of the United States on the basis of what is best for the ultimate benefit of both the Indians and their resources, for the welfare of man is tied inseparably to his use of available resources. In view of the decisions being made, the American Forestry Association believes that a recapitulation of Federal-Indian land policies since the days of our forefathers is now in order. In short, a groundwork based on historical precedents must be laid. This article will be followed at intervals by analyses of Klamath wildlife, water, grazing, and timber resources; and discussion of termination plans when all the facts become available. Readers will require this information in deciding intelligently whether public acquisition is or is not the proper solution to Klamath and to some 6 million acres of other commercial forests in Indian ownership in Oregon and other States. To date no such proposal has been made in Congress, but there are ample indications that such a bill may be introduced as soon as the present deferment bill clears the way. And now to history.

EVOLUTION OF FEDERAL-INDIAN LAND POLICIES

In the first century following the birth of the United States, the irresistible pressure of an aggressive, land-hungry flood of migrants produced problems which were met as current exigencies seemed to dictate. Federal policy, veering with public opinion, contributed directly to some of the darkest pages in American history—the Cherokee Trail of Tears, and the unjust imprisonment of Chief Osceola.

Today the beginning of a fifth major trend is apparent—termination of Federal supervision over tribal affairs. Termination laws affecting nine tribes have been enacted by Congress since 1954. Four new proposals are before congressional committees and two additional tribes are preparing for termination.

Will history disclose that this policy is the product of wisdom and statesmanship? Or will it show that the clamors of divergent interests have obscured the best solutions? And how have other policies fared?

INTEGRATION

From the beginning of French colonization in America, Indians were encouraged to adopt Christian ways and to remain in close contact with the settlements. Intermarriages were common. The welfare of the Indians also received the attention of the early English settlers. In 1633 the General Court of Massachusetts declared that any Indians, who should come to the English plantations and live civilly and orderly, should have allotments, according to the customs of the English. (For much of the historical material we are indebted to Kinney, J. P.—A Continent Lost—A Civilization Won. The Johns Hopkins Press, Baltimore, Md., 1937.)

The English colonists, however, soon discovered that the Indians were not inclined to follow the new example of land clearing and improvement. Furthermore, they were very susceptible to various schemes to separate them from their property. In recognition of this tendency a Virginia act of 1655, typical of those enacted by other colonies, directed that no land could be purchased from the Indians without the assent of the Grand Assembly.

In 1660 Virginia recognized that the English were encroaching upon lands of the Accomack Indians and directed that a tract be set aside for their maintenance. Thereafter for the next century and a half all reservations went to the tribes for communal use rather than to individual Indians.

Colonial law generally guaranteed the Indians protection in their land holdings. In the Royal Proclamation of October 7, 1763, the King of England declared that the several nations or tribes of Indians should not be disturbed in the possession of lands reserved to them. The United States incorporated similar policy into its basic law in the Northwest Ordinance of 1787 (1 Stat. 50).

ISOLATION

A great migration of settlers across the eastern mountains, immediately following the Revolutionary War, resulted in frequent clashes with the Indians in the Ohio Valley and in the area to the southwest of Virginia. Each race became embittered by the conduct of some representatives of the other and the achievement of peaceful coexistence seemed impossible. Dissatisfaction also was increasing in the older settlements. Efforts to provide Indians with hunting grounds had failed and attempts to encourage their self-support as farmers were generally unsuccessful.

These difficulties began to come to a head in 1802 when the area that later became Alabama and Mississippi was ceded by Georgia to the United States on condition that the Federal Government extinguish the Indian title within the State of Georgia. A means of settlement appeared unexpectedly with acquisition of the Louisiana Territory and President Jefferson suggested removal of the Indians to locations west of the Mississippi River. Although a few Indians moved westward voluntarily, the others refused and relatively little was accomplished during the next two decades. Lack of funds and conflicting claims also added to the difficulties.

In 1825 President Monroe told Congress experience had clearly demonstrated the impossibility of the Indians remaining within the present States. He recommended their removal westward where they could have adequate lands, and live in their own manner. Five years later President Jackson approved the act of May 28, 1830 (4 Stat. 411), "To provide for an exchange of lands with the Indians residing in any of the States or Territories, and for their removal west of the River Mississippi." Reelection of President Jackson by a decisive majority in 1832 indicated general approval of his policies for complete removal of the Indians from contact with the white civilization. These policies were spelled out in detail in the Non-Intercourse Act of 1834 which covered regulation of trade and social relationships with Indians living in Indian territory.

Isolation attempts failed when southern and Lake States tribes resisted efforts to make them leave their homelands. Also national confidence in a policy of enforced removal was shaken by the tragic experience of the Cherokee Nation. After 23 years of negotiations and repeated treaties providing for removal further west, the Menominee tribe in 1854 was given a permanent reservation within their ancestral homelands in Wisconsin.

SEGREGATION

In the two decades immediately preceding and following the War Between the States, many people concerned with Indian affairs came to the belief that the tribes should be located permanently on reservations which contained only enough land for actual occupancy; the land should be assigned to them in severalty (severalty—Webster: "In or of one's own right." As distinguished from the usual communal ownership of tribal Indians), and the Indians required to live upon and cultivate the tracts assigned; and sufficient materials and equipment should be provided to enable the Indians to establish themselves as farmers. This concept developed partially from the pressure of immigrants for new land; from a feeling that the Nation's strength lay in widespread ownership of individual farms; and from attempts to confine certain nomadic and warlike tribes within definite bounds.

Construction of transcontinental railroads, the accelerated westward march of western civilization, and the continually rising tide of immigration established the belief that Indians could not be segregated indefinitely from non-Indians. Proponents of allotment became the dominant force and in 1887 secured passage of the General Allotment Act.

ASSIMILATION

New concepts do not spring forth ready-made and this change resulted from previous experiments over a period of 70 years.

As early as 1817 Congress permitted warriors who had assisted the United States in the Creek War to select 640-acre tracts for use so long as they continued to occupy the land. In the same year a treaty with the Lower Cherokees contained similar provisions. Subsequent treaties with other tribes often provided for grants of land to chiefs and subchiefs, perhaps as an inducement to accept the treaties.

The growing sentiment for individual allotments is indicated in Commissioner T. Hartley Crawford's report of 1838: "Unless some system is worked out by which there shall be a separate allotment of land to each individual whom the scheme shall entitle to it, you will look in vain for any general casting off of savagism. Common property and civilization cannot coexist."

Congress accepted the suggestion and in 1839 granted the Brotherton Indians free title to individual shares of land in Wisconsin. Apparently the result was encouraging because similar action was taken with the Stockbridge Indians in 1843. Both tribes were given the full rights and privileges of citizenship. A later report indicates that by 1872 more than half of the Stockbridge Indians had decided to take shares of tribal property.

Although reports in the 1870's disclosed that many Indians were disposing of earlier allotments at a fraction of their real value, the conviction continued to grow that civilization was not possible without individual ownership of land.

The General Allotment Act of 1887 provided for the allotment of land suitable for agriculture or grazing within the various reservations in quantities of 160 acres each to heads of families, 80 acres each to single persons or orphans, and 40 acres to each minor child; the issuance of patents to be held in trust for a period of 25 years; and purchase by the Government of excess reservation lands not allotted for the sole purpose of securing homes to actual settlers. On some reservations, over 50 percent of the acreage was declared surplus. Half a century later the unclaimed residue of surplus land was returned to tribal ownership under the Wheeler-Howard Act of 1934, some as recently as 1950.

Although some Indians favored allotment, particularly mixed bloods and others with personal interests, opposition persisted for years in various tribes. The Menominee, Red Lake, New York, and most Southwestern reservations, for example, still remain completely in tribal ownership. The Klamath Indians, however, accepted 775 allotments between 1887 and 1897.

Unforeseen problems began to arise almost as soon as the General Allotment Act was passed. Some allotters could not work their lands because they lived somewhere else, had only a fractional interest in the land, were too old, disabled or otherwise incapable. Also many did not know how to or wish to farm. Furthermore, most grazing allotments were too small for an economic

unit. Consequently, when Congress provided for leasing in 1891, many Indians turned to this method of management. Efforts to prevent indiscriminate leasing resulted in great confusion, a condition soon intensified by the inheritance of allotments. By 1900 thousands of inherited tracts were unattended and year by year heirship problems became more complex. In order to make productive use of the land and to provide for the needs of elderly people Congress, in 1902, authorized the Secretary of the Interior to make sales under certain conditions.

Within the next few years a number of acts, pertaining to specific reservations, provided for allotment and opening to settlement or sale of the surplus lands. Indian holdings were disposed of rapidly under these various provisions, and by 1920 much of the better agricultural land had passed into white ownership. Between 1887 and the abandonment of the allotment policy in 1934, Indian reservations shrank from 138 million acres to 47,311,099 acres.

RESTORATION

Although the supporters of the General Allotment Act confidently had predicted that the "Indian problem" would be solved in 25 years, it eventually became apparent they had failed to foresee the conditions that would develop. Indications of an impending reversal of policy appeared in 1928 when Congress authorized the Navaho tribe to purchase 258,000 acres with tribal funds and to lease 460,000 acres of private land.

The new era, now referred to by some as a return to segregation, blossomed with the Indian Reorganization Act of 1934. This act, also known as the Wheeler-Howard Act, provided a new lease on life for the reservation system. It forbade further allotments of land; prevented future alienation of restricted tribal lands; restored to tribal ownership the remaining surplus lands of any reservation previously opened; gave Indians the right to establish corporations and made available a $10 million credit fund for the development of Indian resources; granted tribal councils greater authority; authorized the acquisition of lands and water rights; and made mandatory the practice of forest and range management. Acquisitions, which continued through 1948, aggregated 1.7 million acres. Restored surplus lands made up most of the balance and the total increased from 47 to 56 million acres before the tide turned.

All tribes did not accept the IRA act. Some felt it to be a step backward and others have stated since that it prevented Indian progress for 20 years.

The golden era ended in 1952 when the Bureau of Indian Affairs was instructed to terminate Federal supervision over Indians as rapidly as possible. The magnitude of the reversal is apparent by comparison with 1948, a year in which 2,500 acquisition cases were processed, 818,000 acres of open lands were returned to the Colville tribe and a proposal was made for a $25 million fund for acquisition of land and resale to the Indians.

At high tide, 1945 to 1950, Indian holdings were classified as 0.5 million acres in irrigated farms, 3 million acres of dry farms, 34 million acres of grazing land, 16 million acres of forest of which only 6 million acres were commercial forest, and 3 million acres of barren or waste land.

Since 1952 the issuance of patents in fee and sales of land have alienated an average of 400,000 acres annually. These actions have been taken at the request of the individuals or tribes concerned and have been stimulated greatly by the recent increases in land values.

Two very significant events occurred in 1938 and 1941 when the Supreme Court finally affirmed the complete ownership by the Indians of their lands; and rejected the legal theory that the Indians had only a right to use the lands held in trust status except where they had been bought and paid for. A third event, one which may have set a precedent for actions yet to develop, took place in 1940. Then Congress refunded the taxes thousands of Indians had been forced to pay when they were deprived without their consent, of a vested property right to a tax exemption. Numerous claims, beginning with the *Choctaw Nation* v. *United States* in 1881 (119 U. S. 1, p. 41) have repeatedly defined the legal and moral obligations of the Federal Government as a trustee of Indian property. Under one such action the Menominee Indians were awarded $8.5 million. These various actions and the fact that the Bureau of Indian Affairs is engulfed in some 3,000 land laws should be kept in mind in evaluating any proposals that may develop for disposal of Indian land. Somebody could get sued.

TERMINATION

Present plans for termination of Federal supervision over Klamath and other tribes did not develop overnight although the impact in some quarters may have seemed so. A treaty of January 31, 1855 (10 Stat. 1159), indicates a belief a century ago that the Wyandot Indians no longer needed Federal supervision. This treaty provided termination of their relations with the United States as an Indian tribe; subdivision of the land and patenting in fee simple to individual members; appointment of three commissioners to make a fair division; preparation of a tribal membership list; guardianship for those not competent to handle their own affairs; relief from taxation for 5 years after Kansas shall become a State; and the granting of full rights, privileges and immunities of citizens. The Ottawa and Chippewa Indians of Michigan and several other tribes also received termination of tribal relationships. Apparently all members of these tribes did not accept the new freedom, for in 1949 the Secretary of the Interior again relinnquished control over the Saginaw Chippewa Indians.

As long ago as 1910 some of the Klamath Indians asked to be relieved of Federal supervision. In 1928 a bill to create a Klamath Indian Forest, to be managed permanently by the Federal Government for the benefit of the tribe, passed the Senate but died in a House Committee. In 1930 incorporation of the Klamath Indian corporation was proposed. In 1946 and again in 1947 bills quite similar to Public Law 587 were presented to Congress. Many of the pros and cons heard today were thrashed over then. Later members of the Klamath tribes who were opposed to liquidation sought passage of a law which would authorize pro-liquidationists to withdraw from tribal membership and be paid 80 percent of the value of their individual shares.

Review of these various proposals and the hearings contained in House Report 2503, 82d Congress, 2d session (1947) clearly indicates that the proponents for termination of Federal supervision over the Klamath Indians have won that battle. There will be no turning back. The choice now is, immediate termination or delay.

The 1947 Klamath bill was a test case as similar proposals had been offered for the Menominee, Osage, Turtle Mountain, Potawatomie, Mission and other California groups. Significantly, House Report 2503 stated: "The decision of Congress on Klamath Indians may thus be seen to be of major importance not only for that group but for the American Indians in the country generally."

These then are a few, a very few, of the events leading to House Concurrent Resolutions 108, 83d Congress, 1st session (August 1, 1953) which states:

"Whereas it is the policy of Congress, as rapidly as possible, to make Indians * * * subject to the same laws and entitled to the same privileges * * * as * * * other citizens * * *, to end their status as wards * * *, and to grant them all the rights and prerogatives pertaining to American citizenship; * * * be it resolved that * * * all the Indian tribes * * * of California, Florida, New York and Texas * * * should be freed from Federal supervision and control." The Flathead, Klamath, Menominee, Potowatomie and Chippewa tribes are also named.

House Concurrent Resolution 108 triggered termination laws for Menominee, Klamath, Alabama-Conshatta, Uintah-Ouray, Peoria, Wyandot, Ottawa, 4 Paiute bands in Utah and some 50 western Oregan bands. Reports from several sources indicate that termination plans for the Alabama-Conshatta, Paiute and western Oregon bands have been completed successfully. Only Klamath and Menominee, significantly the two containing a valuable resource, have run into trouble. Here the ancient, basic struggle for control of the land and its resources comes to the fore.

This same struggle will reappear when Federal supervision is removed from other valuable Indian lands. Already the Colville Indians in Washington have been instructed under Public Law 772 of July 24, 1956, to submit within five years proposals for removal of Federal supervision within a reasonable time thereafter. Will resource planners be ready when the time comes, or will we continue to stumble along, reeling from various pressures, as we have for so many decades, nay, centuries past?

It would be helpful now if someone, a decade ago, had heeded the clear signals of impending liquidation of the Klamath reservation. Somebody should have started a comprehensive economic study of the Klamath Basin to determine the role of the reservation in the overall economy. Such matters as soil capability, future land use, industrial and agricultural development, the tax base, the ownership pattern and dozens of other factors need to be weighed and balanced with each other. From such information a zoning plan for land use might be developed.

Today some of the timbered portions of alienated allotments on the reservation are being cleared for pasture. Question: Is timber or forage the best product of these soils? If it's timber, it will take 150 years to grow a new crop after somebody discovers the mistake.

Some other people wish to drain the wet lands on the reservation for grazing purposes. Again we ask, what is the best product and which is needed most—grass, water, or wildfowl?

Fundamentally the questions regarding disposal of the Klamath Indian property are another evidence of the tremendous pressures exerted upon the Nation's natural resources by a rapidly expanding population. Other friction points known to all include such things as the million acres being absorbed annually by new urban, industrial, highway, and other uses; land withdrawals for military use; wilderness needs; loss of valuable agricultural and forest land in flood-control projects; drainage of the nesting grounds of migratory waterfowl, to name just a few.

The American Forestry Association believes that thorough study of future needs and planned use of all the Nation's resources to meet these needs is mandatory. To that end the association has launched a land ownership study in California. The results are being awaited eagerly in the hope that there will be clearcut suggestions for national application. Meantime thorough planning for all social and economic adjustments incident to removal of Federal supervision over Indians should be accomplished before other tribes embark upon the termination trail.

Address by Hon. John M. Butler, of Maryland

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. PELLY. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an important address delivered by the Honorable JOHN M. BUTLER, the distinguished senior Senator from Maryland. This speech was given at a dinner of the Port of Washington, District of Columbia, Propeller Club on National Maritime Day, May 22, 1957. The Senator's remarks on our merchant marine and in particular in reference to the Panama Canal merit the careful reading of all Members of Congress.

The address follows:

Mr. Chairman, members of the Propeller Club, ladies and gentlemen, I always look forward with a great deal of pleasure to Maritime Day. It gives me an opportunity to renew old friendships in the maritime fraternity and, I hope, to make some new ones. And it usually affords an opportunity to talk a little about maritime matters.

This evening, there are several thoughts I should like to discuss with you. But before so doing, may I join with you in paying tribute to the steamship *Savannah*. One hundred and thirty-eight years ago today—on May 22, 1819—she left her home port of Savannah, Ga., on the first transocean voyage by any steamship. Twenty-five days later she arrived in Liverpool.

It took the Congress somewhat longer to recognize the significance of that historic voyage. One hundred and fourteen years later—to be exact, in 1933—the Congress finally passed a joint resolution designating each May 22 as National Maritime Day.

Think for a moment what a lonely, dangerous, and great adventure for American capital and American seamen that trip of the little steamship *Savannah* must have been. Remember, it took place only 7 years after the War of 1812. In those early days when sailing ships ruled the waves and steam vessels were considered infernal contraptions, I doubt that many people were as respectful of the owners, and officers, and crew of the *Savannah* as they should have been. Instead of recognizing them as forerunners of things certain to come, most of their contemporaries must have considered the *Savannah* and her crew outright freaks.

However, they are rightly honored today by countless celebrations all over the United States for the feat they accomplished and for their courage and wisdom. That courage and wisdom has been a sound investment and we as a Nation—and the entire world for that matter—are the beneficiaries of their brave deeds.

Now, my friends, I want to touch briefly on a few general matters of vast importance to the American merchant marine.

First, a word about American shipbuilding. Here we have much for which to be thankful.

However, with the shortage of steel plate as it is, we have nothing about which to be complacent. At last count, there were 118 oceangoing ships building or on order in privately owned American shipyards.

In addition, the Navy is now building 43 ships in private yards. Compared to the fact that in May 1954 not a single American yard had received an order for an oceangoing vessel for more than 18 months, I think we have done well in the short span of 3 years.

Within the framework of free enterprise, and without the need for governmental controls, the steel companies must produce the types and quantities of steel plate which our private shipyards must have if our ships are not to be built in foreign yards. I am confident that the steel industry will meet this pressing challenge.

I have been extremely pleased to observe that high-ranking Government officials and industry leaders are cooperating closely on many matters of advanced maritime research and development.

To overcome the tremendous competitive advantage possessed by foreign low-wage maritime nations, it is incumbent upon us to exploit to the fullest the advantages we have in the way of advanced technological know-how. Bold, brave maritime research, performed by private industry, with a maximum of Government cooperation, is needed now, more than ever before, as we stand at the threshold of replacing our war-built merchant fleet. Some of the same spirit and courage which brought about the epic voyage of the *Savannah* will serve us well in these days when we are trying to design and build ships, and shoreside facilites, to serve—continuously and effectively—the commercial and defense needs of this country.

Our tramp fleet is doing well—all things being considered. Unfortunately, the tramp owners are not replacing their fleets with vessels built in American yards. In fact, what profit they are now making comes from cargoes they obtain under the provisions of the cargo preference, or 50–50 bill. This I firmly believe. These cargoes, as you know, are generated in large part by Public Law 480, our surplus agricultural disposal program.

The continued existence of our tramp fleet depends in large measure on the preservation and perhaps extension of our cargo preference bill. For that matter, the continuation of what prosperity our subsidized lines are enjoying also depends on this vital law.

A word concerning the cargo preference bill.

First, it is my present intention to introduce later in this session of the Congress a bill which will require that at least 75 percent of all Government-financed cargoes must be carried aboard privately owned American-flag vessels. Such a measure seems fully justified. First, cargoes generated by our own Government should be carried in major, not equal, part by privately owned vessels flying our flag if they are available to perform the service at market rates reasonable for such vessels. Second, I am hopeful—and perhaps this is wishful thinking—that foreign aid, especially that of a non-defense nature, will in the near future take a sharp decline. I cannot believe that the American taxpayer is going to stand for many more shipments of jet planes to Yugoslavia, and the like.

If foreign aid declines, thereby making it possible to give some long-overdue tax relief to our people, there will be less giveaway cargoes carried by our own vessels unless we boost their share.

In the hearings which should result from the introduction of such a bill, I will be particularly interested to learn how the Government agencies charged with the administration and implementation of the present cargo preference law are in fact carrying out their responsibilities. There are rumors that one or more construe the law as authorizing them to refrain from offering Government-generated cargoes to American-flag vessels in excess of 50 per cent of such cargoes. Certainly it was the intention of the Congress that the requirement that at least 50 per cent be carried by American-flag vessels would establish a minimum and not a ceiling on the American-flag share.

If administrative abuses are taking place in disregard of the spirit of the Congress and the express language of the statute, now is the time for the Congress to take appropriate steps to put an end to these practices and omissions.

In this inquiry, it will be important to ascertain how the agencies administering and implementing the present cargo preference law go about offering American-flag vessels their share. I would think it grossly unfair for an agency to first assign 50 percent of the tonnages to foreign-flag vessels; and thereafter offer, on a short-notice basis, the remainder to American-flag ships. Such a practice undoubtedly would afford the American-flag vessels too little time to make adequate arrangements. It would prevent them from preplanning their participation and might cause undue rate squeezes.

Such a practice might give an unsympathetic agency an excuse to grant or recommend waivers, thereby permitting shipment via foreign-flag vessels. If this practice exists, it must be stopped.

And ladies and gentlemen, these hearings should establish the policies of the agencies in allocating cargoes as between conference and nonconference United States lines.

I would be remiss this evening if I did not say a word or two about the splendid job done by the administration—legislatively and administratively—to encourage American-flag lines to begin an orderly, phased replacement of their war-built fleets. As we all know, probably the most serious problem confronting the American Merchant Marine today is the orderly replacement of over 1,000 privately owned vessels by the end of 1966. Over 900 of these vessels will be 20 years old, or older, between 1962 and 1966. Firm commitments for the construction of at least 21 ships have already been made; and, with such well-conceived plans as its "trade-in and build" program, the Maritime Administration and the shipping industry are intelligently facing up to the problem.

Now, ladies and gentlemen, I would like to direct your attention to a certain matter which I believe vitally affects the defense of this Nation—a vital matter which could directly affect the American Merchant Marine. I refer to the recently accelerated campaign to bring about the internationalization of the Panama Canal.

One of the greatest maritime investments of the United States was the Panama Canal. It has proven indispensable to our maritime commerce and to our national defense.

On May 6, 1957, in my weekly newsletter, I predicted, and I quote: "With jurisdiction of the Suez Canal still in delicate imbalance, it can be anticipated that the call for internationalization of the Panama Canal will soon be sounded by the far left quarter of the political spectrum."

We did not have long to wait. According to the Washington Star of May 8, 1957, the cry to give away the Panama Canal was made on May 7 right here in Washington.

Dr. Norman Cousins, editor of the Saturday Review, declared in all seriousness that America should give up control of the Panama Canal and place it under the jurisdiction of the United Nations; the United Nations, let us not forget, where Soviet Russia has equal voting power with the United States in the Security Council and where she can completely frustrate the work of that body with the veto.

Dr. Cousins saw what he considered a "fortunate" opportunity for the United States to show the world that it practices what it preaches in insisting on the internationalization of the Suez Canal.

Disregarding the completely different historical backgrounds of the two waterways, he expressed the belief that, and I quote: "We are in the fortunate position of being able to use the canal" to help bring peace to the troubled Middle East. To continue quot-

ing: "Our relations with the Arab countries would profit more from such an example than from the kind of military aid that is now being sought," Dr. Cousins claimed.

This dangerous brand of naive idealism during these perirlous times when hard-headed realism should be at a premium must not be allowed to gain the upper hand in the conduct of our international affairs. I will go even further and say that if the United States internationalizes the Panama Canal at this dangerous juncture in international relations it will sign the death warrant for the entire Western Hemisphere.

As a passionate advocate of world government, Dr. Cousins has often proposed fuzzy-minded schemes, designed to relegate the United States to the position of a mere vassel state in a world government where we would pay the lion's share of the cost and be out-voted on every issue. Of course, if one is willing to give away the entire country, it is not surprising that he might also want to give away the canal.

There is little or no analogy between the Panama Canal and the Suez Canal.

The juridicial basis for American control of the Panama Canal rests in three important treaties; 1901, 1903 and 1914.

There is one overriding fact which must be kept ever in mind: The Panama Canal and the Panama Canal Zone for all practical purposes is the sovereign territory of the United States of America. The United States has permanent rights to occupy, use, and defend the area; and the canal is available to the commercial vessels and warships of all nations, without discrimination, except during wartime.

We foresaw its importance and under the inspired leadership of Theodore Roosevelt and Col. George W. Goethals of the Army engineers, dug it, paid for it by the terms of the treaty, and authorized its secured sovereignty under the Canal Zone until the end of time. Any attempt to abrogate or nullify that treaty is strictly an affair between the United States of America and the Republic of Panama and no unilateral decision can be made to change the status quo.

No other nation or combination of nations—and this would include the United Nations—has a right or even the legal means to upset this status quo.

The Suez Canal, on the other hand, has been operated by the private corporation which created it. This company is incorporated in accordance with the laws of France, has Egyptian nationality, and is international in character. It held concessionary rights to operate the canal until 1968, after which the waterway was to revert to the Egyptian Government.

The net investment of the United States in the Panama Canal, which has been called the greatest engineering feat of all times, as of June 30, 1955, was $368,004,765. To this staggering sum must be added the very heavy costs over the years for the maintenance of the Armed Forces on the Isthmus for defense purposes.

The Suez Canal, on the other hand, is a 105-mile lockless waterway cut across barren desert land and cost only about $92,414,000 to construct. The cutting of this channel across the Isthmus from the Mediterranean to the Red Sea, was mere child's play, compared to the construction of the Panama Canal. In fact, when the work at Panama was at its height, the American Government was excavating the equivalent of a Suez Canal every 15 months—and it took 10 years to build the Panama Canal.

To claim that because the United States advocates the internationalization of the Suez Canal it must, to be consistent and show good faith and to earn good will, internationalize the Panama Canal, is utterly ridiculous.

If this brand of perverted logic is to be the criteria for the conduct of our affairs, then the next step would be to internationalize the Erie Canal or the St. Lawrence Seaway. I have no doubt but that some of our more dedicated internationalists would rejoice if we did just that. But so long as I am a United States Senator, I shall jealously guard the sovereign rights of this Nation and its pledged word in treaties with other nations.

I can readily understand the motivation of some of those in our midst who would like to see the most valuable maritime possession of the United States lying outside its continental limits internationalized. For it is an established fact that it is a fundamental object of Soviet Russian foreign policy to place the Panama Canal under Communist control.

There have been reliable reports that, to accomplish this, Communist agitators, trained at the State College of Political and Economic Science at Prague, Czechoslovakia, the propaganda educational center of international communism, are being sent to Central America to direct it.

This dedicated effort of international communism to wrest control of the canal from the United States is not something new or novel.

On March 25, 1954, before the Internal Security Subcommittee of the United States Senate, Mr. Spruille Braden testified that this Communist agitation has been going on for some time. Mr. Braden, our former Ambassador to Colombia and former Assistant Secretary of State for Latin American affairs, said, and I quote: "Going back to 1941, when I was in Colombia, I began sounding warnings to the State Department about the menace of communism in this hemisphere, and during the war—1943 and 1944—there were repeated dispatches in which I said that this is the gravest peril we face and that after the war it is going to be most serious."

Then Mr. Braden revealed to the subcommittee evidences that pro-Soviet officials of the State Department tried in vain to sabotage America's interests in the Panama Canal through the United Nations.

We have seen in the past 10 years the deadly tentacles of international communism spread first over eastern Europe and the Balkans; then over China; and then into southeast Asia. Now we see these tentacles probing the Middle East and Africa. The wanton death, destruction, and human slavery which they have left in their wake is a matter of history. We know the master-minds of the Kremlin have their eyes leveled on the Central American and South American land mass. We know that those deadly tentacles are probing in that area. A thrust was made in Guatemala only to be repulsed by the stout-hearted patriots of that nation. The key to the control of Central and South America—and eventually the United States—is the Panama Canal. If that waterway can be wrested from American control, Communist infiltration into this hemisphere would be made manifestly simple.

Free, uninterrupted use and control of the Panama Canal is absolutely vital to our domestic and foreign commerce.

It brings Seattle 7,800 miles nearer to New York; San Francisco 8,800 miles nearer to New Orleans; Honolulu 6,600 miles nearer to New York than by the Strait of Magellan. With respect to the foreign commerce of this Nation and the free world, the importance of the canal is equally impressive.

The United States, by virtue of the Monroe Doctrine, has always assumed an inherent responsibility for the defense of the Western Hemisphere. The long journey of the U. S. S. *Oregon* around Cape Horn from the Pacific Ocean to the theater of the war with Spain in the Caribbean waters, in 1898, served to impress upon the American mind the absolute necessity of a canal across the Isthmus of Panama for this defense. Now that the canal has been built, it stands as a veritable Gibraltar for the American defense of this hemisphere.

This suicidal proposal to dissolve American control of the Panama Canal has been voiced by many Americans in high place and low. I do not charge that these people are necessarily pro-Communist. I do charge, however, that the proposal itself, should it be carried out, would place the right hand of international communism at the very throat of the Western Hemisphere.

Dr. Cousins, I am confident, is sincere in his proposal. I am sure that he is motivated by the highest ideals and seeks only a world of peace and harmony. However, these are trying times when dubious experiments in good will must not be allowed to take precedence over hardheaded realism. For the very survival of our Nation and the entire free world hangs in the balance.

Thank you very much.

Resolutions on the Panama Canal Situation

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two resolutions with respect to the Panama Canal situation—one from the Panama Canal Society of Chicago and the second from the New York Society of the Panama Canal:

RESOLUTIONS RE PANAMA CANAL BY THE PANAMA CANAL SOCIETY OF CHICAGO

Whereas the Panama Canal situation has been dangerously simmering for over 2 years without constructive results; and

Whereas the inadequacy of the Panama Canal to meet increasing traffic requirements has become more and more acute and the absolute need for a speedy determination of the overall subject is of the most vital importance; and

Whereas there is developing a determined movement to force the Congress into authorizing a sea-level canal and to which radical change practically all engineers familiar with local Canal Zone conditions are unalterably opposed as a dangerous and costly experiment not warranted or supported by experience gained over 42 years of Panama Canal operation and maintenance: Therefore be it

Resolved by the Panama Canal Society of Chicago at its 34th annual reunion at Chicago, May 4, 1957, as follows:

1. That the society respectfully and most earnestly urges the Congress of the United States to enact, without further delay, legislation providing for the creation of an independent Interoceanic Canals Commission to study and review all the problems involved in the matter of increased capacity for the canal, with recommendations in the premises.

2. That copies of this resolution be furnished the press and the Members of Congress.

The Panama Canal Society of Chicago consists almost entirely of men and women who worked on the construction of the canal between the years 1904 and 1914.

Since the founding of the society 34 years ago we have met annually in Chicago to renew old acquaintances and relive experiences of canal days. Our interests in the future of the Panama Canal are inherently paramount.

F. S. WICHMAN,
President.
H. L. STUNTZ,
Secretary-Treasurer.

RESOLUTIONS RE PANAMA CANAL BY THE NEW YORK SOCIETY OF THE PANAMA CANAL

Whereas certain prominent individuals and groups have advocated internationalization of the Panama Canal for divers and naive reasons; and

Whereas considerable agitation is being fomented in Panama for the nationalization of the canal or for vast increases in the annual payments to the Republic of Panama above those now provided in the existing treaties; and

Whereas the advocates of a sea-level canal are constantly pressuring the Congress to authorize this futile and extravagant adventure; and

Whereas it is apparent that transit facilities of the canal will be inadequate in the near future and that increased capacity should be studied now and provided for by the Congress; therefore be it

Resolved by the New York Society of the Panama Canal at its annual meeting in New York, May 4, 1957, as follows:

1. That the society respectfully and most earnestly urges the Congress of the United States to enact, without further delay, legislation providing for the creation of an independent Interoceanic Canals Commission to study and review all of the problems involved and to report back to the Congress with its recommendations in the premises.

2. That copies of this resolution be sent to the authors, in the Congress, of measures providing for the creation of the proposed Interoceanic Canals Commission, and to members of the Congressional committees charged with the duty of considering legislation dealing with the Panama Canal, the metropolitan press and to the other Panama Canal societies in the United States.

R. W. HEBARD, *President.*
JOHN J. FITZPATRICK,
Secretary.

Postage Rates on Second- and Third-Class Mail

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. POFF. Mr. Speaker, upon request, I herewith submit for inclusion in the RECORD a resolution adopted by the Virginia State Convention NALC at its meeting in Roanoke, Va., on May 5 and 6, 1957.

Whereas the average revenue per handling of each piece of mail in the post office during fiscal year 1956 was one-third cent per piece; and the loss on the handling of second-class mail was $231 million out of a deficit of $464.9 million; and

Whereas although postal pay and the postal deficit are unrelated; the deficit is a constant factor in our efforts for equitable pay and better working conditions; and

Whereas regardless of opinion as to whether the post office should be operated as a public service or on a break-even basis, the second class and third class users are a minority of postal patrons and use the mails on a profit-making basis; and

Whereas the letter carrier has borne the brunt of the economy efforts for over 7 years in the elimination of two trips daily (more work at same pay), delay in route adjustments, delay in the payment of uniform allowance, and the delay in mail delivery from heavy days to light days (making all days heavy days). Now the dangerous and pernicious idea of five deliveries per week has been advanced; and

Whereas we believe that each user of the mails should bear a proportionate share of the cost of handling the mail:

Resolved, That our association be on record favoring substantial increases in postage on second- and third-class mail.

Reckless Farm Policy

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. SCHWENGEL. Mr. Speaker, a recent editorial in the Cedar Rapids (Iowa) Gazette of Sunday, May 19, points up some of the risks we run in the unsound way we try to handle the farm problem. I ask consent to have the editorial printed in the RECORD with the hope that it will provide the spark that is needed to get sound action as soon as possible. The editorial follows:

RECKLESS FARM POLICY

The vote last week in the House of Representatives to kill the soil bank by choking off its funds was more of an attempt to embarrass the Administration's farm program than it was an economy move. This was indicated by the report of the agriculture appropriations subcommittee headed by Representative JAMIE WHITTEN of Mississippi, which lashed out at Secretary of Agriculture Benson's handling of the soil bank in 1956.

Citing small results from the 1956 soil bank program, the WHITTEN report recommended cutting soil bank funds from the $750 million asked to $600 million for 1957 and $500 million for 1958. When the bill reached the floor, the House went farther and eliminated the entire soil bank appropriation.

In a sharply-worded letter to Representative WHITTEN regarding the committee report, Secretary Benson said:

"I am sorry to see that what might be expected to be a factual document contains so much argumentative and sometimes misleading material."

Replying to Whitten's criticism of little results from the 1956 soil bank program, Benson went on: "It must be borne in mind that the implementation of the soil bank program for 1956 was contrary to my expressed wishes. It was at the insistence of the House conferees that provisions were inserted in the Agricultural Act of 1956 requiring that the Secretary operate to the best of his ability a soil bank program for 1956. The conferees' report recognized that very little in the way of results was expected for 1956. The record on this matter is so clear that the failure of the Committee on Appropriations to recognize these facts is difficult to understand."

The soil bank has a number of weaknesses that should be corrected. But the soil bank still is the most promising approach to solution of agriculture's basic problem—too great productive capacity.

The law was passed by Congress only a year ago, with the support of both parties and all national farm organizations. The acreage reserve part of the bill, recognized as a temporary expedient for cutting down production, was to end with the 1959 crop.

Failure of Congress to pass a workable corn program earlier this year greatly impaired the effectiveness of the soil bank as far as the Corn Belt is concerned. It must be evident to even the program's severest critics that it has not had a chance to work. At that, the $600 million in soil bank payments last year represented almost exactly the gain in national farm income over the year before.

Perhaps the soil bank should be repealed. Perhaps someone can come up with a more effective and less costly method of adjusting United States agricultural output to effective demand and thus increase farm income and head off the threat of an agricultural depression.

If so, that decision should be made after careful study and consideration by the agriculture committees of Congress—not by a wild-swinging, spur-of-the-moment elimination of the appropriation such as took place in the House last Wednesday. Iowa Farm Bureau President Howard Hill rightly characterized that action as "inadvisable and irresponsible."

Address by Hon. James B. Utt, of California, at the Dedication of St. Judes Hospital, Fullerton, Calif.

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. HOSMER. Mr. Speaker, under leace to extend my remarks in the Appendix of the RECORD I include a dedication speech made by the Honorable JAMES B. UTT, of California, at the dedication of the St. Judes Hospital in the city of Fullerton, Calif.

I feel that it contains historical data of general interest and expresses the humanitarian spirit of our citizens for the welfare of their fellowmen.

The speech follows:

Mr. Chairman, His Eminence Cardinal McIntyre, Mother Superior, reverend fathers, Sisters of St. Joseph, ladies, and gentlemen, I am deeply and humbly grateful for the honor that you have bestowed upon the office which I represent and it is a pleasure for me to have a small part in this very happy occasion for the city of Fullerton and for all of Orange County. I offer my hearty congratulations to all of my friends here for their fine community spirit upon the erection of this hospital for the much needed community service which it will render.

The Sisters of St. Joseph of Orange are loved and admired throughout the State of California and have established an excellent reputation in Fullerton through the operation of their Santa Maria Convalescent Home and I know that the people of Fullerton are grateful that the Sisters have expanded their operations here to include this hospital of 127 beds and 32 bassinets. The dedicated Sisters of St. Joseph are carrying on the work and tradition begun by Father Serra over 180 years ago in this great State of ours. Under the direction and encouragement of Antonio Bucareli, the greatest viceroy which

Spain sent to the New World, Father Serra established the great chain of missions, from San Diego to San Francisco, to minister to the physical and spiritual needs of the native population. How many times Father Serra strode over this very highway between the Mission San Juan Capistrano and the mission at San Gabriel, none of us will ever know, but I do believe that he contemplated the very things that have transpired in this great State, including the hundreds of hospitals and churches, and to him should be given great credit for establishing the early Christian civilization of our State. That is why his statue is in the Hall of Fame in Washington. Perhaps he paused to rest on this very spot. I can see him sitting there, his eyes closed in contemplation, his face turned to Heaven, and saying, "Someday by the grace of God, there will be a house of mercy built upon this hilltop.'" Prophetic? Yes; but here it is.

It is fitting on this occasion, when the hospital is being formally dedicated in the name of St. Jude and thereby placed under his patronage, that we turn our thoughts to the life of this saint and recapture what little is known of his life through scripture and through tradition, and to thereby better understand the suitability of dedicating a hospital to him. I am not a theologian and, therefore, do not wish to be held in strict account for the impressions which I have gathered concerning him. Even the scholars differ somewhat in their interpretation of the scripture, but I shall choose to ignore controversy and uncertainty and to give you the impressions which I have gathered over the years.

Saint Jude is the author of the last and the shortest of the Epistles in the New Testament. He was 1 of the 12 Apostles and 1 of the 4 sons of Alphaeus. His family was a close relative of the Blessed Virgin Mary. His family name was Thaddeus and he was often referred to as Jude Thaddeus.

After the crucifixion and resurrection of Christ, Jude did not long remain in Jerusalem as did his brother, James, but, following the admonition of his Master, "Go ye into all the world and preach the gospel," he went into Mesopotamia and into Syria preaching the gospel, and proclaiming the acceptable year of the Lord, performing many miracles and converting many souls to Christianity among the gentiles. Tradition has it that he always wore the image of his Saviour upon his breast. One of his most noted miracles was the healing of the King of Edessa, to whom Christ had promised to send one of his disciples. The story is told that the King, having heard of the healing powers of Jesus, sent for Him to come to Edessa and cure him of leprosy. Jesus could not go at that time but sent word that he would send one of his Disciples. The King then sent a young artist to paint a picture of Jesus.

In the presence of Christ and beholding the light of His countenance, he became so entranced and so dazzled he could not paint a single stroke. Upon seeing this, our Saviour took the canvas, and held it in front of his face. The image was transferred upon it. It is believed that Jude was then commissioned to go to Edessa, although he did not leave until some time after the Resurrection. From there he went into Persia and joined another Apostle, Simon the Canaanite, where they continued to preach and to convert.

Saint Jude never referred to himself as a relative, but rather as a servant of Jesus Christ. He preached amid untold sufferings and persecutions in countries which had sunk into the depths of immorality and idolatrous worship. Magicians and high priests of idolatry tried to destroy the effect of these two great Apostles, but were unsuccessful. Jude was always considered a symbol of hope in healing the most desperate cases, he never failed to respond to the call for help by the hopeless, the sick and the dying, and like most of the disciples, his life came to a violent end through martyrdom. Both Jude and Simon met martyrdom together and therefore share the same feast day of October 28, as brothers in martyrdom and the Kingdom of Heaven,, not as brothers in the flesh, although he did have a blood brother by the name of Simon.

Tradition has adopted St. Jude Thaddeus as a patron of hope in desperate cases and it is most fitting that this hospital should be dedicated to him, for nowhere is hope more essential than for those who enter as patients and for those who labor in the hospital as doctors and nurses. They need to know with deepest confidence that we are all in the hand of God. They need the inspiring and vitalizing awareness that there is no illness nor injury that God cannot cure, whether through miraculous and spiritual powers or through the working of his providence through physical beings. We must always remember that He who permits suffering also supplies the grace and strength to endure it.

In this massive structure of steel and stone, are the gifts of the rich and the gifts of the poor, all cemented together by the sacrifice of the Widow's Mite, but steel and stone and the most modern equipment do not in themselves fulfill the demands of this or any hospital. It must have the skilled talents of the surgeon and of the doctor, the tender ministrations of the nurses and the dedicated spiritual inspiration of the Sisters of St. Joseph,, to complete the mission.

There are three distinct facets of such a hospital, yet all of them within the same solid sphere of human and spiritual service.

First, there are those who will enter this hospital, but will not return to their home and to their friends, but who will make final preparation for that long journey across the river which marks the boundary of that unknown land where they will go to dwell in the eternal mansions of Heaven. It is good that our Heavenly Father stretches forth his hand and gathers in His little children—that they may find a perfect peace and a perfect rest. While we who are left behind my grieve, we must remember that death is the beginning of a new and beautiful life and we may better understand what the Psalmist meant when he said, "Precious in the eyes of the Lord is the death of his Saints."

Second, there are those who will enter this hospital and through the surgeon's skill, the doctor's care and the dedicated ministrations of the nurses and of the Sisters, will be cured and will return to their homes and to their families, rejoicing.

There is a third facet which commands unbounded considerations of joy and hope, and that is the maternity ward. Here the noble and gallant mothers will enter into this hospital and give birth to the forthcoming generation. To witness this greatest miracle of God, creates within us a surge of faith and causes us to "lift up our eyes on high and behold who hath created these things," and to know that He hath made them a little lower than the angels and hath crowned them with glory and honor. What potential there will be in these 32 bassinets—or any 1 of them—perhaps another Einstein or another Lincoln—perhaps another Billy Graham or even a Bishop Sheen. Time only will tell. So, this hospital is dedicated to Saint Jude, the Patron Saint of Hope, and to those who will labor in this hospital, to those who will suffer and die here, to those who will suffer and be healed, but most of all to those babies who will be born in Saint Jude's hospital, may I give the concluding message of Saint Jude as given in the Saint James version of his epistle. "Now unto Him who is able to keep you from falling and to present you faultless before the presence of His Glory with exceeding joy, to the only wise God, our Saviour, be glory and honor, dominion and power now and ever. Amen."

Pensacola Fiesta

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. SIKES. Mr. Speaker, I had the pleasure of being in Pensacola for the annual Fiesta of Five Flags Festival last week and it was one of the most outstanding festivals ever held there.

I noted with great interest the excellent story by C. E. Wright on the Fiesta of Five Flags Festival held in Pensacola, Fla., May 15 to 19, which appeared in the Sunday, May 5, 1957, issue of the very fine newspaper, the New York Times, and I am glad to have it inserted in the CONGRESSIONAL RECORD.

The article follows:

PENSACOLA FIESTA—THE ANNUAL EVENT IN MID-MAY RECALLS CITY'S HISTORY UNDER FIVE FLAGS

(By C. E. Wright)

PENSACOLA, FLA.—Since 1950 this enchanted city, as its boosters call it, has been opening its spring and summer season with the Fiesta of Five Flags, a 5-day celebration which has become one of the best known of the country's historical pageants. This year it is to be held May 15 to 19. The fiesta commemorates Pensacola's colorful history under the flags of Spain, France, England, the Confederacy, and the United States.

A fact not widely known except by historians is that Pensacola was the site of the first colony established in what is now the United States, a distinction credited by many to St. Augustine. The Pensacola colony was founded by Don Tristan de Luna and his Spanish followers in 1559, 6 years before the settling of St. Augustine and 48 years before Jamestown. However, the Pensacola colony lasted only 2 years while the 2 other early settlements were permanent.

The Fiesta of Five Flags, however, is not wholly of a historical nature. It affords fun and gaiety for residents and visitors alike. It starts with a reenactment of the landing of de Luna, followed by a parade, the coronation of de Luna and his queen and a coronation ball. There is a succession of parades throughout the celebration. The Krewe of Lafitte holds a pirate parade, then there is a children's parade and finally the fiesta parade, which includes the Miss Fiesta beauty pageant. A Pan-American ball climaxes the 5 days of entertainment.

JET TEAM PERFORMS

There are other features. A parade of yachts precedes the landing of de Luna. Pistol championship matches, softball games and daily treasure hunts for both adults and children, a deep-sea spearfishing rodeo 10 miles off shore and outboard racing are included in the celebration.

The Pensacola Naval Air Station holds open house during the 5 days and presents an exhibition by the Blue Angels, a jet aerobatics team whose home base is Sherman Field here. Square dancing on the deck of an aircraft carrier rounds out the Navy's hospitality. Many of Pensacola's visitors at any time of year are those interested in aviation or who have friends or relatives at the

naval air station or at nearby Eglin Air Force Base, whose 465,000 land acres and 15,000 square miles of water ranges constitute the greatest air reservation in the United States. This home of the Air Proving Ground Command is a testing area for every type of aircraft and aerial weapons.

Aside from its preeminence in aviation, Pensacola has all of the things that vacationists look for—bathing, boating, and fishing plus a historical background that is entrancing for those who like to delve into such things.

DEEP HARBOR

A city of about 60,000, Pensacola is uniquely situated on the deepest natural harbor on the Gulf of Mexico, protected by the 60-mile long Santa Rosa Island, which stretches from historic Fort Pickens at its western tip to the fishing village of Destin at the eastern end. Between the island and Pensacola are Pensacola Bay and Escambia Bay and a peninsula which is traversed by U. S. 98, the route to Panama City.

Santa Rosa Island was the spot selected by de Luna for his ill-fated Spanish colony. It lay undeveloped except for Government forts for four centuries, accessible only by boat. Not until 1931 were bridges built from the mainland to the peninsula and from the peninsula to the island. A new bridge was built several years ago, from which time the development of Santa Rosa Island as a resort area has proceeded at a rapid rate. It still lacks sufficient accommodations for its increasing tourist volume, particularly in summer, but more facilities are in prospect.

There are about 40 miles of bathing beaches within easy reach of Pensacola, but Pensacola Beach and a new development of the Santa Rosa Island Authority are the most accessible. All of these gulf beaches as far as Panama City boast of the whitest sand, almost snow white, of any bathing beaches in the world. The white sand in the foreground and the green-blue clear water of the gulf make a natural color contrast of extraordinary beauty under a brilliant Florida sun. An unusual combination of bathing is afforded by this island, with surf on one side and still water on the other.

The Pensacola area is, in fact, a water paradise. The mainland is punctuated by several bayous, used for boating and fishing, and the Escambia River, while a little to the west is Perdido Bay, which separates Florida from Alabama. All this expanse of water together with the Gulf of Mexico just outside makes for excellent fishing, either in fresh or salt water.

Shrimp are netted from a small boat. Blue crabs are caught with dip net or trap. Cast nets are used to trap mullet in shallows and around piers. The Pensacola Fin Divers Association, a nonprofit organization, is promoting spearfishing, which is relatively new in this area. Information on this sport can be obtained from the association secretary, Mrs. Marie Dessell, who is an official of the Florida State and National Fin Divers Associations. For those who want quiet fishing at low expense there are several piers.

Fort Pickens itself is one of the interesting historic spots in this area. The Fort Pickens State Park of 1,659 acres occupies all the western end of Santa Rosa Island and within a single year has had as many as 400,000 visitors. It lies just 2 miles west of Pensacola Beach and can be reached over a good road, recently built. Its construction was started in 1829 and completed 5 years later. It withstood two bombardments during the Civil War. Between 1890 and 1900 it was modernized and was in active service until after World War II. Then it was abandoned by the Government and acquired by the Florida State Board of Parks and Memorials as a public park in 1949.

Byrd's Massive Resistance

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. ABBITT. Mr. Speaker, on Thursday, May 9, Senator HARRY F. BYRD made a very forthright and forceful speech in Norfolk, Va., before a meeting of the Hampton Roads Maritime Association. Senator BYRD's speech was commented on very favorably in an editorial appearing in the Portsmouth Star and Norfolk Ledger-Dispatch on Friday, May 10.

Under leave to extend my remarks in the Appendix of the RECORD, I include the editorial entitled "Byrd's Massive Resistance":

BYRD'S MASSIVE RESISTANCE

The case for opposition to the Federal civil rights program and the Supreme Court's integration decree has seldom been stated more strongly than it was stated last night by Senator BYRD before the Hampton Roads Maritime Association. In the Senator's view the integration decree is "singularly designed to destroy the oldest way of life in the Nation," the pending civil rights legislation is designed as "punitive legislation, to punish the South" for its resistance to this decree.

At the outset of the integration fight in Virginia—which is the spearhead of the fight in the whole South—Senator BYRD called for massive resistance to the Supreme Court decree. He has not deviated from that position. The Virginia plan of resistance to enforced school integration rests largely upon the Senator's concept of the right of the States to oppose the Supreme Court, even to the point of defiance, so long as it is done without violence or attempt to overthrow the Government.

The Senator confined his discussion of the civil-rights legislation to 1 of the 15 or 20 civil-rights bills which have been introduced in Congress. This bill would establish a special bureau in Washington, for handling civil-rights suits. Under this arrangement the right of trial by jury would, in effect, be eliminated in cases of alleged violations of civil rights. Senator BYRD, and others, taking note of the threat of this legislation to one of the fundamental liberties, has introduced legislation to guarantee a trial by jury in cases which the civil-rights legislation would impinge upon that right.

Proponents of the injunctive process, under which civil-rights complaints would be heard by a Federal judge, contend that this remedy would be free of prejudice and bias sometimes shown by local juries. "But," the Senator noted, "they fail to take into account the situation and possible prejudice of the judge." It was on a charge of arrogance and prejudice" that he based his criticism of Federal Judge Hoffman for his handling of one of the Virginia integration cases—the most severe criticism, the Senator said, that he had ever directed against a judge.

The Senator took note of the fact—which is one of the familiar facts of this struggle—that Virginia has been made the battleground of integration. The integration proponents know that if the barrier in Virginia falls, it will fall throughout the South, and the leadership in this fight is a part of the challenge with which Virginians are confronted.

It is the view of Virginia's veteran Senator, who is one of the South's most respected leaders, that the South should oppose the civil-rights legislation as an attack upon the very fundamentals of States rights. And it is his view that opposition to the Supreme Court integration decree should be carried, if necessary, to the point of defiance, short of violence. This is the "massive resistance" which the Senator counseled Virginia to impose against Federal encroachment. This is the weapon which is now being tried in the fire of rising battle in Virginia. Upon its effectiveness, in Senator BYRD's view, will rest the future of the State's public education system, as well as the very integrity of government by the States.

Hearings in Gary, Ind., by House Foreign Affairs Subcommittee

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. MADDEN. Mr. Speaker, the following is testimony of Orvall J. Kincaid, subdistrict director of United Steelworkers of America, which was given before a subcommittee of the House Foreign Affairs Committte last Monday at Gary, Ind.:

MUTUAL AID ENDORSED BY STEELWORKERS

(Statement by Orval J. Kincaid, subdistrict director, United Steelworkers of America, Gary, Ind., before Subcommittee on International Organizations and Movements, May 20, 1957)

The United Steelworkers of America, representing the thousands of men and women working in and around the basic steel industries and the fabricating steel plants in Gary and the surrounding territory, realizing the part that our Nation must play in international affairs, is supporting a foreign economic program that will further the peace and security of our country.

We are greatly concerned over the aimless drift that has characterized important elements of American foreign policy in recent years, and we feel there is an urgent and desperate need for a foreign policy and program that is clear and consistent. Effective foreign policy cannot be improvised and piecemeal. Our foreign policy should have as its chief goals the mobilization of all of our country's moral and material resources for developing a system of international relationships to maintain peace, protect freedom and national security, and to enable a growing population to enjoy a rising standard of living.

Domestic strength is a vital factor of our Nation's international effectiveness and our country, in order to carry on an effective foreign policy, must be strong, prosperous, and free from any taint of economic, social, political, or racial inequality or discrimination. Therefore, integration of foreign, political, and economic policies is essential if the great technical resources and mighty industrial potential of the United States are to be geared to increasing the productivity, raising purchasing power, and improving the living standards, especially of those economically underdeveloped countries which are devoted to human liberty and peace.

We know that international communism is at work everywhere in undermining free institutions and the struggle to defeat this insidious conspiracy must be unrelenting. We know that communism is a false solu-

tion; we believe that democracy is the true solution. Communism is weakened when democracy is strengthened. The representatives of democracy must go out into the underdeveloped regions with specific plans, programs and projects to help raise living standards, for helping to end all colonialism, for winning these peoples as equal members of the free world community. Thus we will make it possible for them to have a stake in the defense of a civilization worth defending.

We must reject completely any and all forms of colonialism, and we express our satisfaction that the Government of the United States has been guided by the basic principles of democracy and self-determination in compacts between the United States and the people of the free world. The Western democracies should redouble their efforts to eliminate every vestige of colonialirt practices in the vital regions of the Middle East. Our Government must seek genuine peace in the Middle East, and together with its allies and the United Nations, take positive steps to prevent aggression, improve the economic conditions of its people and to promote peaceful relations among its various peoples, based on mutual recognition of each other's national existence and territorial integrity.

We support the United Nations and its specialized agencies and believe that efforts should be redoubled to build the United Nations into a more authoritative and effective institution for maintaining world peace and promoting the fundamental human rights proclaimed in the Charter of the United Nations. We regret that our Government has often been reluctant to meet head on the attacks of the diehard isolationists against the International Labor Organization, the World Health Organization, the United Nations Educational, Scientific and Cultural Organization, and other specialized agencies of the United Nations.

We must continue to seek effective world disarmament, with adequate international inspection, control and supervision, backed by sanctions—not subject to the veto—for all violators. In the meantime we must maintain sufficient military strength to deter, and if necessary, to defeat aggression. We must be prepared to meet any form of totalitarianism, whatever it may be, with vigor. We must maintain our guard against the constant threat of Communist aggression and subversion. While never closing the door to negotiations with Moscow, we must never appease. At the same time, every effort should be made to insure that atomic energy be devoted to the fullest international benefit of mankind.

We reiterate our approval of the program proposed by the steelworkers' president, David J. McDonald, as a member of President Eisenhower's Commission on Foreign Economic Policy, calling for expansion of world trade, and aiding the workers as well as the industries which, as a result, suffer temporary dislocation. In order to make possible an expansion of foreign trade without incurring undue injury to American workers, industries, and communities, we urge Government assistance in aiding the adjustments necessary for increased imports. We will continue to support bills introduced in both the House and Senate to implement this program. Our ideas on this matter also have been substantially incorporated in a Federal legislative program to aid depressed areas.

We also give our full support to the continuance of technical assistance programs, both United States and U. N. sponsored. These programs are doing a vital job in the training of needed skills around the world. However, American labor also recognizes that this development of new and needed skills can be explosive unless these people are encouraged and enabled to use these skills. This requires development capital. Industrial expansion may attract private capital, but funds for the substructure which is a prerequisite to industrialization are and will be much more difficult to acquire from private sources. We believe that the wealthier nations of the world must help to supply the capital for this substructure. It is for this reason that labor, not only in this country, but through the International Confederation of Free Trade Unions, also supports the proposed Special United Nations Fund for Economic Development.

The technical assistance program is one way by which the more prosperous countries can meet the desires and demands of their neighbors for a better life. As long as these desires remain unsatisfied there can be no secure peace in our tightly integrated modern world. We are obliged, for the common good of mankind, to aid our brothers everywhere, as our means allow, and to share with them the material and spiritual wealth and strength which God, the Father has bestowed upon us.

Problems of Irrigation in the Northwest

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given by Commissioner W. D. Dexheimer in Portland, Oreg., April 27, 1957:

REMARKS BY COMMISSIONER OF RECLAMATION W. A. DEXHEIMER BEFORE THE LUNCHEON MEETING OF THE PACIFIC COAST FUEL OIL DEALERS ASSOCIATION AT THE MULTNOMAH HOTEL, PORTLAND, OREG., APRIL 27, 1957

The subject of water may appear to be far afield from the interests of an association primarily concerned with keeping the fuel tanks of homes and industries supplied with oil.

However, I am sure you are very much interested in keeping the flames of industry burning brightly and the demands for fuel oil from a prosperous citizenry on the upswing. If you are interested in these things, you are interested in water, because water is a key factor in the economy of all of these Western States on which your future depends.

Without water in plentiful and cheap supply, our agricultural production in the Western States would drop to almost nothing except for dryland crops which are the cause of some of our surplus headaches. Without maximum utilization of water, industry—particularly here in the Northwest—would slow up and some industry would die, just as would a growing plant when deprived of water.

For here in the Pacific Northwest, industry is fed by the kilowatts pouring out of Grand Coulee Dam and the other great multipurpose projects erected on the Columbia River and its tributaries. From the hydroelectric development of the Columbia River basin by the Government and the utility industry have come new plants, new payrolls, and new products. They have contributed immeasurably to the economic betterment of the Northwest and indirectly to the remainder of the Nation.

The Pacific Northwest is not alone in this economic betterment from development and use of our water resources. Just as Grand Coulee Dam is now supplying over 30 percent of the total power needs of the Pacific Northwest, so did Hoover Dam in the 1940's supply nearly one-third of the total power needs of the Pacific Southwest.

The growth of industry in the Pacific Southwest was sparked by the availability of low-cost power from Hoover Dam. It expanded so sharply in the last 2 decades that Hoover now supplies only about 15 percent of the power needs. Because the Pacific Southwest is not so plentifully endowed with great rivers as the Columbia, the bulk of additional power is being supplied by fuel-burning plants.

While the Pacific Northwest has not yet exhausted its hydroelectric potential, the day will come—and it is not too far off—when more steam electric generating plants will be necessary in Oregon and Washington too. Contrary to some popular ideas, hydroelectric and steam-electric generation are not competitive. Actually they make ideal teammates because hydroelectric plants provide the peaking capacity. This is essential if steam-electric plants are to operate at full efficiency on the 24-hour day basis that brings their kilowatt-hour costs down.

I am not here today to talk particularly about power production. Hyroelectric power is low man on the totem pole of relative water needs in the West. Our more pressing needs are water for domestic use, water for irrigation, water for industry, water for fish and wildlife and recreation purposes, and water for navigation. Along with these goes flood control which can largely be accomplished by the coordinated process of storing water for useful purposes.

All of these water uses are essential to a well rounded western economy. They all have a place in the development of our water resources. I could go into detail on each of these uses, but I believe you are familiar with most of them. Those of you from the Los Angeles metropolitan area, for example, certainly know the importance of a domestic water supply and the lengths to which the Metropolitan Water District has gone to get it.

Their Colorado River aqueduct brings water 242 miles from the Colorado River. It has been recognized by the American Society of Civil Engineers as 1 of the 7 modern construction wonders of the United States, as has our own Bureau of Reclamation-built Hoover Dam on the Colorado River. Without the large reservoir at Hoover the aqueduct would not have been feasible.

Agriculturally, those of you from the Central Valley, and the Imperial Valley of California, and the Yakima Valley in Washington are well aware of the essentiality of water. Without water storage and distribution facilities these areas would be nothing but bleak sagebrush-covered rangelands. With a dependable water supply the agriculture income has provided a good portion of the purchasing power to make the Pacific Coast one of the top economic areas of the Nation.

Grand Coulee Dam and the Columbia Basin project are also 1 of the 7 construction wonders named by the American Society of Civil Engineers. A whole new irrigated agricultural empire is beng established on a million acres of what was formerly either dryland, wheatland, or sagebrush. An area which had a population of about 13,000 persons in 1930, now has a population of around 70,000, and this will likely double or better during the next 2 or 3 decades. This is truly a multipurpose project in its best wealth-creating sense.

Grand Coulee, built by the Bureau of Reclamation, is now supplying over 30 percent of the entire Northwest power.

The great shipbuilding and aluminum industries of this area and the Atomic Energy Commission installation at Hanford were located here because of the large low-cost

supply of power from Grand Coulee and Bonneville. Industrial growth has been good wherever water and power are plentiful.

Fish, wildlife, and recreation represent an industry most important in our Western economy. The Bureau of Reclamation has attempted to incorporate these into our planning and construction but we have been handicapped by a lack of statutory authority and we have had only very limited funds for their development.

Nevertheless, some of the best fishing and recreation spots in the Western United States are in and around reclamation reservoirs.

Legislation is now before the Congress which would give greater national recognition to providing fish, wildlife, and recreation facilities. It is supported by conservation organizations and several leaders of the Western congressional delegations.

I am reciting this brief review of the importance of these various functions in water resource development because they show the importance of multipurpose development. We can get a few of these benefits separately by designing individual projects for single purposes without consideration of the other needs. Such projects will also save a little on the initial capital outlay.

But balance the total needs against the relatively small benefits of unintegrated, single-purpose projects and you will understand the importance of multipurpose development. Water is simply too valuable, the pressures of various needs are too great to permit a single-purpose use where 2, 3, or 4 benefits can be accomplished.

Now, where do we stand on this multipurpose development of our water resources which means so much to the West. In the Pacific Southwest, development is fairly well along, thanks again to the multipurpose development of the lower Colorado River upon which southern California is so dependent as a source of water. There are several other projects in southern California, including the Santa Barbara, recently completed, and the Ventura project, now under construction by the Bureau of Reclamation.

In the great Central Valley of California the Federal Government and the State are each undertaking various phases of multipurpose water development. The Bureau of Reclamation has completed the initial phases of the Central Valley project, is at work on a diversion of Trinity River water into the Central Valley, and has before Congress for consideration another unit which will mean a supply of water for another half-million acres of land. The Bureau of Reclamation has spent an average of $25 million per year in California since 1935.

The State, in turn, has started planning for development of the Feather River as an addition to the California water plan to enable the State to make the maximum use of its water resources. Like most other States, California has more water still running away to the ocean unused than it now uses. This unused water creates havoc and destruction in its uncontrolled rush to the sea.

That State, because of its growing population and arid climate, probably has as pressing a need for water control and conservation as any of the Western States. Public bodies and private utilities have built hydroelectric and steam generation to provide for a coordinated economic growth.

Here in the Pacific Northwest, you are most fortunate in having the vast supply of water from the Columbia River and its tributaries. You have had extraordinary Federal participation in its development. In addition to Grand Coulee Dam and the Columbia Basin project, you have a whole series of other federally constructed dams and reservoirs on the Columbia River and its principal downstream tributary, the Willamette. Like the Central Valley, there are numerous single-purpose hydroelectric plants under construction by public utilities, including both privately financed and cooperative.

Despite expenditures over the years of upward of approximately $2 billion by the Federal Government, the development of the Columbia River Basin still has a long way to go. There needs to be additional upstream water storage for flood control and future consumptive uses as well as for the vastly increased firm power production that such storage will make possible. There are many hydroelectric sites which have not been developed, including those at proposed storage reservoirs and others which may be exclusively power projects.

One development which has aroused considerable controversy is that for the Hells Canyon stretch of the Snake River. The Hells Canyon project was originally proposed by the Bureau of Reclamation as a multipurpose unit of the comprehensive plan back in 1948. It was planned as a multipurpose project, the principal benefits of which would be flood control, power production, and revenue support for irrigation development. The revenue would help to finance the Mountain Home project in Idaho. As such it had the support of civic leaders of southeastern Idaho. Subsequently, the irrigation was stricken, making it solely a flood control and hydroelectric project. Most Idaho support was withdrawn as there remained only downstream benefits, even though most of the water would be contributed by Idaho and Wyoming from the headwaters drainage.

This change resulted in a controversy which has lasted for nearly a decade.

Three Congresses, the 81st, 82d and 83d, refused to act on authorizing legislation, for a Federal Hells Canyon Dam, and in the 84th Congress it was killed by the Senate. In the meantime, the Federal Power Commission issued a license for the development of this stretch of the river by a public utility for hydroelectric power. The license provides safeguards for integrated operation with the comprehensive river plan as were recommended by the Secretary of the Interior. This licensing action has been upheld recently by the Supreme Court and 1 of the 3 plants is now under construction.

There is opportunity and need for further downstream development. At the request of Secretary of the Interior Seaton the Bureau of Reclamation is now conducting a reexamination of the stretch of the Middle Snake River below the Hells Canyon site. We made a preliminary report on the Pleasant Valley and Mountain Sheep sites in 1954 and a further report in October 1956. A group of utility companies in 1955 requested a license from the Federal Power Commission to develop two single-purpose hydroelectric power projects in this same stretch of the river at Pleasant Valley and Mountain Sheep.

Others are advocating that in lieu of Pleasant Valley and Mountain Sheep, this whole stretch of the river should be reserved for later construction of the Nez Perce Dam.

This dam, Nez Perce, would be located on the Snake downstream from the mouth of the Salmon and Imnaha Rivers thus blockade these very important spawning rivers from the migratory salmon.

The proposed Nez Perce Dam and reservoir would have greater storage capacity by reason of backing water up not only the Snake River, but the Salmon River as well. On the other hand, there is little prospect of the Nez Perce Dam being authorized for a decade or more. Even though a satisfactory means is devised for transporting adult salmon upstream for spawning and trapping fingerlings for movement downstream around the barrier of a high dam, it will require 10 years or more through at least two cycles of the salmon's life to determine if this method is successful.

Nez Perce would also flood out the Pleasant Valley and Mountain Sheep sites.

We think we have an answer which will fit this stretch of the basin system into the comprehensive plan and will permit work to go forward immediately. On the other hand, if a deadlock develops, such as occurred on Hells Canyon, we are likely to go another decade without any useful benefits coming from this stretch of the river.

A preliminary report by the Bureau of Reclamation last October shows that a 690-foot-high dam at the Pleasant Valley site will provide a reservoir with 2,570,000 acre-feet of storage space, of which 1,300,000 acre-feet would be reserved for flood control. The appurtenant powerplant would have 1,250,000 kilowatts of generating capacity producing 4,830,000,000 kilowatt-hours annually. The reservoir would inundate the lowest of the three sites already licensed for development by the Idaho Power Co. but on which construction has not yet been started. We are now going forward with a feasibility investigation so that a final report on Pleasant Valley can be prepared. This project would be an immediate addition to the power supply of the Northwest. It would provide major flood control so badly needed in this area.

Arrangements are now being made for transporting migratory fish in both directions around the Brownlee Dam. The addition of Pleasant Valley Dam would only require a little longer haul. Migratory salmon runs in the Snake are small compared with the Salmon River so this reach of the Snake is a good place to experiment without serious consequence.

While only most preliminary data is available on Nez Perce, it appears a good project for flood control and power. However, until the fish problem is satisfactorily solved, if it can be solved, high dams are not practicable on the Salmon River. The solution seems at least 10 years away.

In the meantime, should development work on this important stretch of the river be halted? It need not be. If a high multipurpose Pleasant Valley Dam and reregulating reservoir at Mountain Sheep are built soon, the additional storage in lieu of Nez Perce Dam could be provided later by multipurpose reservoirs on the Salmon River. I emphatically add that dams on the Salmon River should not be undertaken unless and until a successful method is demonstrated to maintain that river as a spawning stream. I should remind you that the Secretary of the Interior, in cooperation with the States, has exclusive responsibility for protection and improvement of the fishing.

Idaho's interest in reserving water for future development and their future power needs should be protected. Their water rights must be assured and their future water needs protected. Not only Idaho but Oregon, Washington, Wyoming and Montana as well have thousands of acres of dry land which can be made more productive by irrigation. They have industries, cities and vast undeveloped minerals all needing water and power to continue their development and growth. The expensive multipurpose developments which will supply water for our growing needs requires financial assistance. This can be provided. A portion of the power revenue from the dams could be earmarked for assistance in upstream irrigation development. The establishment of a basin fund to which all of the federally constructed dams would contribute a share of their revenues for further water development is also under consideration.

I am speaking not of agricultural production now or five years from now or even 10 years. I am speaking of the future decades when our increasing population and decreasing farmland pose the threat of food shortages and spiraling food price unless we produce more from the good land we will have left. We are losing good farmland at the alarming rate of over a million acres a year to urban, industrial, highway and airport

expansion. Irrigation is one of the surest ways to increase and diversify farm production on our available acreage.

Finally, in discussing this needed water resources development, I want to state my own personal belief that there is a place in it for private enterprise, for local public groups, and for the Federal Government. I have mentioned the tremendous investment the Federal Government has already made in the Columbia River Basin. These sums must continue to be provided for many years to come if the Pacific Northwest is to realize the full benefits from its richest resource, the Columbia River system.

They might come entirely from the Federal Treasury but this is problematical, even though they represent an investment which will, for the most part, be returned with interest. As you know, the Federal budget and the taxpayer who supports it are both hardpressed. Economy in Government expenditure is a necessity. A more reasonable and likely solution would be to divide the burden between the Federal Government and the investing public.

Ways have been proposed whereby utilities, both publicly and privately owned, may participate in the financing of multipurpose projects and, in return, participate in the benefits by sharing the power output during the payout period. I believe this is the logical method to assure continued development and growth. A determination of policy or degree of participation as to individual projects would be the responsibility of Congress. We must, in the Federal Government, continue to operate in the framework of the laws the Congress has provided.

The important thing is that no stalemate develops in the orderly process of water resources development. The future economy of the West depends upon continued development and maximum use of our natural resources, especially water.

Roy E. Morgan, of Wilkes-Barre, Elected President of Pennsylvania Association of Broadcasters

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record on the election of Roy E. Morgan, broadcasting company executive, to the presidency of the Pennsylvania Association of Broadcasters:

Election of Roy E. Morgan, Forty Fort, as president of Pennsylvania Association of Broadcasters adds to the honors that have come to him through the years by virtue of his pronounced success in his vocation. He is executive vice president of Wilk and Wilk-TV. His station has been in operation 10 years. It is not new for him to be the head of the broadcasters' group for he was formerly president of the Penn-Del Broadcasters' Association. He has been serving as first vice president of the Pennsylvania association.

Many fields other than his own have known him as a leader. His directorships are numerous. He is past president of Family Service Association, chairman of the groups division of the United Fund and is past lieutenant-governor of the Kiwanis 15th District. He has been active in Sunday school work as a teacher.

Early in his career he was a member of the Record newsroom staff. He taught in Hanover Township schools for 2 years. His record as an educator includes administrative work with the undergraduate center of Penn State at Dubois and Hazleton and also at the university. For a time he was director of instruction at Yale University, and he served as an executive officer of the Office of Price Administration in Washington, D. C.

His is the second State presidency to come to a local resident this week. The other, as announced yesterday, went to Mrs. Norman F. Patton, the newly-elected president of the League of Women Voters of Pennsylvania.

Report on International Health

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. HARRIS. Mr. Speaker, as chairman of the Interstate and Foreign Commerce Committee, I have filed today with the House of Representatives a report on international health. The report summarizes testimony given by the Public Health Service and the Department of State at hearings held during the 84th Congress on the organization and financing of, and the participation of the United States in, international health programs.

On this occasion I released the following statement which explains the circumstances which led to the preparation of the report:

Congressman OREN HARRIS, Democrat, Arkansas, chairman of the Interstate and Foreign Commerce Committee, announced today the filing with the House of Representatives of a report on international health. The report summarizes testimony given by the Public Health Service and the Department of State at hearings held during the 84th Congress on the organization and financing of, and the participation of the United States in, international health programs.

"While at this time, the committee does not offer any conclusions with respect to the role which the United States plays in international health programs," Congressman HARRIS stated, "the programs are of such scope and far-flung character that it seemed appropriate to make public for the benefit of the Congress and the American people, this summary of testimony, thus bringing together in one place information available on the organization and financing of, and United States participation in, international health programs."

Congressman HARRIS pointed out that the release of this report coincided with the annual meeting at the Assembly of the World Health Organization in Geneva, Switzerland, in which Congressman JOHN E. FOGARTY, Democrat, Rhode Island, the chairman of the Subcommittee on Labor, Health, Education, and Welfare of the Appropriations Committee, and Congressman CHARLES A. WOLVERTON, Republican, New Jersey, the ranking minority member of the Committee on Interstate and Foreign Commerce, were participating as congressional advisors to the United States delegation. Mr. HARRIS expressed the opinion that Mr. WOLVERTON'S designation as one of the congressional advisors to this important meeting constituted a recognition of the committee's continuing interest in, and contributions to, the field of international health.

Congressman HARRIS called attention to the possible overlapping of activities of the several agencies operating in the field of international health. He stated that, while it appeared that substantial efforts had been made to avoid unnecessary duplication through full exchange of information and formal consultation among the officials concerned, it was not clear whether all had been achieved in this respect that may be desired. Congressman HARRIS indicated that the Committee would give its attention to this problem in its continuing scrutiny of international health programs.

Congressman HARRIS pointed out that the Committee on Interstate and Foreign Commerce has legislative jurisdiction in the field of health, and that in the exercise of its responsibilities in this field, the Committee in the past had frequent occasion to inquire into international health programs in different parts of the world. These inquiries included the operation of the Public Health Service in foreign countries, and the health and quarantine problems attending the facilitation of international air commerce. Previous reports of the Committee on Interstate and Foreign Commerce, however, dealt only with international health activities in particular functional fields or in particular geographic areas. The instant summary is intended to supply comprehensive background information for future inquiries in this field.

Remarks by Deputy Secretary of Defense Donald A. Quarles, Armed Forces Day Observance at Texas Technological College, Lubbock, Tex.

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. MAHON. Mr. Speaker, a few days ago I accompanied Deputy Secretary of Defense Donald A. Quarles to Lubbock, Tex., where he addressed the annual meeting of the Lubbock Chamber of Commerce on the evening of May 16; and on May 17 he delivered an Armed Forces Day observance speech at Texas Technological College.

The people of the Lubbock area were tremendously impressed with the personality and character of Mr. Quarles. They liked him very much, and they liked his speeches, giving him a wonderful hearing.

I would like to add that, in my judgment, Donald A. Quarles is one of the ablest men who has appeared on the Washington scene during my service in Congress. I have great admiration and respect for him.

I am inserting for printing in the RECORD his Armed Forces Day speech at Texas Technological College:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is a great honor for me to be with you here in Lubbock to participate in your Armed Forces Day celebration. We in defense have several very particular interests in Lubbock.

The first of these, and I am sure you will excuse an Air Force alumnus for placing it

first, is our Reese Air Force Base which has made such a great contribution to the training of pilots and the building of air power during and since World War II. During World War II, for example, approximately 7,000 fighter-bomber and transport pilots were trained at Reese Field. This was an important contribution to the successful task of building an air force second to none. Since World War II, Reese Air Force Base has continued in this role and with the same outstanding success.

The second of our particular interests in this community is Texas Technological College which is doing such a fine job of producing much needed engineers. It was my distinct pleasure earlier in the day to make a brief tour of this fine institution with President Jones, to meet some of the faculty and to see the facilities that have been provided. I was particularly interested to learn of plans for an engineering and research institute in the college, and wish you great success in this endeavor.

Coming to the Defense Department as I do from a life in the engineering profession, I naturally tend to emphasize in my mind the technical aspects of the defense business and the vital need in our long-range national security for a broad and expanding base in technology. During World War II, by mobilizing our vast industrial potential and with the closest support of our scientists and engineers, we were able to overcome the terrific head-start of the Axis nations and to emerge victorious from what was in the early days of the war a very discouraging situation. One might say that we were shielded by our oceans and allies long enough to give us time to build up the strength necessary to meet the challenge and to win victory.

In this very process of mobilizing science and industry to the needs of defense, however, forces were created which have now completely changed the national security problem. Our oceans are no longer a protection because, under the impact of science and technology, weapon delivery systems have been developed which can readily span them. And perhaps most important of all, the creation by scientists and the development by engineers of atomic explosives has made available weapons of previously undreamed of potency, millionfold, as compared with chemical explosives. Since science knows no national boundaries, these advances in weaponry have, for the first time in our history, exposed our homeland to the possibility of an instant, devastating and widespread attack.

It is this exposure and the measures we must take to meet it that I would like to discuss with you today.

First, let's take stock of the situation. The Soviets alone have over 170 divisions, more than 20,000 combat aircraft, and the second largest navy in the world, with over 400 submarines. The Communist Far East has about 200 divisions and over 2,500 aircraft. The Soviet satellites have about 70 divisions and some 2,500 aircraft. Not only are these forces impressive in size, but the Communists are also making impressive advances in the quality of their equipment. Their forces are being continually modernized with new jet aircraft, guided missiles and other weapons.

Moreover, their objectives have never changed. They have repeatedly announced the basic Communist doctrine of world domination. In spite of occasional peace overtures, their recent military actions in Korea, Indochina, Hungary, and Poland give a clear picture of their policy and intentions.

Our problem is to counter this growing Communist might with such forces as to convince them that they cannot to advantage exploit it by aggression against the free world position. What we require in order to maintain such a deterrent position is, of course, a matter of military judgment. It depends on many things, including the build-up and deployment of our own forces; the build-up and deployment of the forces of our friends and allies in the free world; and the build-up of striking power behind the Iron Curtain. Military authorities agree, I believe, that the collective strength of the Free World constitutes today a sound deterrent against Communist aggression. While this deterrent features the retaliatory striking power of our Strategic Air Command, it is much broader than SAC. It includes the great military power of all the tactical forces—land, sea and air—not only of our own military services, but of the whole free world coalition. Our problem is to maintain in the future what is today conceded to be a reasonably sound position.

It is the very rapid advance of technology that makes the maintenance of this position such a tricky problem. I have mentioned the great technological changes that have already taken place during and following World War II. It is the further similar changes which we cannot clearly foresee, but which we are sure will take place, that create the uncertainty in our future position vis-a-vis the Communist bloc. We are thus engaged in what we have sometimes called a technological race with the Communists. It is a race in which we started out with a very substantial lead—in fact, with a considerable degree of complacency. Post-war events have changed this. The Soviets have made very substantial progress and are whittling down our lead. They have done a very remarkable job of strengthening and extending their system of education in the physical sciences and in applied technology, to the point where they are today turning out competent engineers at a much faster rate than we are. So, you see why I say that we in Defense are so much interested in the work going on here in Texas Tech.

Maintenance of a strong deterrent position against a massive surprise attack, while it is our top priority requirement, is not the whole story because it deals with only one of the several possible Communist tactics. In pursuit of their avowed purpose of communizing the rest of the world, they might, if deprived of the massive onslaught approach, resort to alternative tactics. We must also be prepared to meet these alternatives.

One such alternative, in which practice has made them expert, is the infiltration and subversion of any marginal countries where their blandishments might be expected to succeed. Here, our response must be a long-term cooperative effort to create in any such freedom-loving countries the stability and economic vitality needed to thwart these covert maneuvers.

Another tactic, and closely related to this last one, has sometimes been called the nibbling tactic; that is, the probing of soft spots on our periphery, with the hope that our front could be ruptured without creating a cause for all-out war. Here again, our response must be to create such local military strength and such steadfastness of purpose as to defeat any such minor thrusts; in other words, to make sure that nibbling tactics will not succeed, and thus to require the Communists, if they decide to resort to force, to use enough of it to expose their aggressive intent to the rest of the world.

To further these national objectives, we have joined in defensive mutual security arrangements with many other freedom-loving countries. Collectively, we hope to extend to all the kind of security that we ourselves seek. This is not philanthropy. It is enlightened self-interest. Communist infiltration and subversion of such freedom-loving countries around the periphery could eventually bring the red tide to our very shores. Communist nibbling could erode and ultimately destroy our position. We must continue to help our free world friends and allies to be strong enough to resist such tactics.

There have been unfortunate misunderstandings about our military assistance programs and our mutual security concepts that I would like to try to clear up.

The objectives of our military-assistance program are: (1) To protect our bases overseas; (2) to support our collective security agreements, such as the North Atlantic Treaty Organization, and the Southeast Asia Treaty Organization; (3) to safeguard vital strategic supplies; (4) to build up military strength of allies; and (5) to accomplish these and other national objectives at least cost to the United States.

To illustrate this last point, our military assistance often makes it possible to accomplish United States objectives more economically than we could with our own forces. For example, it costs some $3,500 a year to clothe, pay, feed, and house a United States' soldier. The soldiers of some of our most effective and proven Allies cost only from one-fourth to one-thirtieth as much, so assisting them to build up their forces is a sound investment. Furthermore, their forces would be in a better position than ours to take care of their local and neighborhood problems.

Misconceptions also exist with regard to the extent of our participation in these mutual-security programs. For example, in the North Atlantic Treaty Organization, which is so vital to the defense of Europe, the United States contributed $12.3 billion in military assistance from 1950 through 1956. In the same period, these same European nations contributed $78 billion, or more than 6 times our contribution. Incidentally, during these same years, the total United States outlay for our own forces was about 20 times our NATO contribution. In my opinion, we are receiving great defense returns from our NATO investment.

This brings me to the very important matter of the budget. As you know, the Congress has been giving intensive consideration to the defense budget. I am sure you also know that your Congressman, GEORGE MAHON, is the chairman of the House subcommittee which is responsible for defense appropriations. I mentioned earlier two very special interests that we in defense have in Lubbock. I would now like to add a third. We feel particularly indebted to this district that it has sent to Congress a man of GEORGE MAHON'S stature. With his great knowledge of the business, his wisdom in handling complex questions, and his statesmanship in putting national security questions on the highest political plane, it is a great good fortune that he is where he is. I am sure his Texas background stands him in good stead because he has a mighty tough assignment. Just in case I might be accused of "apple polishing" in this connection, I want the record to show that, to the best of my knowledge and belief, Mr. MAHON'S committee has already completed the Defense appropriation bill that it will recommend to the Congress.

As the President said in his broadcast earlier this week, there is no cut-rate solution for our security problem. The Defense budget is large but the appropriations we are seeking in the coming year still do not provide for all of the forces and equipment which our military leaders feel they should have to perform their assigned missions. They can make a good case for a larger budget. While I am confident that by concentrating on the essentials and making all possible economies throughout the military establishment we can carry out our responsibilities in the year ahead, any substantial cuts in these estimates would be a gamble with the safety of our country. As Secretary of Defense Charles E. Wilson, stated recently—"In my opinion it is a peril-point budget and should not be cut."

We must all recognize that we are in a dollar squeeze produced by the ever-increasing requirements to meet the Communist competition on the one hand and mounting Defense costs on the other hand. To cite a few examples, unit production costs are continuing to rise and our weapons are becoming increasingly complex. A modern all-weather fighter, for example, carries over a ton of intricate electronic equipment. Modern aircraft cost 10 to 30 times as much as their World War II counterparts. We, nevertheless, have to have the improved equipment since the World War II counterparts would be useless in the present environment. Housekeeping and maintenance costs for bases, facilities, units and equipments all over the world are high and there is no readily available formula for reducing them if we are to meet our commitments.

Regardless of problems, the Nation must afford an adequate defense or eventually face disaster. I know of no evidence that our country with its healthy and growing economy cannot afford the budget now being considered. It, of course, cannot afford waste and we in the Defense Department recognize our obligation to achieve every possible economy through increased efficiency. Our biggest need is for the understanding and support of thoughtful, patriotic people like those gathered here today. The difference between an adequate and inadequate budget may be the difference between peace and war. This is a most serious matter which transcends partisan politics.

No one wants to accept an expensive and uneasy peace as a permanent way of life. As the President has repeatedly stressed, we must always be seeking mutual arrangements, such as mutual inspection which will ease tensions and reduce the dangers inherent in this situation. Until such arrangements are made and adequate safeguards are actually in effect, however, our best, and so far as I can see our only, sound basis for security is the continued maintenance of modern and powerful Armed Forces, as painful as this may be from a tax standpoint.

I am afraid I have made this appear as a bleak and unattractive prospect. Paradoxically, I think it is not. In fact, it offers the first real hope that by waging peace, we can not only avoid war, but we can in due course work out a system of world order that excludes war as an instrument of national policy. This is the deep significance of the theme of this Armed Forces Day—"Power for peace."

Waging peace, in the meantime, does call for sacrifices. It does require us to stand firm in the face of great danger. It is the burden and the challenge of our generation.

Powerful Arguments

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point editorials from four newspapers published in the second congressional district.

These editorials express the publishers' interpretation of a poll recently conducted by the Roper Co. in the Puget Sound-Cascade region concerning power. The results of this poll agree with the result of a questionnaire which I sent to 80,000 persons in the second district last year.

I believe these editorials are significant in that they all carry the same theme—a philosophy which I have advocated since coming to Congress—that those who insist on making a political football out of power are hampering the development of the Northwest, and are keeping us from getting the job done. The facts of power life are that we need $300 million annually to be spent building dams and powerplants. Even during the heyday of Government power building, the Northwest only got $150 million a year from the Roosevelt Congresses. It stands to reason that we need every dollar at our command, Federal, city, private, and public utility district, and that we need a concerted cooperative effort—to work together—so that the development and distribution of this power will be a coordinated enterprise. We cannot attract new industries with inadequate power supplies, or to an area where a hydroelectric civil war makes location of an industry a risk due to uncertainty of power development.

The first of these editorials is titled "Partnership Concept," and appeared in the Bothell Citizen, published by Mr. Lee Irwin, weekly at Bothell, Wash. Another weekly paper, the Ferndale Record, published by Ralph Pinkerton at Ferndale, Wash., carried an editorial entitled "Time To Go Forward." The Bellingham Herald, a daily newspaper published at Bellingham, Wash., published an editorial entitled "The People Favor the Middle Way." From Seattle, the Seattle Post-Intelligencer published an editorial entitled "Public Opinion."

Text of these editorials is as follows:

[From the Bothell (Wash.) Citizen]

PARTNERSHIP CONCEPT

A major change of climate in the public against private power question, which first became apparent last year, apparently is continuing.

For years, liberal-minded politicians made political hay under the banner of public power advocates. With the advent of the Eisenhower administration, a new concept—that of cooperative approach—was introduced.

A survey undertaken by Elmo Roper and Associates in mid-1956 indicated what the people of the Puget Sound-Cascade region wanted was just exactly that * * * cooperation by both private and public power to provide necessary energy for the region's future growth.

The 1956 election saw the people of our State going strongly for President Eisenhower, but just as strongly for Senator WARREN MAGNUSON, a public power advocate, and Democratic Gov. Albert Rosellini. Hence, another survey on the power attitudes of the region seemed in order.

The survey, just completed, showed that support for the partnership concept actually has grown substantially. By better than a 4 to 1 margin, the people want their power supplied by a cooperative effort of private and public power. They rejected Federal control by a 3 to 1 margin. In short, the people are tired of seeing power used as a political football.

Politicians take note.

[From the Ferndale (Wash.) Record]

TIME TO GO FORWARD

A survey made in March shows people of the Northwest are very satisfied with the manner in which private and public power are working together to try to help their thousands of private and industrial users enjoy life here.

What we do need to do most is to forget some of the cheap politics, and start working together. We want to forget former differences, instead go out and try to attract new industries to come to this State. (And we cannot do that by increasing industrial insurance and unemployment compensation costs to employers.)

It is high time this State learned to work together for its common good.

[From the Bellingham (Wash.) Herald]

PEOPLE FAVOR MIDDLE WAY

Despite certain political tub-thumping on "public power" in the Pacific Northwest, a recent public opinion survey reveals that there has been no noteworthy popular interest in the subject in the Puget Sound-Cascade region.

The study, the second within a year sponsored by the Puget Sound Power & Light Co., and conducted by a disinterested public-opinion survey organization, was designed to determine the public attitude and philosophy on electric power.

In mid-1956 the first survey indicated that "the desire for a new cooperative approach in power runs deep among the people—what they would like is the best of both private and public, working in close-knit harmony to meet the region's needs."

In the national election later in the year the voters in the area went heavily for President Eisenhower on the Republican ticket, but also elected Democrats WARREN MAGNUSON to the United States Senate and Albert D. Rosellini to the governorship.

In the recent study voters were asked what they felt were the chief issues on their minds when they went to the polls last November. Noticeably absent from the top issues was the so-called power controversy. Scarcely more than 2 out of every 100 persons interviewed said this was an important issue to them in last fall's election (the international situation, the high cost of living, schools and education, labor problems, and the need for strong leadership in troubled times led the list), and many of those who commented said they did not want electric power to become a political football.

Results of the survey indicated that support for the philosophy of partnership and cooperation in the power field has grown substantially. This concept was favored 3 to 1 in the 1956 survey and by better than 4 to 1 this year, while 70 percent of those interviewed were of the firm belief that electric utilities should work in harmony for the full development of the region.

Further, by a vote of 5 to 1, compared to 3 to 1 last year, preference was shown for control of electric utilites by local companies and agencies, and decisive opposition was registered to outside private or public sponsorship.

Another interesting fact of the survey is that support of the Puget Sound Utilities Council, made up of public and private companies in the area, was even higher this year—17 to 1—than it was in 1956.

"Basically," the report concluded, "people feel that they have found in the Puget Sound Utilities Council a new middle course on power, best suited to the maximum growth of the region. * * * It is apparent that the new philosophy on the power has become a lasting part of a new way of life."

[From the Seattle Post-Intelligencer]

PUBLIC OPINION

Last summer Elmo Roper and Associates made a scientific survey in the Puget Sound-Cascade region to determine peoples' attitudes and philosophies on electric power.

That survey indicated that "the desire for a new cooperative approach in power runs deep among the people—what they would like is the best of both private and public power, working in close-knit harmony to meet the region's needs."

Of course this desire of the people was already being met with the Puget Sound Utilities Council, as we have pointed out here before.

But then came the election of November. Voters of the Puget Sound-Cascade region went heavily for President Eisenhower, but also they strongly indorsed Democrat WARREN MAGNUSON for the Senate, and Democrat Albert Rosellini for Governor.

After the election the "hydromancers"—those who try to make politics out of water and power—began to raise the question as to whether the public attitude on power had not changed. Some claimed that the people had reverted to the outmoded public power concept of 20 years ago.

So this March of 1957 the Puget Sound Power & Light Co. engaged Louis Harris to make another survey. Mr. Harris had conducted the earlier poll for Roper and Associates.

The results of this survey indicate, first of all, that five major concerns dominated the voters of the region last November. They were: the international situation, the leading issue by far; the high cost of living; schools and education; labor problems, sharpened by the presence on the ballot of Initiative 198; and the need for strong leadership in troubled times.

Notably absent was the so-called power controversy. Hardly more than 2 out of every 100 people interviewer said that power was an important issue to them last November.

Once again, an impartial survey showed a clear and unmistakable trend of public attitudes on the power question in the Puget Sound-Cascade area. In 1956 the people of the region, by nearly a 3 to 1 count, preferred the concept of cooperation between private and public power.

Today the number who want such cooperation has grown to better than a 4 to 1 margin over either of the other alternatives. And today, the margin expressing a desire for local control of power has risen from 3 to 1 (in 1956) to almost 5 to 1.

The recent survey showed also that the people sharply reject the idea of private utilities banding together in a single company, and reject even more sharply the idea that control of electric utilities be in the hands of the Federal Government. Support for the Puget Sound Utilities Council, endorsed by this newspaper from its start, has risen markedly.

It's interest to note, too, that almost 7 out of 10 people single out Puget Sound Power & Light, coupled with Boeing, as doing the best jobs of any company or industry in the area. And strong in the minds of most people of the region is the concept that hydroelectric power is the wellspring of better living in a dynamic Pacific Northwest economy.

Speech of Hon. Robert W. Hemphill, Lancaster, S. C., Armed Forces Day, May 18, 1957

EXTENSION OF REMARKS

OF

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks I desire to include an address delivered by Hon. ROBERT W. HEMPHILL, Member of Congress, Fifth District of South Carolina, at the Armed Forces Day celebration in Lancaster, S. C., on Saturday, May 18.

The address follows:

SPEECH OF HON. ROBERT W. HEMPHILL, LANCASTER, S. C., ARMED FORCES DAY, MAY 18, 1957

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is a privilege to be with you today and join and have a part in the celebration of Armed Forces Day in the great county of Lancaster.

This the first speaking engagement I have accepted in the district since the Congress convened, and I am delighted to be here among so many friends and with such pleasant recollections of my past association with you in the courthouse and elsewhere.

America today is, from a military standpoint, at a stage of development and preparedness which most of us believe vital at all times. Because of improved methods of communication, our people are alerted and aware of world conditions which make necessary the maintenance of experienced Armed Forces.

The two major factors affecting current defense policies are the persistent threat to the security of the United States and the rapid scientific and technological developments in recent years.

The first requires the continued maintenance of a ready and flexible defense establishment to deter aggression of any size. The second demands special emphasis on an effective research and development effort and the progressive adjustment of the Armed Forces to take advantage of the new weapons and equipment available.[1]

The Western Hemisphere cannot hope to win the world race in numerical manpower. We have neither the initial number of people, the time, nor the inclination to match the hordes of China, Russia, and their satellites.

As Americans we have refused to sacrifice our standards of living in order to have numerical advantage. Before World War II we were criticized for this attitude, but the American soldier of World War II in combat warfare proved that our way of life makes for the best men and the best soldiers.

I am thankful that I live in a country which has never debased its national philosophy by the support of brothels for the productivity of humanity in a manner such as was exhibited in Nazi Germany in the 1930's.

Since we cannot put into the field great numbers of soldiers, sailors, and airmen, we must concentrate on smaller units, highly specialized, with striking power trained to near perfection.

Improvement in aircraft in recent years has inaugurated a new air age and almost daily some new weapon, or improvement, takes its place in this the supersonic decade. Guided missiles of all types—surface to surface—surface to air—air to air—and air to surface, are augmenting our retaliatory and defensive strength and implementing the offensive power of each arm of our service.

On June 30, 1956,[2] we had 1,026,000 men in the Army, some 83,000 less than a year earlier, and although the force level declined, combat effectiveness continued to improve and is unparalleled in modern military history. Our Navy is at the approximately same strength, having a manpower increase of only 9,000 men. We have superior carriers, mobile airfields, to carry the nuclear warheads, and, because of mobility and evasive potentialities less likely to suffer as a target than stationary land air bases.

The Air Force added 10 new weapons during the fiscal year 1956 and only last week added a vital type aircraft capable of performances which 10 years ago were only a dream.

Our objective is to see that war does not occur. Our present military leaders operate on the assumption that the Communist threat to our national security is one of the present and of the future, and that we must be adaptable to new weapons and new techniques. Our new weapons do not eliminate, at any time, our need for good men and women. In the Air Force, particularly, we face the problem of spending vast sums in training personnel, only to lose their technique because private business has more to offer at the end of the enlistment period. The Congress has attempted by various legislations to offset this situation. I speak of the Dependent's Medical Care Act of 1956, of the Military Public Works Act of that year, as well as the inclusion of the soldiers in the Federal Social Security System. Effective January 1, 1957, survivors received increased benefits and well they should.

You and I as citizens want the best. In typical American fashion, we demand it. We expect it in the future, and we believe that those who serve in our Armed Forces today, including those in our Reserve programs, are the best on earth. Unfortunately, we cannot complete the defense picture by citing military strength alone. In the event of a nuclear war, triggered by some fanatic across the water, we find upon us certain catastrophe, the limits of which no man can accurately predict. For the first time in mankind's history partial defense is not enough to protect our citizens from atomic-hydrogen weapons so powerful that one bomb could destroy the great city of Los Angeles.

We are confronted with these harsh facts of the contemporary world. We must strive to increase the deterrent factors against war. The two most powerful deterrents we possess today are the military power to strike back against an aggressor's blows and the military defenses within the Nation. Our third powerful deterrent can be created—to strengthen our capacity to substantially withstand attack, our national resiliency, by insuring the continuity of civil government and the protection of civilian life. For want of a better phrase we speak of "civil defense."[3]

Nonmilitary defense is as much a necessity to our survival as any weapon or any branch of the service. In the event of war, we must face such necessities as organization, cooperation, and authority. We must be able to quickly inventory, not only the damage, but the surviving raw and manufactured materials. Otherwise, you could conceivably be permitting people to make jukeboxes out of the only steel that might be left.[4]

In the testimony before the congressional subcommittee, known as the Holifield Military Operations Subcommittee, Committee on Government Operations, the former Governor of Nebraska, Hon. Val Peterson, now Administrator, Federal Civil Defense Administration, brought out the fact that in the past wars we have had the luxury of time. We could organize and get ready. His statement before the committee was, "I think it is absolutely clear that if we are not prepared when the first atomic bomb falls, we just can't get prepared following the explosion of the first bomb assuming that we have a large attack."[5]

Suppose the supply of drinking water in some area was completely contaminated. What would be the effect on the population? To what authority could we turn? What productive capabilities would remain if a single hydrogen bomb can release more destructive explosive power than all of the bombs dropped on Europe and Japan during World War II? It is estimated that we dropped the equivalent of 2½ million tons

Footnotes at end of speech.

Footnotes at end of speech.

of TNT on Europe as compared with the equivalent explosive power of 12 million tons of TNT in the first hydrogen bomb, which has since been improved to twenty-or-more million tons.

Now I have talked of men and of weapons and of fear and of war, and now let us talk about people. Our western civilization is neither more able to fight nor ready to defend, than we ourselves. The fiber of the individual must be as strong as his forebears.

At the risk of increasing the trend toward statism, I believe we should develop our national pride, drumbeat loyalty to our country, inoculate the young and the old with the determination that we must survive regardless of the impending or realized catastrophe.

Many military men will tell you that military effectiveness for any length of time is dependent upon supply. Supply, called logistics by the soldier, means civilians. Civilians mean Americans like you, who in World War II produced for and fed the American fighting force, sacrificing daily in the war effort.

We must support our military. We must give them more than money and weapons. We must give them our moral support, evidenced by our appreciation of their effort and our acknowledgment that the uniform of the American military man, except for the cloth of the church, is the garment of highest honor.

We must be prepared on the home front. We should back up our civil defense with all the power at our command. We must have a determination for peace, but we must also have the determination that my child and your child would better die for the United States than live under the heel of a foreign tyrant.

I speak of these things because it is my conviction that our ultimate victory will be achieved by our spiritual, mental, and moral preparedness. We are people with a heritage of hardships and conquest over those hardships. If any enemy believes us prepared in mind and body, individually or nationally, there will be no war.

Weapons are no defense to bacteriological and psychological warfare, and propaganda. A sudden flare on the horizon—a hysterical announcement over the radio or television—an untrue newscast describing unheard-of destruction and potential dislocation, the American people would in less than an hour be put to the test.

The determination to fight or not to fight would still be left with the civil authorities. The decision of the Government might be made upon what they believe the American people wanted in such time of crisis.

So all of us here can realize that this is our day and our generation, and whether we wear the uniform, or have worn it yesterday, or have been civilians who backed up the Armed Forces, paid the taxes, produced and gave the soldier the moral backing, we must face the perils of our age.

The mind and the heart and the attitude of each American here is foremost for this country. I join with you in the determination we will not let America down.

National Association of Manufacturers Leader's Tax System Views Disputed

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter I have received from Henry and Mark Norman, of Syracuse, N. Y., enclosing a letter they wrote to the editor of the Post-Standard, of Syracuse, N. Y.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SYRACUSE, N. Y., *April 30, 1957.*

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: Enclosed please find a published letter written by us in your defense against an attack by Mr. Ernest W. Swigert, president of the National Association of Manufacturers.

We realize that it is impossible for you, who take your legislative responsibilities seriously, to defend yourself against every attack upon you, however unfair and unfounded it may be The responsibility of this defense devolves upon those who are in sympathy with the ideals and principles you stand for. We proudly count ourselves in this group and we send you this letter in the hope it may encourage you in some small measure in your fight for good government.

With best wishes for a long and successful tenure in the United States Senate, we are,

Yours truly,

HENRY R. NORMAN.
MARK M. NORMAN.

NAM LEADER'S TAX SYSTEM VIEWS DISPUTED

To the EDITOR OF THE POST-STANDARD:

Tuesday evening, April 23, Syracusans were able to sit in on the turning back of the clock. This was accomplished by courtesy of Ernest W. Swigert, president of the National Association of Manufacturers, in his speech before the Manufacturers' Association of Syracuse, Inc. (Oregon Senators Called Disgrace to Nation, April 24.)

In an address based more on nostalgia for the good old days of economic feudalism than on facts, Mr. Swigert gave us an NAM's eye view of what's wrong with our country.

One of his principal gripes was the income tax. He favors the bill sponsored by Representative ANTONI N. SADLAK, of Connecticut, by which the top income tax bracket of 91 percent would be reduced to 42 percent and the bottom bracket from 20 percent to 15 percent. We shouldn't be surprised that an NAM spokesman favors a 49 percent reduction to the top brackets and a 5 percent reduction to the lower.

This must have seemed a little too much, even for Mr. Swigert, because he self-righteously adds that 60 percent of the reduction would benefit those making $6,000 or less. Since at least 80 percent of wage earners make less than $6,000, one wonders what Mr. Swigert is so self-righteous about.

His fantastic statement that the tax system is set up to reform society and not for revenue is given the lie by the fact that record annual corporate earnings after taxes are announced with monotonous regularity.

His contention that the present tax system is harmful to economic growth and disruptive to individual initiative doesn't stand examination. The economic growth in the 40 years since the present tax system was started has been unprecedented in human history.

Mr. Swigert obviously yearns for the days of the robber barons when business was a law unto itself. It is unfortunate that the speech of the president of a group representing business does not reflect the growing consciousness of business' responsibility to the public felt by the more enlightened business leaders of today.

The NAM spokesman's unfounded and despicable attack upon Oregon's two able Senators, WAYNE MORSE and RICHARD NEUBERGER, falls of its own weight. Despite Ike's blessing, unlimited funds, great popularity, a convenient memory, and a campaign uninhibited by considerations of ethics and scruples, Douglas McKay was unable to unseat Senator MORSE in Oregon, a heretofore rock-ribbed Republican stronghold.

In his recent speech in Syracuse, Senator MORSE stated his conviction that our strength was not in our vast resources, but in our people. They are far more important than our material wealth. Mr. Swigert apparently is not in sympathy with these sentiments and considers them criminal.

Despite Mr. Swigert's speech, we are confident the American people are not interested in returning to the ragged individualism and "normalcy" of the Republican era after World War I. Oregon set the pace for good government—it will be sustained, Mr. Swigert to the contrary notwithstanding.

HENRY R. NORMAN,
MARK M. NORMAN.

SYRACUSE.

Unification Problem

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. MAHON. Mr. Speaker, there is a great deal of public interest in the problem of unification among the services. It represents the field wherein great savings can be made in defense spending. Mr. James Reston, of the New York Times, wrote a very interesting article on the subject in the May 16 issue of the New York Times, and I submit it for printing in the RECORD:

UNIFICATION PROBLEM: A DISCUSSION OF THE PRESIDENT'S FIGHT AGAINST WASTEFUL AND DIVIDED AUTHORITY

(By James Reston)

WASHINGTON, May 15.—President Eisenhower moved the debate on the budget today on to higher and more fertile ground.

Yesterday, in his TV address to the Nation, he said, in effect, that the choice was between accepting his defense budget about as it is or gambling with the safety of the Nation.

Today in his news conference, however, he conceded that considerable savings could be made if we could get rid of prejudices and unnecessary duplications in the three armed services.

This naturally raised the question here tonight why, if the President sees considerable savings in greater unification of the services, he does not use his power to enforce more unified planning, more clearly defined service missions and objectives, and more economical procedures at the Pentagon.

There is little doubt about General Eisenhower's views on this subject. He has been fighting against wasteful and divided authority in the armed services ever since he returned from his triumphant command in Europe 12 years ago.

Indeed, he appeared before the Senate Committee on Military Affairs on November 16, 1945, and presented a nine-point plan that included most of the suggestions that are now being made by those who contend that his budget could be cut today without reducing the security of the Nation.

POINTS IN 1945 PROGRAM

He presented his program then in these words:

"A single executive department of the Armed Forces is essential in order that there may be a well-rounded military program which assures for us the maximum protection for each dollar appropriated.

"It is not feasible to arrive at the size or composition of each arm without simultaneously considering the others. Each arm supplements the other, and no single service can be independently considered.

"The national security is safeguarded only if the security establishment is fashioned, trained, and administered under single direction—by a single department.

"The area of atomic bombs, pilotless missiles makes unity of concept, indoctrination and training more necessary than ever before.

"The pooling of talent in the field of scientific research and development is an obsolute necessity. Only through a single department can coordinated development of new weapons be assured.

"There is the absolute need for economy in administration if we are, as a Nation, to afford an adequate security establishment. So long as there are 2 executive departments in Washington, instead of 1, we will continue to be harassed with the needless extravagance of double administration, overlapping duplications, deferring standards and competitive procurement.

"Here I would like to give one small example of that from the last war. The Army had a 4.5 rocket; the Navy developed a 5-inch rocket. Each rocket followed the same principles; each was a splendid weapon. But there was a greater cost to the American public because they had that slight difference and because they did it independently rather than together.

"If we do not integrate the executive management of the three members of our fighting team, our postwar security establishment will become the patchwork improvisation that is inevitable where independent departments, at different times, compete before separate congressional committees. With integration we can buy more security for less money. Without it we will spend more money and obtain less security.

"One of the most important and least understood factors in modern war is that it is essentially a matter of perfected teamwork. Perfected teamwork results as much from friendly association over a period of years as it does from the more obvious reasons of combined tactical training and doctrine. By unification at the top we emphasize to our soldiers, sailors, and airmen the essential truth that each wears the uniform of the Nation's fighting forces and that his natural friends and trusted associates are the others who wear that uniform, regardless of its color or design.

"Finally, there is no such thing as a separate land, sea, or air war; therefore we must now recognize this fact by establishing a single department of the Armed Forces to govern us all."

CRITICISM APPLY NOW

These remarks of General Eisenhower are an excellent summary of the criticism that are being made now, 12 years later, about the operations of the armed services under his authority as Commander in Chief.

There is a Department of Defense now, and progress has been made toward unification, but the services are still fighting for the development and control of similar weapons, and still duplicating supplies and services that General Eisenhower thought were extravagant and unnecessary over a decade ago.

The President recalled this morning that he returned from World War II convinced that "the day of the separate services was gone." He added that he had encountered "very fierce opposition" then, but that the law establishing the Defense Department did not meet with his desires.

He wanted at that time a chief of staff for the President. He emphasized over and over again that the main thing that was needed was the power of decision to settle inevitable differences among the services.

"In war," he said, "you must have decision. A bum decision is better than none. And the trouble is that when you get three [decisions] you finally get none."

STRESSES NEED OF UNITY

"We all agree," he told the Armed Services Committee of the Senate in 1947, "that that kind of [unified] command is necessary in the field. In my opinion, it is necessary in Washington, and it is necessary in such things, finally, as our planning and our basic legal authority."

The question now raised in the debate of 1957, therefore, is almost precisely the same as the question raised by the General himself 12 years ago.

Where does the power of decision lie now for unified decisions that defend both the security and economy of the country? Does it lie with the President or the Secretary of Defense, and is it being exercised by them? Or is the law inadequate, as General Eisenhower thought 12 years ago, and in need of revision?

By discussing this aspect of the problem today, the President has pointed the way out of the dilemma he emphasized last night. For more than any American alive, he has both the knowledge and the power to improve the unification and therefore the economy of the services.

The Congressional Quarterly Is Neither Authoritative Nor Nonpartisan

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. CURTIS of Missouri. Mr. Speaker, yesterday under special order the gentleman from New Jersey [Mr. THOMPSON] discussed the resident's legislative program with particular reference to the party allegiance of the Members of the House who allegedly were or were not supporting this legislative program.

The sole authority for determining whether a Member of the House was or was not supporting the President was the Congressional Quarterly, a private publication presumably for profit published by Henrietta and Nelson Poynter, who are also publishers of the St. Petersburg, Florida Times.

The gentleman from New Jersey [Mr. THOMPSON] refers to this private publication as "nonpartisan." The publication refers to itself as "The authorative Reference on Congress". Neither, in my judgment, is correct.

The documentation of extreme partisanship on the part of the Congressional Quarterly was made by Senator SCHOEPPEL (Kansas) last year and appears on pages 13752–13756 of July 27, 1956 of the CONGRESSIONAL RECORD under the title "Analysis by Congressional Quarterly of Congressional Support of President Eisenhower." This was a followup of some remarks Senator SCHOEPPEL made at the time he placed an article by Raymond Moley accusing the Congressional Quarterly of extreme partisanship, in the CONGRESSIONAL RECORD of July 16, 1956—pages 11607, 11608—in his remarks of July 27, 1956 Senator SCHOEPPEL very properly places a letter from Mr. Poynter which undertakes to refute the charge of partisanship made by Mr. Moley and the Senator in his July 16 remarks.

If Mr. Poynter has made any reply to the charges of partisanship appearing in the July 27, 1956 CONGRESSIONAL RECORD, I have been unable to find it. I would be happy to place any reply that may have been made or any reply that might now be made answering the charges of extreme partisanship in the CONGRESSIONAL RECORD.

The Congressional Quarterly for the week ending May 17, 1957, devotes several pages to "Individual Eisenhower Support and Opposition Scores Through May 12, 1957, and for the 84th Congress" of both House and Senate Members. The manner in which these alleged support and opposition scores are computed show basic partisanship and are designed seemingly only for one purpose, to deceive whomever might read them.

Although there were only 26 rollcall votes in the House, 22 rollcall votes were used, apparently as a base for the scores. Yet the votes used were not set out in the article so that a reader could judge for himself whether the vote was on an issue that the President had clearly stated his position. The first vote of the House, of course, was for the Speaker. Presumably, this vote was used in the base and thus prevents Congressman MCCORMACK, of Massachusetts, the Democratic majority leader, from receiving a 100-percent Eisenhower support instead of 95 percent.

The fact that 14 votes were on 1 appropriation bill and followed a basic pattern was unmentioned. Furthermore, it is obvious that President Eisenhower could not have specific views on budget cuts which in many of these 14 items were less than a million dollars. One item was for $30,000. Following such a point of view would rule out any person serving on the Appropriation Committee from ever performing his constitutional duty of reviewing the executive budget, if he was at the same time to support the Executive then in office. The same principle applies to the individual Members of the Congress.

Although the 14 budget-cut votes were obviously used in the base apparently the vote on the Democratic proposed resolution to ask the President to recommend to the Congress how to cut the budget was not included. There were three

rollcall votes on this matter, on the rule, on recommital, and the passage of the bill itself. Majority Leader McCormack was a ringleader in this partisan anti-Eisenhower maneuver. Or perhaps the Congressional Quarterly did not use in the base rollcall No. 31 which was designed to permit Congressman Patman to investigate the national monetary policies. This was very definitely an anti-administration maneuver again led by the majority leader, Congressman McCormack. Or perhaps rollcall No. 60 was eliminated which called for the investigation of the various Federal boards, commissions, and so forth, by a House committee. This, too, was a definite antiadministration maneuver led by the Majority Leader McCormack. Yet Congressman McCormack, according to the Congressional Quarterly, has only one antiadministration vote.

There should be little question in any citizen's mind that the Democratic Senators and Congressmen as a group are not behind the Eisenhower administration. As loyal opponents—and this is as it should be—they critcize Secretary Dulles and our foreign policy. Hardly a day goes by on the floor of the House when some Democratic Member does not make some uncomplimentary remarks about Secretary of Defense Wilson. What the Democrats call the "hard money" policy lies at the base of their constant attack on the Treasury Department and the fight over tax reduction lead by partisan Democrats is not in the too distant past and is certainly in the immediate future. The Justice Department under Attorney General Brownell is a constant target for the Democratic Congressman. The Department of Agriculture and Secretary Benson certainly are unaware of any support they have received from the Democratic leadership in the Congress. The basic dispute in the handling of private and public power, the leasing of mineral rights and so forth, in the Department of Interior divides Democrats from the administration constantly. The handling of TVA by the administration, atomic energy are both basic differences between Democrats and this administration. The list could be enlarged and at the appropriate time I will undertake to do that.

The purpose of these remarks has been to point out that the Congressional Quarterly is not nonpartisan; it is not authoritative. On the contrary it is highly partisan and it speaks out for a certain school of political thinking. I have no objection to it or any other magazine or newspaper taking the position it wishes to take, but I do object to the deception that is being used in taking that position.

I think it is time that the Congress did something about the Congressional Quarterly using the name "Congressional" and using the line "The authoritative reference on Congress" on its title page. This deceives the public and should not be permitted.

Happy Birthday, Irving Berlin

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. FARBSTEIN. Mr. Speaker, we have all sung, listened to and enjoyed the music of the great composer of our times, Irving Berlin. It is with great pleasure that I insert in the Record an editorial written by Abe E. Eisenstein on the occasion of Mr. Berlin's 69th birthday. I am certain that my colleagues join me in wishing Mr. Berlin many years of continued good health so that he may continue to enrich the world with his music.

We of Manhattan's lower East Side are particularly proud of Irving Berlin, since he is a product of that area—a local boy who made good.

The editorial follows:

HAPPY BIRTHDAY, IRVING BERLIN
(By Abe E. Eisenstein)

May 11 marks the 69th anniversary of the birth of Irving Berlin, famous East Sider, former newsboy, singing waiter, World War I sergeant, lyricist and melodist, music publisher, and one of America's greatest song composers.

Son of Moses and Leah (Lipkin) Baline, Israel Baline was born in a little town called Temun, in Siberian Russia, the youngest of eight children, of poor Russian Jewish parents. Israel was 4 years old when the Baline family settled on the lower East Side. His first home was a dark, damp, windowless, small three-room basement flat in the then squalid and crowded Monroe Street. Later, they moved to Cherry Street. His father was a cantor in a synagogue, gave Hebrew lessons, and worked during the week in the local butcher shops certifying meat kosher. Papa Baline died in 1896.

As an east side youngster and schoolboy, Israel (known than as Izzy) swam in the East River, played ball, tag, marbles, joined the street gangs, sang on street corners for pennies or in local saloons for nickels or dimes, and sold newspapers to help contribute his share to that earned by his brothers and sisters in the sweat shops of the city.

Israel soon began singing at Callahan's Bar in Chinatown or at the Chatham Saloon on Doyer Street. He received 50 cents for a night's work. Later, he was a plugger of songs for Harry von Tilzer, the composer and music publisher, from the balcony of Tony Pastor's Music Hall in Union Square at $5 a week. Then, he got a job as a singing waiter in Mike Salter's Pelham Cafe, in Chinatown. It was here that Israel met the royal visitor, Prince Louis of Battenberg, and where he wrote the lyrics for his first song, Marie from Sunny Italy. He received only 37 cents in royalties for it, but it brought his new pen name before the public. The young composer chose for his title page, Words by I. Berlin.

While working as a singing waiter in Jimmy Kelly's restaurant on Union Square, Irving Berlin wrote Dorondo. It was his first song with words and music. He received $25 for it. In 1909, lyricist Irving Berlin worked for publisher Ted Snyder, with a drawing account of $25 a week and with royalties on all published songs. Later, he became a partner of the firm.

Alexander's Ragtime Band, an American classic and a pioneer among syncopated dance tunes, was Irving Berlin's first nationwide success. It was originally rejected by leading publishers but became a hit only after the late George M. Cohan sang it at a benefit affair. Mr. Berlin also made a tour in London (receiving about $1,000 a week), where he was billed as the Ragtime King.

World War I sergeant of infantry and former vaudevillian, Irving Berlin wrote and produced the all-soldier revue, "Yip, Yip Yaphank," raising many thousands of dollars for the soldiers' fund. At the end of the war, he made personal tours at leading vaudeville theaters, singing his own songs at $2,000 a week. He also established his own publishing firm and was one of the organizers and builders of the Music Box Theater. His first show, "The Music Box Revue," grossed over $2 million.

During World War II, he directed the GI show, This Is the Army, and sang his old song hit Oh, How I Hate to Get Up in the Morning. After a successful New York run, the show toured the world for 3 years, making over $10 million for the Army Relief Fund.

All proceeds for Arms for the Love of America were devoted to the Army Ordnance Association; Any Bonds Today? helped the war-bond drive to succeed; I Threw a Kiss in the Ocean, for the Navy Relief Fund; Angels of Mercy aided the American Red Cross, and The President's Birthday Ball helped the March of Dimes campaign against infantile paralysis. God Bless America was made world famous by Kate Smith.

He married the former Miss Ellen Mackay in 1926. They have three daughters, Mary Ellen (Mrs. Burden), Linda Louise, and Elizabeth.

East Siders, New Yorkers, and friends everywhere, remember to salute and congratulate you, Irving Berlin, on your 69th birthday. May the Lord bless you, so that you may continue with your contributions in enriching musical America.

New Police for Public Housing in New York City

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. FISHER. Mr. Speaker, for the information of the Congress, I include an article which appeared in the New York Times on May 20, which states that the city administrator of New York has issued an urgent appeal to the mayor to more than double the already 244-man special police force detailed to public-housing projects in that city.

It will be recalled that proponents of public housing have often been heard to say that if we would put more people in public housing crime and delinquency would thereby be reduced. Others have questioned the correctness of that contention.

Now we have this condition in New York City which tends to confirm the view that public housing does not decrease crime. According to this article, there are now 244 extra policemen on duty at these projects, and a request is made for an additional 276. That will cost the people of New York $1,300,000 a year more than is now being spent there on police for public housing.

In a prior article, which appeared about 2 or 3 years ago, the New York Times reported as follows:

Dozens of families are being evicted from city housing projects because their delinquent children are regarded as a menace to the safety and comfort of other tenants.

City housing authority officials said yesterday that chronic or dangerous juvenile delinquency was among the reasons for which about 250 families are evicted each year as undesirable tenants.

New York City is not alone in facing this problem. Similar experiences have been reported in various other places. In Houston, for example, in my own State, no long ago District Judge Campbell refused the custody of a child to a litigant who proposed to keep it in the San Felipe Courts, a public housing project, because he said it was not a proper place to rear a child.

I do not mean to imply, Mr. Speaker, that there are not many projects where these conditions do not exist. But I am increasingly alarmed by the reports of so many instances where an unusual amount of crime and delinquency appears in public housing projects.

INTEGRATION IN NEW YORK HOUSING

It may also be enlightening to some of the Members at any rate that the report of the city administrator, according to the New York Times, found that "the intermingling of racial groups in some of the authority projects had created a situation 'so sensitive as to be potentially explosive.'" According to the Times, the urgency to more than double the special police in the public housing projects is created because of this mixing of the races in those projects.

This danger which exists in New York and in many other places is not lessened any by recent court decisions forcing integration of races in all public housing projects everywhere.

The New York Times article follows:

CITY ASKED TO ADD TO HOUSING POLICE—PREUSSE URGES DOUBLING OF FORCE IMMEDIATELY IN 83 PUBLIC PROJECTS

Immediate action to more than double the 244-man police force of the New York City Housing Authority has been recommended by City Administrator Charles F. Preusse.

In a report to Mayor Wagner that was made public yesterday he declared that a force of at least 548 men under central control was needed for adequate protection of life and property. Eighty-three housing projects are managed by the Housing Authority.

Mr. Perusse said in a letter submitting the report to the Mayor that his overall survey of the authority's management and operational procedures has already discovered "grave management defects that cry for correction."

"We have also concluded," the letter said, "that a substantial part of the Housing Authority's management structure will need overhauling for better operation." The survey is still not completed.

The Preusse report found that the intermingling of racial groups in some of authority projects had created a situation "so sensitive as to be potentially explosive." Mr. Preusse's letter told the Mayor that the policing survey was given priority because of this situation.

"We recommend immediate action to expand and centralize the police force," the letter declared. "This simply cannot wait upon other and longer-range management improvements."

MAYOR ASKED SURVEY

Mr. Preusse began his overall survey of the Housing Authority in March at the request of the Mayor and the agency itself.

The request was made as the result of repeated complaints about vandalism and other crimes in housing projects, alleged failure to provide adequate project maintenance and other alleged deficiencies in management and operation. The survey is being made by a 6-man task force under Mr. Preusse's direction.

In his report on policing, Mr. Preusse found that the incidence of crime and disorder in the agency's projects was lower than in other areas housing populations of similar social and economic backgrounds.

Most of the trouble requiring policing was found to be caused by a relatively small number of families and intruders from outside the projects.

The report found a lack of flexibility in the deployment of the present police force, divided authority between housing managers and the chief housing officer and lack of a proper statistical system and communications.

Mr. Preusse recommended an annual survey of the force, a single housing police head and higher pay scales. The addition of 276 men, at existing rates of pay would cost $1,370,030, the report said.

Sorting Mail With the Transorma

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. GUBSER. Mr. Speaker, Mr. Paul Nagle, president of the National Postal Transport Association, in a recent appearance before a committee of the Senate has made one of the most ridiculous statements I have ever heard.

Mr. Nagle has condemned an experiment which the Post Office Department is conducting at Silver Spring, Md., with a Dutch mailsorting machine called the Transorma. He alleged before the committee that the machine has failed and is not resulting in savings of manpower and money.

I have seen the Transorma in Holland. I have also watched the Silver Spring operation and believe someone should expose the ridiculous nature of Mr. Nagle's charges and reveal his true motives.

In a little over 1 month each of the 5 operators have learned to sort 46 letters per minute into as many as 300 different slots. This gives the machine a capacity of 13,800 letters per hour. Eventual capacity, with practice, will be 16,800 per hour. Contrast this with hand sorting where one man, operating 30 percent slower than his companion on the Transorma can only reach 35 different bins making it necessary to resort the same mail at least once more to equal the 300 sortings on the machine.

Mr. Nagle's statement that it requires 6 men to service the 5 Transorma operators shows how far he has stretched the truth to condemn the new system. These 6 men are used in what is called the facing operation. Had he been fair he would have pointed out that the same 6 men would be required for hand sorting.

Of course, the Transorma is not perfect. Putting a modern machine in the midst of an obsolete system for handling mail is bound to require the development of new techniques. Mr. Nagle would not expect a modern automatic transmission to work in a model T Ford. He would have to build a new car around it.

If Mr. Nagle's attitude had prevailed since the first days of American history women would still wash their clothes in the nearest creek and we would still be driving horses and buggies. Modern appliances have made our lives better and furthermore they haven't put people out of work. As a representative of postal employees he has the right to do all that he can for the betterment of working conditions for his membership, but he does not have the right to hold up progress and insist on countinuing the United States Post Office as the most ridiculous and obsolete system in the world.

In promoting a bill during the last session which urged the Post Office Department to conduct experiments like the one at Silver Spring I dealt extensively with Mr. Nagle. During those negotiations it became very apparent to me that his prime motive was to prevent mechanization and the replacement of employees who might otherwise be contributing members to his own organization. Self-preservation is a natural instinct but it has to take a back seat to the interests of an entire nation. I sincerely hope the American public will enthusiastically endorse Postmaster General Summerfield's experiment and urge that it be continued.

Movement Started Against Internationalization of Panama Canal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Americas Daily of Miami Springs, Fla., which discloses that the Panama Canal Society of Washington, D. C., has launched a movement to counter Communist and other propaganda for the internationalization of the Panama Canal and to preserve its present treaty status:

THE PANAMA CANAL SOCIETY OF WASHINGTON STARTS MOVEMENT AGAINST INTERNATIONALIZATION—URGES CONGRESS TO REAFFIRM RETENTION, IN PERPETUITY, OF ALL UNITED STATES OF AMERICA RIGHTS

WASHINGTON.—The Panama Canal Society of Washington has launched a movement to counter Communist and other propaganda for the internationalization of the Panama Canal and to preserve its present treaty status.

The society consists of former officials, engineers and employees who were engaged in the construction or administration of the Panama Canal. With about 150 members present, the society discussed for several hours the international questions which have arisen in the wake of the Suez Canal situation.

The meeting then adopted a resolution which asserted its belief "that every just and wise consideration favors the retention, in perpetuity, by the United States of all its sovereign rights, power, and authority with respect to the Panama Canal and the Canal Zone, as guaranteed by existing treaties."

The resolution urged the Congress of the United States to make a similar declaration, reaffirming the long-standing Isthmian policy of the United States.

The preamble to the resolution adopted by the Panama Canal Society said that Communistic influences in the United States and the world at large have long been insistent that the United States surrender control and operation of the Panama Canal to an international body.

It took note that certain noncommunistic elements at home and abroad have also urged such internationalization.

The text said in part: "The United States, under solemn treaty agreements and guarantees, assumed the great risks and obligations involved, and at huge cost to the United States undertook and consummated the construction of the Panama Canal, and has since successfully maintained and operated it, in strict accordance with treaty provisions, for its use by all the ships of the world without discrimination; and has effectively protected, at its own expense, the canal and the Canal Zone during the two world wars and the war in Korea."

Maurice H. Thatcher, former governor of the Canal Zone, said he feared that some tension has arisen between the United States and the Republic of Panama because of Panama's increasing demands for greater benefits from the canal.

"This situation is to be deplored," Thatcher said, "because as between Panama and the United States all questions that affect the two countries should be setled amicably through the orderly processes of negotiation.

"It is inevitable that differences will from time to time arise, and ofttimes there will be very strong differences involved," Thatcher continued. "But destiny has linked the two nations together and thus far they have been able to solve their differences in mutual respect, and these processes should continue in the future.

"In this connection, I may say that if reliance cannot be placed upon treaty agreements, then I do not know how questions arising under them can be solved. These agreements should be fully respected by both parties; and to this end, of course, I favor the implementation by the Congress and our executive branches of any features of the treaty agreements which require implementation.

"On the other hand, I abjure our Panamanian friends who are in authority to stand squarely on the treaty arrangements which have provided for the construction, maintenance, operation, sanitation, and protection of the canal; and if there are differences in interpretations, these should be resolved in the spirit of amity."

Captain Miles Du Val, United States naval officer, retired, historian of the Panama Canal, said three basic international treaties underly its present international status of the canal.

These are the United States-British Hay-Pauncefote Treaty of 1902, the Hay-Bunau Varilla Treaty between the United States and the Republic of Panama in 1903, and the Thomson-Urritia Treaty between the United States and Colombia which was negotiated in 1914 and proclaimed in 1922.

Captain Du Val said that the United States has not given up the major rights, power, and authority which were granted "in perpetuity" by the Republic of Panama in 1903 for the construction, maintenance, operation, sanitation, and protection of the canal.

"The United States still has jurisdiction over the Canal Zone as if it were sovereign of the Territory and, in accordance with the treaty, to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

Financial Institutions Act of 1957 (S. 1451)

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following resolution which was adopted at the national convention of the Independent Bankers Association of America in Miami Beach, Fla., on April 27, 1957. This resolution asks that State banks be given equal representation with national banks on the Board of Directors of the Federal Deposit Insurance Corporation, and is as follows:

RESOLUTION REQUESTING THE CONGRESS OF THE UNITED STATES TO PROVIDE MANDATORY REPRESENTATION ON THE BOARD OF DIRECTORS OF THE FEDERAL DEPOSIT INSURANCE CORPORATION FOR STATE-CHARTERED BANKS

Whereas there is now pending in the United States Congress S. 1451, a banking omnibus bill cited as the "Financial Institutions Act of 1957"; and

Whereas S. 1451 provides mandatory representation for national banks by provision that the Comptroller of Currency be a member of the Federal Deposit Insurance Corporation Board of Directors; and

Whereas S. 1451 fails to give equal mandatory representation for State-chartered banks on the Federal Deposit Insurance Corporation Board of Directors; and

Whereas there were, on June 30, 1956, 8,562 State banks and 4,667 national banks that were members of the Federal Deposit Insurance Corporation; and

Whereas on December 31, 1956, all State banks had assets of $134 billion, and national banks had assets of $118 billion; and

Whereas all Government capital furnished the Federal Deposit Insurance Corporation has been repaid, with interest; and

Whereas the Federal Deposit Insurance Corporation is wholly supported by its member banks and all of its assets have accumulated from funds supplied by member banks; and

Whereas it is inequitable to give mandatory representation on the Federal Deposit Insurance Corporation Board of Directors for 4,667 national banks and fail to provide similar mandatory representation for 8,562 State banks; and

Whereas equal representation and recognition of State and national banks will preserve and strengthen our dual banking system: Now, therefore, be it

Resolved, That the Independent Bankers Association, in convention assembled, request the Congress of the United States to amend the law regarding membership on the Federal Deposit Insurance Corporation Board of Directors to require that one of the three members of the Federal Deposit Insurance Corporation Board of Directors be selected from the active officer list of a State-chartered bank;

Resolved further, That a copy of this resolution be forwarded to each member of the Banking and Currency Committees in the United States Senate and the United States House of Representatives.

Brief History of the Income Tax

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. DORN of South Carolina. Mr. Speaker, a number of people have expressed an interest in the history of the income tax. I asked one of the greatest experts on taxation of our times, Mr. Colin F. Stam, of the Joint Committee on Internal Revenue Taxation, to give me a brief history of this tax. The House will be interested in the following excellent letter from Mr. Stam:

CONGRESS OF THE UNITED STATES,
JOINT COMMITTEE ON INTERNAL REVENUE TAXATION,
Washington, May 20, 1957.

Hon. W. J. BRYAN DORN,
House of Representatives,
Washington, D. C.

DEAR MR. DORN: This is in response to your recent telephone request regarding the development of progressive income taxation, particularly with respect to the position taken by Adam Smith and Karl Marx.

Progressive taxation is premised on the ground that the wealthy pay higher rates of tax than is charged the less well-to-do. It is not a recent development, neither in theory nor in practice. Historically, a statement on progressive taxation is attributed to Manu, an Indian sage. He is reported to have stated nearly 3,000 years ago, "To make the burden of taxes equal is not effected by a mere numerical proportion. The man who is taxed to the amount of one-tenth of an income of 100 rupees per annum is taxed far more severely than the man who is taxed an equal proportion of an income of 1,000 rupees, and to a prodigious bigness more severely than the man who is taxed an equal proportion of 10,000 rupees per annum."

A form of progressive income tax was levied in Athens in 380 B. C. In the year 1295, France levied a combination property and income tax which was in part graduated. It was called a "50th" and had rates ranging up to 2 percent. Under the 50th those who had little or no property were taxed on their income from wages. England knew a graduated income tax as early as 1435 and the Italian city of Florence levied a progressive income tax in 1443. Other European nations enacted graduated income taxes in

the 18th century; Geneva, in 1709; Saxony, in 1742; and Holland, in 1748. These taxes were generally unpopular and in many cases lasted for only a short while.

In 1798 a graduated income tax was reintroduced in England to finance her wars with France and this country. This tax was repealed in 1815 and it was not until 1853 that a progressive income tax was again levied in Great Britain. Since 1853, however, England has not been without a progressive income tax.

Graduation was not limited to the income tax. Poll taxes, property taxes and other revenue measures levied prior to the development of the income tax often contained elements of progression. In addition, it should be noted that any exemption from tax automatically introduces progressivity into the revenue structure. One form of taxation which was rather widely used in the 17th and 18th centuries was the faculty tax. Like the French fiftieth, the faculty tax in many cases was a combination property and income tax and as its name implied the rates varied according to the taxpayer's faculty or ability to pay. The faculty tax was an early variation of the ability to pay, or progressive theory of taxation. Of course, if only a single rate were provided, the tax was proportional, not progressive.

Adam Smith, in the Wealth of Nations, published in 1776, advocated a proportional tax. He stated that "the subjects of every State ought to contribute toward the support of the Government, as nearly as possible, in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the State." He is generally not looked upon as a proponent of progressive taxation although certain of his statements might be construed as indicating that he was not indisposed toward a progressive tax. For example, in speaking of a tax on the rent of houses he stated, "It is not very unreasonable that the rich should contribute to the public expense, not only in proportion to their revenue, but something more than in that proportion." However, although Adam Smith early recognized the principle of progression in a tax structure, it seems clear that he supported the theory of proportional taxation.

Undoubtedly, the most vigorous proponent of a graduated income tax was Karl Marx, author of the Communist Manifesto which was published in 1848. A vigorously graduated income tax together with the abolition of the right of inheritance were advocated among other measures to bring about the centralization of all means of production in the hands of the state and the ultimate downfall of the capitalist class. Marx clearly and avidly supported the theory of progressive taxation because of the far-reaching effects of such a system. Although the theory of graduated income taxes was developed long before Marx published his Communist Manifesto and such taxes had been operative in many countries, Marx is remembered for his proposal to employ the graduated income tax for redistributing a nation's wealth which was a cornerstone for his Communist philosophy.

In the American Colonies some form of the faculty tax was most often relied upon for revenues and, in general, it was levied on the physical property of property owners and on profits of those who owned no property. Such a tax was levied in Massachusetts as early as 1643 and eventually spread to most of the other colonies with the exception of New York. The faculty tax was imposed in South Carolina in 1701 on citizens according to their "estates, stocks, and abilities or the profit that any of them do make off or from any public office or employment." A version of this tax was continued by the first act passed under the State constitution in 1777.

No Federal income tax was levied in the United States until the Civil War. A proportional income tax was enacted in 1861 but was never put into effect. Another income tax act was passed in 1862, this time progressive, with rates ranging from 3 to 5 percent. This tax was abolished in 1871 and except for the income tax act of 1894 which was declared unconstitutional after a single year, it was the only American experience with a Federal income tax prior to the income tax act of 1913, which followed ratification of the 16th amendment. There has been a progressive income tax in this country continuously since 1913. An estate tax was enacted in 1916 and has been an integral part of our system of internal revenue taxation since that time.

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

Some Comments on Training Scientists

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 23, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Some Comments on Training Scientists," written by Gerald P. Burns, vice president of Reed College.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME COMMENTS ON TRAINING SCIENTISTS

(By Gerald P. Burns)

The Russians, we are told, are turning out approximately 50,000 scientists annually; we, in the land of the free, produced about 25,000 last year. Former Senator William Benton, recently returned from the Soviet Union, has pointed out that the greatest danger from the Communists exists in the area of education. Said he, "Although not providing the broad cultured training we do, the Russians are performing an incredible job in training scientists and engineers."

This danger of being overwhelmed scientifically is very real. It's difficult for Americans to understand the tremendous pressures brought to bear on students in the Soviet Union—pressures to study, to learn, to master the mysteries of science, to produce a technocracy that could conquer the world. If we are to survive, then we must recognize this danger and take steps to counteract it.

We should understand at the outset that the new Russian emphasis on education, especially higher education, is designed for one purpose only—eventual domination of the free world. Their insistence on long hours of intensive study and their exclusion of cultural subjects in training scientists are devices that produce a single-mindedness of purpose peculiarly adaptable to their basic national aim.

In girding our loins to meet this challenge, we should not fall into the trap of attempting to emulate the Russian methods. Certainly we must increase our output of scientists, engineers and technically trained college graduates. But it must be done by our methods, not theirs. It is customary in American education to provide some cultural subjects in even the most scientific curriculum. Then, too, extra-curricular activities, although nyet for the Russian student, are a must for the American student.

It is possible in this country to continue this kind of higher education for scientists and technicians, and still turn out superior performers. The main problem is to double the number of scientists being graduated annually by American colleges and universities and to do this without compromising the high standards of scholarship held by most institutions of higher education. This, too, can be accomplished.

An article in the October 15, 1955, issue of the Saturday Evening Post made reference to "a small college in Oregon" that was turning out successful scientists at a phenomenal rate. The Post neglected to mention that this was Reed College in Portland, Oreg.

With little drum-beating and virtually no publicity, Reed has consistently led the Nation in its production of scientists. According to a study sponsored by the Carnegie Foundation, conducted by Drs. Knapp and Goodrich, this "small college in Oregon" turned out in the period studied 132 successful scientists in every 1,000 graduated; a remarkable record when compared with the next highest school which had 72 per 1,000 grads.

It was mentioned above that American students want and deserve more than a sterile, intensive higher education in the sciences alone—and that such sterility is not necessary. Again Reed has proven that a superior education is not based solely on what is learned in the classroom or science laboratory. The program of study at Reed includes humanities for all, considerable independent study with maximum use of library facilities, cocurricular activities such as music and drama, and extracurricular activities such as sports and social events. This might appear as "too broad" or "watered down" to meet the stiff competition of the rigid Russian program—but the kinds of leadership positions in science and engineering held by Reed alumni bear out the vitality and value of the American approach.

At Reed the environment for study produces not only able scientists but liberally educated leaders for all fields. When a college or university produces a Rhodes' scholar, this is usually reason for some celebrating. At Reed, such an award is a frequent occurrence. Reed's record in this respect now stands at 1 Rhodes' scholar out of every 81 male graduates—the national average being 1 out of about 3,000 graduates. Here indeed is an enviable record—and there are other similar records that might be quoted, clearly indicating that this small college in Oregon is truly outstanding. Reed is not the only college of liberal arts and sciences in the country to vindicate the value of our American methods of training and education. Swarthmore, Oberlin, Carleton and many other excellent institutions have for decades added to the stockpile of scientifically and liberally educated Americans.

The way to beat the Russians in this new war of brains is to increase the number of broadly trained American scientists. Since the small colleges of liberal arts and science like Reed are far-and-away the most prolific producers of such scientists, they should be encouraged and expanded. Since these institutions provide much of the brainpower and leadership to keep the United States free and prosperous, let's recognize this fact and act accordingly.

For many years the colleges have been termed "ivory towers"; the professors have been called absent-minded and impractical; the Nation has failed to support these institutions and professors adequately—but they have not failed the Nation.

If the maintenance of our political, economic, and social freedom depends upon our scientists, and if the production of scientists depends upon our colleges, then it's simple

logic for leaders in business, industry, and the professions to be interested in, and give support to, these colleges. Perhaps the United States needs more Reeds to lean on.

Foreign Affairs Committee Hearings in Gary, Ind.

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. MADDEN. Mr. Speaker, last Monday a subcommittee of the House Foreign Affairs Committee held open hearings on our foreign-aid legislation in Gary, Ind.

The meeting attracted a large attendance and interest. Forty-two witnesses testified or submitted statements. The following is the testimony of Albert G. Vinick, president of the American Lithuanian Council of the Calumet region of Indiana:

AMERICAN LITHUANIAN OPINION

(Statement of Albert G. Vinick, president, American Lithuanian Council, Lake and Laporte Counties, Ind., May 20, 1957)

GENTLEMEN: The American citizens of Lithuanian descent are deeply interested in the restoration of free and independent Lithuania which, unfortunately, at the present time is subjugated by Soviet Russia. For them, it is important that the Government of the United States help the enslaved Lithuanian nation liberate itself from the Soviet Communist yoke.

One of the most effective means to this is to sustain the spirit of liberty among the people of Lithuania by showing them that the United States is interested in their fate and by telling them about this and other countries of the free world.

This is being done by the Information Service of the United States which, among other things, maintains the Voice of America for the listeners behind the Iron Curtain.

There is clear evidence that these radio programs reach a considerable number of people in Lithuania and even those deported to Siberia. We know this from the letters received in this country by the relatives of persons living under the Soviet rule and also from the attempts by the officials of Soviet Lithuania to refute statements of those radio programs.

The Voice of America programs are being given in various languages and in each nationality section there is a group of people who prepare those programs. They are all supported by the funds appropriated by Congress for the United States Information Agency. In the budget submitted this year for the consideration of the United States Congress, President Eisenhower asked $144 million for this Agency, but the House Appropriations Committee decided to cut this amount about 20 percent. This tendency to economize is making itself felt in the Senate. If this tendency prevails in both Houses of the Congress, the functioning of the Information Service might be considerably handicapped.

The Lithuanian American Council comprising hundreds of thousands of American citizens of Lithuanian descent throughout the country would consider this curtailment of the activities of the Voice of America a serious blow to the efforts of liberation of enslaved peoples.

Submitting this to you and through you to the United States Congress I express my opinion, and the opinion of those affiliated with the Lithuanian American Council, that at least the major part of the proposed cut in the appropriation for the Information Agency should be restored. We would be even more pleased if the Congress would give this vital service the amount originally asked for in President Eisenhower's budget.

Clinton Turn Verein 90th Anniversary

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. PHILBIN. Mr. Speaker, on Sunday, May 19, the Clinton, Mass., Turn Verein celebrated its 90th anniversary with 250 guests in attendance at impressive exercises conducted at Turner Hall.

It was my distinct privilege and honor to be guest speaker on this outstanding occasion and under unanimous consent I include in the CONGRESSIONAL RECORD the text of my remarks before this distinguished and patriotic organization.

The guests included many officers of the Massachusetts Turn Vereins and 16 members of the Clinton Turn Verein, all members of the organization for 50 or more years, who were paid special tribute during the 90th anniversary celebration. These 50-year members are Herman J. Brockelman, Frederick J. Krauss, Charles F. Lamlein, Christian Ploss, Arthur E. Wohlrah, Charles M. Schwab, Paul A. Schneider, Gustave H. Gleisburg, Robert Jendrick, George H. Lamlein, Edward T. Onrda, John A. Schott, Albert W. Schneider, Alfred Scheid, Oswals Heinold, and Robert Hillner.

The Honorable Morris N. Gould, associate judge of the Clinton District Court, was a brilliant master of ceremonies and the Honorable Werner Hollebem, German Consul, extended the warm greetings and congratulations of West Germany to the gathering.

The text of my speech follows:

It is a great privilege as well as a real pleasure to be with you on this truly historic occasion when we are celebrating the 90th anniversary of the Clinton Turn Verein.

As you all so well know, I come here today not only as the Congressman from this great district in our beloved Commonwealth with its hundreds of thousands of loyal Americans, but I come here also as your neighbor, dear friend and a proud fellow member of this distinguished organization. There is no group anywhere that I more greatly admire for achievement and fine citizenship, and there is no group of its kind that I am bound to any more closely by enduring bonds of lifelong friendship, fellowship, and affection, or for whom I have greater respect and higher regard, than this one I have the honor to address today.

Of course we can all be proud of the sterling record that has been made by our Clinton Turn Verein throughout the years. It is heartwarming and inspiring when we reflect as we do today, upon the history of our group, to note that for so long a time it has so outstandingly served our community and our country as well as cherished needs of our own membership.

So many men and women have devoted themselves in such a true spirit of dedication to the great objectives and valuable activities of Turn Verein that I could not even begin to mention them. Their contributions, which have been so significant, so meaningful, and so beneficial, are worthy of our recollection and profound gratitude. We can be especially proud and especially grateful for the imagination, genius, ability, and devotion of those who had the vision and the spirit to establish this organization, as well as those who have carried its unblemished banner with such fervor, loyalty, and wholesome results from the time it was founded up to this very hour.

Because of the historic aspect of these exercises, it may be appropriate for me, as briefly as I can, to allude to the origin, background and progress of Turn Verein. The first noteworthy fact is that Turn Verein is a German institution which was founded in the early part of the 19th century by a great gentleman and far-sighted thinker named Friedrick Ludwig Jahn for the purpose of furthering physical education. Today, as we know, the activities of the Turners have been expanded to include people of different nationalities and faiths and to include not only physical training but mental training as well. In addition, the Turners have collected libraries, established schools, and founded a newspaper and have engaged in many other activities designed to improve the individual and benefit the civic and patriotic welfare of the Nation.

It is interesting to note that the first Turn Verein in America was founded in the city of Cincinnati way back in the year 1848, largely due to the efforts of Friedrick Hecker, one of the heroes of the German Revolution.

Like the old Turn Verein in Germany, the American Turner Society had as its slogan: Frish, frohm, froh, frei, which for the benefit of my good Irish friends who have happily become so prominent in this organization today, and others who may not understand the beautiful, rich German language, means bold, devout, gay, and free.

At the time the basic purpose of the organization was stated as follows: "cultivation of rational training, both intellectual and physical, in order that members may become energetic, patriotic citizens of the Republic, who could and would represent and protect common human liberty by word and deed." How well these objectives have been realized is best attested by the clean living, high character, industrious habits, unsurpassed citizenship and lofty patriotism of those who embrace this organization.

During the Civil War, for example, not so long after the organization came into being, the Turners played an important part. The renowned 20th New York Regiment in that war consisted only of Germans. The Ninth Ohio Regiment was made up predominantly of Turners. Several other regiments consisted wholly or in part of Turners. It is reported that over 51 percent of the total membership of the organization at the time served during the Civil War, and it can be said to the everlasting credit of our illustrious society that that example continued to be followed in every succeeding war and conflict in which our country was engaged, wherein the Turners and the descendants of the German people in this country have played such a prominent part, and exemplified an imperishable record of loyalty, devotion, and willingness to sacrifice their lives, if necessary, for the perpetuation of American ideals and the American Republic.

At the close of the Civil War the Turn Vereins of the East and West were reunited and a new Turn Zeitung was established

with New York as a center. The Turners, back from the war, now turned their attention and activities to gymnastic and cultural pursuits. The clubs reached a high level during the late 1860's and during the 1870's which was about the period that our own fine club was established here in Clinton.

Always of forward-looking philosophy and progressive viewpoints and principles, the Turners advocated many reforms that were later adopted by the Nation. As early as 1871, recognizing the great worth, zeal, and influence of women, they advocated woman suffrage. For many years they urged that gymnastics be taught in schools until finally schools throughout the country began instructions in gymnastics which brought and are still bringing such untold benefits to American children in many generations. The Turners advocated every good cause and are famous for their moderation in all things.

In 1948 the Turners celebrated their centenary in the city of St. Louis and the program included not only competitions in gymnastics, but also of track and field events, basketball and volleyball. Competitions were held also in song writing, poetry and essay writing and singing contests which have always been one of the most zestful and enjoyable activities of the Turners.

Women's auxiliaries of Turn Verein have been generally established and competitions are now open to women as well as men and the outstanding work that the women have done and are doing is not only well known, but is a source of great pride to all of us.

Today the Turners have a far-reaching educational program. The Turner Society appeals to every member of the family, and that is why Turnerism has been so valuable in enriching wholesome family life here in Clinton and in many other places. Not only the women but the young folks have been brought into this happy mingling of free spirits seeking agreeable human companionship, seeking to promote good causes and seeking to build up strength in the individual and the family and the community because they realize well that this, in turn, means strength for the entire Nation.

In Clinton the Turners have conferred innumerable and immeasurable benefits upon our community life, upon the quality of our citizenship, upon our civic spirit, our social relationships and upon the development of understanding, tolerance and strong friendships that bind us together regardless of origin, race or creed, in a union devoted to bring out the best in the individual and in the community and aiming for the highest goals given to free American citizens in our land to unbounded opportunities. That encouragement to high aspirations is one of our greatest needs of the hour in this confused and bewildering era.

There is a lesson that we can all take from the story of the early Turners and the early German settlers. They came to this country fired by a fierce impulse for its freedom and its opportunities. They were scrupulously honest, industrious and willing to work. They had unflagging energy and they were prudent and frugal in their ways, yet always charitable, generous and just. While they never forgot the rich heritage they had left and while they kept it alive in all its breadth and fullness in their homes, their families and in this very Turn Verein, they never lost sight of basic human and spiritual values. They had superlative faith in their Creator and unshakable faith in free institutions. They were loyal in the way of life they had brought with them, and they were loyal even unto death to the great new country of which they became such proud and worthy adopted sons and daughters.

Their constant aim was to preserve and protect this country, and they opposed and they denounced and they fought, just as their descendants here today do, the terrible plague of godless communism and subversion that stalks through the world working to dismember nations and condemn individuals to the role of serfs and slaves. Yes, my friends, you may search the whole world over, you may comb every nook and cranny of America, but you will never find more devout people, better Americans, or more loyal and devoted citizens of this great land than those who founded and for so many years carried on with such fruitful and happy results the Turn Verein that we today hail with so much pride and joy.

Judged by every measure, they were great citizens and great Americans and great human beings. In accordance with Turner traditions an the spirit of their own great homeland they were bold, as real men should be when the occasion requires, they were devout, as we all must be, they were gay, as every person desires to be, and they were free, as all men and women everywhere yearn to be and were destined to be by Him who gave them life and gave them liberty at the same time.

I have many happy memories of this hallowed place and the many wonderful people who frequented it and made it what it is. Here, like most of you, I have spent happy hours, and I have known some of the greatest people, some of the warmest, finest friends that it has ever been anyone's high privilege and good fortune to know. Here, in truth, there has been friendship, there has been brotherhood, there has been tolerance, understanding and affection, there has been that gay and buoyant spirit which we call "Gemutlichkeit," there has been adherence to high ideals, there has been the cultivation of loyal and lofty Americanism, there has been the exaltation of underfiled family life and the free, expansive development of the individual. Above all, there has been a grateful acknowledgment of the Supreme Being, and the confidence and faith that He will, in time, if we but persevere in that faith, show us the pathway to peace and to justice.

And so, my friends, with this magnificent legacy which is ours handed down to us from the past by such loving souls and spirits that we almost speak of them with bated breath, let us rejoice in this happy celebration of what their hands and minds have wrought. Let us be thankful for all that they have done for our Turn Verein, for Clinton and for our country and in a real spirit of humility, as well as deep appreciation, let us rededicate ourselves to their unfinished work in this great society, in our beautiful town so deserving of our help and in our great free country which today needs loyal citizens to defend it against the ravages and threats of tyranny more than ever before in its history.

And let us proudly hold the banners of Turnerism aloft and continue, as our predecessors did, to exemplify its finest traditions.

May our noble and beloved Turn Verein, under God, enjoy many more returns of this happy birthday celebration. Let us all pledge ourselves anew to its great cause and to the cause of freedom and justice for all.

Prospects for Tax Reduction—The Past Is Prologue

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. REED. Mr. Speaker, it is currently popular political sport for elected representatives of the people to speak in a knowing manner about tax reduction. Much of this discussion stems from politically motivated efforts to impress the people with the fact that the political proclaimer not only promised tax reduction "firstest," but that he also promised the "mostest." In early April when these tax-cut promises began to reach their full crescendo, I labeled them as "premature" and pointed out that for the most part they were being uttered by those who have traditionally been among the ranks of the spenders in Congress.

These premature political promises were made before the committees of Congress had made any substantial progress in the consideration of appropriation bills. These premature political promises were made before a review had been made of estimates of Federal receipts for the fiscal years 1957 and 1958. The spenders in Congress in promising tax relief before sufficient consideration had been given to appropriation bills and before revised estimates of tax receipts were available were premature in their pronouncements. They also were indicating a determination to use the proverbial meat-ax approach to budget reduction without regard to the national need for the goods and services provided for the people of our Nation under the proposed expenditure program provided in the 1958 budget. That these political proclaimers were premature in their tax reduction promises has now been demonstrated by publication of the revised estimates of Federal receipts for fiscal years 1957 and 1958 by the staff of the Joint Committee on Internal Revenue Taxation. These estimates indicate a substantially reduced budgetary surplus for each of the fiscal years involved as follows:

TABLE 1.—*Receipts, expenditures, and surplus of the Federal Government, actual for fiscal 1956, estimates for fiscal years 1957 and 1958*

[In billions of dollars]

	Actual, 1956	Estimated, 1957		Estimated, 1958	
		January budget estimates	May staff estimates	January budget estimates	May staff estimates
Receipts	68.2	70.6	70.7	73.6	74.3
Expenditures	66.5	68.9	69.5	71.8	73.0
Surplus	1.6	1.7	1.2	1.8	1.3

Fiscal responsibility in the conduct of our Federal affairs demands that these minimum surpluses be preserved and that we avoid deficit financing that would result from either a further increase in Federal expenditures or an unjustifiable tax reduction in advance of substantially less Federal spending.

Mr. Speaker, I believe that my record in the House of Representatives clearly demonstrates that no one has sought tax reduction with greater consistency or more earnestly than I have. I have always believed that the people rather than the Federal Government could more effectively spend the taxpayer's dollar. My tax philosophy has been predicated on three cardinal principles: First, the Nation's tax policy must pro-

vide sufficient revenue for the conduct of essential governmental affairs; second, that policy must fairly and equitably apportion the tax burden among our citizens according to ability to pay; and third, that tax policy must stimulate the dynamic development of our free enterprise economy and remove those influences which stifle the development of individual initiative and enterprise.

In the caption to these remarks I have indicated that the past is prolog. Because previous events portend the future, I believe it is appropriate at this time to review the tax record of each of the two major political parties in the United States so that the American people can derive a realization as to the causes of the current tax problems that beset us and an indication as to which party is more likely to provide our citizens with responsible tax reduction in the future.

With the advent of the 16th amendment, on March 1, 1913, the Federal income tax collector visited the American people and he has since continued that visit without interruption. In September 1916 the Federal estate tax collector began his visit with the American people and he too has stayed without interruption. In addition the Federal excise tax collector has plagued our American families with sporadic visits, particularly during the First World War when a host of these excise taxes descended upon us. Most of these World War I excises were repealed by the Republican Revenue Acts of 1921, 1924, 1926, and 1928, but they were all dusted off and revived as part of the blessings of the New Deal and they grew in size and number under Democrat paternalism. The Republican Party in 1954 substantially reduced and in some instances repealed these excises.

During the period from 1919 to date the Democratic Party has been responsible for 14 increases and 3 reductions in individual income taxes. During this same period the Republicans were responsible for 9 tax reductions and 1 tax increase in individual income taxes. The Democrats' fiscal tax policy has traditionally been dedicated to the principle of tax and tax, spend and spend. By consistent and I might add—unconscionable, adherence to this Democratic policy, the Democrat Party has broadened the tax base and increased the tax rates every time that party has been in power. Starting with a personal exemption for a single person of $3,000 and an exemption for a married couple of $4,000, the Democrat Party through a series of tax increases reduced the personal exemption until it reached a level of $500 for a taxpayer and each of his dependents in 1942. This Democrat reduction in the exemption level not only meant that more of a taxpayer's income was subject to tax, but it also meant that millions more Americans were required to pay taxes. In addition to decreasing the personal exemptions the Democrat Party piled tax rate increase on top of tax rate increase.

On the other hand the traditional fiscal policy of the Republican Party has been tax reduction, expenditure reduction, and debt reduction. It is no mere chance occurrence that under this Republican fiscal policy the two greatest tax reductions to ever occur in the history of our Nation were Republican-sponsored. During the Republican 80th Congress, tax reduction legislation was enacted that saved the American taxpayers an estimated $5 billion annually. During the Republican 83d Congress tax reduction occurred in the total amount of $7.4 billion. In the CONGRESSIONAL RECORD of May 2, 1957, on page A–3318, I inserted a factual description of the accomplishments of the Republican Party in achieving tax reduction and expenditure reduction. To further inform my colleagues in the House about the tax record of the Nation's two major political parties, I will insert in the RECORD at this point a summary table of Federal individual income-tax exemptions and first and top bracket rates for the period from 1913 through 1957. By reference to the years indicated in the left-hand column of the table, the party responsibility for tax changes can be determined.

TABLE 2.—*Federal individual income tax exemptions and 1st and top bracket rates 1913–57*

Income year	Personal exemptions					Tax rates			
	Single	Married				1st bracket		Top bracket	
		Dependents				Rate	Amount of income	Rate	Income over—
		No	1	2	3				
						Percent		*Percent*	
1913–15	$3,000	$4,000	$4,000	$4,000	$4,000	1	$20,000	7	$500,000
1916	3,000	4,000	4,000	4,000	4,000	2	20,000	15	2,000,000
1917	1,000	2,000	2,200	2,400	2,600	2	2,000	67	2,000,000
1918	1,000	2,000	2,200	2,400	2,600	6	4,000	77	1,000,000
1919–20	1,000	2,000	2,200	2,400	2,600	4	4,000	73	1,000,000
1921	1,000	[1] 2,500	2,900	3,300	3,700	4	4,000	73	1,000,000
1922	1,000	[1] 2,500	2,900	3,300	3,700	4	4,000	56	200,000
1923	1,000	[1] 2,500	2,900	3,300	3,700	3	4,000	56	200,000
1924	1,000	2,500	2,900	3,300	3,700	[2] 1½	4,000	46	500,000
1925–28	1,500	3,500	3,900	4,300	4,700	[2] 1½	4,000	25	100,000
1929	1,500	3,500	3,900	4,300	4,700	[2] ¾	4,000	24	100,000
1930–31	1,500	3,500	3,900	4,300	4,700	[2] 1½	4,000	25	100,000
1932–33	1,000	2,500	2,900	3,300	3,700	4	4,000	63	1,000,000
1934–35	1,000	2,500	2,900	3,300	3,700	[3] 4	4,000	63	1,000,000
1936–39	1,000	2,500	2,900	3,300	3,700	[3] 4	4,000	79	5,000,000
1940	800	2,000	2,400	2,800	3,200	[3] 4.4	4,000	81.1	5,000,000
1941	750	1,500	1,900	2,300	2,700	[3] 10	2,000	81	5,000,000
1942–43 [4]	500	1,200	1,550	1,900	2,250	[3] 19	2,000	88	200,000
1944–45	500	1,000	1,500	2,000	2,500	23	2,000	[5] 94	200,000
1946–47	500	1,000	1,500	2,000	2,500	19	2,000	[5] 86.45	200,000
1948–49 [6]	600	1,200	1,800	2,400	3,000	16.6	2,000	[5] 82.13	200,000
1950 [6]	600	1,200	1,800	2,400	3,000	17.4	2,000	[5] 91	200,000
1951 [6]	600	1,200	1,800	2,400	3,000	20.4	2,000	[5] 91	200,000
1952–53 [6]	600	1,200	1,800	2,400	3,000	22.2	2,000	[5] 92	200,000
1954–57 [6]	600	1,200	1,800	2,400	3,000	20	2,000	[5] 91	200,000

[1] If net income exceeds $5,000, married person's exemption is $2,000.
[2] After earned income credit equal to 25 percent of tax on earned income.
[3] Before earned income credit allowed as a deduction equal to 10 percent of earned net income.
[4] Exclusive of Victory tax.
[5] Subject to maximum effective rate limitation: 90 percent for 1944–45, 85.5 percent for 1946–47, 77 percent for 1948–49, 87 percent for 1950, 87.2 percent for 1951, 88 percent for 1952–53, and 87 percent for 1954–55.
[6] Additional exemptions of $600 are allowed to taxpayers and their spouses on account of blindness and/or age over 65.

The Democrat Party did not content itself with merely increasing individual income taxes and excise taxes. Table 3 sets forth corporation income tax rates for the period 1909 through 1957 indicating the corporate tax changes. By referring to dates in the left-hand column of the table it is possible to determine the action taken with respect to corporate tax rates by our two major political parties.

TABLE 3.—*Corporation income-tax rates, 1909–57*

Calendar year	Reduced rates on small corporations	General rate
1909–13	$5,000 exemption	1
1913–15	No exemption after Mar. 1, 1913	1
1916	No exemption	2
1917	do	6
1918	$2,000 exemption	12
1919–21	do	10
1922–24	do	12½
1925	do	13
1926–27	do	13½
1928	$3,000 exemption	12
1929	do	11
1930–31	do	12
1932–35	No exemption	13¾
1936–37	Graduated normal tax ranging from 8 percent 1st $2,000; over $40,000. Graduated surtax on undistributed profits ranging from 7 percent to.	15 27
1938–39	12½ to 16 percent 1st $25,000; over $25,000.	[1] 19
1940	14.85 to 18.7 percent 1st $25,000; 38.3 percent $25,000 to $31,964.30; 36.9 percent $31,964.30 to $38,565.89; over $38,565.89.	24
1941	21 to 25 percent 1st $25,000; 44 percent $25,000 to $38,461.54; over $38,461.54.	31
1942–45	25 to 20 percent 1st $25,000; 53 percent $25,000 to $50,000; over $50,000.	40
1946–49	21 to 25 percent 1st $25,000; 53 percent $25,000 to $50,000; over $50,000	38
1950	23 percent 1st $25,000; over $25,000	42
1951	28¾ percent 1st $25,000; over $25,000	50¾
1952–57	30 percent 1st $25,000; over $25,000	52

[1] Less adjustments: 14.025 percent of dividends received and 2½ percent of dividends paid.

In addition to the tax changes indicated in table 3, the Democrat Party enacted excess profits taxes during the three wars in which our Nation became involved while the Democrat Party was in control of our Federal Government. The World War I excess profits tax was in effect from 1917 to 1921, the World War II excess profits tax was in effect

from 1940 to 1945, and the Korean war excess profits tax was in effect from 1950 to 1953.

Despite the ever-increasing tax burden imposed on the American people by the Democrat Party, that party has also led our Nation down the path of unbridled inflation, deficit financing, and mounting public indebtedness. That fact is demonstrated by table 4, which I will include as a part of my remarks at this point showing budget receipts and expenditures and public debt for the fiscal years 1915 through 1958.

TABLE 4.—*Budget receipts and expenditures and public debt*

[Fiscal years. In billions of dollars]

Fiscal year	Budget receipts	Budget expenditures	Surplus or deficit	Public debt at end of year
1915	0.7	0.7	−0.1	1.2
1916	.8	.7		1.2
1917	1.1	2.0	−.9	3.0
1918	3.6	12.7	−9.0	12.2
1919	5.1	18.4	−13.4	25.5
1920	6.6	6.4	+.3	24.3
1921	5.6	5.1	+.5	24.0
1922	4.0	3.3	+.7	23.0
1923	3.8	3.1	+.7	22.3
1924	3.9	2.9	+1.0	21.3
1925	3.6	2.9	+.7	20.5
1926	3.8	2.9	+.9	19.6
1927	4.0	2.8	+1.2	18.5
1928	3.9	2.9	+.9	17.6
1929	3.9	3.1	+.7	16.9
1930	4.1	3.3	+.7	16.2
1931	3.1	3.6	−.5	16.8
1932	1.9	4.7	−2.7	19.5
1933	2.0	4.6	−2.6	22.5
1934	3.1	6.7	−3.6	27.1
1935	3.7	6.5	−2.8	28.7
1936	4.1	8.5	−4.4	33.8
1937	5.0	7.8	−2.8	36.4
1938	5.6	6.8	−1.2	37.2
1939	5.0	8.9	−3.9	40.4
1940	5.1	9.1	−4.0	43.0
1941	7.1	13.3	−6.2	49.0
1942	12.6	34.0	−21.5	72.4
1943	22.0	79.4	−57.4	136.7
1944	43.6	95.1	−51.4	201.0
1945	44.5	98.4	−54.0	258.7
1946	39.8	60.4	−20.7	269.4
1947	39.8	39.0	+.8	258.3
1948	41.5	33.1	+8.4	252.3
1949	37.7	39.5	−1.8	252.8
1950	36.5	39.6	−3.1	257.4
1951	47.6	44.1	+3.5	255.2
1952	61.4	65.4	−4.0	259.1
1953	64.8	74.3	−9.4	266.1
1954	64.7	67.8	−3.1	271.3
1955	60.4	64.6	−4.2	274.4
1956	68.2	66.5	+1.6	272.8
1957 est	70.7	69.5	+1.2	271.5
1958 est	74.3	73.0	+1.3	270.2

NOTE.—The change in the public debt from year to year reflects not only the budget surplus or deficit but also changes in the Treasury's cash balances, the effect of certain trust fund transactions, and direct borrowing from the public by certain Government enter prises.

It is significant to note that with the advent of the New Deal in 1933 our Federal Government consistently engaged in deficit financing until the Republican-controlled 80th Congress when Republican fiscal policy provided lower taxes, less Federal spending, budgetary surpluses, and debt reduction. It is also significant to note that the fiscal years 1956 through 1958 provide for budgetary surpluses and that the last time that we had 3 successive years of budgetary surpluses occurred with respect to the fiscal years 1928 through 1930—again under the leadership of the Republican Party.

Mr. Speaker, much has been said about the proposed budget for fiscal year 1958. It is likely that much more will be said about it in the months to come. I have previously expressed both regret and misgiving that the President's budget message to the Congress called for such a high level of Federal expenditures. I would call attention to the fact that much of the current criticism of the budget comes from that very vocal group that is composed of the traditional spenders in Congress—the group that has consistently voted in opposition to economy measures, in favor of an ever-increasing Federal bureaucracy, in support of legislation piling a tax on a tax, and in support of measures that have inevitably resulted in mounting public indebtedness.

A review of fiscal statistics supports the great Republican record for economy and gives further evidence to the indictment of the Democrat Party as the spenders. During the period of the Republican 83d Congress there was a sharply declining total of Federal spending from 1953 to 1955, and under the Democrat controlled 84th Congress there was an equally sharp rise from 1955 through 1958. The total budget reduction in the first phase was approximately $10 billion and the total increase in the second phase was approximately $8 billion.

It is significant to note that the fiscal year 1955 was the pivotal point in the recent budget record—it was the year of lowest Federal spending. It is also significant to note that fiscal year 1955 represented a budget that had been prepared by a Republican administration supported by a Republican Congress. In the 84th Congress the Democrat majority resumed its practice of piling expenditure on expenditure through the enactment of new and expanded Federal programs. In the 84th Congress the Democrats provided for nearly 200 new or increased programs largely imposing Federal-aid programs on the States. These Federal-aid programs in effect taxed the citizens of the States and then doled the money back to the States for programs that the States could better operate themselves if Federal taxes were reduced so that State taxes could be made adequate to finance the programs.

Mr. Speaker, no expenditure can be made by the executive branch of the Government unless it has been authorized by the Congress. The authorization may take the form of an appropriation, either current or permanent, or an authority to spend from debt receipts. Consequently the amount of expenditure in any year by the executive branch is determined by the action of Congress. There is, therefore, a responsibility on the Congress to act with deliberate restraint in the expansion of existing programs and in the beginning of new programs. We must recognize our responsibility to the needs of the whole Nation as distinct from the special interests of articulate organized minorities.

Mr. Speaker, it is estimated that the burden of Federal spending programs under the 1958 budget upon my State of New York will be approximately $11 billion. A comparable figure for California is $7 billion, for Texas $3 billion, and for Virginia $1 billion. The allocation of burden among the other States in our great Nation is equally as alarming. It is apparent that one of our most urgent national responsibilities is to spend less, not more. I would stress the fact, however, that in achieving these expenditure reductions the Congress must act with the greatest wisdom possible so as not to impair our national security and so as to continue those Federal programs that are essential and that can be performed most efficiently by the Federal Government.

Mr. Speaker, reduced Federal expenditures, reduced Federal taxation, and reduced Federal indebtedness are essential objectives that we must achieve if we are to realize the maximum development of our national potential under the American free enterprise system. The record that I have cited conclusively demonstrates that the greatest hope of attaining these objectives lies with the Republican Party and the fiscal principles for which that party stands. It is well to remember the record of the past in evaluating the promises of tax reduction uttered by the Democrat spenders in Congress whose adherence to the Democrat program of tax and tax, spend and spend, has made the restoration of our Federal Government to a position of fiscal integrity such an arduous task.

Tax Decision in Eaton Case Improves United States-Canadian Relations

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Cincinnati Enquirer on April 30 entitled "Tax Decision in Eaton Case Improves United States-Canadian Relations":

WASHINGTON.—The exigent demand for new raw material sources druing World War II produced the Steep Rock iron mines in the back country of western Ontario. Beneath a lake 12 miles long and in places 350 feet deep, lay rich deposits of high-grade iron ore.

With the approval, encouragement, and financial assistance of the Canadian and American Governments, Cyrus P. Eaton, Cleveland industrialist, and his associate in the Cleveland investment house of Otis & Co., William R. Daley, organized Consolidated Premium Iron Ores, Ltd., under the laws of Ontario.

Using the Consolidated Premium Corp., Mr. Eaton, the prime mover in the enterprise, raised $1 million in capital. The late Reconstruction Finance Corporation advanced $5 million, the Canadian Government granted loans. All this as a war measure. Ottawa, in addition, waived corporation taxes for a term of years.

The lake was drained, the high-grade Steep Rock ore quarried and hauled to market and and the venture became profitable.

Meanwhile, the urgent, wartime reason for deceloping Steep Rock receded in memory. The corporation, Steep Rock and Premium, were Canadian companies taxable, under the

United States-Canadian income-tax convention, only by the Dominion Government.

Nevertheless, the United States Internal Revenue Bureau, in its ceaseless quest for new profits to levy upon, undertook to assess Premium $2,598,900.70 in taxes, penalties, and interest for the years 1943–49; years during which the Canadian Government largely had foresworn taxes in view of the development costs. (Since 1947 the Canadian Government has collected $695,000 in corporation taxes from Premium.)

The Internal Revenue Bureau further levied against Mr. Eaton $1,527,234.79 and against Mr. and Mrs. Daley $388,283.19 in taxes, interest and penalties for the year 1943. These assessments were based upon a Bureau estimate of the appreciation in the value of Premium shares held by Mr. Eaton and the Daleys. They further were founded upon what Mr. Eaton declares to have been a fiction, i. e., that the Premium Corp. had a permanent establishment in the United States at Cleveland.

To the taxpaying citizen unversed in the intricacies of Internal Revenue regulations affecting corporations the ramifications of this case are deeply puzzling. What does stand out is that the corporation involved is Canadian and hence untaxable in the United States. The subsidiary question hinged on whether the Messrs. Eaton and Daley acted on behalf of Consolidated Premium or as individuals.

The other day in Washington United States Tax Court Judge Ernest H. Van Fossan found that the Treasury could not reach across the border to tax the Canadian corporation, Consolidated Premium, that the company had no permanent establishment in Cleveland and that Eaton and Daley were in truth acting for the corporation. Judge Van Fossan's opinion likewise disallowed a tax claim for 2 percent of Premium's commission on the sale of Steep Rock ore in the United States.

Judge Van Fossan's finding rated only a brief mention on the financial pages of the newspapers yet it was pregnant with political consequences. Perhaps even more significantly, the ruling affected the course of Canada's current industrial, mining, and oil boom, so largely financed by American capital, as well as the fortunes and investment policies of multiplied thousands of corporations and private investors on this side of the border.

The issue, double taxation, was clearer in Ottawa, in Toronto, in Wall Street, and in Cincinnati's Fourth Street than in Washington. A ruling adverse to Eaton and Consolidated Premium would, moreover, have had incalculable consequences reaching into the Congress and the Dominion Parliament. Such a finding might well have thrown open the United States-Canadian tax convention for renegotiation necessitating exhaustive and lengthy inquiries.

Before the Van Fossan finding came down the Senate Foreign Relations Committee had begun a study of the knotty problems that would have ensued upon a contrary ruling. The Canadian industrial and financial community, already nettled because the External Affairs Department had not made stronger representations to Washington in the matter, would have beseiged the new Parliament to be elected in June with urgent demands for Canadian action perhaps even to the point of retaliation against American corporations and investors.

Given the current state of ill will in Canada toward the United States, a mood compounded of many factors apart from Foreign Minister Lester (Mike) Pearson's indignant reaction to l'affaire Norman, a tax court decision in favor of double taxation would have produced new and damaging tensions. Beyond the economic factors involved, far transcending the personal advantage or disadvantage of Mr. Eaton, were questions of national prestige.

A decision to tax a Canadian corporation would have been regarded in Canada as another example of Yankee arrogance and inconsiderateness toward our nearest neighbor and best customer. Our northern cousins have many bones to pick with us these days as it is. Our farm surplus disposal program has, or so they assert, closed many world markets to them and stopped their once valuable wheat export in its tracks. Canada has a 2-year carryover of wheat, we have roughly 1 year of overstock.

The Canadians take a lively interest in the dispute over St. Lawrence Waterway tolls and prospective United States' subsidy to American shipping on that route. There are many causes of contention, minimized or ignored in this country, but the principal grievance is one which has created a certain ambivalence in Canadian opinion toward its massive neighbor. This bears on the Eaton tax decision.

Since World War II, United States investments in Canada (now standing at $13 billion) dominate the mining, oil, motor car, chemical, electrical, machinery and machine tool industries. Canadians fear they are becoming a financial "colony" of the United States. Yet at the same time the Canadian economy desperately needs the new capital flooding across the border at the rate of $700 million a year to offset the billion and a quarter-dollar annual deficit in balance of payments. Double taxation might dam that flood. It almost surely would.

That is why the tax court's finding brought relief to Ottawa and the financial districts of Toronto and Montreal.

That decision has mollified at least some of the current asperity north of the border toward us and our Government.

American Courtesy at the Panama Canal

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. PATTERSON. Mr. Speaker, a constituent of mine recently toured Central America and in observing the Panama Canal, was greatly impressed by the conduct of two Americans, Mr. Fred Berest and Mr. George Harter, of the Locks security force. I wish to insert at this point in the RECORD a letter from Mr. Edward Cohen which tells of this commendable courtesy at the Panama Canal:

THE H. C. COOK CO.,
Ansonia, Conn., April 15, 1957.

Hon. JAMES T. PATTERSON,
New House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Our recent visit to Central America took us to Panama City, and, of course, to the Panama Canal.

The controversy of the Suez Canal tended, naturally, to increase our interest and sharpen our wits about the Panama Canal, and we avidly absorbed every bit of information on this phenomenal feat of engineering.

What impressed us deeply as we watched the huge ships going through the canal was the integrity and courtesy of the locks security force at the Mira Flores Locks, especially the two young Americans, Fred Berest and George Harter.

These two young men extended to us every courtesy and patiently answered our every question relative to the canal, and not only made our visit a memorable one, but again stirred up in us a deep sense of patriotism and love for our country, which we always feel in foreign lands.

Were it in my power to hand out good-conduct medals, Fred Berest and George Harter would be now receiving them. As it is, it is our earnest desire that this letter concerning our American security force representatives reach those in power where it would do the most good. Criticism is so aptly given. Let us record good deeds. Let those who earn them reap the reward.

With kind personal regards, we are
Yours,

EDWARD COHEN,
Treasurer, the H. C. Cook Co.

Hon. Earl W. Jimerson, a Dedicated Leader of American Labor

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include tributes paid to Earl W. Jimerson, president of the Amalgamated Meat Cutters and Butcher Workmen of North America, on the occasion of a testimonial dinner for Mr. Jimerson held in New York City on May 19, 1957.

The following remarks were included in the program guests received at the dinner:

EARL W. JIMERSON, A DEDICATED LEADER OF AMERICAN LABOR

(By Max Block, vice president, Amalgamated Meat Cutters and Butcher Workmen of North America)

Tonight, all of us honor a distinguished veteran leader of labor. Earl W. Jimerson's friends throughout the country are legion. He has, without any shadow of a doubt left an indelible imprint on the march of time. Truly, few men in our lifetime have worked as tirelessly and so unselfishly in the interests of other humans. Few men have labored so unflinchingly for democracy and few have done as much to banish poverty in our land.

The mammoth membership growth of the Amalgamated—the record high labor standards enjoyed by the nearly 400,000 members of our union throughout the United States and Canada, attest eloquently to the caliber of his leadership. Thanks to Earl W. Jimerson, the Amalgamated ranks today foremost among the world's food unions in A. F. of L.–CIO.

This testimonial event which draws us here to extol President Jimerson as the guest of honor, reflects our genuine respect and affection for an outstanding labor leader who has contributed richly to the stream of American history. The outpouring of spokesmen from the ranks of labor, industry, government, and education and the record-shattering sale of Israel bonds in conjunction with tonight's event stand as a monumental tribute to our guest of honor—the able chieftain of our Amalgamated.

In honoring Earl W. Jimerson, our colleague of many years, we are jointly paying tribute tonight to those idealistic management spokesmen, who, in collaboration with our labor representatives, accounted already for the sale and purchase of over half a million dollars worth of State of Israel bonds.

In the vanguard of our union forces in this worthy effort, Earl Jimerson has given of his strength, executive, and organizational ability to once again further good things for good causes as he has done without undue fanfare on many occasions in a lifetime of service to democracy and labor.

It is a fitting occasion, I feel, that the State of Israel, President Jimerson, and our friends of the industry are here together lauded for their respective democratic concepts.

It is a great occasion for a great effort, for a unity of labor-management purpose which can only redound to the benefit of the State of Israel and us all.

I take this opportunity, if I may, in behalf of our management friends and of all here in the Amalgamated who know him and have worked with him through the years, to say to President Jimerson, "You've done a great job in a great cause. May you prosper for the future as assuredly the State of Israel will, too."

CHRISTIAN CHARITY—EARL W. JIMERSON: A VIGNETTE

"What, sir," said Boswell, notebook in hand, "are the principal virtues of man"?

"Whereas, sir," said Johnson, "you know courage and the vox humana are reckoned the greatest of all virtues, because unless a man has those virtues, he has no security for preserving others."

For more than three decades Earl W. Jimerson has been the conscience of the polyglot world of the meatpacking industry extending from the black ghettos of Chicago to the white ghettos of New York. Of all the labor leaders that make up the American labor movement, few surpass him in his practical Christian charity.

He is a cautious leader with great appeal in the expansive Midwest; a spokesman for the rights of the oppressed whom the Jews accept as a friend; a labor leader with a most generous impulse who is the first choice of the trade unionist and the citizen. Few command more loyalty and devotion in the trade-union movement.

Good citizen that he is, wherever there was or is a job to be done whether for the Amalgamated or the labor movement, or for the community, State, or Nation, there you would always be sure of finding Earl W. Jimerson.

"Jim's" first major achievement in the field of labor—which in a sense was a forecast of things to come—was his successful effort in organizing Retail Meat Cutters Local 534, in East St. Louis. The charter for that union was issued in March 1914. Local 534 continues to be one of the pillars of the international union.

In recognition of his initiative and leadership so ably demonstrated in organizing the local union, his fellow workers elected "Jim" as their first secretary-treasurer and business agent. He served in that capacity with distinction from 1914 to 1918, when he was chosen president of the Packing Trades Council of St. Louis and East St. Louis. The council was an organization of 13 local unions—retail meat cutters, packinghouse workers, sausage makers, poultry and egg handlers, and others—in the St. Louis-East St. Louis area. In that same year he was also one of the principal organizers of the East St. Louis livestock handlers.

Jim's first salary as business agent of local 534 was the handsome sum of $13 a week plus $1.50 for lunch and carfare. It was a full year after the union was organized before they were able to furnish the "B. A." a horse and buggy—the first official mode of transportation of the local. Even at that, the money for the purchase of the horse and buggy was raised from picnics, barbecues, and other fund-raising activities of the union. This was also true of the funds that bought the secondhand Model T Ford which 2 years later replaced the horse and buggy.

The 1920 St. Louis convention elected Jim second international vice president. The first international vice president elected at that occasion was Patrick E. Gorman, present international secretary-treasurer of the organization. Since that 1920 St. Louis convention Pat and Jim have been bosom friends and an effective, inseparable team in leading the Amalgamated Meat Cutters from success to success.

If organizing the Meat Cutters in 1914 was a rugged task for Jim, it did not discourage him in the least. In fact that job merely served as a proving ground to prepare him for other rough periods ahead, many of which were indeed critical. But Jim never ran away from a fight. Whatever the situation, he has stood the test and met the issue headon. And every obstacle he hurdled gave him new experience and fortified him with fresh courage to tackle the other problems that were sure to follow.

In 1916 Jim took an active part in the organizing drives that brought the packinghouse workers of the Swift, Armour, and Morris & Co. East St. Louis plants under the banner of the Amalgamated Meat Cutters & Butcher Workmen. The year 1917 provided a crucial test for Jim, but he met the issue as calmly and courageously as he has faced any crisis. His conduct under fire proved his color and stamped him as a real leader.

When the commonly called but mistakenly designated "race riots" broke out in East St. Louis in 1917, Jim found himself right in the midst of it. He had won the admiration and respect both of his fellow workers and fellow townsmen because he could always be counted on to champion the cause of the underdog.

The so-called East St. Louis "race riot" of 1917 was one of those labor flareups over an intolerable industrial situation. It was incorrectly, perhaps intentionally, called a "race riot" because the outsiders involved in the case were Negroes. Jim was applauded by the Negro press for "preventing further violence and bloodshed." He emerged a leader in the fight against racial discrimination.

On other occasions he was appearing before some congressional committees, courts, Federal commissions, arbitrator, mediator, State boards or some other officials or agencies laying down facts and figures on the miserable conditions under which the packinghouse workers and their families lived and urging action by those in power to help improve them. Probably the best known of these cases and hearings were those before Judge Samuel Alschuler, World War I Meat Packing Industry Administrator, whose decision in favor of the workers temporarily stemmed the tide of wholesale wage reductions in the industry.

Of such stuff Jim was made. He called the score as he saw it. He calls them now as he sees them and let the chips fall where they may.

Earl Jimerson is no fly-by-night, "soldier of fortune." Jim has shared alike the sufferings and heartbeats, the joys and sorrows, the successes and failures of the men and women of the packing industry and allied fields.

He has gone hungry with them when that was the best they could do, and like them has eaten little higher up on the hog when times were better.

Like the true leader that he is, Jim has risen to the top but has never lost the common touch. He is never too busy to exchange greetings with even the newest member of the organization or lend an attentive ear to the problems of the smallest local union. He loves people and is easy to get along with but when the situation warrants it he can be as adamant and unyielding as the proverbial Missouri mule—from the opposite side of the river from his native East St. Louis.

When Jim was mustered into service by the international union headquarters during its darkest hours in the twenties, the union's membership stood at 5,000 and the treasury under that amount in dollars. Today, the roster borders on 400,000 and its financial resources reflect its undoubted strength.

In his dealings with employers Jim is a hard fighter but square shooter. He advocates the doctrine of "live and let live." He is as considerate of the employers who provide a job for only a single amalgamated member as for those who employ thousands. "Unless they succeed," he says, 'we won't have much to bargain for." He believes that once a contract is signed it ought to be respected alike both by the union and the employer and in both the letter and spirit.

A Friend Named Diem

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Newsweek magazine of May 20, 1957:

A FRIEND NAMED DIEM

(By Ernest K. Lindley)

The visit of Ngo Dinh Diem as President of the Republic of South Vietnam is living proof of what is often called a miracle but is not one. Rather, South Vietnam today is proof of what an authentic patriot, resolute and shrewd, can accomplish with the full backing of the major instruments of American policy: Military aid, economic aid, training missions, the United States Information Service, the State Department and its Foreign Service, all operating behind the shield of a collective defense treaty backed by the armed force of the United States.

Scarcely more than 2 years ago South Vietnam was in utter chaos. This was the legacy of French misrule, French military defeat, the Geneva Conference of 1954, our own halfhearted policy, and our agreement to a truce in Korea in advance of one in Indochina, thus permitting the Red Chinese to shift to the south the weapons which enabled the Communists to win a decisive victory at Dienbienphu. Parts of South Vietnam were controlled by quasi-religious sects with their private armies—one of them had a powerful grip on Saigon itself. Various pockets were under Communist control, and Ho Chi Minh, the Communist who had humiliated the French, was widely honored, while Diem was hardly known to his own people. South Vietnamese troops who had suffered defeat with the French at Dienbienphu were awed by Communist military power.

DISCOURAGEMENT

The economy of the country had nearly collapsed. Nearly a million refugees poured in from North Vietnam. A South Vietnamese Government had to be built almost out of thin air, and against obstructive French tactics. Most of the neghboring Asian governments and the British as well as the French were ready to write off Diem. Even our own Government lost heart and began casting about vainly for someone else to rescue what looked like an almost hopeless cause.

Then suddenly Diem began to take hold. Two years ago (Newsweek, June 6, 1955) I wrote from South Vietnam: "Probably no other governmental head in the free world is surrounded by so many tough, complex problem as Diem.—He has the will to win. No one else capable of fighting Ho Chi Minh to a standstill is presently visible. Diem should be supported to the limit." Reflecting the judgment of the more determined of our official representatives, I urged that the French withdraw completely and that the farcical absentee emperor, Bao Dai, be deposed.

In 2 years South Vietnam has been transformed. The private armies and the main Communist pockets have been wiped out. Most of the countryside has been pacified and brought under control of the central government. Most of the refugees have been resettled. Diem has become the authentic symbol of Vietnamese nationalism. South Vietnam is still beset with problems and is not yet self-supporting but its prospects of surviving and developing are bright and solid. The credit belongs primarily to Diem, but, as he unhesitatingly proclaims, he could not have succeeded without large-scale American support.

THE GREATER COST

Aid to South Vietnam has been costly to the American taxpayer. Any critical analyst, looking back, doubtless could find that some of our money was wasted. But it is the end result which counts. Had South Vietnam gone down the drain, the cost would have been infinitely greater—probably a war or Communist control of most or all of the Southeast Asian peninsula.

South Vietnam is, of course, only one of many free nations saved in the past decade by resolute leadership, backed by the United States of America. They run all the way around the perimeter of Eurasia from Norway to the Republic of Korea. And the situation in the Middle East today bears striking similarities to that in Southeast Asia in 1954 and 1955, when we at last moved to halt the southward thrust of the Red Chinese. The global struggle with Communist imperialism continues. We can still lose it by failing to exert the effort and spend the necessary money, not only on our military establishment but on our diplomacy, the USIA, military and economic aid. Let us hope that the advocates of economy do not put us in peril of eventual defeat.

Atoms To Light City and Keep Food for Years

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles from the May 17, 1957, issue of the Idaho State Journal by Lee Ester and Hugh A. Wagnon. These articles, published in the Pocatello paper, indicate what tremendous advances in atomic research are being made at the national reactor testing station located near Arco, Idaho:

[From the Idaho State Journal of May 17, 1957]

ATOMS TO LIGHT CITY, KEEP FOOD FOR YEARS

(By Lee Ester)

NATIONAL REACTOR TESTING STATION.—An Ohio city about half the size of Pocatello will be lighted by nuclear power by 1960.

In another 5 years, you may be able to leave hamburger at room temperature and it will taste as good months later as the day it was bought.

These were a few of the glimpses into the future given some 30 newsmen Thursday as the National Reactor Testing Station opened its gates for the second time in 8 years of operation on the Lost River plains near Arco.

Experiments on those two projects are among hundereds conducted regularly by physicists, chemists and technicians who are working to develop beneficial uses of the atom.

Their tools are the reactors spaced miles apart on this sprawling 431,000-acre site.

A reactor, simply, is a device with a heart of enriched uranium which gives off fast-moving particles called neutrons.

These flying neutrons are reflected back into the reactor mass and bombard atoms, causing them to fly apart.

This "explosion" or fission of atoms—carefully controlled in all reactors at NRTS—releases tremendous amounts of energy which can be converted into power.

The proposal to power the city of Piqua, Ohio, depends upon the success of the organic moderated reactor experiment, one of the newest facilities at the station.

Designed by a task force headed by 34-year-old German-born Dr. Charles A. Trilling, the reactor is different from other reactors in that it will us an organic compound made from benzene for the dual role of "moderator-coolant" in the reactor system.

As a moderator, the material will slow down neutrons produced in the uranium fission process. Without it, the neutrons would run wild and cause the reactor's fuel elements to burn up too quickly.

As a cooling agent, the liquid organic material will circulate through the hot reactor core, absorb heat and carry it to another unit.

There, the heat will produce steam which will drive power-generating turbines.

The reactor will produce more than enough power to light Piqua, Ohio, but electricity is not the object at NRTS.

"We know that turbines work and that generators will produce electricity, so we don't need to bother with that here," Trilling explained.

Instead, experiments with OMRE will provide information on the rate of decomposition or damage on the organic material under exposure to temperature and radiation levels encountered in power reactors, effect of this damage on the operation of the reactor and requirements for successful operation in spite of this damage.

Operated by Atomics International, a division of North American Aviation, Inc., OMRE is expected to produce enough data in 6 months to tell whether it will be a success.

Touring NRTS, you get the impression the project is here to stay. Originally planned for 10 reactors, the site now has 8 in operation, 5 more under construction and 7 others under design or up for construction bids.

The tour included most of the areas where research into peacetime uses of the atom is being carried out, but newsmen were not taken into the areas where military research is being conducted.

NRTS now has five contractors with another to move in shortly.

Of the six, Phillips Petroleum Co. has the largest investment with Argonne National Laboratories, Atomics International, General Electric and Westinghouse having substantial operations. The latter two firms have contracted to build ship and aircraft reactors in an isolated area still highly secret.

The sixth firm, Aerojet-General Corp., will build a gas-cooled reactor.

The approximate installed value, plus improvements, of installations at NRTS was $104,000,000 last December 31. Projects totaling $82,000,000 are now under construction or slated.

The permanent operating force is expected to pass the 3,500 mark by next September. The current construction force of about 1,000 is expected to total more than 1,700 by midsummer. Annual permanent payroll is estimated at $14 million.

[From the Idaho State Journal of May 17, 1957]

IDAHO AEC SHAPES KEY TO TOMORROW'S WORLD

(By Hugh A. Wagnon)

NATIONAL REACTOR TESTING STATION.—The key to the world of tomorrow is being shaped at this Atomic Energy Commision installation in the desert between Idaho Falls and Arco.

A press tour of many of the installations Thursday disclosed what is being done to pry open the secrets of economic civilian uses of the atom and the power it releases in controlled experiments with reactors, which are what the scientists call the atomic stoves.

Perhaps the aspect that strikes the layman's imagination is the strange lack of anything that can be seen—the actions of atoms and neutrons is beyond the realm of the five senses and must be "seen" by the use of sensitive instruments.

But there were wonders to behold. Wires outside a heavily encased pipe melt metals inside the pipe at a temperature of more than 500° F. without themselves getting warm.

CREATES MAGNETIC FIELD

It's done by creating a magnetic field inside the pipe. "Coolants" are used at temperatures of more than 500°; the secret is "heat transfer." The already superheated metal coolant absorbs another 100° from the atomic reactor and carriers it away. This is virtually important for the temperatures generated by the reactors are so high that one of the key problems is to find materials that can stand up and contain the reactor without melting.

One of the most promising avenues of exploration for civilian uses of atomic energy is the low-pressure thermal reactor, which, by slowing down the fission process, can produce usable energy more efficiently, with much less shielding. Its first apparent application indicated by the research men will be to ship propulsion and to small city powerplants.

Another field being investigated by one of the many laboratories at the site is the fast reactor, where atoms are split without being slowed down. Still another is the breeder reactor, where more fuel is created than is used. This means that when other problems are solved, there is little likelihood of there being an atomic-fuel shortage.

CONFIDENCE AND OPTIMISM

Right now the NRTS is accomplishing many practical uses of radioactive material but none was indicated as being commercially feasible as of today. On the other hand, "confidence" and "optimism" were two words most used by the scientists to describe how they felt about future applications.

Some of the things we may expect to develop from the experiments at Arco and elsewhere are economic electric power; use of atomic power to propel submarines, ships, and eventually, locomotives and airplanes; radiation of fresh vegetables and meats to make refrigeration unnecessary; and an ever-increasing use of isotopes in medicine, agriculture and many other fields.

Sacks of potatoes were immersed in a tank of water, in which cylinders at the bottom radiated enormous quantities of roentgen rays, six million per hour. In comparison, a cientist noted that a medical X-ray uses 1 roentgen. Potatoes thus treated have been kept without deterioration for as long as 6 years. What this may mean to Idaho's future economy is fabulous.

One of the scientists, Don Reid, plant superintendent for the $44 million Phillips chemical processing plant, compared the present status of the reactor to that of the packing industry of 75 years ago, when many byproducts were thrown away, as against the present era when "they use everything of the pig except the squeal."

One thing appears certain—it will not require 75 years for the atomic science to achieve efficiency comparable to that of the packing industry.

Mother o' Mine

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the East Side News on the occasion of Mother's Day:

MOTHER O' MINE

(By Harry H. Schlacht)

Sunday is Mother's Day. The two words most hallowed in every language are God and mother.

Mother, it embraces all that is lovely, all that is loving, all that is faithful, and that is beautiful. It is the first word we learn to lisp as we begin life. It is the last word we gasp as we depart from life. It is the golden cord which binds the earth to heaven. It is the love that changes the poorest cottage into a paradise. It is the greatest of all love. It is the eternal love.

O wondrous word mother. We bow our heads at your shrine. We kneel at the altar of sacred memories. We venerate your holy name. There is no tribute too great, there is no honor too glorious, to pay our mothers. We are transported upon the wings of blessed memory back to our childhood. We recall her tender caresses, her loving embrace, and her sweet lullaby at twilight. We hear again her soft voice which once made our infant hearts rejoice.

The songs and poems inspired by the love we bear, the touching eulogies delivered, the flowers we wear in her honor, the trees we plant in her memory, all these are tributes to her sublime influence. It has been written that "the hand that rocks the cradle is the hand that rules the world." It can be written that the hand that rocks the cradle is the hand that saves the world. The story is told of an angel that was sent from heaven to return with the three most beautiful things on earth. As he pursued his mission, he beheld a beautiful rose, that, he thought, he would bring back. He then saw a baby's smile; that, too, he would bring back. He looked and looked until he finally saw the sacrifice a mother's love was making for her child, and that, he concluded, was the third. He proceeded back to heaven—and when he arrived, he found that the rose had withered away—the baby's smile had gone—and nothing remained but a mother's love.

Her love is the greatest approach to divine love that God grants to man. She walks unafraid into the valley of the shadow and emerges forth with new life. She is the keystone to the home. She is the guiding star of man. In the sacred manger in Bethlehem, holding, as a tiny mite, the light of the world, was mother. In the great trial, at the foot of the cross on Calvary, faithful—utterly faithful—knelt mother.

Ere the fragile threads which sustain her part, while she can still hear words of honor and praise, while she can still feel the warm embrace of your love, take her to your heart and give her your devotion. Blessed are the children who can still have the benediction of her fading eyes and the caress of her trembling lips. For many of us she is a hallowed memory. For many of us she touches us only in our dreams. There has never been an act of heroism that could compare with the life's work of the humblest mother. To the soldier who falls in battle, we give bronze and tablet. But to mother—it is a battle without glory. She wears no medals of men. Her badge is the furrowed lines on her face. No bugle sounds taps over her—only the purling waters of the placid streams, only the birds in the air, and only the winds of heaven chant.

Remember mother. We shall see mother's love find its full expression in the world of tomorrow. We build monuments to soldiers, statesmen, and scientists. We should build a monument to the greatest soldier of them all—the sweet and gentle spirit of motherhood. Let us dedicate that monument to: The uprooting of all causes of war, the ending of prejudice of races and nations, and the strengthening of all peacemakers. That is what every mother seeks; that is what every mother shall have. Make every day Mother's Day.

Tapes Indicate Schrunk Feared

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, May 23, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Francis J. Ivancie, executive assistant in the Office of the Mayor of Portland, Oreg., together with an article entitled "Tapes Indicate Schrunk Feared," which was published in the Oregon Sunday Journal of April 21, 1957.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

CITY OF PORTLAND, OREG.,
April 25, 1957.

Hon. WAYNE L. MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORSE: Enclosed is a copy of a recent newsprint which concerns one phase of the vice investigation in this city.

This article is a good representation of objective newspaper reporting which is necessary in order to develop the true picture of the situation here in Portland.

Yours truly,

FRANCIS J. IVANCIE,
Executive Assistant.

[From the Portland (Oreg.) Sunday Journal of April 21, 1957]

TAPES INDICATE SCHRUNK FEARED

(By George Skorney)

Jurors in a Federal wiretap trial Saturday heard a voice on a tape recording say, "We got to keep that guy (Schrunk) out of the town," and then were told a little later that the trial would be postponed until Tuesday pending an appeal to a higher Federal court in San Francisco.

The reference to Mayor Terry Schrunk when he was sheriff of Multnomah County was included in telephone conversations alleged to have been illegally recorded by Portland Vice Czar James B. Elkins and his henchman, Raymond P. Clark.

Voices in the two tape records, played in public for the first time, appeared to be those of William M. Langley, Multnomah County district attorney, Thomas Maloney and Joseph P. McLaughlin, Seattle gamblers and other persons. The 3 men have been indicted on various counts by 3 Multnomah County racket-probing grand juries.

But just as the trial was getting into full swing with the playing of the two tapes, United States Judge William East postponed the proceeding so the circuit court of appeals can rule whether 12 important witnesses of the prosecution shall be permitted to testify.

Judge William Denman of the appellate court will consider this defense motion at 9:30 a. m. Monday. East recessed the trial here until 9:30 a. m. Tuesday.

Elkins and Clark showed little interest in the playing of the sensational tapes.

It must have been evident to the Federal court jury that at least some of the conversations were recorded from telephone conversations, because ringing of telephones, dialing noise, and the hanging up of telephones could be heard.

One of the clearest conversations heard was between a man who identified himself as Tom and another man who appeared to be Langley.

The man named Tom said that Ron Moxness, editor of the Oregon Teamster, was let go by Cylde Crosby, international teamster representative, for his (Moxness') crusading tactics.

The other voice replied, "One of the characteristics of a crusader is that he must pop off."

The Tom voice said Moxness talked about teamster interest in pinballs being illegal and about the racket business.

The other voice complained that "he (Moxness) always is putting Schrunk in the paper. I'm glad Moxness is out of there. He's a damn crusader."

In another conversation between the same Tom and another voice identified as "Joe," Tom said:

"The rumor is moving around Schrunk (then sheriff) is coming into the city. * * * We got to keep that guy out of the town."

The same Tom voice said in another conversation that "Schrunk is coming in the city * * * he'll blow the whole proposition in the air."

All these conversations were in the second reel played, which was admitted as evidence as exhibit No. 2.

In the first reel, also admitted as evidence, there was a conversation that apparently involved Langley and a man called Joe.

"Thornton is going to blast me," said the unidentified voice to Joe.

This apparently referred to the probe Langley was making of the Oregon Liquor Control Commission in 1955. The voice told Joe that he had only hearsay evidence that Attorney General Robert Thornton was going to accuse him of whitewashing if he dropped the probe.

Langley was asked by the late Gov. Paul Patterson to make the probe concerning reports of bribery of OLCC employees. Thornton got into a hassle with Patterson, maintaining that as attorney general he should make the investigation.

(Langley, after he completed his grand jury investigation, reported to the governor that there was no evidence for prosecution against anyone.)

In another part of the same conversation, the voice said, "Thornton's going to fall flat."

Judge East and Circuit Judge Charles Redding of Multnomah County are on opposite sides of a legal fence, on whether 12 present and former public officials shall testify in the Elkins-Clark trial. Judge East has said he will cite these officials in contempt if they don't testify. Judge Redding has said he

will hold them in contempt if they do testify.

Redding reasoned the tapes were seized illegally from Clark's home May 17, 1956, through Langley and deputies of Sheriff (now mayor) Terry D. Schrunk. Redding said he is protecting the civil rights of Elkins and Clark.

East ruled the tapes were seized legally by the FBI when they later were in the hands of State police and that Redding's injunction was voided as far as the Federal court was concerned.

The defense has asked the appellate court to issue a writ of prohibition preventing Judge East from compelling the 12 men to testify. United States Attorney C. E. Luckey, who is prosecuting the Elkins-Clark case, and Walter H. Evans, Jr., and William J. Crawford, defense attorneys, will argue the motion before the appellate court.

If Luckey loses, it is believed by court observers that this will seriously hurt his case against the underworld pair.

Judge East was obviously relieved that the contempt dilemma will be settled by a higher court. He said from the bench:

"A great deal of weight has been removed from my shoulders."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided;* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Extravagant Hoover Commission Recommendations for Savings

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD, I include reply to the letter of Chairman Clarence Francis, of the Citizens Committee for the Hoover Report, received May 16, 1957, as follows:

MAY 16, 1957.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR MR. CANNON: I am writing with reference to your remarks on the floor of the House on May 14, 1957. In your address you seriously questioned whether actual economies can result from the recommendations of the bipartisan Hoover Commission. The Citizens Committee has looked into this question with considerable care and would like to furnish you with the results of its study.

In this connection, our research department prepared the attached special research memorandum No. 11, entitled "Specific Examples of Savings, Capital Returns, and Increased Revenues Resulting From Reports and Recommendations of the Bipartisan First (1947–49) and Second (1953–55) Hoover Commissions." This study covers only a part of the total recommendations but it does document some $2.8 billion in savings. All of these figures are either taken directly from, or based upon, statements made by officials of the executive branch or by the Comptroller General of the United States.

With respect to the first Hoover Commission, the committee has looked into five specific areas of economy. The results of the survey indicated that economies in these five areas had resulted, as follows:

	Million
General Services Administration	$677.0
Veterans' Administration (cancellation of hospital beds)	545.0
Post Office Department (post and postal cards only)	72.0
Reconstruction Finance Corporation (abolition of)	474.4
Defense Department	569.5
Total	2,337.9

Additional results of the work of the first Hoover Commission would doubtless be found in other areas of Government but I think these figures are sufficient to make the point. Definite economies of substantial size are traceable to the first Hoover report through the statements of the agencies themselves.

With respect to the second Hoover Commission, the Citizens Committee has also made a study of some of the savings which so far can be attributed directly or indirectly to the Commission's findings. The results of this survey are as follows:

	Million
Treasury Department	$20.3
General Services Administration	131.7
Federal Housing Administration	.5
Interior Department	.6
Commerce Department	19.3
Veterans' Administration	13.6
Post Office Department	56.0
Health, Education, and Welfare Department	2.2
Defense Department (10 percent of total economies)	235.9
Total	$480.1

Here we would like to point out that only 39 percent of the 314 recommendations of this second Commission have been installed in whole or in part. Many of them have been installed rather recently, so that considerable time must pass before results can become evident. An example is the legislation providing a cost-accounting system for the Federal Government. Installation alone will take several years.

May I emphasize that these figures cover only a part of the total Federal operation and that they are meant simply to illustrate the fact that substantial savings have been certified by responsible governmental agencies. To study completely the budgets of all departments and agencies over a span of 9 years would involve the task of compiling and comparing material on approximately 11,000 pages, with an average of at least 50 items per page, or more than 550,000 separate budget items. In our view, there are additional and very substantial savings which would be divulged by a more thorough study than that which we have been able to undertake.

In conclusion allow me to refer to the subject of appropriations on an annual accrued expenditure basis as provided in H. R. 2494 currently before the House. Varying estimates have been made as to the savings which might come to the taxpayer through this measure. We would like to point out that substantial economies might flow from a reduction in the so-called "carryover" funds—that is, unspent funds available from appropriations in previous years. These funds are today estimated to be in the neighborhood of $50 billion. As a most conservative estimate, a thorough scrutiny of such funds might lead to a reduction of only 1 percent—and this is a minimum. This alone would be $500 million per year. It is our feeling that the savings would be considerably more substantial.

Thank you very much for hearing our views on this matter.

Sincerely yours,

CLARENCE FRANCIS.

SPECIAL RESEARCH MEMORANDUM NO. 11, CITIZENS COMMITTEE FOR THE HOOVER REPORT—SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) AND SECOND (1953–55) HOOVER COMMISSIONS

Much current controversy centers around the record peacetime Federal budget of $71.8 billion for fiscal 1958. There is general agreement on the need for economy but widespread debate over specific cost-cutting proposals.

The question then arises: "Are substantial savings available through adoption of the recommendations of the bipartisan Hoover Commission?"

In the following pages, the Research Department of the Citizens Committee lists some examples of concrete economies, capital returns, and increased revenues clearly attributable to the work of the bipartisan first (1947–49) and second (1953–55) Hoover Commissions.

Four points should be noted:

1. This list traces $2.3 billion in aggregate economies to recommendations of the first Hoover Commission and $480.1 million to the second—a total of some $2.8 billion for both to date.

2. This is a partial list, intended only to illustrate broadly the principle that specific economies are available through adoption of Hoover Commission recommendations.

3. These examples are based almost entirely on official reports of the Federal departments and agencies concerned.

4. Most of the examples are based directly on Hoover Commission recommendations, but some are byproducts of the Commission's work, illustrating the ways in which a document like the Hoover report can stimulate economy-consciousness in governmental operations.

Five Congresses and two administrations have had a hand in the bipartisan effort through which some 72 percent of the proposals of the first Hoover Commission and, to date, 39 percent of the second have been adopted. The process of effectuation following adoption is often a long one and the results, when obscured by sudden developments such as the Korean action, are difficult to identify.

The fact remains that definite savings of a major nature, far greater than the totals shown by these examples, have been made. It may be reasonably concluded, therefore, that substantial additional economies remain available in the unenacted 61 percent of the second Commission's recommendations.

Attached are:

1. Appendix A (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan first (1947–49) Hoover Commission).

2. Appendix B (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan second (1953–55) Hoover Commission).

An examination of these two appendixes indicates the figures are almost entirely official statements of the Federal departments and agencies. In only two of the scores of specific figures here quoted has the Citizens Committee's Research Department posed its own estimate; and in these two cases, the estimates are premised upon official figures.

APPENDIX A

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) HOOVER COMMISSION

The first Commission on Organization of the Executive Branch of the Government was created by unanimous act of Congress on July 7, 1947. The Commission was em-

powered to "study and investigate the present organization and methods of operation of all departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the executive branch of the Government."

The Commission divided up its total project of studying the executive branch into a series of major-purpose activities and functional problems. Twenty-four task forces were created. Some of these dealt primarily with Cabinet departments, while others centered on broader categories of interest. The task force reports were completed in the late summer and autumn of 1948; and the Commission reported to Congress during the first 6 months of 1949. Most of the reports had minority opinions and dissents, proving that the recommendations were not accepted without a good deal of examination.

In enumerating the savings, capital returns and increased revenues attributable to the first Hoover Commission, the Citizens Committee covers five major areas. They are: the General Services Administration, the Veterans' Administration, the Post Office Department, liquidation of the Reconstruction Finance Corporation, and the Department of Defense. These estimates are not all-encompassing of the whole area of savings effected by the first Hoover Commission. They are chosen merely to illustrate some of the financial benefits which demonstrably have resulted from the recommendations of the Commission.

1. THE GENERAL SERVICES ADMINISTRATION

It should be remembered that there would be no General Services Administration had it not been for a specific recommendation of the first Hoover Commission. In February 1949 the Commission recommended to Congress that responsibility for three internal service operations, Supply, Records Management, and the Operation and Maintenance of Public Buildings, be placed in an Office of General Services with a director appointed by the President (Report on Office of General Services—Supply Activities, Recommendation No. 1). The agency was created by the Federal Property and Administrative Services Act later in that year.

The agency's annual reports have stated economies, as follows:

Fiscal year and savings[1]

		Million
1951		$81.0
1952		127.3
1953		130.6
1954		147.6
1955:		
(a) Personal property	$168.7	
(b) Real property	14.6	
(c) Records	3.6	
(d) Administrative	3.6	
		190.5
Total		677.0

[1] Stated officially by Jess Larson and Edmund Mansure, the 1st 2 General Services Administration Administrators, and found in the GSA Annual Reports.

2. THE VETERANS' ADMINISTRATION

Cancellation of congressional authority to build 16,000 hospital beds for the Veterans' Administration was the biggest savings item in this field. (Report on Medical Activities, p. 6.) There are various methods by which nonrecurring or onetime savings like a hospital cancellation can be amortized. The Citizens Committee used a 5-year basis in making its estimates, believing that the normal patient load accretions would cause such construction to be authorized again toward the end of such period. However, good economic conditions, important reductions in the incidence of tuberculosis, new drugs and medical techniques, and a number of other factors have mostly deferred this construction program, perhaps indefinitely. Hence, while the committee's 5-year amortization estimate seemed a reasonable basis when the estimate was made, it may have been too short for this particular case.

The aggregate saving of $545 million is shown as follows:

Fiscal year and savings[1]

	Million
1951	$67
1952	97
1953	127
1954	127
1955	[2] 127
Total	545

[1] Bed construction amortized without interest factor over a 5-year period; operation and maintenance costs carried on an annual basis, starting in 1952, at ½ of full annual figure of $60,113,000; and at full figure thereafter.

[2] Construction cutback was fully amortized according to Citizens Committee basis by June 30, 1954, but annual operation and maintenance savings of $60,113,000 would continue thereafter.

3. THE POST OFFICE DEPARTMENT

The most notable achievement here was the increase in the price of penny post and postal cards from 1 cent to 2 cents. (Report on the Post Office, Recommendation No. 8.) Congressional action on this Hoover Commission proposal led to an average annual revenue increase of $7.4 million—$5 million in fiscal year 1952, and an aggregate total of $32 million thereafter on postal cards. The aggregate revenue thus added has been $37 million through fiscal 1956.

To this can be added revenues from increasing penny post cards from 1 to 2 cents, which are estimated by the Post Office Department to have returned another aggregate of $35 million. This is necessarily an estimate since the postal accounting system compounds these revenues into the normal sale of 1-cent stamps.

The total, thus, is $72 million.

The rate on postal cards and post cards had stood at 1 cent since May 13, 1873, except for a temporary 1-cent increase during World War I.

4. THE RECONSTRUCTION FINANCE CORPORATION

In its report to Congress on Federal business enterprises in March 1949, a task force of the first Hoover Commission recommended the liquidation of the Reconstruction Finance Corporation. The Commission itself recommended drastic cutbacks in lending, but did not recommend total liquidation. However, the combined efforts of these two groups resulted in its termination effective September 28, 1953.

For the most accurate description of the capital returns realized from the Reconstruction Finance Corporation in liquidation, a direct quotation is taken from the 1956 annual report of the Treasury Department:

"After giving effect to assets transferred to other Government agencies under the provisions of the RFC Liquidation Act and Reorganization Plan No. 2, of 1954, there remained for liquidation loans, securities, and commitments amounting to $592,200,000. By June 30, 1956, this portfolio had been reduced to $117,800,000. The total reduction of these assets was $474,400,000, of which $114,300,000 was accomplished during the year.

"The proceeds realized from liquidation of the Corporation's assets are returned to the Treasury. In the fiscal year 1956, there was paid into the Treasury from cash on hand and amounts realized during the year a total of $150 million." [1]

[1] Annual Report of the Secretary of the Treasury, for the fiscal year ended June 30, 1956, p. 138.

5. THE DEPARTMENT OF DEFENSE

The major segment of savings and budget reductions achieved from the original Hoover Commission fell within the Department of Defense, and these were most substantial. Some were annually recurring and some were nonrecurring, but, in the 1949–50 period, $569,675,000 of a total of over $1.5 billion saved in the Defense Department can be linked with Hoover Commission recommendations.

Due to the outbreak of hostilities in Korea, many of these Defense savings were immersed in the necessarily increased expenditures for war. Thus it is impossible to go beyond this point with regard to savings. Most savings effected by the Defense Department after the Korean war relate to the work of the second Hoover Commission and are dealt with later in appendix B of this memorandum.

The savings of $569,675,000 for 1949 and 1950 and stemming in whole or in part from the Commission and its task force are as follows:

	Savings[1] *(million)*
Lowered cost of recruiting program	$2.3
Lowered cost of printing and binding	2.3
Inactivation of administrative vehicles and substitution of civilian type vehicles for heavy military type vehicles	11.9
Inactivation of facilities surplus to peacetime needs	169.2
Lowered cost of petroleum reserves	.5
Lowered cost of classified project	2.1
Restrictions on civilian travel	.4
Bringing the rating structure of enlisted men into line with actual distribution and the structure plan for fiscal year 1951	9.9
Institution of the monetary maintenance allowance system in lieu of issue-in-kind	13.8
Curtailing and closely examining requirements for issuance of change of station travel orders	$3.6
Lowered cost of quarters allowances for enlisted personnel resulting from adjustments in the rating structures	1.9
Early discharges, releases to CAD officers, and lower requirements for recruit outfits	9.5
Reduced requirement for operation of aircraft	5.0
Decrease in depot and base supply and maintenance	4.2
Lower fuel requirements from reduction in steaming hours of the active fleet and operation of a smaller fleet	2.6
Rescheduling and combining cargo shipments	7.9
Lowered operating expenses of ships other than fuel	3.0
Adjusting schedules for ship overhauls, reevaluation of scope of work required for individual ships, and accomplishment of increased self-maintenance by ships' crews	10.0
Decrease in the total communications requirements for the Department of Defense including those resulting from the operation of AFSA	6.6
Reduced procurement of organizational clothing, motor transport spare parts, general supply items, signal supply items, and curtailment of repairs, upkeep, and improvements for Marine Corps	1.0
Lower level of support for courts-martial, chaplain supplies, miscellaneous schools, etc	.7

[1] From Semiannual Report of the Secretary of Defense, July 1–December 31, 1949, pp. 53–55.

	Savings (million)
Curtailment of major repairs and replacements and general maintenance of naval facilities	$7.6
Savings through consolidation of Reserve training facilities, joint use of facilities and inactivation of some smaller training vessels while at the same time extending the training schedules of some of the larger vessels which will accommodate greater numbers of Reserve personnel for training	13.5
Reevaluation of research and development projects	17.2
Cancellation of the quinquennial overhauls of reserve fleet vessels and reduced preservation and maintenance of other war reserves	13.5
Curtailment of information and education activities	.3
Employment of better traffic policies and procedures in the operation of a central Military Land Traffic Office	1.6
Reduction of leased space after consolidation of activities	.07
Reduction and unification of military attaché office staffs	1.4
Lower cost of planned field exercises	.5
Savings in maintenance and operation of hospital facilities	5.3
General appropriation reprograming by deferred maintenance, personnel reductions or turn-over, lower level of operation in order to absorb wage board and other pay increases	156.5
Flying hours reduced	57.7
Reevaluation of industrial mobilization	25.9
Total	569.5

CONCLUSION

It will be noted that all the examples cited in appendix A, except those relating to the Veterans' Administration and the Post Office, are taken wholly from official reports and releases of executive branch departments and agencies, and, in those two cases, the estimates are based upon official figures.

These examples, to repeat, are simply intended to illustrate the point that concrete economies can be substantiated. They do not by any means represent the probable total of all such economies if all departments and agencies could have been included in this study.

The total of this partial list is itself impressive, however:

	Million
General Services Administration	$677.0
Veterans' Administration	545.0
Post Office Department	[1] 72.0
Reconstruction Finance Corporation	[2] 474.4
Department of Defense	569.5
Total	2,337.9

[1] Increased revenues.
[2] Capital returns.

APPENDIX B

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN SECOND (1953–55) HOOVER COMMISSION

The second bipartisan Hoover Commission was created in cognizance of the need for continued study and improvement of Federal administration. The Brown-Ferguson Act (Public Law 108, 83d Cong., 1st sess.) provided for a second Commission on Organization of the Executive Branch of the Government. It was passed without a dissenting vote in either House. President Eisenhower signed the bill on July 10, 1953.

The new Hoover Commission was assigned the responsibility of recommending methods and procedures for: Reducing expenditures to the lowest amount consistent with efficient performance of activities; eliminating duplication of functions; consolidating services of a similar nature; abolishing those activities not necessary to efficient conduct of Government; eliminating those functions which compete unnecessarily with private enterprise; defining responsibilities of officials, and relocating independent agencies directly responsible to the President into departments or other agencies.

The major difference between the first Hoover Commission and the second lies in the fact that, while the first Commission was directed to concern itself with the procedural aspects of Federal administration, the second Commission was, in addition, instructed to go beyond this, to raise the substantive question of whether a given Federal activity should be continued or discontinued regardless of the efficiency or lack of efficiencies with which that activity was being administered.

The Citizens Committee estimates that $480.1 million has resulted in savings from the second Hoover Commission recommendations already put into effect. The figures listed in this appendix reflect those savings made during the year 1955 and thereafter, with a few from 1954.

The examples here cited are all taken from official reports. While most are directly attributable to the Commission's recommendations, some are byproducts, due in whole or in part to the stimulus of the Commission's proposals.

1. THE TREASURY DEPARTMENT

New management programs were installed as well as audit studies, evaluation of the revenue accounting system, operational cost reports, and workload statistics. These and other managerial information leading to savings resulted wholly or in part from the recommendations of the second Hoover Commission.

Total net space requirements were reduced. Programs were carried on to provide more suitable and efficient space and facilities. Related activities have been put under one roof to provide for more efficient operations. Much effort has been devoted to improving and modernizing accounting systems within the Department. In many Treasury activities new, modern equipment was installed.

The origin of these savings can be traced to the stimulus of Hoover Commission recommendations on central accounting and reporting, spread of workload, discontinuance of detailed appropriation and receipts accounts, and methods of recovery of capital sums to the Treasury. The savings for 1955 and 1956 are detailed as follows:

Fiscal year 1955 [1]

	Million
Savings in cartage costs	$0.1
Reductions in export control operations	.1
Procedural and organizational realinements in the Bureau of the Public Debt	.4
Conversion of disbursing accounts	.2
Closing of four regional accounting and disbursing offices	.2
Installation of mechanical equipment in the Division of Disbursement	.2
New system for correspondence control	.6
New form of index card maintenance	.2
Reduction in supervision by Internal Revenue storekeepers	.4
Discontinuance of coinage operations at two offices	.4
Disposal of excess properties by the Coast Guard	.9
Transfer of three Coast Guard supply depots to the Navy	.2

[1] Annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1955.

Fiscal year 1955—Continued

	Million
Decommissioning of 10 Coast Guard vessels	$1.6
Better utilization of personnel	.2
Overall reduction due to improved methods and procedures	4.6
General management improvement program in the Bureau of Accounts	.6
Reorganization improvements in the Bureau of the Mint	.6
Total	11.5

Fiscal year 1956: Improved management actions saved a total of $8 million—Annual recurring savings—$6 million [1]

Revised procedures for the examination of printed products in the Bureau of Engraving and Printing	$0.3
Revisions in taxpayer-assistance programs in Internal Revenue	2.8
Extended use of mechanical and electrical equipment	.1
Transfer of Coast Guard supply facilities to the Navy	.2
Disposal of one supply base	1.0
Transfer of 46 parcels of property to General Services Administration for disposal	.4
Disposal of surplus vessels by the Coast Guard	.2
Space and equipment utilization survey in the Bureau of Customs released space valued at and declaration of surplus equipment	.5 .1
Customs Bureau reductions in manpower, space, and equipment	.6
Management improvement program in the Division of Disbursement	.6
Savings on an annual basis (recurring) from the Management Improvement program	.6
Elimination of duplicate sets of records [2]	1.0
Reorganization of the Bureau of Accounts and the Savings Bond Division (recurring)	.2
Total	8.6

[1] Items 1 through 11 obtained from the annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1956.

[2] Accounting and Auditing Developments in the United States General Accounting Office—United States Government Printing Office, 1957.

2. THE GENERAL SERVICES ADMINISTRATION—FISCAL YEAR 1956

Many new savings factors have been introduced into the General Services Administration since the second Hoover Commission completed its work. An accrued cost system of accounts was established, and large reductions in paperwork resulted from the creation of a single fund for administrative operations. Expansion of electric accounting-machine operations brought about savings in several accounting processes throughout the administration. A performance-analysis system was installed to measure performance in terms of accomplishments and cost. Finally, the internal audit program was more clearly defined so as to emphasize the review of internal controls on an agencywide basis.

These improvements embrace the Hoover Commission recommendations for storage and distribution, paperwork management, procurement, property management, records management, stockpiling and warehousing, and surplus-property distribution within the General Services Administration. The rec-

ord of savings for the General Services Administration in 1956 is listed below:

	Million
More efficient telecommunications service [1]	$1.0
Continued utilization of real property transfers	5.7
Records management surveys	4.3
Releasing of storage space	.7
Curtailed expenditures for new cabinets	2.3
Curtailed expenditures for transfer cases	.4
Transfer, instead of new procurement, of property	95.0
Repair and rehabilitation of equipment instead of new purchase	1.2
Improved audits and financial management	1.0
Reduction of motor vehicle fleet (recurring) [2]	20.0
Improved payroll procedures [3]	.1
Total	131.7

[1] Annual report of the Administrator of General Services for the year ending June 30, 1956 (items 1 through 9).

[2] GSA press release, February 17, 1956.

[3] 8th Annual Progress Report under the Joint Program To Improve Accounting in the Federal Government, 1956.

3. THE FEDERAL HOUSING ADMINISTRATION

The opportunity for administrative savings does not exist in as great a degree in the Federal Housing Administration as it does in other Departments or agencies.[1] However, management improvements for FHA in 1955 were responsible for savings of approximately $0.5 million.

It is as a result of recommendations of the first Hoover Commission that the Housing and Home Finance Agency embraces all Federal activities in the housing field except the Veterans' Administration and the Farmers' Home Administration. The Federal Housing Administration naturally falls within the scope of the Agency. Recommendations of the second Hoover Commission regarding the Federal Housing Administration are, for the most part, concerned with authority and studies of mortgage-loan insurance. These would be extremely hard to evaluate in terms of savings. General management improvements are most indicative of the savings made by the Federal Housing Administration and appear below.

Fiscal year 1955 [1]

	Million
Management improvements in Comptroller's Division—expected to effect annual savings in personal services of	$0.2
Records management economies	.2
Better use of space, and printing economies	.1
Total	.5

[1] Twenty-second annual report, Federal Housing Administrator, for year ending December 31, 1955.

4. DEPARTMENT OF THE INTERIOR

The Interior Department also participated in accounting reviews and cost-type budgeting. The Department also continued to examine internal functions in order to discontinue those activities which were in competition with private enterprise. This directly follows the recommendations of the second Hoover Commission. In addition, the Department proceeded to dispose of unneeded real property and to better organize field organizations. Much progress was made in records management and also in the area of general administration.

[1] Also the FHA is essentially a self-supporting Federal agency.

Evidence of the influence of Hoover Commission recommendations on business enterprises, paperwork management, and disposal of surplus property can be clearly seen in the savings shown here.

Fiscal year 1955 [1]

	Million
Decrease in volume of reclamation records	$0.1
Disposition of excess property, Bureau of Mines	.2
Total	.3

[1] 1955 Annual Report, Secretary of the Interior, Partnership in Resource Conservation and Development, for the fiscal year ended June 30, 1955.

Fiscal year 1956 [1]

	Million
Reduction in volume of stored records, releasing space and equipment worth approximately	$0.2
Transfer of surplus property to other agencies	.1
Total	.3

[1] 1956 Annual Report, Secretary of the Interior, the Conservation of Natural Resources, for fiscal year ended June 30, 1956.

5. THE DEPARTMENT OF COMMERCE

A modified accrual basis of accounting is also being used by the Commerce Department. The full benefit of this system is yet to be realized, but some economies have been made. The Department has also installed modern electronic machines which have greatly simplified paperwork management. Space transfers, reduction of inventories, new filing methods, consolidation of records space, and sale of surplus property have effected savings of more than $19 million. Again, these management improvements are in accord with recommendations of the second Hoover Commission. Those savings which can clearly be identified are set down as follows:

Fiscal year 1955

	Million
Transfer of space from Army to Panama Canal Company [1]	$0.8
Reduction of inventories of the Panama Canal Company [1]	3.0
Simplified methods and modern electronic aids in taking the 1954 business census [2]	4.0
Reorganization and clearance of filing systems [2]	0.2
New cost control study by the Maritime [2]	
Elimination of paperwork in Bureau of Public Roads [2]	0.5
Reduction of records storage space [2]	1.5
Sale of the Inland Waterways Corporation [3]	9.0
Total	19.3

[1] Annual Report of the Comptroller General of United States, 1955, 84th Cong., 2d sess., H. Doc. No. 255.

[2] Commerce Department release, Apr. 8, 1956, G655.

[3] Contained in special report to congressional committee.

6. THE VETERANS' ADMINISTRATION

Improvements in management and administration in the Veterans' Administration brought about significant results. Cost studies and new purchase practices were established, as well as control summaries and cost-type budget schedules. Procedural improvements in hospital administration were highly gratifying in light of the Hoover Commission recommendations. Progress was also made in the transfer and destruction of records and in the application of work simplification techniques.

The savings made by the Veterans' Administration clearly reflect the second Hoover Commission's recommendations applying to administrative procedure, medical supplies, storage operations, supply depots and distribution, and business-type services. The Veterans' Administration has adopted the Hoover Commission's principle that paperwork management places heavy proper emphasis on controlling the creation, maintenance, and use of records as well as storage and disposal. Achievements along these lines have been noteworthy, as may be seen by the savings figures:

Fiscal year 1955 [1]

	Million
Reduction in ratio of employees to patients in VA hospitals resulted in saving in salaries of approximately	$6.0
Cost studies in Department of Medicine and Surgery stimulated improved management at field stations	.7
Improved purchasing practices of items such as proprietary drugs and hearing aids	.4
More economical use of office space—release of excess space	.3
Redistribution of supplies	.2
Transfer of VA records to GSA Federal Records Center	.3
Disposal of unnecessary records	.2
Application of work simplification techniques	.2
Reduction of depot inventories within VA	.2
Transferring accounting functions of loan guaranty divisions to finance divisions in regional offices, resulting in elimination of approximately 65 positions	.4
Redistribution of excess personal property within the VA	2.1
Total	11.0

[1] Administrator of Veterans' Affairs—Annual Report, 1955.

Fiscal year 1956 [1]

	Million
Development of electric accounting procedures for loan accounting	$0.2
Procurement of thorazine at one depot with direct delivery to each station	.2
Microfilming of records eliminated annual expenditures for microphotographic equipment	.2
Transfer of adjustment and refund functions	.2
Release of filing equipment for other VA departments	.1
Reorganization of regional offices and transfer of work	.9
Consolidation of divisions at 10 VA hospitals	.5
Disposition and transfer of records	.2
Improved procedures and controls in supplies and services	.1
Total	2.6

[1] Administrator of Veterans' Affairs, annual report for fiscal year ending June 30, 1956.

7. POST OFFICE DEPARTMENT

The first Hoover Commission recommended improved accounting and budgeting procedures, and a comprehensive cost-control system for the Post Office Department. The new Hoover Commission emphasized real-property management and maintenance along with general reorganization of the Department. In following these recommendations the Postal Establishment has made substantial savings. Considerable progress has been made in modernization of controllership and management programs, conversion to punched card checks, the establishment of a reports management program, development of accurate measures of cost, improved classification of accounts, transportation proce-

dures, and paperwork management. Savings stimulated in whole or in part by the Commission for the years 1955 and 1956 are as indicated.

Fiscal year 1955 [1]

	Million
Discontinuance of over 1,100 post offices	$1.5
Consolidation of 383 rural delivery routes with other rural routes	1.0
Change from advance authorization of space to "space used" agreements with railroads	10.0
Discontinuance of city distribution in 180 railway post offices	.4
Replacement of RPO service by closed pouch or star route service on 193 trains	4.0
Elimination of duplication in weighing magazines and newspapers	1.8
Total	18.7

[1] Annual report of the Postmaster General, fiscal year ending June 30, 1955.

Fiscal year 1956

	Million
Discontinuance of 813 post offices [1]	$1.1
Revised plant arrangement and mechanization of New York City west side terminal [1]	.8
Survey of all star routes in the southeastern States [1]	.2
Special agreements with rail and highway carriers for moving mail equipment [1]	.7
Modernization of financial and accounting practices [2]	20.0
New procedure for controlling overages from the sale of stamped envelopes [2]	.2
Discontinuance of city distribution for 120 cities in 200 RPO's [2]	.5
Discontinuance of RPO and closed pouch service on 900 trains [2]	8.0
Improved practices in dispatching and loading [2]	.1
Authorization of multielement rates and mileage equalization and 13 trunkline carriers [2]	5.1
Centralization of money order audit operation [2]	.5
Reduced printing costs through adoption of punch-card certificate form [3]	.1
Total	37.3

[1] Annual report of the Postmaster General, fiscal year 1956.

[2] Interim report, the Postmaster General to the President of the United States, September 30, 1956.

[3] Report on installation of industrial-type controllership, July 1, 1953, to June 30, 1956, Bureau of Finance, Post Office Department.

8. THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

This department, although relatively new, has made significant contributions in its measures of economy. Improvements have been made in accounting operations and general management procedures.

Fiscal years 1955 and 1956 (2-year totals) [1]

	Million
Freeing office equipment for reuse elsewhere in the Government	$0.7
Reduction in floorspace	.2
Reduction in motorized equipment	.2
Abolition of offices and divisions	.1
Management improvements in Bureau of Old-Age and Survivors Insurance	1.0
Total	2.2

[1] Contained in special report to congressional committee.

9. THE DEPARTMENT OF DEFENSE

Two-thirds of the second Hoover Commission's recommendations apply to the Department of Defense. Improvements were underway in the Department even before the Commission completed its report; and, during the period the Commission was working, many were developed in cooperation with the Commission's task forces. Others have resulted directly from the recommendations of the Commission.[2]

Economies shown here are taken from official Defense Department reports and also from reports on the joint accounting program by the Comptroller General. While not all the economies listed can be directly attributed to the Hoover Commission, a substantial portion directly flows from the recommendations of both the first and second Commissions. It is here estimated—and most conservatively—that 10 percent of the total economies reported in the following pages can reasonably be attributed to the Commission's work. In fact, a logical case could be made for a far higher percentage. The total reported by the Department was $2,359 million, 10 percent of that is $235.9 million.[3]

Fiscal year 1955

During the fiscal year 1955, major emphasis was placed on improvements in supply management. In the field of standardization of stocks the beneficial effects of a new cataloging program were immediately evident. Standardization actions eliminated many items from military supply systems and developed common standards and specifications for commercial and military components. The Department estimated that savings from standardization of stocks in 1955 were $29 million.[4]

Similar improvements were made in the management of excess stocks. Increased efficiency was also achieved in the use of storage space. The introduction of uniform reporting systems made possible more cross-servicing in storage activities and the transfer of facilities from one department to another. An annual saving of $30 million resulted from the closing of 17 Army supply depots. When 6 of these depots were transferred to the Air Force, $16 million was saved in lieu of new construction costs. Improved transportation rate negotiations saved approximately $48 million.[5]

Work simplification is an integral part of the overall management improvement effort of the Army. The Defense Department estimated that a $13 million saving resulted from improvements installed by supervisors trained in this field.[6]

The Army financial management plan brought about many improvements in installation accounting and better use of stock inventories. Cutbacks in inventory levels have brought about the greatest monetary savings, according to Defense Department figures; $585 million in excess capital was relinquished in 1954 through reductions in stock, and $700 million in 1955.[7]

The Navy also contributed greatly to general economy and management improvements within the Department of Defense. Studies were made of the accounting features of cross-servicing and monetary accountability procedures. Audits of contractors' claims and other accounting and audit work brought about substantial savings. The Navy was able to save an estimated $123.5 million in the cost of materiel procurement.[8]

Air Force management underwent the same comprehensive study, and the Secretary of the Air Force estimated that $440 million was saved in contract costs resulting from improved audit procedures (this combines actual and potential reductions).[9]

Fiscal year 1956

The joint accounting improvement program carried on during the period January 1, 1956, to September 30, 1956, is illustrative of savings made in the Defense Department during that year. According to the Comptroller General of the United States, better management practices and financial improvements in the Department resulted in savings of $202 million.[10]

Improvements in inventory control resulted in the relocation of supplies and the saving of 250,000 square feet of space. It eliminated 187 different records for various financial inventory categories and brought about discontinuance of overlapping stocks of similar supply items. These measures reflected an estimated saving of approximately $133,000 per year. Method improvements based on a management study of in-transit warehouse procedures effected an estimated saving of $150,000. The indirect material inventory has been decreased by $381,000.[11]

Improved direct labor efficiency in the Department brought about a saving of $625,000.[12]

An internal review of inventory at the Long Beach Naval Shipyard resulted in a reduction of approximately $307,000 in ship stores insurance items. A ship stores inventory purification program at the San Francisco Naval Shipyard resulted in a reduction of approximately $386,000.[13]

At the Pearl Harbor Naval Shipyard, elimination of duplicate records and the abolition of 74 supply department positions through transfer of items saved $339,000.[14]

This joint program to improve accounting to which we refer, also highlights the internal audit program within the Department of Defense. It estimates that savings in the cost of Government procurement amounted to $166.4 million in fiscal year 1956.[15]

A navywide review of records, resulting in the elimination of duplicate records, saved an estimated $400,000. Reduction of stock-fund inventory at one naval activity amounted to $2.8 million as the result of an audit. At still another activity, disposition of excess stocks in the amount of $600,000 was instituted.[16]

[2] Action already taken on the second Commission's recommendations regarding food and clothing will eventually lead to substantial economy. This applies primarily to the "head count" on a service installation whereby the number of meals served is restricted to the number of personnel on that post. Food was ordered and meals prepared on the basis of an estimated total number of personnel. Because substantial percentages of the estimated total number were on leave, fll, or not present for a variety of reasons, this led to a great waste of food. The task force on food and clothing estimated that if this and other of its recommendations were fully implemented, a savings of $200 million a year would be possible.

[3] The use of the conservative 10-percent estimate also takes account of duplications (e. g.) as between reports of the Department and of the Comptroller General.

CONCLUSION

As in dealing with the first Hoover Commission, it must be emphasized here that the departments and agencies used do not constitute the total areas of economies. While these figures are merely representative, they are perhaps the most illustrative ones obtainable.

Savings and financial returns are primarily limited to the years 1955 and 1956 because the second Hoover Commission's recommendations were mainly implemented in those years.

It is evident that savings in the Department of Defense constitute the greatest proportion of savings in the areas covered. This is valid because two-thirds of the second Hoover Commission's recommendations directly apply to the Defense Department.

The compilation of savings from recommendations of the second Hoover Commission and the corresponding departments and agencies is condensed as follows:

	Millions
Treasury	$20.3
General Services	131.7
Federal Housing	.5
Interior	.6
Commerce	19.3
Veterans	13.6
Post Office	56.0
Health, Education, and Welfare	2.2
Defense (at 10 percent)	235.9
Total	480.1

MAY 20, 1957.

Mr. CLARENCE FRANCIS,
Chairman, Citizens Committee for the Hoover Report, 777 14th Street, N. W., Washington 5, D. C.

DEAR MR. FRANCIS: Am glad to have your letter of May 16 concerning the Hoover Commission recommendations and my remarks on them in the House on Tuesday, May 14, 1957. Am especially glad to have a copy of the study made by your Committee listing certain savings claimed to have resulted from the two series of Hoover Commission reports.

Permit me to correct you on one point. At no time have I said that no economy whatever can be expected to result from adoption of Commission recommendations. Certainly out of the multitude adopted, there will be some savings, somewhere, however small. Have at no time contended otherwise. So, you erroneously conclude when you state that I "seriously questioned whether actual economies can result from the recommendations of the bipartisan Hoover Commission". I have stated or inferred, or both, and offered support thereof, and now repeat that—

1. The second Hoover Commission pointedly failed to list specific estimates of savings.

2. Failing this, it prominently listed the bloated estimates of savings made by the various task forces, and then made the sweeping and unsupported statement that adoption of the recommendations would produce enough savings to balance the budget and reduce taxes.

3. These grossly exaggerated, unbelievably fantastic claims have been advertised and sold to the American people. The people have been sold a bill of goods by your Citizens Committee and others. This is unfair to them and to their representatives in the Congress. Furthermore, it is a disservice to whatever worthwhile suggestions the Commission may have made.

4. Thus misled, the people have been bombarding the Congress demanding adoption of all the Hoover Commission recommendations and thus save billions—the most oft-used figures are $5 or $5½ billions.

5. The Hoover Commission recommendations to the contrary notwithstanding, Federal expenditures have consistently increased since the first Commission reported in 1949. All recommendations adopted, so far as can authoritatively be determined, have had no appreciable effect in reduction of the budget.

6. Perhaps the most absurd claim of all is that billions can be saved merely by adopting the budget and accounting reforms, the key feature of which is the proposed change to the so-called accrued expenditure basis of making appropriations. The original claim of savings was advertised as $4,000,000,000.

Sound appropriating processes are so vital to protection of the people's tax funds, and the claim of savings attributed to the proposed changes therein are so utterly groundless, that the fallacy of this accrued expenditure proposition must be exposed. I consider it in the public interest to undertake to persuade you and the Citizens Committee to see the preposterous dimensions of both the claim of savings and the shortcomings of the proposal itself. You are of course aware of the genesis of the $4 billion estimate of savings. The task force merely expressed "belief" that such savings could "reasonably be expected". At your national conference here in Washington last February, the Commission chairman stated that "there are savings estimated at over $3 billions to be had" by adoption of the accrued expenditure technique. Basis for that estimate was not given.

This accrued expenditure idea was apparently conceived in ignorance of certain budgetary and legislative facts of life. Those who persist in stirring the people to agitate for its adoption have seemingly accepted without question the faulty premises on which the idea rests. The first premise is that the Congress has lost control of the purse strings by reason of existence of billions of unexpended appropriation carryover balances and that adoption of the accrued expenditure method would eliminate or at least drastically reduce such balances, thus recouping control of the purse. Every day the Committee on Appropriations receives letters, pamphlets, and bulletins from across the country so stating. But they are sadly in error—exactly 180 degrees off. This system, if adopted, would not result in any reduction whatsoever in carryover balances. What would happen would be a large reduction in "appropriation" balances and an equally large increase in contract authorization balances, with no change in total unexpended carryover balances. That is an indisputable fact—it simply cannot be successfully denied. And contract authorization balances are just as important as appropriation balances. A government obligation or contract can and would be just as valid under one as under the other and, furthermore, once granted would result in just as much eventual spending. So, the first premise is completely without substance. It is unnecessary here to discuss the question in detail, but there is no substance to the contention that control of the purse has been lost merely because of large carryover balances, or for that matter, lost at all. Congress has absolute power in its hands, right now, to appropriate or not appropriate, as it sees fit.

You state that "as a most conservative estimate, a thorough scrutiny of such funds (carryover balances) might lead to a reduction of only 1 percent—and this is a minimum. This alone would be $500 million per year. It is our feeling that the savings would be considerably more substantial". This statement unmistakably shows that you, like so many others, apparently do not fully understand present procedures. And unfortunately, it also shows that you make the mistake of indulging, as did the task force and others, in broad, unsupportable generalizations in this respect. You twice indicate that reduction of carryover balances "might" lead to savings—a minimum of $500 million, you say. You "feel" that the savings would be considerably more substantial. Mr. Hoover says over $3 billion in savings are to be had through adoption of the plan. Why do you say "might"—why not offer some specific evidence of the basis for whatever estimate you produce?

You suggest "thorough scrutiny" of carryover balances. The Hoover Commission and those who advocate its recommendations have led the people to believe that Congress does not now scrutinize these carryover funds when considering requests for additional appropriations, or at best gives inadequate attention to them. Nothing could be further from the truth. It is standard operating procedure of the Committee on Appropriations to do so. Carryover balances should of course be held to absolute minimum and so should new appropriations. It is amazing that anyone would suggest that a mere change in the way appropriations are now stated would somehow more or less automatically assure closer examination of carryover balances. They are examined now. If it be contended that such examination is sometimes inadequate, certainly it is somewhat naive to expect that a mere procedural change would impart closer scrutiny.

Possibly the worst feature of the plan is that it would mean automatic return to the use of contract authority, a procedure abandoned generally some years ago. The Committee on Appropriations found from hard experience that contract authority costs the taxpayers more money in the long run. It has a certain appeal, and that is its principal defect. Experience demonstrated time and again that a request for direct appropriation received more searching scrutiny than a request for contract authority. It was often easier to secure acceptance of what was frequently said to be "merely contract authority". But once granted it results in eventual expenditure just as much so as under the usual direct appropriation method. It is the more costly method and for that reason, not only would the accrued expenditure idea not save $4 billion, or $3 billion, or $500 million, it would not save a single dollar. The Director of the Budget, Mr. Brundage, went so far as to say he always carefully avoided any mention of savings. When pressed to elaborate, he said he "felt satisfied" that the plan would save "several million dollars". It not only would not save money, past experience with contract authority suggests beyond reasonable doubt that it would actually cost money. Assume you are aware that just two months ago the Committee on Appropriations approved a report of a special subcommittee appointed to study the proposition because it so importantly concerns the business of the Committee. The Members of that subcommittee are experienced in legislative matters. They know something about the business of appropriating. They concluded that the idea "has disadvantages and offers no improvement".

The propaganda campaign to pressure the Congress into enacting the second Hoover Commission reports is strikingly similar to the one following the first Commission reports several years ago. That became so confused and ridiculous that, as you doubtless know, the Senate Committee on Government Operations issued a report in January, 1953, reviewing the situation. The committee, the report stated, was "unable to find any sound basis for the unsubstantiated estimates of savings claimed by some of the proponents".

Have not had time to fully evaluate the many pages of detailed savings included with your letter, totaling $2,337.9 millions for the first Commission and $480.1 millions for the second Commission. They are described as being "clearly attributable" to the work of the two Commissions. First inspection of

the lists, however, discloses some amazing items. For example:

1. Lower fuel requirements from reduction in steaming hours of the active fleet and operation of a smaller fleet. Claimed savings, $2.6 millions.

2. Flying hours reduced. Claimed savings, $57.7 millions.

This is the first knowledge at hand that steaming and flying hours or size of the fleet of the Navy was ever influenced by the Hoover Commission.

3. Lowered cost of classified project. Claimed savings, $2.1 millions.

Did the Commission in fact secure this saving?

4. General appropriation reprogramming by deferred maintenance, personnel reductions or turnover, lower level of operation in order to absorb wage board and other pay increases. (Defense Department) Claimed savings, $156.5 millions.

Is it a certainty that the Hoover Commission secured this item?

There are many others in the lists. You submit no conclusive evidence on which they can be accepted as a whole at face value.

The proposition at issue, however, is the recommendations of the Second Commission. On these you fail to substantiate the exaggerated claims of savings being made in their behalf. That is the issue.

Sincerely,

CLARENCE CANNON,
Chairman.

The Challenge of the Budget in Our Democracy

EXTENSION OF REMARKS
OF

HON. HARRY G. HASKELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. HASKELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a speech by the Honorable Nelson A. Rockefeller at the annual meeting of the Brooklyn Chamber of Commerce on May 20, 1957:

THE CHALLENGE OF THE BUDGET IN OUR DEMOCRACY

I

I appreciate greatly your invitation to attend this annual meeting of the Brooklyn Chamber of Commerce.

The chamber is an integral part of our American way of life. It is the center of the economic life of New York City. New York City is the center of the economic life of our country.

And now, increasingly, our country is becoming the center of the economic and social strength of the free world.

While we New Yorkers cannot help having a modest feeling of pride concerning this development, we can't at the same time overlook the fact that as a result, the economic and social vitality of our great metropolitan area is increasingly dependent on the strength, security, and growth of our Nation and of the free world as a whole.

Therefore it is fitting and encouraging that the national organization of which you are a vital part should be taking such an active interest in Federal expenditures, taxes, and the dangers of inflationary pressures as they affect the strength, security, and growth of our country and of the free world.

No problems affect our national well-being more importantly and I would like to discuss certain aspects of them briefly with you.

II

Three basic factors underlie our overall national well-being:

1. Our national security;

2. The stability and growth of our economy; and

3. The freedom, well-being, and social progress of the individual citizen.

All three are intimately interrelated. The strength and vitality of each are dependent on the others:

Our national security has never been challenged on more fronts nor has its preservation ever been more complex or costly.

The determination and will to meet this challenge depend on the strength and vitality of our belief in those basic values of human dignity, freedom, and well-being which are the heart of our democratic way of life.

The strength to meet this growing challenge depends on a dynamic, expanding economy at home based on free enterprise, the fruits of which are not frittered away by needless or wasteful governmental expenditures.

The business community under the leadership of the chamber has taken an active and continuing interest in these problems. Its stimulation of national discussion concerning various aspects of the Federal budget for fiscal year 1958 is a wonderful example of how effective a citizen group can be in bringing important issues to the attention of the people and the Congress. Discussion has centered around the size of the President's budget in terms of inflation, reduction of taxes, and unnecessary Federal expenditures.

I should like to take this opportunity to associate myself with those who seek to eliminate unnecessary Federal expenditures; avoid the insidious, corrosive force of inflation, rout out waste and keep as large a percentage of national earnings in the hands of the people as is compatible with the security, freedom, and well-being of our Nation and its people.

In my opinion, contrary to a great deal that has been said during the past weeks, we never have had a President who has been more keenly aware of these problems, or who has been more effective in dealing with them.

One may very well ask, then, why such a big budget and why all the criticism.

The situation is complicated. The underlying problems are just becoming apparent.

Their solution, I believe, will require fundamental changes in some of our traditional thinking about certain aspects of budget making and governmental organization.

III

Let's take a look at the various phases of the budgetary problem.

A. Currently, the issue has been dramatized by the administration's Federal budget of $71.8 billion for fiscal year 1958. It is being widely attacked as inflationary and as threatening our ability to sustain the vigorous economic growth trend upon which America has come to depend, and which rightly is regarded as a bulwark of our national security.

If the budget should, in fact, pose such a threat, there would be the strongest justification for sacrificing even the most urgently important domestic public expenditures for schools, public health facilities, roads, the soil bank and other programs of social benefit and perhaps even for taking desperate chances by skimping on defense and other vital portions of our foreign security measures. For in the last analysis, as I stated before, all of these are dependent upon the support of a strong and vigorously expanding economy. Moreover, nobody likes to pay taxes, and the tax burden we have been carrying for many years is so high that there is an understandably strong and widespread demand for tax relief.

The issues are of such urgent importance to our national interest that it behooves us to examine them dispassionately and to try to arrive at decisions that reflect an honest estimate of what will best serve the interest of our country rather than our individual inclinations. Let's look at the record:

When President Eisenhower first came into office at the beginning of 1953, he inherited the budget of the Truman administration for fiscal year 1952–53. Under this budget, the Federal Government spent $74.3 billion, or almost 21 percent of the Nation's total output of goods and services—the gross national product—of $358 billion for the fiscal year.

Under the Eisenhower administration, the gross national product has experienced one of its most impressive periods of vigorous and healthy growth. In the last fiscal year, 1955–56, the gross national product amounted to $403 billion. Federal expenditures had been reduced to 16.5 percent of gross national product from the 20.8 percent in the year that President Eisenhower assumed office.

Our total national output has been increasing at something like a 4 percent annual rate. At the present moment it is estimated to be running at an annual rate that approaches $430 billion, and a conservative estimate for the full fiscal year 1957–58 would place it at no lower than $438 billion. This means that during his first 5 years in office our gross national product has increased by $80 billion or more than the total of the present proposed Federal budget.

On this basis, Federal expenditures of $71.8 billion in fiscal year 1957–58 would represent just about 16.3 percent of gross national product—no greater or no less than the relative burden of the $68.9 billion expenditures in the current fiscal year. It would be slightly easier to carry than the $66.5 billion expenditures of fiscal year 1955–56, and far easier than the real burden of Federal expenditures in the 3 preceding years.

This brings us back to the question whether a Federal budget of $71.8 billion for fiscal year 1958 would produce an inflationary spiral and threaten the vigorous economic growth trend of the past 5 years. The answer is clearly "No."

Our economy was able to grow without an increase in prices under compartively larger Federal expenditures and despite budget deficits in fiscal years 1953, 1954, and 1955. For the past 2 years we have had a balanced budget and in fact a surplus. There is consequently every reason to believe that an expenditure of $71.8 billion in fiscal year 1957–58, which will still provide a budget surplus under current tax rates, will not have the devastating inflationary effect that some have proclaimed.

Much as everyone would like to have a tax cut, the $80 billion increase in annual gross national product during the 5 years of the Eisenhower administration clearly demonstrates that even at the present high tax rates, our economy has experienced one of the greatest periods of vitality and growth in its entire history.

Above all, I think most people agree with the President that before we cut taxes there should be some reduction in the Federal debt. Even with a budget just under $72 billion, it is estimated that we can make progress in this direction provided we maintain present tax rates.

B. This leads us to the next important question—the level of Federal expenditures.

Is the President justified in recommending an increase of $7.2 billion from the low point in fiscal year 1955 of 64.5 billion? I believe that from the point of view of the areas of the budget over which he has control that he is justified.

True, the budget represents an increase of 11 percent in the past 3 years. But let's look at the record during this period—

There has been a 5-percent increase in population.

There has been a 7.2-percent increase in the cost of goods and services purchased by the Government.

There has been a 10-percent increase in pay and fringe benefits enacted by Congress for both military and civil-service personnel.

There has been an increase in interest rates on Federal borrowing which has added just under a billion dollars a year to the carrying charges on the national debt.

The above four factors automatically increased the service requirements and operating costs of the Government during this period. They account for a large part of this increase in the Federal budget—over which the President has no control. It is interesting to note that private industry costs during the same period increased by a considerably larger percentage.

The other major area of increase has been in our national security program—a rise of $2.6 billion, which represents one-third of the total increase during this period. High and sustained expenditures for national security are most difficult to accept. It is hard for us as a people to become accustomed to prolonged international tensions and to the constant danger of some overt threat to peace. Our tradition is to rally to a national emergency with an all-out effort and then to revert to a normal peaceful existence.

Unfortunately this has now become impossible. The Communist effort to subvert and overthrow the democratic system based on respect for the freedom and dignity of the individual is unrelenting. We cannot maintain our way of life for ourselves and our children's children without the utmost vigilance and the willingness to accept whatever sacrifices may be necessary to make aggression in all forms an unattractive course for Soviet imperialism.

The danger to our national security is all the greater because the Soviets combine an implacably hostile ideology with an increasingly high order of technical skill. They developed nuclear weapons and a long-range air force faster than the free world expected. They have mastered the revolutionary advances in science and in some fields which may threaten our very survival, such as that of intercontinental missiles, they may even be ahead of us.

To relax our vigilance is to court disaster. But the cost of national security comes high primarily because of the technological revolution through which we are living. In the past, a weapons system would be good for a generation at least. The equipment of a rifle company at the beginning of World War II hardly differed from its counterpart in World War I. But many of today's weapons become obsolescent almost as soon as they reach combat units.

We must therefore bear the cost of weapons for two military programs concurrently. One is based on existing weapons to protect ourselves against current dangers. The other is for weapons in production and being developed for defense 3 to 10 years ahead. To weaken either program would invite aggression either now or in the near future. And the lead in the technological race once lost is almost impossible to regain.

To cut military and defense expenditures before we have assured ourselves of success in the fields of weapons technology and overall defense could be suicidal. In fact, to take care of realistic minimum needs in these areas will involve larger, not smaller appropriations—much as we deplore the necessity. But we can be deeply grateful that our vigorous and growing economy gives us the capacity to do so.

This is not to say that economies in the field of national security are not possible. But they involve certain public restraints and basic reorganizations in our Defense Department, and not the reduction of forces. I shall deal with this problem a little later.

The military threat does not exhaust the range of our danger, however. The Soviet are continuing at an accelerated pace their intellectual, economic, psychological and subversive penetration in all free countries throughout the world. Only within the last 10 days Mr. Khrushchev, in his interview with Turner Catledge of the New York Times, admitted that the unswerving Soviet objective is for Marxism-Leninism to gain constantly greater authority among the masses of the world.

That this effort has not been without success is proved by reports that last year the writing of Marx outsold the Bible in the free world and that the sale of Stalin's works followed in third place.

The ingenuity, persistence and ruthlessness of Soviet Communist subversion throughout the world are fantastic. In the face of this, cuts in the budget of either USIA or of the ICA would be extremely unwise. I think both organizations are doing far more effective jobs than they are given credit for.

C. We then come to the third and final phase of this analysis which brings us to the question: Is there waste in Federal expenditures? It seems to me that to answer this question intelligently, it has to be considered under two different headings:

1. Federal expenditures over which the President and the heads of departments and agencies have complete control; and

2. Federal expenditures over which the President and heads of departments and agencies do not have complete control.

1. Federal expenditures over which the heads of departments and agencies have control have been carefully scrutinized. This administration has been extremely economy minded and most effectively so, regardless of criticisms you may hear. The Budget Director, Percival Brundage, and his department have done a superb job in keeping costs down with the cooperation of the department heads and the complete support and backing of the President. Before the present 1958 budget was ever submitted to Congress, the President and the Bureau of the Budget reduced departmental estimates by $13 billion. In the past 5 years when major disputes have arisen in Congress regarding waste in these areas, it is almost invariably more a question of opinion as to the value of the function than of inefficiency in administration. The activities of the USIA are a perfect case in point. The administration has not been given nearly the credit it deserves for its economies in the areas over which it has complete control. Unfortunately, this does not cover all items in the budget and this is where a lot of public misunderstanding comes in.

2. That leads us to the area of Federal expenditures over which the President and his heads of departments and agencies do not have complete control. There are a number of reasons for this which are beginning to be more clearly understood. Let me illustrate.

A. For one thing, there are a number of fixed obligations such as the interest on the national debt and veterans' benefits which go on from year to year. In addition, Congress often increases the President's budgetary requests and also initiates new programs. Last year, for instance, the Congress increased the appropriations beyond the amounts recommended and considered necessary by the President for the Air Force by more than $900 million; for the soil bank by $500 million; and for farm housing by $450 million. Already, in this year's economy-minded Congress, additions to the President's budget request have been piling up in the fields of agriculture, veterans' affairs, and housing. And just the other day Congress boosted the borrowing power of Fanny May (Federal National Mortgage Association) by $1.25 billion over and above what the President asked. This contingent liability alone is greater than the total of all the reductions in the President's 1958 budget which the Congress has made so far.

B. Or let's take a slightly different example. During recent years, the various military services have wanted to close many obsolete or unneeded bases, terminals, and depots throughout the United States. However, because of local and congressional pressures, they still are operating between one and two hundred such facilities that are no longer necessary from the point of view of our overall national security. If totaled up, the resulting wasted cost to our country would probably run into hundreds of millions annually. Other similar examples could be given.

In my opinion we have reached a point where because of the fantastic burden of our growing defense and national security costs, we can no longer afford the luxury of this kind of large-scale national special interest expenditures which undermine efforts at economy and efficiency of operation. This is one of the areas in which real progress can be made in trying to hold down mounting Federal expenditures. It is where the chamber of commerce, working with the Congress, can play a leading role of national statesmanship.

When it comes to holding down nonessential Federal expenditures that only benefit special area or group interests, all of us must exercise a greater degree of self-restraint and concern for the national well-being. Increasingly, this is becoming the key test as to the capacity of our democracy for self-discipline.

One way in which the President's hand can be greatly strengthened in this area is for Congress to give him item, or line veto, powers. By vigorously advocating and supporting the granting of such authority, the chamber could make a major contribution to the problem of holding down unnecessary expenditures.

C. An even more promising area for long-range economies is that of reorganizations in our Military Establishment. The current assignment of roles and missions was established when technology was much more elementary than now. It was based essentially on means of transportation: The Army was responsible for everything moving on land; the Navy was responsible for the oceans; and the Air Force for control of the skies.

But the extraordinary complexity and destructiveness of modern weapons and the increasing range of delivery capability are tending to make this traditional division of functions meaningless. It is difficult to know whether a ballistic missile should go to the Air Force because it flies through the air or to the Army because it is fired like an artillery projectile, or to the Navy which has the flexibility of movable bases. As a result, each new technological invention—and they succeed each other at an unbelievable rate—leads to an endless wrangle about which service should control it. Therefore, too, each service is urgently pressing the development of new weapons in all categories without sufficient regard for the program of other services, because the service which gets there first hopes to control the weapon and the budgetary allocation which goes with its production and use.

Now, some competition in weapons development is vital, since superior quality of weapons is basic to our survival. However, much of the present competition is unnecessary and costly both in terms of duplication and of our total national security. With the scarcity of top-flight scientists, why should three groups be working on the same problem of developing guided missiles in all their stages? The basic problem is a lack of overall strategic plans and clearly defined and designated roles for the three services to carry out the plans.

A solution to this problem of duplication is made difficult by the organization for developing our strategic plans. The recom-

mendation for the assignment of roles and missions comes from the Joint Chiefs of Staff composed of a Chairman and the Chiefs of the Army, Air Force, and Navy. Thus, the Joint Chiefs reflect the same differences which produced the interservice disputes in the first place. Chiefs of services, overburdened with administrative responsibilities and responsible for the morale of their organization are asked to adjudicate disputes and to develop doctrine which may involve the very existence of their service. Interservice rivalry and wasteful duplication of effort are inherent in the current assignment of missions and in the organization of the Defense Department.

A system must be set up where clear decisions can be made from an overall national point of view. Possible solutions to this problem might be to have either a military staff for the Defense Department separate from the three service staffs, and reporting directly to the Secretary and President, or to give the Chairman of the Joint Chiefs of Staff much greater power and a staff independent of the three services. Today the Secretary of Defense has inadequate control over expenditures because he has no way of determining an overall strategic plan and of assigning an integrated program of roles and missions to the three services, except on the basis of the recommendations which the three services give him through the Joint Chiefs. And the Joint Chiefs, however hard each one of them might try as an individual, do not stand above the interservice rivalry; on the contrary Defense Department organization makes them an expression of it. The President, as you may know, has consistently supported a greater degree of unification of the services. This is a major problem area and it must be faced realistically.

Now, in conclusion, let me summarize:

First, the facts seem to indicate the Federal expenditures for 1958 at levels recommended by the President would not, in view of the great increase of our gross national product, put dangerous inflationary pressures on the economy.

Second, the record of the past 5 years clearly shows that taxes at present levels—much as we dislike them—have not prevented an acceleration in the dynamic growth of our economy.

Third, the President's record for economy and holding down expenditures has been outstanding. The major increases since the low of 1955 have been in those areas beyond his control and for critical national defense items.

Fourth, major savings can only be effected in these ways:

(a) By the entire Nation exercising more self-restraint in putting special interest pressures on Congress.

(b) By giving the President the right to veto individual line items.

(c) By reorganization in the Defense Department staff setup which will permit overall strategic planning and determination of weapons use, roles, and missions for the three services exclusively on a national-interest basis.

These then, gentlemen, are the most important areas where we have an opportunity to control rising Federal costs and strengthen our national defense. We must fact them squarely sooner or later—in my opinion the sooner the better for the security and well-being of our country as well as of the free world. They are in line with the recommendations of the chamber of commerce and I am confident that your organization could play a major role in bringing them about. By so doing, you will gain the everlasting gratitude of the American people.

The Sheep and Wool Industry

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. BERRY. Mr. Speaker, I wish to call to the attention of the House a few recent developments affecting the sheep and wool industry.

This week the United States Department of Agriculture announced that the Commodity Credit Corporation has negotiated a barter contract involving the exchange of $10 million worth of CCC-owned wool and other farm commodities for the strategic materials, principally chrome.

Approximately half of the barter agreement is devoted to the export of wool. This is being accomplished under the 1955 agreement between the Republic of Turkey and the United States Government. Department officials estimate that 10 million pounds of wool will be taken from CCC stocks to consummate the exchange. The total quantity of wool to be taken will depend upon the particular lots selected.

I wish to point out that the CCC inventory of wool 2 years ago was 150 million pounds. This recent barter transaction reduces these total stocks to around 22 million pounds, and with expected sales in the domestic market it is estimated CCC holdings will be down to 20 million pounds by the end of this month.

Department officials have advised me the export of 10 million pounds to Turkey places the CCC in a position where it will be possible to entirely dispose of its wool inventory by early fall.

The successful operation of the wool export program by the Department of Agriculture is of tremendous value to domestic wool producers. This excellent record of export ties in very well with the successful operation of the wool incentive program.

The incentive program which has been of so much value to the economic life of the country, particularly the wool producing regions, has assisted in rebuilding an industry that was destroyed between 1939 and 1952 by extensive importation of foreign wools at a fraction of the cost of such production domestically. That regrettable policy dropped the sheep number in the United States from about 49 million in 1939 to about 27 million in 1952.

Because of the incentive program and the domestic protective policy, the sheep and wool industry has started to climb back to recovery.

There were two principal reasons for the establishment of the incentive wool program. First, to bolster our national economy, and secondly, to build back an industry vital to national defense. There is no substitute for wool in the manufacture of wearing apparel. Should the United States again be forced to engage in a world war, it would probably be fought in a cold climate.

Wool is an absolute necessity for national defense. There must be a domestic supply of wool rather than hazard the shipment of this vital commodity 5,000 to 8,000 miles in time of war.

Sheep and wool producers throughout the Nation will be pleased to know that section 626 of H. R. 7665, the Defense appropriation bill, which was reported to the House last Tuesday, contains the so-called Berry wool amendment which requires exclusive use by the Defense Department of domestic wool in all clothing and other materials containing wool procured by any branch of the armed services.

This original amendment which has now become an established part of the Defense appropriation bill has meant millions of dollars to the domestic wool producer. It has been a great benefit both to the national economy and to national defense.

Scion of Mellon Family Gives Up Life of Ease To Aid Poverty-Stricken Thousands in Haiti

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Plain Speaker of Hazleton, Pa., on May 16, 1957, written by Larry Allen of the Associated Press:

SCION OF MELLON FAMILY GIVES UP LIFE OF EASE TO AID POVERTY-STRICKEN THOUSANDS IN HAITI

(By Larry Allen)

DESCHAPPELLES, HAITI.—Here in the broad Artibonite Valley an American millionaire works day and night to bring health and cleanliness to thousands of poverty-stricken Haitians.

William Larimer Mellon, Jr., a tall, youthful man with prematurely white hair at 47, is doing what he wants to do. Out of his life forever are round-the-world cruises and polo ponies.

Scion of the Pittsburgh Mellons and great-nephew of old Andrew, Mellon at 37 had retired to Arizona after working in the family bank and Gulf Oil.

One day he read an article on the work of Dr. Albert Schweitzer in the African jungle.

From that moment, a new horizon opened for Mellon. He went back to school to start long preparation for the new days ahead.

Seven years later, he walked out of Tulane University as a doctor.

With his wife, he visited Haiti in 1952 to get material for his doctor's dissertation on tropical ulcers.

He found incredible poverty, helplessness and physical miseries among the densely populated rural districts.

He built, with Haitian labor, a sprawling, one-story structure of poured concrete, and named it the Albert Schweitzer Memorial Hospital.

It cost him $1½ million. Cyclone and earthquake proof, Mellon's modern air-conditioned hospital has three operating rooms, X-ray facilities, a pathology laboratory, and a morgue. Annual upkeep runs to about $200,000.

Mellon also acquired a 100-acre farm which makes the hospital virtually self-sufficient. Besides vegetables, corn, and rice, the farm produces beef cattle, goats, chickens, turkeys, and pigeons. There are also citrus fruits and bananas. Powdered milk comes from the United States.

Thus the Mellons started a great, new adventure, overcoming discouragements and even politics and jealousy that at times harassed their progress.

Today, Mellon's hospital is a beacon of hope for the tens of thousands of Haitians who have sought medical aid in the year since the 75-bed hospital was opened.

Four American doctors, two laboratory technicians, and four nurses, in addition to a Haitian dentist and other trained native personnel, assist Dr. Mellon. He acts as director but still does most of the diagnoses—and there's never any shortage of patients.

Mrs. Mellon is a medical technician and presides at the reception desk. Ian, Michael, and Rosanne, children of Mrs. Mellon's first marriage, collect the 2 Haitian gourdes—about 40 cents—registration fee and advise patients that only 1 gourde will be required for the next visits. Outpatients can buy medicine at cost.

Dr. Mellon asks payment for services—just so the patients satisfy their pride in themselves—even if a patient pays with a mango. They want everything from medical attention to advice from Dr. and Mrs. Mellon on domestic troubles and education.

In the Artibonite Valley, Haitians for years have been prey to malaria, yaws, tuberculosis, veneral disease, and shocking malnutrition. It has not been unusual for thousands of Haitians to die annually of starvation.

Dr. Mellon wants the valley people to feel that the hospital is theirs—one reason he charges for services. He hopes one day the Haitians can take over. In the meantime the hospital is a place where American doctors can share their techniques with their Haitian colleagues.

The Mellons believe there will always be a place for service to mankind and to God, and they'll move on if the Haitians ever take over this hospital. They think of such places as the headwaters of the Amazon River.

Mrs. Mellon as Gwen Grant Rawson went to Arizona to get a divorce. Mellon met her there and they married in 1946.

Blue-eyed and pretty, she took life on Mellon's two huge ranches in easy stride. She had a handsome new home and a swimming pool.

But when Mellon made up his mind to give up all of that, she never hesitated to encourage him and follow him wherever he wanted to go.

The Legislative Appropriation Bill

SPEECH
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I did not support H. R. 7599, the appropriation bill for the legislative branch, because it contained items I believed to be unnecessary and which should have been stricken from the bill.

I specifically opposed the expenditure of $7,500,000 to begin the construction of a third House office building. This initial expenditure would ultimately lead to a total outlay of $100 million, as it was pointed out in the debate that in addition to the new office building it was planned to remodel the two existing buildings and add other improvements.

To me this was the one real economy test which this session of the Congress had to face. It is interesting to note that those who profess their beliefs in economy the loudest were the ones who fought the hardest for this expenditure of the taxpayers' dollars.

Personally, I find my two-room suite to be adequate for my needs. I find that it allows me to do my work efficiently and that is all that I am concerned with.

So far the House has made sizable reductions in the appropriation bills which it has had before it during this session. However, many of these reductions amount to "paper cuts" and in my opinion few real economy cuts have been made. Had the House voted to reject the new building plans for a third House office building, then it could say truthfully that it was interested in economy. But the House failed to do so.

I was proud to have joined with 175 of my colleagues in opposing this spending program by the House of Representatives and my conscience is clear.

How Long Quotas?

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. SANTANGELO. Mr. Speaker, the problem of immigration is one which receives a great deal of attention and the present law dealing with immigration has been subject to a great deal of criticism. Because of the importance of the immigration law and the desire of the people to avail themselves of the blessings of our country and its opportunities, interested organizations are urging the Congress and American leaders to fulfill the promises and pledges of past years. The immigration law requires drastic revision, despite the humane administration by the Commissioner of Immigration. President Truman and President Eisenhower recommended a revision. The platforms of both parties in 1952 and 1956 pledged revision, but no action has been taken. Legislation is necessary to eliminate the quota system and discriminatory features.

The following resolution was approved by the annual convention of the council of the diocese of New York:

A RESOLUTION FAVORING AN AMENDMENT OF IMMIGRATION LAW

The annual convention of the diocese of New York in 1947, 1948, and 1954 adopted resolutions favoring an immigration policy which in terms of law and of administrative procedures expresses the true spirit of American democracy, and a recognition of the dignity and rights of the individual consistent with the Christian doctrine of man. Amendment of the present law was promised by the platforms of both major parties in 1952 and 1956, and has been consistently recommended by both President Truman and President Eisenhower. Amendment is supported by the National Council of the Churches of Christ in the United States of America, the National Catholic Welfare Conference, and the United Board of Jewish Rabbis. It is supported by the AFL–CIO—an effective answer to those who claim that revision would adversely affect American labor.

The problem is now complicated by the 180,000 refugees from Hungary, 21,500 of whom are being admitted to the United States by Presidential authorization. Of this number, 15,300 are admitted as parolees, and emergency legislation is urgently needed to regularize their status.

Recalling our long-standing position in favor of an amendment of the immigration law, and moved by the plight of the Hungarian refugees from Communist oppression, the annual convention of the diocese of New York adopts the following resolution:

Resolved, That the Congress of the United States be petitioned to act promptly and affirmatively on the President's recommendations to amend the immigration law to raise the number of immigrants admitted from 213,000 to 278,000 per year, and to eliminate legal and administrative provisions based on racial discrimination; and for emergency legislation regularizing the status of Hungarian refugees admitted on parole; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Senators from New York State, the Congressmen whose districts lie within the diocese of New York, and members of the appropriate committees of both Houses of Congress.

Supping With the Devil

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Admiral Radford has sounded a timely warning to the American people to beware of negotiating with the Russians in the field of atomic energy. In view of the broken promises of the masters in the Kremlin, how can we place any faith or confidence in any written agreement which they might be willing to sign at this time? The editorial from the Wall Street Journal follows:

SUPPING WITH THE DEVIL

Admiral Radford may have, as some people say, caused a bit of embarrassment for Harold Stassen in the negotiations with Russia about disarmament. But in his outspoken fashion he spoke a wise word of caution.

"The Communists," said the admiral, "have broken their word with every country with which they ever had an agreement." And he added, "We cannot trust the Russians on this or anything else." The outburst was apparently caused by the implications in Mr. Stassen's report on the recent London talks that the Russians mean what they say on disarmament.

We hope Admiral Radford wasn't himself implying that there shouldn't be any efforts toward a disarmament agreement with the Russians. For the difficulty with that view is that it automatically forecloses any possibility of curtailing the arms race. It makes a satisfactory agreement not merely dubious but impossible.

Nevertheless, a little of this skeptical attitude would have been very helpful in the past. Our error in World War II was not in the fact that we had dealings with the Russians against a common foe; the error was in being so blindly trustful of everything the Russians promised that our statesmen forgot common prudence.

In future disarmament skepticism is vital. The time may well come when the Russians, for their own good reasons, will agree to a disarmament program with adequate inspection for enforcement. If so, we can accept it. But we had best be hardheaded and suspicious about the terms.

The old proverb doesn't say that one should never sup with the Devil. It does remind you that if you do you had best come to table with a long spoon.

The Bunk About Wage Costs

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by George D. Riley, legislative representative, AFL–CIO, regarding labor costs on the newly authorized Federal-aid highway program.

During the debate on the highway bill last year opponents to the Davis-Bacon prevailing wage rate provision argued that protecting labor would result in increased highway costs. Now those same forces are pointing to alleged increases in highway construction and saying "We told you so." If highway costs are up, Mr. Speaker, it is not because of the Davis-Bacon provision in the highway act. George Riley makes that clear in this article, which I recommend to all who desire to know the facts about labor costs in the highway program.

The article follows:

THE BUNK ABOUT WAGE COSTS

(By George D. Riley, legislative representative, AFL–CIO)

The Federal highway program was announced originally as a $101 billion undertaking. When it appeared that many citizens were having difficulty in thinking in such vast terms, a $50 billion figure started circulation, and the States went thoroughly conservative in their estimates of costs for highway construction to be done within their boundaries.

The $50 billion tag took hold. Congress passed the legislation. Money began to pour into the trust fund. Mentally, the Nation's motorists started riding on the new limited-access roads.

Now there are signs that the original $101 billion figure may be nearer the real amount for the same mileage contemplated in the $50 billion which Congress envisaged when it wrapped up the highway legislation last year.

State-by-State estimates of construction costs were compiled for the information of Congress in 1954. Now, according to Engineerinig News-Record, "highway officials are shocked over skyrocketing costs of the new Federal highway building program."

And an attempt is made to pin the blame on labor costs.

But last February the United States Department of Commerce pointed out that wage costs in highway construction are vastly on the decline while contract bid figures are on a steep incline.

"Road construction volume in 1955," the Department of Commerce said, "was nine times that for 1944, while labor usage in 1955 was only five times that for 1944."

As the machines used in road construction mount in size and increase in efficiency, the labor cost factor diminishes, thus providing a rebuttal to Engineering News-Record, to the Carolinas Branch of the Associated General Contractors and to all others who are engaged in spreading the "increased labor costs" fallacy.

The position of the low-wage regional branch of the Associated General Contractors has been summed up as follows:

"Carolinas Branch, AGC, staged an all-out fight last year to defeat the Davis-Bacon section of the highway bill, branding it as 'unnecessarily expensive, and a tool of union officials'."

And so the Carolinas Branch carries on for the lowest wages possible—or at least against a law which requires that the wage rates shall be the same as those paid for similar work in the community.

Secretary of Commerce Sinclair Weeks, no dear friend to the Davis-Bacon Act, has done the cause of the Carolinas Branch no good by coming up with the actual facts and figures regarding highway construction wages and their relation to total costs as reflected in the bid figures. He has told the Carolinas Branch that with each passing year the cost of labor will be less and less. One reason is improved equipment—machines, for example, which lay bituminous topping at the rate of 84 feet a minute.

But as steadily as highway contract bid figures rose between 1944 and 1955, it is evident that more recently they have climbed even higher.

John H. Lyons, Jr., general organizer of the Iron Workers, called attention to some interesting points at the recent national legislative conference of the building and construction trades department.

He explained that equalizing of wage rates, benefits and working conditions through legislation opens the door to more competitive bidding and more efficient construction. He cited recently awarded highway contracts which were an average of 75 percent greater than estimates that had been prepared only 3 months earlier.

In the same period building construction costs rose only 12 percent. Those contractors involved in the 12-percent rise are those who pay benefits and operate under conditions which the building trades endeavor to make apply to all Government construction, whereas the highway contractors do not so operate.

It is interesting to take a look at cost studies concerning all types of highway construction during 1956. In New York State labor costs were about 29.5 percent of all costs. In California, another high-wage State, labor costs averaged 28.3 percent. In Florida, a low-wage State, the average labor cost was 21.9 percent.

Statistics on labor costs by themselves do not present the full picture. To assess the part which labor costs play in relation to overall construction costs, it is necessary to consider the sharp decline in the amount of labor employed in highway construction as a result of the use of new methods and new machinery.

The Bureau of Public Roads, United States Department of Commerce, recently completed a study which showed very clearly how the man-hours of direct labor in highway construction had decreased between 1944 and 1955. The findings were published in the February issue of Public Roads, the Bureau's magazine.

The Bureau of Public Roads, on the basis of data on the use of labor collected by it since 1944, found a pronounced decrease in the number of man-hours of direct labor required for a given physical volume of highway construction. Direct labor was defined as "labor employed by the contractor at or near the site of the project."

For the most part, these are the workers who are covered by the prevailing wage requirements of the Highway Act.

In its study the Bureau of Public Roads learned that between 1944 and 1955 there was a reduction in labor usage factors of 43 percent. Such a reduction naturally meant a tremendous drop in contractors' labor costs. This great decrease in the number of hours of labor required, the Bureau found, was basically due to "increased productivity of the labor-equipment combination resulting from great strides that have been made by manufacturers in developing more efficient construction equipment."

In plain words, automation has come to the highway construction field, and the road contractor today uses something like a half of the workers he did in 1944.

The Bureau of Public Roads gave due regard to the changes in price levels which occurred between 1944 and 1955 and made the necessary adjustments, using the Bureau's highway construction price index. The Bureau's figures are as accurate as humanly possible. No one can honestly argue that the findings reported are not authentic.

The Bureau of Public Roads has also projected its study to cover the whole period of the Federal highway program up to 1970. After showing that from a value of approximately 217,700 man-hours per million dollars of construction costs in 1944 the man-hours fell off to about 123,000 in 1955, the study indicates the drop in 1960 will be to 104,000 man-hours and for 1970 it will be down to 80,000 man-hours.

As noted earlier in this article, it was found that road construction volume in 1955 was nearly 9 times that for 1944, while the amount of labor used in 1955 was only 5 times that for 1944.

This study by the Bureau of Public Roads of the United States Department of Commerce should lay to rest the increased labor costs bugaboo so dear to the hearts of low-wage road contractors.

It is evident that labor costs in highway construction are diminishing. Therefore, labor costs cannot possibly be blamed for any increases in expenditures for the new roads. The facts are plain. Now it will be interesting to see whether the foes of labor will stop or continue their false allegations about increased labor costs.

Sea-Level Canal?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Letters to the Editor

column of the Washington Post and Times Herald, Sunday, May 19, 1957, written by Mr. W. R. McCann, of Hopewell, Va., on the question of constructing a new interoceanic canal at Panama of so-called sea-level design:

SEA-LEVEL CANAL?

The outlook section of your April 28 edition featured an article by John G. Norris, staff reporter. The article covered the recent combined exercises by the Armed Forces on the Isthmus of Panama. Your military analyst, however, did not confine himself to covering military, naval, and air operations; he included discussion of a possible form of a future Panama Canal.

Without considerable additional information, the ordinary reader of Mr. Norris' article would be misled; as a whole the article serves as active propaganda for constructing a new interoceanic canal at Panama of so-called sea-level design. Mr. Norris, in his allotted space, does not treat any of the inherent problems; and to review those several problems herein would require too much space for an adequate recital.

It should be stated, however, that the underlying issue as to the type of canal is not new; rather it is old and worn ragged. It appears that proponents of a sea-level canal are now endeavoring to precipiate another "battle of the levels," with both history and successful operation of the present canal over the years against them.

The present debate was reopened incident to the development of modern weapons of warfare; the newest being the hydrogen bomb. This supreme weapon, in the opinion of leading nuclear-warfare and independent-canal experts, would destroy any canal regardless of type, thus rendering a 10-year propaganda both futile and irrelevant.

W. R. MCCANN.

HOPEWELL, VA.

The Legion Poppy

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. HENDERSON. Mr. Speaker, on May 25, throughout the State of Ohio, the American Legion Auxiliary will be distributing red crepe-paper poppies which have been made by disabled veterans of all wars. We are inclined to buy a poppy without recognition of its meaning to the veterans who have made them and the ladies who sell them. George Price, commander of the American Legion post at Dresden, Ohio, in the 15th District, which I have the honor to represent, has explained the significance of the Legion poppy in an article which appeared in the Dresden (Ohio) Transcript of May 23, 1957.

The article is as follows:

Memories of battlefields in France will be brought back to a number of local war veterans by the sight of the little red poppies which will be worn here Saturday, May 25, in honor of the Nation's war dead, George Price, commander of the post of the American Legion, stated today. "The poppies will be crepe paper replicas of wild poppies of western Europe which bloomed in Flanders Field across which American Armies advanced to World War I victories, and in the cemeteries where those who paid the price of victory were laid to rest," he explained.

"Veterans of World War I will never forget those poppies," Commander Price said. "They were the one touch of natural beauty which seemed able to survive amid the constant shelling, trench digging and tramping of armies which plowed a wide strip of France into a ghastly sea of mud and blood. They grew along the trenches, in no-man's land and around the shell craters. In the bare, raw earth of the battle cemeteries they took root and provided the only floral tribute to those who found their final resting places in Flanders fields.

"When the veterans of that war came home, it was natural that they should think of the poppy as the memorial flower for those who did not return," Price added.

Soon after the war, the American Legion adopted the poppy as its official memorial flower, and ever since it has been worn in honor of not only those who died in France but of all Americans who gave their lives for their country.

"The poppies are made by disabled veterans of all wars and are distributed by the women of the American Legion Auxiliary, who, at the same time, receive contributions for the welfare of the disabled veterans and needy children of veterans. I am sure that members of Dresden Post of the American Legion, and all other war veterans, will be among the first to put on a memorial poppy on Poppy Day," Price concluded.

First-Class Threat

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert at this point in the RECORD, an article from the May issue of the American Press which reveals the concern of newspaper publishers over the proposed ban of certain classes of mail if a fund shortage develops.

It is my hope that should third-class mail be stricken that the Postmaster General will except legal weekly newspapers from this order. This question is one that goes far deeper than saving money for the Post Office Department.

When the postal service was first established, it was with the idea that it should provide an inexpensive means of communication between American people. Included in this communication were newspapers, which bring to the public reports on the activities of its Government, groups, and individuals. I believe that this is a basic purpose of postal service. Other services have been added, but they have been with the tolerance of Congress, and were not included in the basic intent envisioned by our forefathers when the mails were established soon after the formation of our Government.

Aside from the dangers of destroying the legal status of these third-class papers by nondelivery even for a short period, the real peril lies in establishing a precedent which would give virtually dictatorial powers over the press to an official of the Government.

I know that Arthur Summerfield is a reasonable man and a hard-working man. It is not his fault that Congress has obligated him to deliver more mail than the sale of postage, also regulated by Congress, will pay for. I know that he does not want, and will not implement, any program damaging to the weekly papers of the Nation.

I feel the American Press has rendered a distinct service to the newspaper field in bringing this to the attention of Congress. When the previous mail stoppage was contemplated, I, at that time, consulted with Mr. Abe McGregor Goff, Solicitor of the Post Office Department, and requested him to keep me advised of developments affecting third-class weekly newspapers. Mr. Goff assured me that the Post Office Department would give these papers special consideration if such a ban was found necessary due to a shortage of operational funds, and that the question of their role in disseminating vital public information would be given fullest consideration.

The text of the American Press article is as follows:

THREAT TO PRESS FREEDOM

We are still concerned about the recent threat of the Postmaster General to call off third-class mail unless he was given the funds which he demanded.

We realize that there is a great deal of junk in third-class mail which we could get along without. Of course, there are also many hundreds of business publications mailed third class which are of importance to the readers in the trade they cover.

But we are not as concerned with what is included in third-class mail as with the Postmaster General's assumption that he could legally call off any class of mail. For we realize that if he thinks he has the power to call off third-class mail he must also feel that he would have the authority to eliminate second-class mail as a means of cutting his expenses. In other words, he might, with one stroke of the pen, stop the distribution of newspapers throughout the United States.

We have always feared the power of labor unions when they take action to stop the publication of newspapers. It is a dangerous threat to freedom of the press. But a far greater danger apparently exists if one man in Washington assumes that he, as an individual, can issue an order which could, overnight stop the news of the world from reaching the people of our country.

A Salute to Pan American World Airways

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. POWELL. Mr. Speaker, many of our colleagues recognize the necessity of assisting the Puerto Rican people in obtaining for themselves more than general menial chores.

Pan American Airways long ago pioneered service to San Juan and made it possible for a rapid exchange of persons, knowledge, and culture between the mainland and the Commonwealth of Puerto Rico. Hundreds of thousands of

people have been flown between San Juan and the United States via Pan American Airways. In the first 3 months of this year alone, Pan American has flown more than 1,000 tons of cargo between New York and San Juan.

However, I believe that Pan American's finest accomplishment was achieved recently when this great international airline commissioned 33 new stewardesses at its Miami base. Twenty-three of those girls are Puerto Ricans and they will soon be flying on Pan American Clippers to all points of the Pan American system to South and Central America and the Caribbean.

Mr. Speaker, I salute Pan American World Airways for its conscientious industry and making available to its passengers the service of these 23 Puerto Rican girls who, I am sure, will render to Pan American a service for which the airline can be additionally proud.

Mrs. Norman F. Patton, of Wilkes-Barre, New President of the League of Women Voters of Pennsylvania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 17, 1957, on the selection of Mrs. Norman F. Patton, of Dallas, near Wilkes-Barre, as the new president of the League of Women Voters of Pennsylvania:

Probably Mrs. Norman F. Patton, Dallas, would say that her selection yesterday as president of the League of Women Voters of Pennsylvania is an honor that has come primarily to the Wilkes-Barre community rather than to her. Without question it is gratifying to have the presidency of this alert and useful organization come our way, but it didn't just happen. By the unusual quality of her service to the league, Mrs. Patton has earned the recognition.

For the past 9 years she has served the Wilkes-Barre League of Women Voters as a member dedicated without stint to its work. For 2 years she was president. She has occupied other league offices and has been chairman of many of its committees, notably public relations. Only recently she completed several years' tenure as a board member.

Her leadership in league and other community-minded undertakings soon attracted outside, as well as local, attention. She has been a member of the League of Women Voters of Pennsylvania for the past 6 years, first vice president for the past 2 years and at the same time has served as chairman of public relations.

She was a member of the Wilkes-Barre YWCA board from 1952 through 1955 and was president of the YWCA 1953–54. Mrs. Patton is a member of the publications committee of the national YWCA and of the board of directors of the Wyoming Valley united fund.

She still finds time for her musical talent as director of Dallas Woman's Club chorale and director of the General Hospital Nurses Glee Club.

We salute Mrs. Patton as a worthy head of a statewide organization, among the first to receive a charter from the national league, and an affiliate that has been growing in size and in public estimation for more than a quarter of a century.

Are Engineers Throttling Science?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an informative speech made by S. S. Podnos, Director, Office of Ordnance and Transport Equipment of the Office of the Assistant Secretary of Defense—Research and Engineering—entitled "Are Engineers Throttling Science?" stating the reasoning behind the consolidation of two Assistant Secretaries of Defense into one office, and made on March 25, 1957, before the District of Columbia Society of Professional Engineers:

ARE ENGINEERS THROTTLING SCIENCE?

It is a privilege to meet with you this evening, and to answer an accusation made of late against the American engineer.

I hesitated to accept the topic "Are Engineers Throttling Science?" when first suggested by the program chairman of this society. This is the type of subject that people write about and talk about without really conveying what is meant and what they mean. The topic is vague. And the resulting battle of words and their meaning only serves to further confuse the public, the very recipient we are all seeking to inform correctly.

But the very vagueness of the topic was a challenge to me. I felt that anything I could do toward its clarification would render a service by resulting in better understanding. And for this reason, I accepted.

Many of us are inclined to accept what we read or hear without question. Most of us are too busy or don't have enough patience to analyze and think through. As a result we often forget what things are based upon. We remember how to multiply long after we have forgotten that multiplication is based on addition. With this in mind, I will dissect the subject, piece by piece.

The boundaries of science are without limit. Basically, science has to do with those things you cannot touch, those things having to do with nature, and those things having to do with life. These are called the abstract sciences, such as mathematics, the natural sciences; such as physics and the human sciences; such as sociology. Science is almost all things to all men. One might also add that science is based upon commonsense.

But it should be noted that engineering is a part of science. In fact, the problems of science at the human level have been called engineering ones. They have been labeled physical engineering, biological engineering, and human engineering. These are also called the applied sciences. In recognition of these, groups devoted to science, such as the National Academy of Sciences, and the American Association for the Advancement of Science, of which I am a member, have engineering sections. It is obvious that engineers have no cause to throttle engineering.

We all know that one who works in science is a scientist. It is not well known that the term "scientist" includes the engineer. It may be of interest that in the British Isles today all professional engineers are scientists. However, in this country there is an increasing tendency, by use, to disassociate the terms "scientist" and "engineer," perhaps because of our nonprofessional use of the latter term for tradesmen that attend boilers, locomotives, and the like. This has been accompanied by a growing tendency to associate the term "scientist" exclusively with the nonengineers in research. As such the research scientist does scientific research. From the foregoing it would appear that the topic of this discussion should have been: Are engineers throttling scientific research?

Now let us consider engineers. Whereas science is a type of activity, engineers are people. As people they are free to pursue any course of activity, and they do. I'll venture that there are more engineers engaged in scientific research in this country than the members of any other single profession. Their educational background has trained them to have the same vision and imagination, so necessary for this activity, as possessed by all other scientists. Many engineers are engaged in the design and development of items for use. Others are engaged in sales management, motion studies, testing, construction, and a host of other activities. An appreciably lesser number are engaged in production engineering and production—the "nuts and bolts" activity also so necessary to our way of life. However, to imply that all engineers are "nuts and bolts" people, as has been done recently by those that seek to mass inform the public, is an insult to the engineering profession.

I am a good example of what I am talking about. I hold a degree in science. As a graduate I instructed two college laboratories in a senior physical science course, and simultaneously performed work in basic or pure research. Within my experiences I have also spent many years in engineering development, production, and maintenance working with the automotive, metals, and ordnance industries. In the position prior to the one I now hold I received recognition for achievements in applied research. And I am a licensed professional engineer in the District of Columbia.

Engineering, on the other hand, while it is a profession and a system of training, is also a type of activity. As a system of training, and as a profession which participates in research as a normal course, it can have no cause to throttle scientific research. However, as an activity it is one of the links in the sytsematic chain of events from basic research to production. This could be the only possible conflict with scientific research. It will, therefore, serve to clarify the topic of this discussion by changing it to Is Engineering Throttling Scientific Research?

This question has been given considerable publicity as recently as this month, due to the consolidation at the staff level of the Office of the Secretary of Defense, of the 2 positions of Assistant Secretary of Defense for Research and Development, and Assistant Secretary of Defense for Engineering, into the 1 position of Assistant Secretary of Defense for Research and Engineering. There has been serious misunderstanding about the reasons back of this change and some erroneous accounts have appeared in the press. However, an explanation of these reasons will serve as an answer to the question "Is engineering throttling scientific research?"

In the reorganization of the Office of the Secretary of Defense in 1953, 2 separate Assistant Secretaries of Defense were established 1 for research and development ac-

tivities and 1 for engineering activities. The main purpose in establishing 2 offices was to provide effectively for adequate attention to both scientific research and engineering. Since I have been with the Engineering Office almost from its inception, my observations are based upon personal experience.

Almost immediately the question arose about the specific activities that were the responsibility of each office. To define these responsibilities, fruitless discussions ensued as to what was research and what was development, and how each fit into the transition of materiel from exploratory work to production. I will discuss these two briefly to give you a better picture of the situation.

Research consists of two phases, basic research and applied research. The latter is also called exploratory development. Basic research reveals new knowledge. Applied research or exploratory development shows how this new knowledge can be applied to attain desired devices. As such in applied research we demonstrate the feasibility of a new principle, idea, or device. This is accomplished by paper studies, experimental models where the art is not well defined, and the like.

Engineering, on the other hand, is to evolve an item for use, and consists of three phases: the development of the design, the development of the prototype, and the development of manufacturing-type tooling and processes based upon the item to be produced. This last phase also includes the manufacture of a pilot lot of the item for operational or user tests and approval by the user. While not pertinent to this discussion, it is of interest that production of an item for inventory and use in the ideal case is conducted after approval of the item by the user based upon operational tests. When we ask whether an item is well engineered, we want to know whether it is satisfactorily developed up to the point of production.

Development is a two-horned animal. The first horn is that of exploratory development or applied research. The second horn is engineering or, as it usually is called, engineering development. It is important to note that applied research is concerned with what can be done, while engineering development is concerned with what will be done.

In between applied research and engineering we have a management phase which includes the analysis of what came before and a plan of activity for that which follows. This is the normal point to weed out and select materiel, for this is the point past which large expenditures are necessary. It is not overly expensive to have multiple approaches in applied research. In fact, in terms of payoff it can be very worth while. In engineering development, however, costs rise rapidly because hardware is being built for the many tests required. It is therefore of great importance to narrow down the field in this in-between phase, or if not possible at this point, before the engineering phase has gone very far. The prime objective of the research and development program is to achieve a highly effective research and development output within the limits of available resources including funds and qualified manpower. In view of the ever-growing complexity and cost of new weapons and equipments, the temptation to carry numerous weapon systems or components thereof through the entire development cycle must be avoided to accomplish this prime objective. Attainment of this prime objective requires a high degree of management effectiveness in applying restraint and selectivity.

Let us go back to the two horns of the development animal. When the two horns are not properly identified and clearly separated, we often neglect the management phase in between. This results in a strong tendency for the multiple approaches of applied research to carry on as multiple projects in engineering development and then as multiple items in production for inventory and use. This tendency must be curbed.

You have noted that research and development covers the same territory as research and engineering, and that development is both a research activity and an engineering activity. With respect to the two former Defense offices—Research and Development, and Engineering—the organization prior to 1953 gave to the Research and Development office responsibilities for basic research, exploratory development (or applied research), and engineering development. What is more, the larger part of its effort was devoted to engineering development. If after 1953 the Research and Development office had concentrated its effort upon basic research and exploratory development, both of which constitute the research area, there would have been no conflict. As a result of the situation after 1953 both offices were concentrating upon engineering, and the research area was given less attention than its importance warranted. Further, due to the duplication of activity of both offices, the selectivity which was to be accomplished after research, was accomplished with difficulty if at all.

The position of research in this situation was that of the young aspirant for congressional office, campaigning for nomination against the incumbent. His campaign was going poorly, and he was puzzled. Accordingly, he proceeded to question a politically wise friend of his, as to what was wrong. His friend replied, "Young man, the answer is simple. You are talking about your opponent. He is talking about himself. Nobody is talking about you."

Because of continued albeit unknowledgable agitation, and the fruitless discussion already mentioned, as to what was research and what was development, the Hoover Commission in 1955 recommended that the two offices be consolidated. Secretary Wilson did not accept this apparently simple solution at that time because there was no assurance, under the then existing conditions, that the original goal of adequate attention to both scientific research and engineering would have been realized. Now, however, with more experience in back of us, we have been able to carry out the Hoover Commission recommendations for one consolidated office. With an effectual internal organizational structure and experienced personnel, we now have the basis that should assure the realization of effective attention to basic and applied research as well as to engineering development.

However, we do feel that the current rate of technological advance has brought about an increasing closeness between basic research and engineering application. For this reason research activity and engineering activity should be a correlative endeavor. Engineering people should participate in the latter stages of research to the extent of acquainting themselves with what is coming along. By the same token it is even more important that reseach people participate in the preliminary stages of engineering, for they are the source of knowledge so necessary to application for use.

What I am saying is that the team approach is not only beneficial, but is becoming a necessity. But it is important to define who is the captain of the team. When conducting basic and applied research he should obviously be a research person. When conducting engineering it is reasonable that he should be an engineering person. Engineering here is a type of activity. I have no intent to imply that a graduate engineer is the only type of person who can captain this branch of engineering activity.

It is also of importance that the research person not overindulge in engineering development, for his time is too valuable in research. For of the two, research and engineering, research is more difficult. In research one deals with ideas while in engineering he deals with things. Too many of us tend to regard the process of thought as nonproductive. Unfortunately this association has become so ingrained that too many of our research scientists are doing engineering development. This is human nature. Why do the difficult when you can do something easier? And it is for this reason that when a research scientist is given both an idea and a thing to work upon, he invariably emphasizes the thing and research suffers. This detrimental practice must be stopped so that the scientist can concentrate upon the research that is his true pursuit.

Three of the most spectacular achievements during World War II were in the fields of electronics and nucleonics; radar, the proximity fuze, and the atom bomb. The scientific research for all three was of foreign origin. We in America have not emphasized scientific research, including basic research, as much as we should have. We have been inclined in the past to put our chips on engineering, and in so doing have built an industrial empire without equal. But to keep pace, engineering needs research. We have just about drained the available reservoir of basic scientific knowledge that has not been applied. Scientific research must be increasingly encouraged until our way of life is as dependent upon it as it is upon engineering. We in the Office of the Assistant Secretary of Defense for Research and Engineering are dedicated to the overriding importance of both basic and applied research as a means for maintaining and enhancing our position of technological superiority.

The research area must be emphasized for another reason—to enhance our long-range planning. When it is not emphasized, there is a tendency to base long-range planning upon current developments. This is erroneous practice, for it results in current planning rather than long-range planning. Long-range planning must be based upon research to make it effective.

Much criticism has been heard about the type of person thought necessary to head the consolidated Research and Engineering Office. Be assured that it is not of importance whether the head be a physicist or an engineer. What is important, is that he should have executive ability, have a good understanding of both research and engineering, be a good administrator, and have vision.

Other criticism of this consolidation of offices has cited the "strangulation of the research and development program caused by a constant level budget concept." Here is a case where those that are criticizing are looking at apples and talking about oranges. True, the research and development money appropriation has not fluctuated appreciably. However, whereas the research and development appropriation originally paid for the research and development program, within the last few years there has been an increasing amount of procurement money used for this same program. For example, in this fiscal year approximately $5½ billion is going toward the research and development program. Of this approximately $1½ billion is research and development money. For the next fiscal year it is estimated that a total of $6 billion will go to the research and development program. This amount is more than half of the total moneys spent for research and development in this country by both governmental and nongovernmental sources. This is a far cry from strangulation.

It is only within the last year that we have known the total moneys going into the research and development program. This determination was made at the request of the engineering office to assure ourselves that sufficient funds were being devoted to the research and development program. And now as a consolidated research and engineer-

ing office we intend to find out much of the research and development money appropriation will go to research, to assure ourselves that sufficient funds are being devoted to this area. Current practice is to talk of research and quote research and development data. This practice is misleading.

The unfortunate misunderstanding that has persisted in some scientific circles and in the press is that the overall problem and our internal organizational solution in some way involves a "battle between scientists and engineers," or in clear terminology, between scientific research people and engineering people, and that the organizational change is a victory of some kind by one group over the other. Nothing could be further from the facts. It should be evident from my discussion that the consolidation was made to increase, and not to diminish, emphasis on research. Those people that are serving as the source of criticism—the press says they are many, although I doubt this—let those people stand up and be counted. I say they are not properly informed, and until they are the dissential effects caused by their criticism is a detriment to the job which we are trying to do. Let us cease the argument and devote our efforts to more constructive tasks.

For scientific research is to engineering what motherhood is to the child. As the mother gives life to the child, so does scientific research give life to engineering. If engineering were to throttle scientific research, it would only serve to throttle itself. There can be no victory, nor exalting, of one over the other. Both are equally necessary. To the question, "Is engineering throttling scientific research?" the answer must be "No."

Our technical capabilities and our accomplishments have increased tremendously in the present generation. Our technological advances are proceeding at an ever-increasing rate over growing horizons. To maintain the national security and to promote the national welfare, scientific research and engineering must walk hand-in-hand into the future.

Automobile Safety Belts

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ROBERTS. Mr. Speaker, a number of the members of the Special Subcommittee on Traffic Safety—including myself, as chairman—have had safety seat belts installed in our respective family automobiles. We did this because we are convinced that these devices, properly installed and well constructed, have a definite positive effect on the reduction of injury to persons involved in automobile accidents. This fact was proved to our satisfaction by testimony given by Cornell University officials following an exhaustive research study on the value of seat belts.

Under leave to extend my remarks, I submit the following editorial on this subject which appeared in the Montgomery (Ala.) Advertiser on May 22, 1957:

SAVED BY THE BELT

Some traffic experts have questioned the effectiveness of safety belts in preventing deaths and serious injuries in auto accidents.

One criticism, for instance, was that the belt will not prevent your head from smashing against the dashboard. Other types of accidents were cited in which the safety belt would do little, if any, good.

Now the Cornell University committee on transportation safety research has submitted its rebuttal to these contentions. From a study of 5,000 accident case histories, the committee concluded that good safety belts, properly designed, installed, and used, will increase a car occupant's chances of escaping injury in an accident by nearly 60 percent.

The conclusion was reached after a comparison of 162 accidents involving the same model cars, in the same circumstances, with the same number of passengers. In one car the occupants wore seat belts; in the other they did not.

Some safety belts are worthless, either because of inadequate fastening or poor design. But good ones, worn properly, tip the odds in your favor that you will survive a crash.

In a high-speed, head-on crash, it is unlikely that even a safety belt will prevent serious injury or death. But in this connection it should be remembered that in the National Safety Council's study of 685,000 accidents in 1 recent year, 87 percent occurred at 40 miles per hour or less. In these crashes, good safety belts can be of immense value.

Better still, of course, is to avoid the crash.

Address by Guy L. Smith, to Sneedville High School Graduating Class, May 14, 1957

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. REECE of Tennessee. Mr. Speaker, Mr. Guy Lincoln Smith, editor of the Knoxville Journal, Knoxville, Tenn., delivered an address to the graduating class of Hancock County High School, Sneedville, Tenn., which should be an inspiration to all young people, as I am sure it was to the graduates at this fine school, and for this reason I am inserting it in the RECORD, under permission, so that it might be more widely available. I consider Mr. Smith one of the soundest and more able of the editorial writers in the country, and, incidentally, he is chairman of the Republican Party in Tennessee, where he has rendered an effective public service:

There are certain conventions employed in addressing graduating classes or members of graduation classes which no speaker would dare to ignore.

One of these requires that the members of the class be tendered sincere congratulations upon their achievement, upon obtaining the coveted sheepskin which testifies to the scholastic adequacy of the bearer and commends him to the favorable attention of scholars everywhere.

Graduating seniors, I congratulate you and salute you. You may well be proud of yourselves as we are proud of you.

A second convention calls for your speaker to point out that the graduation ceremonies are really but a milestone along the way of every one of you. The day after graduation, you enter upon those responsibilities which we call real life, as differentiated from the cloistered years you have spent within the halls of your alma mater. I attest the truth of this time-tested theory.

A third convention requires that he who addresses a graduating group shall point out that, even though the responsibilities change in their character after the graduate is through his formal education, the eternal verities lose neither their shape, their character, nor their changeless value. Truth, honor, loyalty, honesty, industry, and vision—these retain the priceless quality after graduation that they possessed before the memorable event. This conviction, the speaker before such a group as this, needs not belabor or emphasize because all history testifies to its truth. He who builds his adult life upon the foundation of these eternal principles is not only guaranteed success in this life, by the most sacred promises we know, a life in the hereafter. As your speaker, I affirm my most solemn belief that these things are so.

Having thus disposed of the most compelling of the conventions of such an occasion as this, I want to talk to you briefly, now that you are becoming full-fledged citizens of this great Republic, about you and your Government.

When I was invited to come here it was impressed upon me that there could be nothing political or partisan about what I had to say. For a man who has been in politics for almost 4 decades, and in the newspaper business for an equal period of time, it is difficult to either speak or write without taking a position on one or another side of the matter discussed. The task would have been simple, if I were in position to join the preachers in simply standing against sin, but after all, that is a big subject and one which would scarcely be appropriate to this occasion.

I have, then, after extended pondering of my problem, determined to make a nonpolitical political address, for reasons which I will undertake to justify as I go along. In the few minutes allotted to me, I want to talk to you about government, and about politics—mind you, not Republican and not Democrat—but simply politics, as the science by means of which all governments, big and little, are carried on throughout the world.

I have chosen this subject because it seems to me, in the kind of world we live in today, there is no other which should have, whether it does or not, such universal interest, and particularly for you young people who are now graduating not only from high school, but graduating soon into full citizenship in your own country.

There were times in the past history of mankind when the problems of all government were extremely simple, when the citizen of any government required no more of it than the protection of life and property. That was a long time ago.

As the centuries have rolled around, governments have materially changed. Leaving their simple character of early days, they have constantly become more and more complicated organizations as they have undertaken to perform added services and to make greater requirements of the individual citizens for whom, in theory, they exist to serve.

Thus it comes about that government at some level has its hands upon all of us from the moment we are born until in the last rites our mortal remains are whisked off to the cemetery.

This being undeniably so, I have chosen to talk to you tonight on the subject of What Should Be the Citizen's Attitude Toward Government? The subject seems to be appropriate to the occasion because there is not a graduate of this class who has not already been touched, or had his life course changed by government, and there is no new

citizen who has any choice but to live with government for the remainder of his days.

A corollary question must necessarily be "What shall the attitude of the citizen be toward politics?"

Let us address ourselves briefly to the corollary before we consider the main issue. If the influence of government is as all pervasive in our lives as I have said it to be, then there can be little hesitation upon the part of any citizen, man or woman, about the necessity for his or her active participation in politics, as the science of forming and operating governments. In a word, it behooves every citizen to be an active politician.

Every so often I run into some citizen, otherwise highly intelligent, who say something like this: "Don't talk to me about taking a hand in politics. It's dirty, and wicked, and degrading in every way—all I want is to keep clear of it. Let somebody else get into it and get their hands soiled; it's not for me."

Any American citizen who does not recognize his or her concern with, and responsibility for participation in, politics needs to have his or her head examined. How can any of us be indifferent to something—government—which reaches out its hands to control almost every phase of our lives? Rejection by the citizen of his responsibility to take a hand in politics is as senseless and stupid as it would be to stand out in the rain, with umbrella in hand, refusing to raise it, or to stand by a burning building with hose in hand, refusing to put out a blazing fire.

So I say to you young people who are graduating now or soon into full citizenship in your country that it is not only your civic responsibility, but actually a matter of your own protection that you take a hand in politics as a means of having a part, through elected officials, in the kind of government under which you live.

So much for the corollary. Now for the main premise: "What should be the citizen's attitude toward government?"

In this discussion I am moved by a sincere respect for your achievement in vaulting this initial hurdle in your lives and also by a keen sense of responsibility as one who, by reason of years, has had an opportunity to better appraise the hasards in the relationship between the citizen and his government. I should also add that I am moved by the same love of this, your and my country, that is shared by all of us who are worthy of the name of Americans.

I should begin by reminding you that this United States of America which you hold in your hands—figuratively now, but with the rest of your generation literally a few years from now—is a very young thing.

Many of us, most of us, have in our consciousness a natural conviction that this country of ours and this Government of ours are timeless and unchangeable in their character. "Ages may come, and ages may go," we say to ourselves, "But this country of ours is immortal." Don't we see it referred to in the papers every day as the most powerful nation, not just on the globe right now, but in all the annals of history?

Why of course we do. Every one of us who loves his country prays God that this be so. Yet history tells that this country of ours, this Government of ours, unique among all the governmental experiments of mankind, is only a century and three quarters old. It is scarcely as old as the life span of 3 men who live out their Biblical 3 score and 10 years.

Seventy-five years ago Abraham Lincoln, standing on the site of one of the great battles of the Civil War, said this:

"Four score and seven years ago our Fathers brough forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great Civil War, testing whether that nation or any nation so conceived and so dedicated can long endure."

So the thought I should like to fix in your minds so firmly that you will carry it to your graves is that this "testing" Abraham Lincoln was talking about in 1863 is still going on today.. The truth of it is that the stresses and strains against it today, while they do not spring from the use of swords, guns, and cannon as they did in Lincoln's time, are greater now than they were then.

Now if we feel that our heritage of a kind of government is unique among all the kinds of government conceived by the mind of man, let's examine it briefly for two things. Let us determine, first, what it is about our kind of government that makes it precious, and, second, what should be the attitude of the citizen if he is to do his duty in its preservation, so that he may hand it along to his children and his children's children as a priceless treasure?

First, what is it about our kind of government that places it above all others?

It's very simple. Those wise men who drafted our Constitution, who established the pattern of our future with that document and with the Declaration of Independence, did not fashion a government for the faceless and fraudulent "common man" who was mocked and regimented for 20 years by those who sought to change the character of our Government.

No; our priceless form of government was fashioned in all its ingenious complexity, for just one thing—to preserve to the very fullest extent possible the freedom of each individual citizen. This was the goal; this was the thing those brave and thoughtful men had in their minds, that every man or woman should be free, in every respect, to the fullest extent compatible with the necessity for living in a society of other human beings. That was the goal these forefathers of our set up; that was the purpose of their documentary handiwork; that was the heritage which they handed down to us.

Now if we are, as citizens, to preserve this freedom, what is the prudent attitude for us to assume? How will we best serve ourselves and serve our fellows in the years just ahead? How shall we best stay free?

What I am going to say may shock you. I hope that it does, at least enough for you to remember it, for it can be truthfully said that the attitude I am going to recommend to you is precisely the attitude toward government which the Founding Fathers had. Because their attitude was what it was, we have a government whose ultimate, final goal, is not the kind of democracy which is measured by a universal median of poverty, but freedom to do, to think, and to believe, each as he sees fit.

Now for what may be for your a disturbing statement. It is this:

Our Founding Fathers drafted both our fundamental documents, the Declaration of Independence and the Constitution in fear of government. They drafted those documents with the inner consciousness that all kinds of government, even what we call good government, is hostile to the freedom of the individual and predatory where the individual's liberty is concerned.

Why do I make this kind of statement? you ask. "Why," you say, "any government is supposed to be the servant of the people. It's supposed to be helpful and good."

Well, the Founding Fathers didn't share your sweet confidence, even in a government they were in the process of creating.

I'll make it clear by history that they fashioned our government, even though it marks the high point of the thinking of all time in this field, in very real fear of the thing they were creating.

You recall from your history that the Constitution was first drawn and submitted to the States for their ratification. That went through all right and the United States of America was in being.

But then the wise men of that time got to studying this document, whose complex system of checks and balances the Constitution's drafters believed to provide a maximum of freedom for the citizens. The more they studied, the more they felt that, after all, they had given this central government too much power, so then came what we now call the Bill of Rights, a list of 10 amendments which were adopted subsequent to ratification of the Constitution. Sometime, when you feel the urge to appraise your citizenship, read those amendments. See if, as I have said before, they did not spring from a very proper and lively fear of government, even of a kind of government drafted by noble, patriotic men. See if those amendments do not spell out that fear in plain terms of things the government shall not have the right to do to the individual. The right to worship, the right to assemble, the right to petition, the right to defy unlawful search, all of these things spell out just one thing—fear of government, and that is one part of the heritage passed down to us.

If this is a proper attitude for the young citizen to assume toward his government, one of fear, what is to be the basis upon which he is to measure every act of government? The answer is simple: Does the act, in its final effects, threaten the individual's liberty?

Commonsense teaches us that at least in its present stage of development, the citizen need not be fearful that his liberties will be seized by frontal assault, by armed force, for exambple. No, there is no danger there.

The real danger is that we will be seduced by indirection, that we will be misled by objectives with pretty names—"security" is one of them—with a concealed price tag in terms of our individual freedom.

The best example I can provide of the sly and subtle attack under which our freedom stands right now is that of taxation. The purposes for which all governments levy taxes are dressed in alluring colors, given appealing names. Military security, health, conservtaion, all such things necessary to a certain degree, are held up before us as the objectives of taxation. In recent years there has been a steady trend of having the government do more and more things for the people, a constant process of having the government assume the responsibilities which the individual formerly fulfilled for himself.

As a prime example of the kind of thing all of us have to fear from government, keep in mind that no matter what any constitution guarantees, none of the other freedoms of the individual can long exist without economic freedom. The individual is enslaved even in a country such as ours to the extent government is able to reach into his pocket and take his earnings, no matter how pretty the purpose sounds for which they are taken. When, and if, a big enough percentage is taken by government, then, as is the case in the Socialist and and Communist countries today, the people belong to the government, rather than the government to the people.

I could do this group of young citizens no greater service tonight than arouse them to a vigorous suspicion of all the acts and motives of government no matter who is in office or what party is in power.

In closing, let me emphasize once more that it is only through such lively suspicion, inducing constant vigilance, that the free institutions which our young men and women are inheriting, can be preserved.

You remember as Benjamin Franklin came from the meeting at which the Constitution was adopted, some woman in the crowd cried out:

"What have you given us?"

From the lips of this wise man came the reply:

"A republic, madam, if you can keep it."

My prayer for you, and for your children's children, is that you will have the intelligence and the tenacity—and the fear—to keep it.

Dollar Diplomacy

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Sun-Telegraph of Monday, May 20, 1957:

YOUR MONEY'S WORTH: DOLLAR DIPLOMACY
(By Sylvia Porter)

Never has America's dollar diplomacy been on so vast a scale.

Any of us might understandably be getting the impression that our entire foreign-aid program is being stymied while President Eisenhower and Congress battle over the budget and squabble particularly over his request for $3.8 billion to cover next year's foreign assistance.

But quite the contrary. Economic diplomacy is being pushed harder than ever at every level—on the purely governmental level, the quasi-government level, the private financial level.

Actually we are giving and lending tens of millions of dollars every week through various agencies.

STARTLING LIST

In glancing through the current issue of the privately circulated Pick's World Currency Report I found a report on our financial activities abroad during just last month.

Even an expert may be startled by the following summary of our dollar diplomacy in April alone.

Argentina received a $75 million credit from the International Monetary Fund, repayable in 3 to 5 years.

Austria made an arrangement to get American surplus commodities worth $24.7 million. The proceeds will be invested in Austria and used to aid Hungarian refugees.

Belgium drew $50 million from the International Monetary Fund.

Brazil signed a $2.7 million 5½ percent 8-year loan deal with the Eximport Bank to recondition 12 cargo ships bought in 1956.

Canada's three big corporations—Aluminum Company of Canada, Bell Telephone of Canada and Quebec Natural Gas—either sold or arranged to sell $193 million of securities in our markets.

CHILE, COLOMBIA

Chile extended her $35 million international monetary fund arrangement for 1 year.

Colombia issued 4 percent Banco de la Republica notes, up to an amount of $70 million, to United States banks and exporters in settlement of commercial claims.

France drew another $60 million from the monetary fund and set up negotiations for a $140 million Eximport Bank loan for the purchase of 21 jet aircrafts.

Indonesia worked out an arrangement with the United States under which she gets a $15 million 40-year development loan and a promise of $77 million in the future.

Japan was authorized to obtain $9,100,000 of United States wheat with yen.

Jordan accepted a new $10 million grant in aid from the United States for economic development and the maintenance of political stability.

AID FOR POLAND

Poland agreed to accept $95 million in United States aid, with $80 million for surplus wheat and cotton and $15 million for mining machinery.

United Kingdom signed a plan with the United States under which she is permitted to postpone future annual payments on her $3,700,000 American loan a specified number of times until the year 2000.

The World Bank raised another $100 million through a sale of 4¼ percent bonds to United States investors and created a new Far East department within the bank.

And so it went in April, so it is going in May and so it will continue to be. What Congress is debating is only one small part of our dollar diplomacy. It is a crucial part but the significant point is that it is a part, not the whole.

Congress and Automobile Safety

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ROBERTS. Mr. Speaker, a very thoughtful editorial appearing in the Selma (Ala.) Times-Journal recently dealt with a subject in which I am vitally interested, that of automobile and traffic safety.

Under leave to extend my remarks, I submit this editorial:

QUESTIONABLE FACTOR

Fourth District Congressman KENNETH ROBERTS spoke for a great many Americans when he warned auto manufacturers to speed their pace in producing safer cars.

As chairman of a House Subcommittee on Traffic Safety, Congressman ROBERTS said in an exclusive interview with the North American Newpaper Alliance that unless horsepower is subordinated to safety, Congress will be asked to spell out minimum standards.

"Too many advertisements still play up tremendous horsepower, or faster pickup, or ability to outrace other cars on the highway," he said. "Some of the manufacturers show interest in development of cars that will be safer than previous models, but others give this very little priority.

"With nearly all motor vehicles moving across State lines, there is no doubt but that automobile safety is within Congress' jurisdiction," ROBERTS said.

"Safety regulations have been set for railroad equipment and for airplanes and for commercial interstate motor trucking," ROBERTS said. "We may have to do it for automobiles."

He noted that the minimum-safety standards approach has been applied successfully to the household refrigerator industry. The Commerce Department recently ordered that new household refrigerators be equipped with door devices that would give a child trapped inside a chance to get out. This action is the result of a bill sponsored successfully by ROBERTS and enacted last year. It was held up a full year to give manufacturers opportunity to move voluntarily. Most of them did, but not all.

"This refrigeration bill has set a pattern," said ROBERTS, "it has shown how the Congress can stimulate progress in protecting the public.

"No one thinks that all automobile accident deaths or injuries can be prevented, but the number certainly can be cut down. American engineering genius really hasn't been turned loose on the business of turning out cars that are more nearly accident-proof."

Congressman ROBERTS undoubtedly is on sound ground in taking this position as chairman of the Congress group on traffic safety, and there is no question but that he has the support of most automobile buyers in calling for safety before horsepower.

Horsepower to many mortorists is a questionable factor, but safety is a thing to be desired by everybody.

Representative Powell Calls for a Third Force in American Life

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a speech given by me on the occasion of the prayer pilgrimage for freedom, at the Lincoln Memorial, Washington, D. C., on Friday, May 17, 1957, at 12 noon:

REPRESENTATIVE POWELL CALLS FOR ESTABLISHMENT OF A THIRD FORCE IN AMERICAN LIFE

We meet here today in front of the Lincoln Memorial because we are getting more from a dead Republican than we are getting from live Democrats and live Republicans.

We must face the basic dishonesty and increasing hypocrisy of our two political parties. Only the politically free Supreme Court views the American scene against a background of morality and uncompromising legality and acts accordingly.

In the north and south amongst Republicans and Democrats we find a studied contempt of the law of the land—the Supreme Court decisions. Even the proponents of civil rights legislation have made deals behind the scenes to emasculate the present bill or see that it is passed only in one House. As for the executive branch, it refuses to exercise the massive majesty and prestige of its office as it should.

I begged the Democratic Party directly through the national chairman, Paul Butler, to speak out during its national meeting May 5. They absolutely refused to say one word concerning the bombings, outrages, persecutions, and present civil rights legislation now being considered by a Democratic-controlled Congress.

Therefore, it is mandatory that we establish a third force. A force that will be nonpartisan, but political; nonracial, but for the time being led by our Negro clergy who have given the greatest spiritual witness of any group in this century; nondenominational, inviting men of all faiths to follow. It must be housed only in the churches, led only by the clergy, powered through prayer with the masses acting in unity.

The NAACP is now being driven underground. The technique of the South is to outlaw the NAACP for the sole purpose of preventing it from presenting cases in local and State courts. This will be an insurmountable roadblock to prevent the NAACP from reaching the Supreme Court. We can through this third force raise funds and channel those funds to the NAACP to continue its monumental work and where they

are blocked, present cases ourselves using the same NAACP lawyers.

We shall use as our techniques—based solely on passive resistance nationally and locally wherever the situation calls for such action—work stoppages, economic boycotts, mass demonstrations, sitdown strikes, slowdowns, picket lines, and above all, political unity irrespective of party, for and against individual candidates. Through these techniques we can turn the tide from hypocrisy to honesty; from flaunting the law to respect for the law. We will welcome and we will aid openly or through the underground those white church groups, Protestant, Catholic, and Jewish, who are on our side—the right side, the legal side, the moral side.

New German Fears

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of Thursday, May 23, 1957:

NEW GERMAN FEARS
— (By Ludwell Denny)

LONDON, May 23.—Germany moved on two fronts today to block a feared disarmament deal between the Western Allies and Moscow which would perpetuate her partition.

While Chancellor Konrad Adenauer and Foreign Minister Heinrich Von Brentano were flying to Washington, Defense Minister Franz Josef Strauss and the chief of the German armed forces, Lt. Gen. Adolf Huesinger, were arriving here.

These Washington and London Conferences follow last-minute sessions in Bonn with NATO Supreme Commander Gen. Lauris Norstad.

The German move is urgent because British Prime Minister Harold Macmillan and President Eisenhower are now seriously considering biting at the Soviet bait dangled at the London Disarmament Conference. The Conference has recessed while they try to make up their minds.

This showdown is probably the trickiest in the entire postwar period because so many postponed decisions are now interlocked. They involve the future status of Germany as well as the survival of NATO versus Soviet domination of Europe and most of the world.

The situation is now more favorable to the Russian plan than in the past. Economic, psychological, and domestic political pressures are undermining the Western Governments' long effort to build up adequate military defense against superior Soviet strength.

As a result of welfare state extravagance and the expensive Suez war fiasco, Britain was forced to make drastic defense cuts which weaken the already shaky NATO. France is threatened by bankruptcy from the Algerian war, which has toppled the Paris government.

Germany is still chiseling on her fair share of NATO manpower and money. And the American Congress, heeding the taxpayers' tirade of carrying an unequal load, is now trimming foreign aid.

As for the psychological climate, all western peoples increasingly fear a nuclear war. Moscow has increased this by a campaign of threatening notes to Scandinavia, France, Britain, and Germany.

Finally, Western Goverments are having their internal troubles. Italy's new minority cabinet cannot last. The Macmillan government here is on the defensive, probably could not survive a general election. The Eisenhower Administration is stumbling. In Germany a hot election campaign is under way.

In these circumstances the pro-Western Bonn government is naturally alarmed lest Messrs. Macmillan and Eisenhower make the so-called first-step disarmament deal. This would demilitarize part of Germany before the divided country was unified, and lead to eventual American and British withdrawal while Soviet forces wait nearby for the kill.

Curtis Calls for Independent Successor as TVA Board Member

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. EVINS. Mr. Speaker, Dr. Harry A. Curtis, who has served as a member of the TVA Board of Directors for the past several years and who has rendered this Nation great public service, delivered his valedictory or farewell address recently at Chattanooga, Tenn. In this connection, under unanimous consent, I include excerpts from Dr. Curtis' address in the Appendix of the RECORD. The timely advice of a distinguished American should be followed:

CURTIS CALLS FOR INDEPENDENT SUCCESSOR—RETIRING TVA BOARD MEMBER DELIVERS FAREWELL ADDRESS TO DISTRIBUTORS

Dr. Harry A. Curtis, who retires May 18 from the Tennessee Valley Authority Board of Directors, set forth some specific ideas about his successor's qualifications in an address before the Tennessee Valley Public Power Association's annual meeting in Chattanooga last month.

Said Dr. Curtis: "* * * above all it is vitally important that the man be capable of reaching thoughtful and independent conclusions rather than just falling in with what others may wish."

"If ever there was a time when the TVA needed a sturdily independent man appointed to the TVA Board, that time is about at hand," the 73-year-old Curtis stressed.

Dr. Curtis said that some time ago he and Dr. Raymond R. Paty, another TVA Board member, were told that TVA was to be a part of the Washington team and would be expected to act accordingly.

"So we were told," Dr. Curtis revealed. "Presumably this meant that we should meekly accept the Dixon-Yates scheme, that we should gladly accept the 18 amendments to the proposed revenue bond bill, that we should bow to the Bureau of the Budget's guess as to how much power would be needed in the valley, that we should not spend our power revenues for additions to existing power plants."

SENSE OF SECURITY

In his farewell address as TVA Director, Dr. Curtis warned that TVA's success "has led to a sense of security that is not supported by the situation that prevails today." He said "there will be hell to pay, internally and externally" if a strong man is not appointed to the TVA Board.

Dr. Curtis, in an address titled "Unfinished Business," told the Tennessee Valley power distributors that the most important unfinished business is "a revenue-bond financing bill such as the TVA and you, our partners, can live with.

"It is hard to escape the conclusion," he declared, "that the current talk of maintaining tight Government control of TVA activities is nothing but a disguised method of damaging the agency beyond repair."

"Perhaps the real intention of some folks in Washington were clearly evident in the infamous Dixon-Yates scheme," he said. "It must be recalled that campaign promises are not safe reasons for assuming that all will be well."

Dr. Curtis declared that "the privately owned power companies have always spearheaded the fight to destroy the TVA. They have spent millions of dollars of their customers' money in this fight."

"Year after year," he charged, the power companies "have put out a vicious string of lies in newspapers, magazines, and pamphlets. They even stink up whole pages in some usually dignified publications, such as the staid old Atlantic Monthly."

"The TVA is handicapped in this fight since it has neither the wish nor the authority to spend millions of its income in this fashion," Dr. Curtis explained. "The TVA can only continue year after year to present the facts in its official publications, and must rely largely on its friends to combat the lies that its opponents spread about so liberally."

He warned that even though TVA has survived 24 years of fights against its enemies, the agency today faces major problems.

William S. Peterson, president of the American Public Power Association and general manager and chief engineer of the Los Angeles department of water and power, also had some comments on the TVA Board.

TVA ACT CITED

He cited the portion of the TVA Act which states, "All members of the Board shall be persons who profess a belief in the feasibility and wisdom of this act."

"This simple statement," Mr. Peterson declared, "is the most important of the fundamental bases upon which rests all of the past successes of the operation of the TVA as well as all of its future progress."

"It is my earnest hope," he continued, "that no President will ever disregard this requirement."

Mr. Peterson said most large electric utilities, including his Los Angeles system, believe they are growing rapidly if they have to double system capacity every 10 years. But TVA is having to double its capacity for normal loads every 6 years, and "on top of this, we find that service to the Atomic Energy Commission and other Federal services multiplies its use of power in the same 6 years by a factor of 15."

"Such rate of growth, in such a tremendously large electric utility system, has never occurred, as far as I know, in the history of our Nation," Mr. Peterson stated.

He urged passage of a satisfactory form of revenue-bond financing for the TVA promptly, and said Congress must either do this or provide funds through appropriations for the continued development of the TVA system.

He said the Los Angeles Department of Water and Power has found that the revenue-bond provision * * * has provided means whereby the financing of the necessary extensions of the system are conveniently and promptly met.

Mr. Peterson said the Los Angeles experience indicates the need for both engineering and financial planning by a group that is close to the problem and which has full responsibility for the solution of the problems involved.

BOND FINANCING URGED

"I am fully convinced," Mr. Peterson declared, "that some form of revenue-bond authorization, with reasonable controls that can keep such bond issues closely related to the burden to be carried, can be developed and should be used" for the TVA power system.

"Most of you," he told the TVA distributors, "are familiar with the illustrations in TVA publications showing the map of the United States with zones for different typical rates. You will recall that the lowest rate zone is that embracing the TVA, and that successive rate zones beyond grow to higher and higher rates as the distance from TVA is increased."

He said the same thing is true in the Los Angeles area, "where I am sure that the rates of the department of water and power have influenced the rates of private companies operating within the same State."

"Thus we find that the public power enterprises are the forces which give our Nation a truly free competitive enterprise system in a field of the electric utilities," Mr. Peterson pointed out.

The TVPPA meeting heard a report from James L. Grahl, APPA assistant general manager and director of the APPA Atomic Energy Service, on the current status of the Nation's atomic power program. Mr. Grahl was unable to attend the meeting because of illness and his paper was presented at the meeting by J. D. Brown, APPA staff member and Washington representative of TVPPA.

Mr. Grahl said it is not technical problems that delay United States progress in producing low-cost atomic power; "it is the lack of a national policy on atomic power development."

Mr. Brown reported to the convention on the Washington scene, particularly the status of matters relating to TVA. He emphasized that all public power groups in various parts of the Nation should work together.

E. H. Wright, manager of Southwest Tennessee Electric Membership Corp., Brownsville, Tenn., was reelected president of the association, and W. L. Manton, manager of North Georgia Electric Membership Corp., Dalton, Ga., was reelected secretary-treasurer.

Other speakers were Jac Chambliss, of Chattanooga, on Labor Relations Today and Tomorrow; Louis R. Blanks, DuPont safety director, on Safety and Accident Prevention; R. S. Hutcheson, of the Bureau of Business Research of the University of Tennessee, on Wage and Labor Survey Report; Xen Portwood, personnel director of Knoxville Utilities Board, on Fringe Benefit Costs; Earl Parks, manager of lighting, Nashville Electric Service, on Fifty Miles of Street Lighting; and Gaynor P. Collester, General Electric Co., Atlanta, on Live Better Electrically.

The convention heard a welcome from Mayor P. R. Ogliati, of Chattanooga; a response from L. J. Wilhoite, chairman of the Chattanooga Power Board; and reports from Association President Wright, Secretary-Treasurer Manton, and Executive Secretary J. Wiley Bowers, of Chattanooga.

ANNUAL REPORT CONTEST

The TVPPA annual report contest was won by Gibson County Electric Membership Corp., Trenton, Tenn. Second place went to Holly Springs Department of Electricity, Holly Springs, Miss., and third place winner was Memphis Light, Gas & Water Division. Mrs. Pan Dodd Wheeler of the Tennessee Municipal Technical Advisory Service made the awards.

In the annual membership competition among the five power districts, the west Tennessee and north Alabama areas tied for first place with 96 percent of the power systems in those areas being members of the Tennessee Valley Public Power Association.

The convention adopted resolutions (1) reendorsing the Jones-Davis TVA self-financing bill, with specific mention of the association's opposition to territorial limitations being placed on TVA's service area; and (2) urging rapid construction of the Tennessee-Tombigbee Waterways system as a profitable use of the Nation's rivers.

Battle Over Foreign Aid Spending

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of May 21, 1957:

BATTLE OVER FOREIGN AID SPENDING—MAIN FIGHT EXPECTED ON HOW TO USE FUNDS AFTER $1.2 BILLION REDUCTION

(By Constantine Brown)

The battle for the administration's foreign-aid program promises to be spectacular. The consensus of responsible Senate leaders is that the Appropriations Committee will lop off at least $1.2 billion from the administration's requests. The main conflict between the administrative and legislative branches will develop, however, on how and where the funds should be spent.

President Eisenhower and Secretary Dulles insist on "flexibilities." They want to have, as in the past, absolute discretion in the distribution of the appropriations for foreign aid. A substantial number of Senators of both parties insist on a "partly selective" distribution. They want to list the amounts for each recipient, leaving only a limited "emergency sum" to be spent by the administration at its discretion.

Congress, and especially the Senate leadership, feels that over the years the Executive has been spending the taxpayers' money too indiscriminately. Hundreds of millions have been poured into India, Indonesia and other neutralist Asiatic countries in the hope of detaching them from the influence of the U. S. S. R. and Communist China. These optimistic expectations have never been fulfilled. In every conflict between the free and the Communist worlds at the United Nations we have found the same countries we have liberally assisted siding with the enemy.

Similarly there is a strong feeling against the administration's actions concerning assistance to Yugoslav's Marshal Tito. The Senate voted last year to stop any further help but, at the pressing request of the administration, an amendment was agreed to which left the matter of additional aid to be decided by the President within 90 days after passage of the bill. In October economic assistance to Yugoslavia was resumed. Last month the decision was reached to ship a limited amount of military equipment—especially jet planes and tanks. Both decisions were based on the findings of the State Department that "the best interests of the country would be served" by continuing to help Tito.

The leaders in Congress are not satisfied with the explanation of the Executive that resumption of military and economic aid to Yugoslavia will help "pry it loose" from the Communist bloc. They have seen no indications that the Yugoslav dictator favors in the slightest the views and concepts of the free world. The fact that there are occasional "lovers' quarrels" between the Communist leaders in the Kremlin and Belgrade does not justify the optimism of the Executive. The votes of the Yugoslav representative at the U. N. show Tito is always on the other side. It is doubtful that he needs our aid, estimated at 10 jet planes a month for the next 7 months. Intelligence reports show that many of those he received last year are still in crates in Yugoslav warehouses.

Similarly, Congress is reluctant to continue military assistance to countries which have drastically reduced their military budgets budgets and establishments despite their NATO commitments. The tendency among our major allies is to let Uncle Sam carry the burden of their military expenditures while their governments gradually reduce their taxation burden.

A number of responsible legislators would want to appropriate foreign economic and military aid to specific countries which have proven, before and since they started receiving American assistance, determinedly opposed to the Communists. These are, from the Atlantic to the Pacific, Spain, Greece, Turkey, Iraq, Saudi Arabia, Iran, Pakistan, Thailand, Vietnam, the Philippines, Formosa, and South Korea. Most of these are spending upward of 50 percent of their national incomes on their military establishments.

It is remarkable that the combined military forces of the Korean Republic and Taiwan, despite those countries' limited resources and population, substantially exceed the armed forces Britain will have by the end of next year. It is pointed out that Korea, for instance, which collects $321 million from its impoverished population, spends $228 million on its defenses. It is obvious that it could not continue to support an armed force of more than half a million men and stand an outlay of $300 million for reconstruction without American help. The same thing applies to other Asiatic and Middle Eastern countries directly under the Red guns.

The American people are demanding a curtailment of the present unprecedented high peacetime budget. The economy-minded Congress realizes that we cannot let down our guard. Hence, it favors assistance to those who refuse to play footsie with the Reds, either politically or economically.

Truman Doctrine Stopped Communists in Greece and Turkey—Eisenhower Policy Let Communists Take Half of Vietnam

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Philadelphia Daily News of Thursday, May 23:

IKE IN TROUBLE

Right off the bat, we're going to claim the editorial privilege of blowing off steam.

We must admit that we got mad a couple of times during President Eisenhower's radio-TV address Tuesday.

Ike praised an historic declaration by a Democratic President and a Republican Congress to defend Greece and Turkey against Communist aggression.

The name of that Democratic President, Mr. Eisenhower, was Harry S. Truman. The policy is known to historians as the Truman doctrine.

Is Truman a dirty word, Mr. President?

We got mad, too, when Ike compared the Truman doctrine (without naming it, naturally) with what his administration did in Vietnam, a remnant of French Indochina. Greece and Turkey under Truman wound up free. Vietnam wound up sawed in half, with the Reds in control of North Vietnam.

Now we've got that off our editorial chest, we'll proceed more calmly.

We think Ike made a pretty good speech in defense of his mutual security program and other defense measures. Better than his speech last week.

This newspaper has been in favor of Ike's budget right along. More strongly than many Republicans.

We just wish that Ike had been in there fighting sooner, harder, and smarter.

Ike has been unable even to rally his own team behind his budget. He's done worse—here anyway—than Harding. Harding called in Charles G. Dawes, later Vice President, to be director of the budget. Dawes laid down the law that all fights about the budget had to be in private. Once Harding's cabinet and the GOP congressional leaders had agreed on a budget, everybody on Harding's team had to defend it in public.

Ike hasn't worked that way. One of the first of his team to sound off against the budget was his Secretary of the Treasury, George M. Humphrey.

But did Ike fire him? No. He went off on a hunting trip to Humphrey's plantation. Shooting quail.

Other Republicans came out against the budget, too. So Ike seems to be in serious trouble. We're afraid Congress isn't going to listen to him. Especially Republicans. Their ears are blocked by the economy bloc.

But keep on fighting, Ike. We're with you in this fight. Except when you slight Harry S. Truman.

Postal Rates

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. John E. Forbes, of Redlands, Calif.:

AN OPEN LETTER TO CONGRESSMAN HARRY P. SHEPPARD, ALL SENATORS AND CONGRESSMEN, AND TO POSTMASTER GENERAL SUMMERFIELD

REDLANDS, CALIF., *May 8, 1957.*

HON. HARRY R. SHEPPARD,
House Office Building,
Washington, D. C.

DEAR SIR: In addition to those in your constituency, there are several million Americans who—

1. Won't mind paying a 4-cent first-class postage rate if it is necessary.

2. Don't care whether mail is delivered on Saturday or not.

3. Are annoyed to exasperation by the amount of "junk" mail forced upon them.

4. Are annoyed and exasperated by the inability or unwillingness of the Congress to eliminate it.

Under separate cover you are receiving from me the accumulation of free house organs and bulk advertising mail delivered to me in 1 month—from April 8 to May 8, 1957; 6 so-called magazines, 3 advertising broadsides, 4 letters or "reasonable facsimiles thereof." Total weight, 2 pounds—2 pounds of nothing.

If there are in this country 25 million homes and each home gets only one-half as much junk mail as I did, then the total of this expensive and useless nothingness reaches the unbelievable sum of 12,500 tons a month, or 150,000 tons a year.

The bulk rate is 1½ cents per letter and the Post Office claims it must have 4 cents per first-class letter. Therefore it would appear that they lose 2½ cents on each bulk letter. If each home gets 12 letters a month then the dollar loss on bulk mail alone reaches at least $7,500,000 per month.

I believe that if the Congress as a whole were able and willing to act for the householder, the voter, in this connection, they could stop this deluge of uselessness and save the Post Office so much money that an increase in first-class rates would be unnecessary.

Can we count on you?

Yours truly,

JOHN E. FORBES.

President Diem of Vietnam Thrilled at TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. EVINS. Mr. Speaker, following the visit of President Ngo Dinh Diem, of Vietnam, who was received by the President and who recently addressed the Congress in joint session, he expressed a desire to visit and to see the TVA and to learn more of its operation and accomplishments. A news report appearing in the Nashville Tennessean of Friday morning, May 17, pictures President Diem viewing one of the great multipurpose dams of the Tennessee Valley Authority and quoting this distinguished visitor as being "impressed" and "thrilled" by TVA's "impressive accomplishments."

Truly, Mr. Speaker, the TVA is one of the world's greatest democratic achievements—a great regional water-resources development which many distinguished visitors from foreign countries have visited and admired. Among the many hundreds of distinguished visitors, as contrasted to the thousands of tourists and sightseers, who annually visit the TVA, the following are included:

Queen Juliana and Prince Bernhard, of the Netherlands.

Ambassador and Mrs. Eban, of Israel.

Muhammed Khuda, Minister of Defense of Pakistan.

Ambassador and Mrs. Feridun C. Erkin, of Turkey.

Admiral Renato Guillobel, Secretary of Brazilian Navy.

Former Prime Minister Hans Hetoft, of Denmark, and Ambassador Henrik de Kauffmann, of Denmark.

Prime Minister David Ben-Gurion, of Israel.

Prime Minister Joseph Pholien, of Belgium.

President Gabriel Gonzales Videla, of Chile.

Dr. Frans Bluecher, Vice Chancellor of West Germany.

Prime Minister Pundit Jawaharlal Nehru, of India.

President Enrico Gaspar Dutra, of Brazil.

Right Hon. Hector McNeil, British Minister of State.

The Kahn of Kalat, Ruler of Kalat, Pakistan.

Prince Charles, Regent of Belgium.

The Egyptian Minister of Public Works.

President Miguel Aleman, of Mexico.

N. D. Diem, President of Vietnam.

Visitors coming to the TVA for intensive study, as distinguished from tourists and sightseers, numbered 4,660 in 1956. Of this number 2,641 came from 80 foreign countries, an all-time record. Such visits range from a day to several weeks. Included among foreign visitors were 72 citizens of 27 countries who came to TVA as trainees. According to information from TVA authorities, Japan and Germany sent the largest number of study visitors, with Brazil, Mexico, and Colombia close behind.

The Faith That Built America—An Address by Dr. R. Richard Renner, of Cleveland, Ohio, During the Washington Pilgrimage of 1957

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mrs. BOLTON. Mr. Speaker, each year the Washington Pilgrimage redirects our attention inward toward the rich more and spiritual heritage of our great Nation. In these days of personal, national, and international tensions, it is desirable to look again at the simple but unswerving faith of our forefathers in Almighty God.

In his address at the faith and freedom dinner, April 26, Dr. R. Richard Renner, president of the Washington Pilgrimage, and president of the staff of Cleveland's Doctors Hospital, eloquently reviewed this steadfast faith of early America. As his message is directed to all who would know more of their spiritual heritage, I ask permission, Mr. Speaker, that it be included in the RECORD at this time.

The address follows:

ADDRESS OF DR. R. RICHARD RENNER AT THE FAITH AND FREEDOM DINNER OF THE WASHINGTON PILGRIMAGE, APRIL 26, 1957

America was settled by men who fled to this country to escape the so-called divine right of kings and governments and churches. They believed that all men were created equal. With a firm reliance on the protection of divine providence, they look to God as their supreme judge. They believed the new Nation would succeed only if its citizens were moral and obedient to God. The Washington Pilgrimage believes our Government will continue to succeed only as long as our citizens continue to be moral and obedient to God.

Governments, like clocks, go from the motion men give them. As ignorant tinkers can ruin clocks, so can nearsighted, selfish statesmen ruin governments. As wrong clocks can upset the entire household, so can wrong governments upset God's entire household. The judgments of God came upon a people as their governments manage the trust which God has committed to them through His people.

Religion was the driving force which inspired Columbus to sail blindly west into the Atlantic. The first settlers came over believing that if men followed God, He would give them a new government of the people, by the people, for the people. God-directed self-government started in the Virginia

House of Burgesses where they all took their seats "till a prayer was said that it would please God to guide and sanctify all."

Following the Mayflower compact, every New England town drew up a covenant with God which was the town constitution. There were solemn agreements with God. They felt their migration to America was led by divine providence and they agreed to live together in teamwork under His direction.

The early settlers of America had all been persecuted at the hands of the church and the state. When minorities arose whose aim was to bring in democracy to church and state, or at least to purify religion and government, they were persecuted in every country. That persecution was not merely neighborly disapproval or newspaper condemnation. They were thrown into filthy jails where they died from starvation and disease. In 1662, more than 4,000 Quakers were to be found in English jails. The crimes committed by church and state were too horrible to mention.

These oppressions of the religious minorities by the church, and the greater cruelties by the state and the church in the name of the mother religion, caused the great migration to America. They were not free to practice their religion in Europe. As religious people they did not believe in any divine right of kings, and could not agree that the king could do no wrong when down deep in their spiritual hearts they knew the kings like Henry VIII and many others did nothing but wrong.

With these ideas in mind it is no wonder that in all our colonies the people made certain that the people were not there just for the rulers, but that the rulers were there for the people, to minister to their comfort and their welfare. According to Thomas Hooker of Connecticut, "The privilege of election belongs to the people according to the blessed will and law of God." Roger Williams said, "The sovereign, original foundation of civil power lies in the people. Governments have no more power than the people, consulting and agreeing, shall entrust them with; for the sovereign power of all civil authority is founded in the consent of the people."

In like manner they made certain they would preserve the liberty and purity of the Gospel. John Cotton had said, "To make the Lord God our Governor is the best form of government in a Christian Commonwealth." As they depended on God for protection, so they looked to God for direction. They were a people called by God and under a special covenant with Him. All these early pilgrims were a race of devout stalwart God-fearing men whose aim in life was to find their place in God's divine plan and to fulfill it.

The purpose of settling Virginia was to establish an English Christian outpost in the New World. The English Government perhaps wanted to get ahead of the government of Spain, but the religious people wanted the plantation of a church of English Christians. Sermons were preached in English churches and funds were raised there for these colonies. They wanted also to be missionaries to the Indians. Reverend Alexander Whitacre, the son of a great Puritan minister, who converted Pocahontas, was one of the early leaders of the colony.

You remember the Virginia-London Co. offered the Pilgrims in Holland a free home as settlers in Virginia. Accepting that offer, they set sail for Virginia. That the Mayflower landed at Cape Cod was due to adverse winds, the Gulf Stream, no navigational ability and poor seamanship, rather than any lack of Christian hospitality in the Virginia colony.

When the House of Burgesses first met in Virginia, after prayer to God, their first law was one protecting the Indians; the second law encouraged the conversion of these Indians to Christianity. Other laws made church attendance compulsory and ruled against gambling at dice or cards. Half the laws during that early period had to do with religious observance. Articles, instructions, and orders did specially ordain, charge, and require with all diligence care and respect that the Christian faith be preached, planted and used, and to make yourselves all of one mind for the good of your country and your own, to serve and fear God, the Giver of all goodness, for every plantation which your Heavenly Father hath not planted shall be rooted out.

The Quakers settled Pennsylvania, but few of us realize that they also settled Delaware and western New Jersey. They stressed high ethical standards and the inner light. If you will only be still and know God, you can be guided by the spirit of God. Their plain manner of dress was their outward expression of their belief in the equality of man. Perhaps because Penn had suffered and had been in jail in England many times because of his religion, he granted a charter of liberties approved by the Colonial Assembly in 1701, guaranteeing that no person shall in any case be molested or prejudiced because of his or their conscientious persuasion or practice. This Quaker form of democracy was a foundation of our American heritage.

It was later that the Scotch-Irish Presbyterians arrived and settled in areas of western Pennsylvania, the Carolinas, New Hampshire, and Maine. In many areas their American plan of representative government was copied from the Presbyterian form of church organization. Out of these Scotch-Irish Presbyterians came the great group of Disciples of Christ, founded in America with the express purpose of uniting all Christians into one common group.

But to Maryland goes the honor of being the first colony to extend religious toleration to all Christian groups as early as 1634. As a Catholic minority in England they had been persecuted, so they decreed that "no person should in any way be troubled, molested, or discountenanced for or in respect to his or her religion, nor in the free exercise thereof, nor in any way compelled to the belief of any other religion against his or her consent." A government under God was the aim of Caecilius Lord Calvert, Baron of Baltimore.

There were wide differences between the broadbrimmed-hatted Quakers and the black-gowned Jesuits, yet each had in his heart the picture of a God-directed commonwealth. And the New Jersey settlement was directed by an impulse on the spirit of God's people not for themselves but for their posterity which should be after them. We owe a debt to our posterity. It is too bad that future generations cannot be here at this time to see the wonderful things we are doing with their money.

Perhaps Jonathan Edwards was the most influential man in colonial times. He was president of both Yale and Princeton. His chief interest was people, and he wanted in all America the highest personal standards with a sense of divine purpose. But the man who stirred colonial America to deeds of daring rectitude and scorn for miserable aims that end in self was none other than George Whitefield, the associate of John and Charles Wesley. Colonel Oglethorpe had brought over all three to make certain his settlers in Georgia remained true to their Christian ideals. Whitefield soon extended his endeavors to all the colonies, and there is hardly a small-town church from Georgia to Maine that is not obligated to him. He had trust in God. Nothing was too hard for God to do; nothing too great for America to hope for from God. This was our American heritage. This the Washington pilgrimage believes.

Disaster awaits the people or the nation that forsakes moral standards or ignores God's sovereignty. On this idea was born the principle of the American Revolution. On it was the foundation for the dream of a God-directed United States of America.

The true foundations of our early Government were on the unchangeable will of God. A good government must rest on a definite moral basis in the people. The people will be moral only if they are religious. They felt strongly that their Government would succeed if the mass of people were virtuous and in touch with God. And the rights of everyone are divine, yes, even more divine than the divine right of rules, because kings and rulers were constituted for the good of the people. These rights are written by the electronic beam from heaven, by the hand of God Himself, and will never be erased as long as the people believe in divinity and trust His power to lead them and their nation.

Our early leaders believed this. Washington violently rejected the idea of a monarchy. Adams demanded annual elections to keep the Government in touch with the people. Jefferson as wartime Governor of Virginia refused to assume dictatorial powers. Benjamin Franklin in Poor Richard's Almanac supported these views.

While Jefferson wrote the Declaration of Independence it was the ideal of the times. Franklin and Adams made many corrections and additions in their own handwriting. Not only was the Government divided into legislative, judicial, and executive branches for proper balances, but to prevent too much authority concentrating at the top, they tried to further balance the power by State, county, city and town governments for they knew that concentrated power tends toward corruption and powerful rulers forget they are only agents of the people and their power is all derived from the people. Jefferson said, "No government can continue good but under the control of the people."

But a declaration of rights is also a declaration of duties. If "Liberty like life is the gift of God," (Jefferson), then religion and morality are indispensable supports. "Liberty can no more exist without virtue than the body can live and move without a soul" (Adams). Public virtue in government cannot exist without private virtue in the people, and public virtue is the only foundation of a republic. If our citizens fail to obey the inner police of their own virtuous conscience, sooner or later they will obey the police of a dictator state.

Washington spent much time on his knees in prayer. Probably nothing else could sustain him at Valley Forge. The first day after he became commander in chief at Cambridge he issued an order saying, "The general expects of all officers and soldiers not engaged in actual duty, a punctual attendance on divine service to implore the blessings of heaven upon the means used for our safety and defense." Washington also started and closed each day with a time of prayer alone in his room. Adams stated to his grandson, "The whole duty of man is summed up in obedience to God's will." Jefferson wrote a book on the teachings of Jesus and read from it every night. Franklin began each day with prayerful meditation, and insisted that the First Continental Congress and all our official meetings be opened with prayer. Is it any wonder we of the Washington Pilgrimage feel that America was founded on religion by moral men and that we want America to remain true to those spiritual principles that have made us a great nation under God?

Even on the reverse of our Great Seal, the Eye of God looks down on the uncapped pyramid of 13 layers. These 13 States operate under the all-seeing eye of God, who according to the Latin motto, "looks with favor on that which has been begun." The Continental Congress declared the statements on the Great Seal "allude to the many signal interpositions of providence in favor of the American cause."

On the other side of the Great Seal, the shield of 13 red and white stripes without support of the eagle indicates that we can rely on our own virtues. And in the American eagle's left claw are arrows for war, while in his right is clutched the olive branch for peace. Have we made of our eagle a southpaw, or a lefty, because he does so much more with his arrows for war than with the olive branch for peace? Our Founding Fathers wanted to wage peace more than war.

The "E Pluribus Unum" on our Great Seal stands for teamwork under the supervision of God in our new Nation. Do you agree with the founders of the Washington pilgrimage that we need teamwork of all people without regard to race, color, or creed to keep America true to the spiritual ideals of our Founding Fathers, and forever a Nation under God?

Any kind of people can live under a dictator. It takes people with character to form a democracy and use their freedom wisely. We study the past to learn its lessons and prepare for the future. People with a great spiritual idea will learn to live together in democracy. Today we do not have Washington and Jefferson and Lincoln. The challenge is on you and on me. America's future and democracy's future and the worlds future depends on our response. Will we do it?

Man has tried in vain to build society on science without love, education without wisdom, politics without justice, and economics without God. We must build on the bedrock of faith in God, the home, the family, and the state. We have had world leadership thrust upon us. Mankind is knocking at our gates for wisdom and leadership and the hope of peace. Let us not fail to fulfill our destiny and lead the world in peace and love because we lack the moral fiber in our own national life.

Information, direction, and stimulation can still come from the mind of God to the mind of men in our Nation. Everyone should be free under the direction of God to fight for America under the dictates of his own conscience. I wish this freedom for every man in every nation. The basic struggle is for the wills of men. It goes on in the hearts of men. Armies and navies and bombs, and pacts and economic assistance treaties may be necessary, but the final deciding factor is whether we as men and nations will be guided by the voice of materialism or the Voice of God.

Let us then as pilgrims find again that faith in God our colonial fathers knew. Let our homes and schools become again the Nation's strength. Let our statesmen learn again to listen to the Voice of God. Then we shall know once more the greatness of a nation whose strength is in the spirit of the people. Then America can give forth to all the peoples of the earth the only answer that can satisfy their longing for peace and their thirst for a sane and decent world. Then will inspired policies guide our Nation's lifeblood. Then will democracy be reborn. Then will America know the peace of God. Then and then only will the Washington pilgrimage have fulfilled the ideals its great founders have for all America.

Anthracite Dollars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News, May 16, 1957, disclosing the impressive amount of revenue provided railroads by the anthracite industry:

ANTHRACITE DOLLARS

The Anthracite Institute calls attention to the fact that the hard coal industry provided railroads with $77,204,400 in revenue during 1956, $38,911,000 of which went into wages. That was sufficient to insure full time employment to 7,625 men at the rate of $5,102 annually.

Through the years, anthracite has been one of the best customers railroads have had in this area. That the industry still contributes so large a sum under adverse conditions will be surprising news to many.

Anthracite dollars find their way, directly and indirectly, into many channels of commerce. If a breakdown were available, the statistics might be just as enlightening as the freight bill.

"Liberty and Justice for All"—Remarks to Students of Dimner Beeber Junior High School

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mrs. GRANAHAN. Mr. Speaker, it was my honor and privilege last Friday to meet with the faculty and students of the Dimner Beeber Junior High School, 59th Street and Malvern Avenue, in my district of Philadelphia, and to discuss with them the concepts of liberty and justice.

Some years ago, my husband spoke at this same school and was tremendously impressed by the caliber of the teachers and the students. He told me he was proud to be the Congressman for such a group. I can now fully appreciate his feelings at that time, for when I spoke there, I was most impressed in exactly the same way.

The children of Dimner Beeber Junior High showed a sense of maturity and responsibility and civic awareness one finds really surprising among junior high age groups, and the deportment of the student body was truly outstanding. The principal, Mr. E. Orton, has every right to be proud of his faculty and students.

Mr. Speaker, under unanimous consent of the House, I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD my remarks at the Dimner Beeber Junior High School that day, as follows:

LIBERTY AND JUSTICE FOR ALL—REMARKS BY CONGRESSWOMAN KATHRYN E. (MRS. WILLIAM T.) GRANAHAN, AT DIMNER BEEBER JUNIOR HIGH SCHOOL, PHILADELPHIA, MAY 17, 1957

It is a great pleasure, and an honor, too, for me to have this opportunity to speak to you today on the great phrase out of our pledge of allegiance, "with liberty and justice for all."

Children in school sometimes find it a little difficult to read much deep meaning into the high-sounding words and the noble expressions in our great patriotic documents. Much that is in the Declaration of Independence sounds strange to us today—the words are often unfamiliar ones and the thoughts are of issues long ago and known to us only through our study of history. They do not seem to have too much current meaning sometimes.

The Constitution is one of the greatest documents ever written by human beings, but again, to the boy or girl in school, it may deal with very little that seems familiar and with a whole lot that seems altogether out of your daily experience.

So, too, the concepts—liberty and justice.

It probably becomes monotonous to you to hear your teachers and your parents and people in public life constantly telling you the day will come when these concepts are more meaningful—and will be real to you in everything you do.

It is no reflection on your youth that we who are older keep repeating this idea. For we, too, were all once in school and more concerned about what we might wear at graduation, or what celebrations there would be at the end of the school year,or what we would do on the school picnic, or how much money we would have to spend on vacation plans, than we were about the immigration laws, or the idea of political freedoms or economic freedoms.

It is only where justice and freedom have been unknown for periods of time—or where the threat to destroy them is ever-present—that these great concepts become more personal to each individual, including those in school.

So I want to say right now, I am not going to lecture you about how glad you should be to live in America rather than somewhere else. I know you all know how lucky you are. Let's not go around pointing fingers at each other and saying be grateful, because it is not necessary.

But let us do this—you in your school activities and in your day-to-day life at home and at church or synagogue and among your friends, and I will try to do the same in the Congress of the United States—let us translate the words liberty and justice into their real meaning to us by being good friends with each other and listening to the other fellow's point of view, and making sure the other fellow gets his fair share in all instances.

For after all, that is what this country is supposed to be based on. That is what we want it to be—a true democracy where all are equal before the law and none of us need be ashamed of our racial or religious or economic background.

For while we do not have equal wealth, or equal brainpower, or equal physical characteristics—we are all different in every way—and yet we do have this great and precious thing of equal opportunity and equal justice under law.

Those of you who have been in Washington and have seen the majestic Supreme Court building across from the Capitol have seen the inscription, "Equal Justice Under Law," over the entrance. It is not just a phrase which sounds good or looks good carved in the marble. It is the basic concept of America. It is what makes our country the wonderful place we know.

There are times when one or another of us has occasion to wonder if the words are really true. We hear instances of individuals who are railroaded to jail for crimes they did not commit. We hear of poor folks who get less than justice because they are pitted against rich and powerful adversaries.

And you might be inclined then to say: "Aw, there is no justice."

But stop a moment and just consider one thing. Consider this.

When and how and under what circumstances do you hear of these instances in which justice is not evenhanded; in which some individual who is not rich and powerful loses out unfairly to another?

You hear about these things in the newspapers, in Congress, over the radio or television, in the pulpit of your house of worship, or in the conversation of friends and neighbors—and you hear about them because some one or some group—or the Government itself—has moved in to correct an injustice.

Frequently it is the courts which do it. Sometimes it is public opinion. Often it is a newspaper. But always it is some American or American institution which is moved to act by what is right and by what is just. Just remember that.

Right now we have many problems in this country. They are not always being solved as quickly or as well as we would like. As a Member of Congress I sometimes get impatient over the slowness of things—over the slowness of progress. I have introduced some bills which seem to be dying on the vine, pigeonholed in committee. One is to change the immigration laws to allow more good people who would make good Americans to come to this great country as your relatives and mine came here. Little seems to happen on this bill. I get discouraged over it, sometimes.

But friends in the Congress tell me that the issue is not dead and will not die. That like-minded Members will continue to work to correct the injustices of the present law as they affect some groups.

And as I see Congress in action I have reason to believe that decent-minded people will succeed in achieving any good purpose, but it takes work and patience and constant plugging away.

The Congress can move fast in an emergency. It can move at lightning speed when there is a sudden crisis involving our country or our defense.

But normally it moves slowly, deliberately. It takes infinite pains. It examines every comma and looks twice at every period. Everything the Senate does is painstakingly reviewed by the House, and vice versa. Bills may pass one House or another many times before the other one even agrees to consider them. Issues are sometimes resolved by the plain and ordinary and remarkable procedure of just letting them lie around long enough until time takes care of a bad situation.

That is not my idea of the right way to operate. We should face up to these problems and act on them.

But sometimes we seem to lack not only the will but the wisdom to know how to act on them or what to do.

For it is not always a simple matter of righting a wrong or improving a bad situation. What we do to help one group or another in our midst may react adversely on some other group. Bills to help a particular industry hurt another industry. Proposals to help one part of the country may react to damage the economy of another.

This is not an argument for delay. It is rather an explanation for why there sometimes are delays.

Basically all Members of Congress want to do the right thing for the country. But our views differ on this frequently. A majority can always act, but not always in such a way as to assure the justice of a majority cause. Sometimes it is a minority which has justice on its side. What then?

The answer is we must examine each proposal and each proposition with as much intelligence and as much objectivity as possible—as we can bring to bear on the subject. And we must sometimes pray for guidance—yes, it is often that hard to know the true path of justice and liberty.

By liberty, can we mean the complete freedom of everyone to do always whatever he likes, regardless of how many people get hurt in the process? No, it cannot mean that.

But what it can mean, and should mean, is that we dare not discriminate against any group because of race, creed, or color. We dare not have one type of justice for the rich, and another for the poor. We dare not bow and scrape before one group because they are powerful, and ride roughshod over another, because they have no way of getting back at us.

In short, we have to be decent with each other. We have to recognize the elementary human dignity in each person.

And we have to pass the kind of laws which also recognize human rights, and human needs, and human dignity.

We do not always succeed. When we fail, we should be told about it. It should be called to our attention. Americans have a right and a privilege to speak up and protest when they see a miscarriage of justice.

The more we watch out for the other fellow's liberty, the safer our own will be.

The more we protest injustice to someone else, the less likely are we to have injustice practiced on us.

The more we join in common undertakings to help the whole group, the whole school, the whole community, the whole country, the better off each and every one of us is going to be.

That may be stating it too simply. But to me, that's simply what it all amounts to.

I am still a new Member of Congress. I have much yet to learn about the work. But I hope I never learn that to be a successful Member of Congress one has to unlearn the principles of decency and dignity and justice and friendship which to me are so fundamental to the democratic process. I am sure it will not be necessary.

And you boys and girls, as you grow older and take part in the life of the community, will find no better guides than the words "liberty and justice for all."

1957 Graduates From Gruver, Tex., High School

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ROGERS of Texas. Mr. Speaker, it was my great pleasure this week to welcome to Washington the 1957 high school graduates from Gruver, Tex., which is located in the 18th Congressional District of Texas that I have the honor to represent. The occasion of their visit to this Chamber was likely noted by this body in view of the fact they were, in my opinion, one of the finest looking and the most well-behaved groups we have seen for some time. They were accompanied by the principal of Gruver High School, Mr. Ralph Eddins and Mrs. Eddins, and Gruver Elementary School Principal Mr. J. T. Hoy and Mrs. Hoy. This group has worked long and hard toward the realization of their senior trip and they are, I believe, to be commended for their selection of an educational itinerary. These 26 sons and daughters of Texas were Misses Barbara Wright, June Sloan, Luanna Olsen, Margaret Montgomery, Marietta Luttrull, Esther Kauffman, Kathryn Knutson, Jolene George, Rachel Harris, Suellen Hawkins, Gwen Arthur, Mary Lou Beamer, Barbara Charon, Adeline Dahl, Bonnie Drake, Janet Eddleman and Mary Lou Gordon; and Messrs. David Shapley, Charles Beck, Fred Sturman, Billy Cox, E. C. Denns, Donald Heath, Dale Irwin, Larry Lewis, and Byron Peddy.

The President's Case Against Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including two articles from the Wall Street Journal on the subject of foreign aid. Both editorials are provocative and should be of interest as we come to consider the foreign-aid bill.

The editorials follow:

THE PRESIDENT'S CASE AGAINST FOREIGN AID

Let us assume for a moment that President Eisenhower is correct when he says that to cut even a dollar out of the foreign-aid program would be reckless, would weaken the Nation and could lose both peace and freedom. What does that actually mean?

Mr. Eisenhower contends that without our military help overseas, we would have to spend many billions of dollars more on our own defense, put more men in uniform, and keep them there longer. If that is so, it plainly means that but for our aid the 42 nations with which we are associated in defense treaties would do little or nothing in their own defense.

And if that is true, it means in turn that these 42 nations have no real determination to oppose communism; they are building up their own defenses mainly because the United States helps them. If that is the case, they are highly unreliable allies.

If all this, moreover, is the real significance of foreign aid, it clearly indicates we can never stop. To do so, ever, would be to bring the whole anti-Communist defense structure toppling down, since it presumably rests on nothing more substantial than handouts from Washington.

The President, in fact, offers no hope that foreign aid will ever end. On the contrary, he seeks to establish the principle of permanence, first by proposing to make military aid a direct charge against the Defense Department budget, and second by recommending to Congress a long-range revolving loan fund for some types of economic aid. The program that was originally to last 4 short years is now to be a program in perpetuity.

It is thus the bleakest kind of picture the President paints. For ourselves, we do not believe the outlook is all that bad.

We doubt very much that the alternative to military aid is going it alone. We think a good many of our allies would make considerable defense efforts in their own self-interest and would remain allies, without any dollars from us. A nation like Britain has never been unaware of the need for military preparedness, or allergic to its national interest. Even now the British Government is glad to show, by developing its own hydrogen bomb, how much it can defend itself.

Many other allies have powerful defense capabilities with which to deter the Communists. What's more, they would still come under the protective shield of the United States even without American military aid. The greatest deterrent to Communist aggression is not the number of jets in Europe or Formosa, but the United States treaty ob-

ligations to assist its allies should they be attacked.

But if that is somehow not the case—if the allies are so crass and so blind that they will do little or nothing without our help and the assurance of our help forever—then God help us. Such allies would not be worth having in a showdown.

In making this kind of argument, the administration is not making an argument for foreign aid. It is unwittingly making the strongest possible case against foreign aid.

FOREIGN AID

Tonight President Eisenhower is scheduled to make another appearance on television; his aim is to forestall cuts in the $3.8 billion foreign aid request made to Congress as part of his record $72 billion budget.

Now, starting with lend-lease, foreign aid has been with us in some form for almost 20 years. Never has a country poured out so much to so many peoples beyond its borders. For much of that period the time-honored American position of concentration on domestic affairs and avoidance of the foreign entanglement has been deeply submerged.

The fact of the matter is that, in having to carry his case to the people over the airwaves, the President is pointing up that fact that the people are now disillusioned with this 20 years of foreign-aid programs. One place this disillusionment shows up is in Congress; Congress is a great mirror of major trends in the thinking of the people. Only a few years ago the most "isolationist"-minded Congressmen were saying of foreign aid—yes, it's necessary and I'm all for it; what we must reduce is waste in the program.

But this has now become the position of the "interventionist" wing in Congress. For example, in a television panel discussion recently, Senator CASE, the New Jersey Republican, was the only one of four Senators to defend the aid program fully; and he thought "waste" could be reduced. A one-time foreign-aid advocate, though a less-enthusiastic one, is Senator O'MAHONEY, of Wyoming. He declared that the administration was "neglecting America and taking care of the other nations of the world."

Reasons for the disillusionment of the people are not hard to pin down. It is not just that taxes continue at a high level. It is not just that inflation continues to chip away at salaries and savings. There is the overriding fact that foreign aid just hasn't seemed to have gotten the country anywhere.

Just since the end of World War II some $55 billion has been rushed abroad, much of it to hold back communism. But where communism has been held back there is the very great question of whether it wouldn't have been held back anyway. And in some places where contributions have been made, the people there have come to regard the aid as a permanent price for not going Communist. Then there are cases—as in the Middle East recently—where offers of aid have been more embarrassing to anti-Communist forces than of help to them; offers of dollars were offered as proof by pro-Reds that the United States was about to take over the country.

Certainly the record is not a clear one. But it is just as clear that sweeping assertions that this or that appropriaiton is sacrosanct because it will hold back communism are not enough. Clearly what the people require are some specific examples of how foreign aid has done what it was supposed to do.

The administration must have some favorable examples to set against the case of Indonesia—freed as a Dutch colony from the Japanese with American help, backed in its drive for independence from the Dutch by this country, granted dollar help and now—so its leaders announce—looking to Moscow for precept in molding itself into a nation.

In grappling with the realities of today's foreign affairs the public has begun to ask some questions. If there is reason why we should now provide the additional billions being asked, the President should supply it—with a detailed rundown of facts and figures, of who has been saved from what and by whom. Ringing slogans, after 20 years of them, have lost their impact on the American people.

Smoke 'Em Out

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. HOFFMAN. Mr. Speaker, with a staggering national debt, a $7.4 billion annual interest charge, a $70-plus billion budget, and taxpayers entitled to relief, will someone please tell me why the Congress—supposedly the people's Representatives—have insisted on keeping in operation the expensive and unneeded Murphy Army Hospital in Waltham, Mass.; the expensive and unneeded Army-Navy Hospital in Hot Springs, Ark.?

The very efficient Secretary of the Army, Wilber Brucker, Michigan's former Attorney General and Governor, has vigorously protested this waste.

Congressman FORD, who represents Kent and Ottawa Counties, and who is a member of the subcommittee and the full Committee on Appropriations, which will bring the bill carrying these items to the floor, has called attention to the fact that the 1956 and 1957 appropriation bills kept these two hospitals in operation, despite the fact they were not needed.

Congressman FORD further disclosed that, notwithstanding the efforts of the Department to comply with the congressional directive to keep the hospitals operating by funneling patients to them from other areas, this year there was an average of but 68 to 77 patients a day in the 405-bed Arkansas hospital, while the hospital staff carried 313, doctors, nurses, military, and civilian attendants—4⅓ attendants for one patient. The Murphy 450-bed hospital had a patient load of from 85 to 95 a day, and it, too, carried a staff of over 300 doctors, nurses, military, and civilian attendants—3½ attendants to one patient.

The Congress often charges the Executive Departments—and especially the armed services—with being responsible for the waste of our tax dollars. For this waste in operating these two hospitals, is not the Congress responsible?

Our colleague, Mr. FORD, further discloses that closing the two hospitals, turning the Massachusetts one into an Army engineers headquarters, would save $746,500 next year and approximately $1,043,000 each year thereafter.

Heretofore, the appropriation has gone through under a closed rule, which prevented a point of order being made against the bill. This year, the Member from the Fifth District, Mr. FORD, is determined that, if a similar rule is proposed, he will ask for a record vote; that, in any event, he intends to fight the appropriation when the bill comes before the House.

Unless the Congress supports him, it will have no logical reason for complaining about waste or extravagance in Executive Departments.

The House is continually investigating the influences behind wasteful appropriations. It certainly would be interesting to know who is responsible for continuing in operation these two unneeded expensive hospitals. I shall, of course, vote to put them to other use.

Wholly Indefensible

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. MINSHALL. Mr. Speaker, as a former member of our armed services who saw service abroad, I continue to be interested in our troops now serving in many lands, and the conditions under which they serve. I desire to commend my colleague from Ohio, Mr. BOW, for the prompt and courageous action which he took a week ago to endeavor to prevent the surrender of one of our servicemen to the Japanese authorities for prosecution on a homicide charge. The Japanese claim the right to prosecute the soldier for an incident occurring in the performance of this soldier's duty assignment, on a reservation occupied by our forces.

Trial by the Japanese in this case would be a rank violation of the provisions of the agreement with Japan as to the status of our forces there. I feel sure that Mr. BOW's protests were instrumental in inducing the decision by the Secretary of Defense to hold up the surrender of the serviceman and to review the decision.

The indignation of the Nation at the action first contemplated by the Far East Command has been ably expressed in an editorial in the Plain Dealer of Cleveland, Ohio, on May 19, 1957, as follows:

WHOLLY INDEFENSIBLE

Defense Secretary Charles E. Wilson has thrown a temporary roadblock into plans of United States military authorities in the Far East to turn over an American soldier to a Japanese court for trial on manslaughter charges. Charges had been made against the GI, even though he was on duty and under orders when a Japanese female looter was fatally injured on a United States firing range north of Tokyo.

A complete review has been ordered by Wilson. Here are the facts:

The woman who was killed was stealing scrap metal, despite repeated warnings. The soldier, Specialist 3/c William S. Girard, of Ottawa, Ill., fired a blank mortar shell casing as a warning to Japanese civilians to leave the area. He didn't even aim the weapon, but by an odd chance the shell casing hit the woman.

The incident, which occurred on the Camp Weir firing range last January, aroused intense feeling in Japan. Japanese authorities demanded that Specialist Girard be charged with manslaughter and tried in Japanese courts.

The United Press said that the decision to surrender the soldier for civilian trial was made by Rear Adm. Miles H. Hubbard, second in command of operations and administration of the United States Far East Command.

Hubbard admitted he was setting a precedent in permitting an American serviceman to be tried in a civil court for his action while on duty at a United States military base.

One American officer said: "Girard won't have a chance with that Japanese jury." An American Embassy official said he thought the American action "stinks. * * * We apparently consider the man expendable."

Whether the Japanese, having made their point, will mete out outrageous punishment remains to be seen. The Supreme Court in Tokyo, following the announcement that Girard would be turned over to Japanese authorities, directed the Maebaski prosecutor's office to indict the American on a charge of accidental manslaughter.

We agree with the officer who said that the action smelled. An American soldier, doing his duty as he saw it, has been forsaken by his country and turned over to those who, only a few short years ago were our bitter, fanatical enemies. What effect this unprecedented action will have on morale is perfectly obvious.

Certainly we want to get along with Japan, who is no longer our enemy. But to sacrifice one American soldier in the interests of maintaining amicable relations with our former enemy is monstrous, morally wrong, and wholly indefensible.

A Man's Best Friend Is His Dog

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. MOULDER. Mr. Speaker, during these days of trials and tribulations in the present complex national and international problems such as the foreign aid program, it would be well for us to clear our minds by giving thought to some of the finer facts of life.

Therefore, as part of my remarks I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD, an article appearing in the June issue of the Royal Arch Mason on the life of a great man, Senator George G. Vest of Missouri, including his famous eulogy to the dog as man's best friend. The life and activities of Senator Vest is closely associated with the congressional district I have the honor of representing.

The article follows:

A bronze monument to commemorate a hound dog—a Missouri hound dog.

Yes, that is what the citizens of Warrensburg, Mo., wish to do, and for which they are seeking donations from all friends of dogs wheresoever situated. The movement has the support of the chamber of commerce of that city and the appeals are being made on radio and television.

Yet, the man who made Old Drum famous lies under a very unpretentious stone in the local cemetery. Vest was a native Kentuckian, born at Frankfort in that State, December 6, 1830, for that day, he had an excellent education, graduating at Centre College and Transylvania University (1853).

It was by chance he became a Missourian, for he had started for California, when at the little town of Georgetown, Mo., he was detained by a stagecoach accident. It was there he defended a Negro on a murder charge; while the Negro was freed, yet he was hung—we should say lynched. And the young lawyer found it advisable to leave town. In 1856 he opened a law office in Boonville, Mo.; in 1860 he was elected to the Missouri legislature, and likewise a presidential elector. In the legislature he showed his southern interest by introducing resolutions favoring the South; he attended the rebel legislature in Neosho in 1861 when he resigned his Missouri Legislature job to accept one as senator in the Southern Confederacy.

When the war was over he returned to Missouri, opening a law office in Sedalia in partnership with Col. John F. Philips, and it was while in Sedalia that he became counsel for the celebrated hound-dog case.

There was nothing complex about the case. Lon Hornsby, a local character in that area had shot a hound dog, Old Drum, belonging to one Charles Burden; Burden took to the law to avenge Old Drum's death, hiring Colonel Vest as his attorney. Vest, in a colorful address, praised the dog in such a way as to raise the emotions of the jury which turned in a verdict in favor of Vest's client. The trial took place in Warrensburg, Mo., in 1870, and 87 years later, the name of Old Drum and his defender is still a classic in Missouri.

Later Vest was sent to Congress, 1879, and returned three times. In 1903, he retired, locating at Sweet Springs, Mo., where on August 9, 1904 he passed away. In Congress he made a name for himself in working for the interest of national parks, fair treatment for the Indian, and the St. Louis exposition of 1904.

What did Vest say, in his closing remarks of the trial, which won the unanimous verdict of the jury?

"Gentlemen of the jury: The best friend a man has in this world may turn against him and become his enemy. His son or daughter that he has reared with loving care, may prove ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith.

"The money that a man has, he may lose. It flies away from him when he needs it most. A man's reputation may be sacrificed in a moment of ill considered action.

"The people who are prone to fall on their knees to do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads.

"The one absolutely unselfish friend that a man can have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is his dog.

"A man's dog stands by him in prosperity, in health, and in sickness. He will sleep on the cold ground where the wintry winds blow, and the snow drives fierce, if only he may be near his master's side. He will kiss the hand that has no food to offer; he will lick the wounds and sores that come from encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince.

"When all other friends desert, he remains. When riches take wing and reputation falls to pieces, he is as constant in his love as the sun in its journey through the heavens. If fortune drives the master forth an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of its company to guard against danger, to fight his enemies.

"And when comes the last scene, and death takes the master in his embrace and his body is laid away in the cold, cold ground, no matter if all other friends pursue their way, there by his graveside will the noble dog be found, his head between his paws, his eyes sad, but open in alert watchfulness, faithful and true, even in death."

The case was appealed to the Supreme Court, but they affirmed the decision of the lower court, upholding the decision of the jury, that:

"A dog is man's best friend."

(Colonel Vest was made a Royal Arch Mason February 28, 1868 in Sedalia (Mo.) Chapter No. 18; Colonel Phillips, his law partner, was likewise a Freemason.)

Letter to Eisenhower

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a letter by the distinguished superintendent of schools of the city of Charleston, the Honorable William Robert Gaines. This has to do with the President's changed position on Federal aid to education.

The letter follows:

CHARLESTON CITY SCHOOLS,
Charleston, S. C., May 16, 1957.

Hon. DWIGHT D. EISENHOWER,
President, United States of America,
Washington, D. C.

MY DEAR MR. PRESIDENT: I write this with the small hope that it might come to your personal attention. I write only from my deep concern for education. To emphasize that my concern is honest I must add that education is my life's work; my father, brother, and uncle are presidents of respectable colleges (Washington and Lee University, Wofford College, and Hampton-Sydney College); and many others of my family of this and preceding generations have worked conscientiously and with some effect in educating the youth of America.

I write this with no intention of personal criticism, but only in an effort to discover what reasons have impelled you to reverse your former and apparently strong convictions concerning general Federal subsidies for education.

Recently, the editor of the Charleston Evening Post quoted, in part, a letter you, as President of Columbia University, wrote in 1949 to the House Education Subcommittee. Since this is a responsible newspaper, I assume the quotation is correct. It reads:

"I would flatly oppose any grant by the Federal Government to all States in the Union for educational purposes.

"Such a policy would * * * completely decry and defeat the watchful economy that comes through local supervision over local expenditures of local revenues. * * *

"Very frankly, I firmly believe that the army of persons who urge greater and greater centralization of authority and the greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can be arrayed against us."

What you wrote then I believe now. Furthermore, we both know that education is significantly different from such inanimate concerns as highways, dams, or the dollar return from cotton or corn crops. Education deals with the minds of men. This vital function concerned with what men think and believe, must be insulated from the faintest suggestion of centralized authority.

South Carolinians are faced with an educational responsibility unsurpassed by any State. The percentage of the State's population in public schools probably ranks first among our States, and, unfortunately, the per capita income of the citizens ranks near the bottom. Yet the people of South Carolina have resolved to make the sacrifices necessary for the education of children and are courageously approaching the solution of providing decent schools. If citizens of other States feel as strongly about the necessity for adequate schools as their elected representatives loudly proclaim, they certainly can do the same. South Carolina's case clearly indicates there is no lack of State or local ability to finance school construction.

With arguments camouflaged by highly debatable statistics, the fervent advocates of a general subsidy must be contending one of two things:

Either that the Federal Government should become deeply involved in the planning of public education (and from personal experience, I can testify that some educators believe this), or that if citizens of the various localities are too lethargic to care, wise ones in authority must make up for their stupidity—and this line of reasoning completely negates the very essence of democracy.

I regret that I feel it necessary, because of tension recently generated, to add that my conviction concerning a general Federal subsidy for education was the same prior to the new Supreme Court's school-race rulings and is something quite apart from my attitude toward these rulings.

Knowing that my hope is virtually impossible, still I wish I could hear personally from you as to why you have so completely reversed your feelings concerning this matter of ultimate concern to all Americans.

Respectfully submitted.

WILLIAM ROBERT GAINES,
Superintendent.

The President's Budget

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. RADWAN. Mr. Speaker, the following letter from my constituent is typical of the encouraging support which is mounting for President Eisenhower's program and budget:

BUFFALO, N. Y., *May 22, 1957.*

DEAR CONGRESSMAN RADWAN: Listening last night to the President's spirited address, I thought of you, and recalled that, if I remember correctly, you had earlier announced your support of his budget. That took independence and courage then, and it must have taken more since, while the opposition has been gathering momentum. But I have never had reason to think you short of either independence or courage—on the contrary. I have been meaning to write you in commendation of your stand. But I was busy getting ready to go away on vacation, which I did last weekend. • • •

But I cannot wait longer to urge that you do not succumb to the current budget-cutting tax-cutting hysteria, but stand fast in the President's support. I wish he had supported himself sooner and more vigorously. But better late than never. I do not see how any patriot can desert him now.

Cordially yours,

C. I. CLAFLIN.

Arkansas Library Commission

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. HAYS of Arkansas. Mr. Speaker, I was very pleased to receive a report from the Arkansas Library Commission of the use of the first Federal aid funds for rural libraries in Arkansas. The Commission is to be congratulated upon its splendid work for libraries throughout the State. The detailed plans it has made for utilizing this Federal assistance are admirable. It seems to me that these plans establish a pattern that might well be followed by States having similar library problems. Under leave to extend my remarks, I should like to include a letter from Mrs. Karl Neal, executive secretary of the commission, describing these plans:

ARKANSAS LIBRARY COMMISSION,
Little Rock, Ark., May 6, 1957.

The Honorable BROOKS HAYS,
House of Representatives,
Washington, D. C.

DEAR MR. HAYS: On April 1 the Arkansas Library Commission received the first check for Federal aid to public libraries in the State. This check was for $40,000. We had hoped that the Congress would approve the full appropriation of $7,500,000, since Arkansas' share would have been approximately $160,000. However, we are grateful for the $40,000 amount. We know that many calls are made on you to support measures for the appropriation of Federal funds. I am writing this letter to tell you the great benefit that even $40,000 will be to the public library program in Arkansas.

For the past 6 years the appropriation from the Arkansas State Legislature for the Arkansas Library Commission has been $153,850. The highest amount we have ever received from State funds was the 1949–51 biennium when our appropriation was $199,000. This year through the determined efforts of the trustees of the Arkansas Library Commission, under the leadership of Mrs. Merlin M. Moore, chairman, the appropriation for the Arkansas Library Commission for the next biennium was raised from $153,850 to $196,000. We are rejoicing because of the vote of confidence given the State library program by the Arkansas Legislature. The staff and the trustees of the Arkansas Library Commission are ready with a good program of library service made possible through the increased State aid and the initial grants of Federal money. No public library in Arkansas has adequate financial support. Although 45 counties now have the local 1-mill tax, which is the legal limit in Arkansas for support of a library, the income in most cases is pitifully small. The receipt of the $40,000 at this particular time enables us to present a program to local libraries which will inspire our people to a better use as well as a better support of the local public library.

Federal money will be used to encourage the development of multicounty units in our State. A well qualified librarian can administer a program of library service for several counties with the assistance of local people qualified to work with direction from a head librarian.

The Arkansas Library Commission is spending one-half of the first grant for the purchase of new books to be used in the establishment of library service for rural people now lacking a local public library. Two bookmobiles have been purchased for use in demonstrating the value of library service. These bookmobiles have been ordered and should be delivered for use early in July. The first time you are at home we would like for you to inspect these bookmobiles and to visit the Arkansas Library Commission so that we may show you the new books and the new service which will be available because of your support of the Library Services Act.

I have been librarian at the Arkansas Library Commission since 1952. Each year we have found it increasingly difficult to operate this library in a creditable way on the appropriation of $153,850. Good books cost money. Qualified personnel sufficient in number to accomplish our goal also cost money. We are trying to build a foundation for the improvement of educational opportunity, especially for adults in our State, many of whom because of economic need left school before graduation. We feel that our greatest asset is the quality of our people. The librarians and trustees in the public libraries of Arkansas are a dedicated group of people. They have their finger on the pulse of our communities. Give them an adequate book collection, a means of transporting the books to isolated areas and we will see an improved way of living in Arkansas.

Sincerely yours,

FRANCES NEAL,
Executive Secretary and Librarian.

Benevolent and Protective Order of Elks Pays Tribute to the Late Honorable Bruce A. Campbell

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. PRICE. Mr. Speaker, on Wednesday, May 15, national leaders of the Benevolent and Protective Order of Elks gathered at Belleville, Ill., to pay tribute to the memory of one of its outstanding members and a past grand exalted ruler, the late Honorable Bruce A. Campbell.

Bruce A. Campbell was a national leader of the Elks for many years. He served as grand exalted ruled in 1918–19. After leaving the highest office that could be given to him by his associates in that great organization, he continued an active part in the many worthwhile programs of the Elks. He devoted much of his time on a voluntary basis to the good of the organization. He was particularly interested in the Elks magazine, and for a long time was one of the chief promoters of that publication.

Past grand exalted ruler, James R. Nicholson, in commenting on Bruce Campbell's interest in Elkdom stated that he was one of the most brilliant leaders that the order ever had, and with that appraisal I think every member of every lodge of Elks in the country will agree.

Bruce Campbell was my personal friend for a period of over 30 years. I have never known a finer man or a more valuable citizen not only in his home community but in his State and in his Nation.

Under leave to extend my remarks in the RECORD, I enclose herewith an article from the Belleville News-Democrat of Thursday, May 16, giving an account of the observance in Belleville, to which I have referred:

ELKDOM PAYS HIGH TRIBUTE TO CAMPBELL

High officials of the Benevolent and Protective Order of Elks yesterday afternoon paid tribute to the late Attorney Bruce A. Campbell in the dedication of a mausoleum at Mt. Hope Cemetery. Mr. Campbell's widow, now living in Phoenix, Ariz., unveiled the mausoleum after ceremonies conducted by Elk leaders and local ministers.

The monument was erected to perpetuate the good deeds of the one for whom it is directed," Dr. N. H. Feder, past grand trustee from Belleville, told those in attendance. "Today, as Bruce Campbell has dedicated to Elkdom, let us go down on record as dedicating Elkdom to him."

Mr. Campbell, a retired attorney who lived in Belleville until 1954, and who died September 29, 1955, at the age of 75, at Phoenix, Ariz., served as grand exalted ruler of the Elks in 1918–19.

"A diplomat of first rank," Joseph B. Kyle, past grand exalted ruler, said at the ceremonies of the former leader in the Democratic Party and director of several corporations. "He always accepted the challenge given him," Kyle said.

Tributes were rendered by Kyle, Feder, and Grand Exalted Ruler Fred L. Bohn. Msgr. F. A. Kaiser, pastor of St. Luke's Church, opened the program with the invocation and the Reverend Alfred F. Schroeder, pastor of Christ Evangelical and Reformed Church delivered the benediction.

Past Grand Exalted Ruler James R. Nicholson, present committee chairman of New York and general manager of the Elks' magazine, delivered the opening address. A million members make up the Elks membership and "Bruce Campbell was one of the most brilliant leaders that the order ever had," he said.

Among the Elks dignitaries in attendance were Past Grand Exalted Rulers John S. McClelland, of Atlanta, Ga.; and Earl E. James, of Oklahoma City. Lee A. Donaldson, Chicago, grand secretary, was also in attendance.

Irresponsibility in Handling the Lives of Our GI's

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. REED. Mr. Speaker, I am receiving vigorous protests from outstanding citizens, especially from members of the bar, with reference to the surrender of an American soldier to a Japanese court trial on a manslaughter charge. The facts appear in the clipping which I am including as a part of my remarks.

Without going into the facts other than appear in the clipping, I hope that this will cause the Government to take note of this, and not permit the slaughter of this boy by the Japanese authorities.

The article follows:

UNITED STATES TO PERMIT JAP TRIAL OF GI IN DUTY DEATH—CASE SETS PRECEDENT; WOMAN KILLED ON RANGE

TOKYO.—United States military authorities, in an unprecedented action, agreed Thursday to surrender an American soldier to a Japanese court trial on a manslaughter charge.

The charge is based on the accidental shooting of a Japanese woman on an American firing range.

She was killed by a blank mortar shell fired as a warning to Japanese civilians to leave the area.

Sp3c. William S. Girard, of Ottawa, Ill., fired the mortar.

The incident, which occurred on the Camp Weir range January 30, aroused intense feeling in Japan. Japanese authorities demanded that Girard be charged with manslaughter.

The decision to surrender Girard for civilian trial was made by Rear Adm. Miles H. Hubbard, second in command of operations and administration of the Far East Command.

He admitted that he was setting a precedent in permitting a United States serviceman to be tried in a civil court for his actions while on duty at a United States base.

One American officer who refused to be quoted by name said, "Girard won't have a chance with that Japanese jury."

A United States Embassy official, who said it would be worth my job to be quoted, said the American action stinks.

"We apparently consider the man expendable," he said.

Ambassador Douglas MacArthur II said he has been kept fully informed of the action but said he is in no position to approve or disapprove.

Many United States officers said the woman had no business on an American firing range. They said she and other civilians were stealing scrap metal and were aware of the danger.

Admiral Hubbard said the official military position still is that Girard was on duty and under orders when the woman was killed and therefore not subject to Japanese trial.

However, he said, after days of conferences with Japanese officials the military command decided to release Girard to the Japanese because of the interpretation of conditions of the agreement between the two countries.

The Issue Is Still Constitutional

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ABBITT. Mr. Speaker, I wish to call to the attention of the Members of the House a splendid article written by Mr. Ross Valentine, which appeared in the Richmond Times-Dispatch early this week, entitled "The Issue Is Still Constitutional." This is a most pertinent article and deals with a subject which is of tremendous interest to all of us.

In the 3 years that have elapsed since the Supreme Court decision on school segregation there has been brought about a considerable change in the feelings of many people throughout the country, who are coming to realize the precarious position faced by our people as a result of this and other recent actions regarding the so-called civil rights question. To my mind, one of the most dangerous threats that has faced our people in many years is the pending civil rights bill which would destroy many of the liberties now enjoyed by our people. Mr. Valentine has, from the beginning, fully understood the dangers in this proposed legislation, and I feel that his comments here are certainly worthy of consideration.

I commend this article to the reading of the Members of the House.

The article follows:

THE ISSUE IS STILL CONSTITUTIONAL

Friday was the third anniversary of an event unique in the history of this country. Nine political appointees in black robes arrogated to themselves the right and power to rewrite the Constitution, specifically by deletion of article X of the Bill of Rights, which states that—

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Article X has been cited innumerable times during the past 3 years. I intend to do so as long as there are ribbons to be had for Underwood typewriters.

The language of that article is flawlessly clear. Interpretation is unnecessary; except, of course, for the Justices of the Supreme Court. Either they don't know what it means, or deliberately erased it from their minds. For their benefit, and the benefit of less august citizens I will elaborate the obvious.

The article means that any power not conferred on the Federal Government, and not specifically denied to governments of sovereign States, are consigned to the States, or may be wielded by the people themselves, i. e., by resorting to constitutionality prescribed amendatory procedure.

Surely it does not require a legally trained mind, or exceptional inellectual powers, to understand that.

Article X is the keystone which holds the arch of checks and balances in place. Knock out the keystone and you destroy the structure of American freedom.

Article X is explicit, definite, mandatory.

Under the Constitution it cannot be changed or deleted—except with the consent of the people of the several States.

I have studied the Warren school decision and pertinent analyses and comments by statesmen, politicians, constitutional lawyers, labor leaders, clergymen, and commentators. Pro or con, they all agree on one point: that the decision was based—not on the language of the Constitution—but on moral or ethical concepts. To use the precise language of Mr. Chief Justice Warren's revealing footnote, "And see generally Myrdal, the American Dilemma," Myrdal is a Marxist moralist.

Now, let us assume, that separate schools for Negroes and white children are, indeed, immoral; that the arrangement prevailing in Southern States, is based on bias and that bias is per se unethical and undemocratic.

Would that assumption make the High Court decision constitutional?

Would it alter the language of the Constitution?

Would that assumption alter the constitutional basis of our Government, based not on men's passions or opinion but on law?

To believe that it does would be to maintain (as Hitler and Stalin did) that the end always justifies the means. Once we subscribe to that immoral concept, we may as well bow the knee to the overlordship of Moscow.

When politically appointed judges, including men devoid of judicial experience, are permitted to set themselves up as moral arbiters, instead of guardians of written law, totalitarianism is just around the corner.

"Oh well," say the one-worlders and the integrationists, "he's hiding his racial prejudices under legalistic reasoning." Or, "he's pandering to the bias of the white majority." Both assumptions are false.

I sat down to dinner, some 30 years ago, with a Negro clergyman at the home of a Jersey gentleman, and felt it was my "unalienable right" to do so. If I chose to do so in Richmond that would be my business. Freedom to choose one's associates is an inseparable part of all freedom.

But no one is going to coerce me into involuntary acceptance of a patently unconstitutional court decision that would deprive the people of this or any other State of the right to run their own schools as they see fit.

Proponents of forcible integration profess to be fighting for "racial justice." But racial justice works both ways. It also means the right of people of any race to send their children to schools where they will be with their own.

What's immoral about that?

You Can Have Good Mail Service, If—

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. CEDERBERG. Mr. Speaker, recently the people of our Nation have suddenly become interested in the operation of the Post Office Department, but many of the problems involved in the terrific task of handling about 60 billion pieces of mail a year are not generally known.

Recently, the U. S. News & World Report arranged an exclusive interview with Postmaster General Arthur E. Summerfield who has provided the readers of that publication with first-hand answers to many of the questions presently being discussed with respect to the Post Office Department. This interview appears in the current issue of U. S. News & World Report and I feel that it is sufficiently enlightening to be included at this point in the CONGRESSIONAL RECORD:

Mr. SUMMERFIELD. Before I answer your questions, I wish to make some general observations. The spotlight of nationwide publicity has been focused on the Post Office Department recently to an unprecedented degree.

This interest grew out of the inadequacies of our budget, which led to a forced cutback in accustomed mail service over the weekend of April 13, 1957.

While we did not plan it this way, this emergency has probably been helpful for the Post Office Department.

Today many more citizens understand that their post office must have everybody's help if this Nation is to have the postal service our people deserve and expect.

The Post Office Department faces many serious problems.

Its buildings are out of date, overcrowded, poorly located.

It lacks modern equipment and is struggling to handle an ever-growing volume of mail by old-fashioned hand-labor methods.

It is charging 1932 prices for most services. Meanwhile its costs have more than doubled, just as household and business expenses have.

It loses more than half a billion dollars a year. It losses total total more than $5 billion since 1945.

No one in the present management of the Post Office Department is satisfied with the mail service. We know it is better than it was, but we also know it is not good enough. You can have good mail service if certain things are done.

We have plans well underway to attain our goal, which is the next-day delivery of a letter between any two cities in the United States.

In the meantime, the Department has two immediate objectives.

The first is to increase postage rates on first-, second-, and third-class mail so that the Department can operate on a more nearly break-even basis. Doing so would mean that the actual users of the mails would pay more of the costs which are now paid by the taxpayers.

And a half billion dollars of new revenue a year from more equitable postal rates would help balance the Federal budget and contribute to tax reductions.

The second objective is to accelerate a long-range—possibly 10-year—program to build and modernize post-office buildings and develop modern mechanical and electronic equipment to speed mail through post offices 30 to 50 percent faster than is now possible. Unless the buildings and equipment of the Post Office Department are modernized, we face a gradual deterioration and eventual breakdown of our postal service as the mail volume continues to increase.

Now, you've been hearing some misleading statements for a long time. These imply that the Post Office is a "great public-service organization" and as such has always lost a great deal of money, and that isn't any different from the Department of Agriculture, the Department of Defense, the Treasury or any of the other departments of the Government which are supported mainly by general tax funds. This is sheer propaganda disseminated by a few large mail users receiving subsidies.

The fact is that the Post Office Department, from 1900 to 1940, lost on an average only $33 million a year. During that period the Post Office Department absorbed in this $33-million figure the cost of franked mail for Members of the Congress, distribution of mail for other departments of the Government, and airline subsidies.

You will note on the chart [see page 66] that I omit the years from 1941 through 1945, the reason being that those were war years, and during periods of national emergency the Defense Department takes care of the cost of distribution of service mail, which throws the Post Office Department into the black—or did—on an average of $33 million a year during those particular years. So for accuracy's sake, we eliminate those 5 years.

From 1946 to 1956 the postal deficit jumped to an average of $445 million a year, and the total deficit in those years exceeded $5 billion, all of which became part of the national debt. On this, the Treasury is paying interest currently at the rate of about $125 million a year.

Most citizens are budget-conscious today, and rightfully so. Everyone knows that the Government has the largest budget in peacetime history. But so is our gross national product, and so are the demands which must be met by Government to assure the Nation's security.

It is vital to the Nation's welfare that budget cuts not be made in a haphazard manner or for partisan political purposes. As far as the Post Office Department is concerned, it is essential that any budget review be based on an understanding of the facts that differentiate this huge businesslike operation within Government from other branches of the executive department.

In 1952, the last year under my predecessor, Postmaster General Jesse Donaldson, the deficit in the Post Office Department was $720 million, an alltime high. [See photo-chart on page 67.] In 1953, we succeeded in reducing it to $625 million, and progressively to $222 million in 1956, and in 1957, which ends on this coming June 30, an estimated $211 million and an estimated $178 million in 1958.

This reduction, exceeding $500 million, was due to efficiencies and economies through management improvements, increased parcel-post and foreign mail rates, payment of postage by Congress and Government agencies, and transfer of airline subsidies from the Post Office Department to the Civil Aeronautics Board. These airline subsidies now can be scrutinized by the appropriations committees of the Congress—which they never had an opportunity to do before—because heretofore the Post Office had to pay as a subsidy the figure the Civil Aeronautics Board submitted to us, and we had nothing to say about it. They set the rates and the amount of the subsidy, and we, of course, had to pay it.

So when we asked to have this changed, we did it for two reasons: One, I wanted to have a clean budget in the Post Office Department. Second, I believe in the processes that we have developed through the years in this country where the appropriations committees should have a chance to review carefully all budgets, including airline subsidies.

AS DEFICIT WAS CUT, CONGRESS ADDED NEW EXPENSES

Meanwhile, as the basic postal deficit was being reduced, new expenses were being added, mostly by actions of the Congress. They added 25 millions in 1953 to our costs, 47 millions in 1954, another 105 millions in 1955, another 242 millions in 1956 and another 304 millions in 1957—and an estimated amount of $473 million in 1958.

This $473 million includes such items as these: Pay increases of $207 million; fringe benefits of $59 million; retirement-fund contributions, $132 million; increase in capital expenditures over 1952 of $47 million. Now this last was the only item over which the Post Office Department had any influence—for the replacement of worn-out equipment of one kind or another in the post offices throughout the country, and new equipment for new post offices. Finally, there was $28 million in rate increases for the railroads in 1953, making, as I say, a total of $473 million.

Furthermore, the estimated $651 million deficit in 1958 does not include pending rail-rate increases, further employee pay increases or fringe benefits, and the facilities-modernization program of the Department costing a minimum of $110 million per year for the next 5 years.

The meaning here is simple. If we had continued to operate under 1952 standards, we would today have a yearly postal deficit in excess of $1 billion.

So I feel that the administration has done its homework insofar as an effective effort is concerned to improve its efficiency and reduce the deficit of the Post Office Department during the past 4 years.

It is a rather common practice to complain about the number of people on the Federal payroll.

But let's see what has happened in the Post Office Department.

In 1949, there were 517,690 employees on the Post Office payroll.

In 1952, there were 523,757.

In 1955, there were 511,613, and in 1956 there were 508,587.

None of these figures includes the temporary employees we add at Christmastime. So again, in this area, we feel we have improved our efficiency. And we haven't done that by firing employees on a wholesale basis. The reductions are due to attrition, retirement, and deaths among our 500,000 employees.

The recent dilemma of the Post Office Department in requiring more money to continue accustomed mail service through the fourth quarter of this fiscal year was due primarily to the high rate of prosperity the Nation is enjoying, and to reasons beyond our control.

The Post Office Department needed an additional $47 million because the American people are now sending nearly three-fourths of a billion more pieces of mail this year than we estimated 18 months ago that they would; because we must pay the higher wages to postal employees voted by the Congress; and because 1.3 million more homes and 250,000 more business concerns needed delivery service. To have denied these American citizens regular mail service would have been unthinkable.

COULD NOT SPEND MONEY WE DID NOT HAVE

The need for extra money—supplemental appropirations, they are called—is common and often unavoidable in the Post Office Department. In the past 20 years additional funds were needed in all expect 3 years. During these 3 years, 1953, 1954, and 1955, the Eisenhower postal administration returned $235 million of unspent money to the Treasury out of funds appropriated to the Post Office Department by the Congress.

The need for this additional money to continue regular mail service the last quarter of this fiscal year was first made known to the Senate committee last July. Subsequently, the House committee was so advised, as indicated in the record of their January 15, 1957, hearings. The formal request for these needed funds was sent to them on March 12, 1957, by the Bureau of the Budget. They had ample knowledge and time to have prevented this curtailment of mail service.

In taking the step we had to take on April 13, the Department acted in accordance with established practices and the statutory provisions of the law in regard to supplementary appropriations.

To have continued without appropriations would have been in violation of the antideficiency law. As President Eisenhower emphasized in his April 17 press conference, we could not spend money we did not have.

The recent publicity about the Department has also focused the spotlight on another phase of our financial problem which most Americans did not understand—namely, that there is a very small percentage of postal expenditures over which the postal management has direct control.

For example, our budget for next year calls for expenditures of about $3.25 billion. Of this huge sum, 96 percent goes for pay of employees, transportation of mail, and occupancy of postal buildings. Postal salaries and fringe benefits are set by the Congress, the rates we pay to railroads and airlines for carrying mail are set by other governmental agencies, and the costs of utilities and communications are largely fixed by other regulatory bodies.

This leaves approximately 4 percent, about $140 million, of the total budget of $3.25 billion for items over which the Department can exercise any real discretionary control—and even that is limited.

TWENTY PERCENT MORE MAIL WITH FEWER EMPLOYEES

Some critics say we could save money by being more efficient and thereby using fewer employees. The answer is that we have been doing that, and the meat-ax approach does not lend itself to either efficiency or good employee morale. Efficiency in the postal service is built by day-to-day improvement at 38,000 places of business. Our record in this respect is a good one and can be wrapped up in 1 simple statistic: We are today handling 20 percent more mail than 6 years ago with fewer employees.

The same is true of transportation. We are today spending $50 million less, comparatively, for transportation per year than 4 years ago, despite the large increase in the volume of mail.

We are all very conscious, in the Post Office Department, of this fact: It's a Government monopoly, and as a monopoly we have to be particularly careful to recognize our responsibility to the postal patrons of this country, which number all of our 170 million fellow Americans. We have tried to do that. We also recognize this fact—which I called to the attention of the appropriations committees of Congress—that the Post Office Department is the one major department of the Government which can identify every service it renders to any individual.

When a person buys a stamp or a series of stamps for the mailing of a letter or a package or parcel, he is paying whatever price the Government of the United States through the Congress is charging for this service, and he has a perfect right to expect that service is going to be provided, because he is paying a specific charge for every service he receives.

Now, then, if we curtail after people have paid their money for that service, we commit a breach of trust. They have no other place to go to mail first-class letters; they have only the Post Office. So I say that, if they are not paying enough for the postal service which they receive—which is true, they are not—that is the responsibility of the Congress of the United States. It is not the fault of the American mail user. He is paying all that the law says he should pay.

You hear a great deal of conversation about the service that foreign countries provide their people and the rates they charge. But the emphasis is usually on service without reference to cost.

We have studied several countries in Europe and we have calculated the number of square miles in area they serve, also what they pay their experienced postmen on an annual basis, and what they charge for a domestic letter rate. I think these are very illuminating figures.

The average square miles served by these countries total 105,808. In the United States, your Post Office Department serves 3,022,387 square miles.

These countries pay their experienced postmen on an average $1,502 a year; whereas the United States Government pays it experienced postmen an average of $4,410 a year.

The average domestic letter rate charged by these same countries is 4.4 cents for a 1-ounce letter, as against 3 cents in America.

These other governments operate their post office either on a break-even basis or at a profit. Our neighbor, Canada, does it consistently on a profitable basis.

Now I'll be glad to answer questions.

Question. Is it true that foreign postal service is a good deal better than our service here?

Answer. It may be better in certain areas of Europe, but the conditions vary so much it's like trying to compare apples and oranges. By the way, I was interested in observing the other day a report that came out of a meeting of the postal unions in Europe—I don't mean employee organizations, but the union of post office departments of various countries—to the effect they are planning on reducing the number of deliveries a day. They have already done that in several instances, reflecting their increase in costs of labor over there. All of the countries in Western Europe are in that group.

POST OFFICE A UNIQUE BUSINESS

Question. Would you say that the Post Office Department is a unique business?

Answer. Certainly in this respect, we cannot set the prices for our goods and services.

Question. Who sets the prices?

Answer. Congress.

Question. Can you change them?

Answer. We can't change them on the first-class mail, airmail, second-class mail, and third-class mail. The Postmaster General does set the prices on fourth-class mail, which is parcel post, with the consent of the Interstate Commerce Commission. We are required under the law to operate the parcel post service on a break-even basis, and we have done so.

Question. You say you can't fix the price of the transportation of your mail by train or airplane? Who fixes that?

Answer. The Interstate Commerce Commission sets the rates paid to the railroads, and the Civil Aeronautics Board sets the rates to be paid to the airlines.

Question. So you are in a business where somebody else fixes the rates of what you have to pay, and somebody else fixes the rates of what you can charge for the service itself?

Answer. That is correct.

Question. Who fixes the pay of the employees of your Department? As a head of a business, can you fix the pay?

Answer. No. The Congress of the United States fixes it.

Question. Then your budget has to reflect any increases in pay voted by the Congress?

Answer. Yes.

Question. And then, when you go back to Congress to get enough money to pay for your freight, transportation, employees, and also to get your prices established, can they decide to make you run at a deficit if they want to?

Answer. They can and have.

Question. In other words, they fix your deficits, too?

Answer. They do.

Question. That's not very much like a private business, is it?

Answer. No, and it isn't a sound way to run a governmental agency, I might add. Other countries don't do it that way.

I feel that if the Members of Congress were familiar with all of the ramifications of the Post Office Department, the various items that affect its operation, they could more intelligently adjust the various items to reality.

Question. Your customers are the public. If your customers want service and you run out of service, what are you going to do?

Answer. We should take steps to prevent a recurrence of the April 13 episode, when we curtailed mail service on the week end.

Commonsense would seem to indicate that the Department should have a more flexible means of getting the money it needs to carry extra mail volume. Then, when we sell more stamps and have to provide more service, the extra revenue would be reflected automatically in our spending authority without any of the fuss and fury which arose last month. If estimated mail volume falls off, as it undoubtedly will from time to time, then the Department certainly should not spend as much money as it originally estimated.

Question. In a private business, if you run out of goods, don't you just tell a customer to come back in a couple of weeks?

Answer. That's right.

Question. But you can't say that?

Answer. No. We did that partially for 24 hours on April 13, and you know the reaction.

Question. Did the public react violently to it?

Answer. Violently by some, but many others seemed content not to get any mail on Saturday.

Question. What was the nature of the protest—did they blame the Post Office Department more than Congress?

Answer. Not when they understood. At first, they believed some of the statements that were made on the floor of the House and in statements to the press wherein some members of the Appropriations Committee were blaming the Postmaster General for a so-called arrogant attitude and so on—but when the facts were released to the press and over the air, the change was almost instantaneous.

Question. In most businesses, the head of the business can estimate the demand for his product and get enough supply to take care of the demand. What means do you have for estimating the demand for your product?

Answer. Well, we take the figures for the previous year, and years prior to that previous year, and we can pretty well judge the trends. We study the economic situation that exists in the country at the time—the volume of mail that's being used—and we come up with a reasonably accurate figure.

When you consider that we're talking about 60 billion pieces of mail a year, that we can come up with a figure within 1 billion of that, that's not too inaccurate.

Question. There must be a lot of money received from the sale of stamps. Does that go to the Department at all?

Answer. No; not a penny of it. It goes immediately to the Treasury of the United States.

CONGRESSIONAL APPROPRIATIONS ONLY SOURCE OF FUNDS

Question. And how do you get it out of the Treasury to use?

Answer. Only by appropriation of the Congress.

Question. If you had all the money from the sale of stamps as a revolving fund, would you run out of money?

Answer. It all depends upon whether or not other expenses have been added over and above what they were the year before—for instance, an increase by Congress in salaries and wages or fringe benefits. Sometimes those increase more rapidly than revenue increases from all classes of mail.

Question. By stamps, do you mean revenue from all classes of mail or service?

Answer. All revenues—registered mail, c. o. d., parcel post, airmail—all classes of mail.

Question. Is the cost of printing the stamps charged against you?

Answer. Oh, yes; we pay the Bureau of Engraving and Printing for those, at a price set by them.

Question. When your budget is made up, do you get any use of these receipts?

Answer. Oh, no.

Question. You have a deficit figure here of $545 million. Do you count receipts from stamps in that?

Answer. Yes, in order to determine the amount of the deficit, but that's entirely different. The revenues that come in go to the Treasury.

Question. Then, for operating purposes you don't have it, but it's credited on the books to your Department?

Answer. That's right.

Question. Have you restored all the cuts in service you made a few weeks ago?

Answer. Nearly so. However, we have restricted the Saturday deliveries in business areas to 1 a day, which is adequate, and in most cities of the United States to 2 deliveries a day in business areas on weekdays, with a few exceptions in the larger cities, which get 3 deliveries in business areas on weekdays.

Question. Do you think the American people expect their mail to be delivered the day afterward in towns and cities within a reasonable distance?

Answer. Yes—they either expect it or they want it.

Question. Are they getting it?

Answer. They're getting it in many, many instances, but in many they are not. We're not satisfied with the service. While we have improved it substantially, we are still unsatisfied.

There are two places in which we can improve the delivery of mail. One is to reduce the time it takes a letter to be processed from the time it arrives in the post office until the time it leaves, and the other is to reduce the time in transportation betwen cities. The reason we have so much difficulty—the real bottlenecks—are within post offices.

You must realize that the Government has appropriated no new funds by direct appropriation for the building of any new post offices since 1938. It is since 1938, up until the present time, that this country has had its greatest growth—its greatest expansion in all lines of business.

We're doing business in outmoded, outgrown post offices and we have not been provided the funds by the Congress to do the necessary research work to design modern pieces of equipment that could be used to reduce the demands for floor space per letter, or to reduce the time it takes to process a letter.

It has only been in the last 4 years, really, that any sums of any amount worth mentioning have been appropriated to the Department for the purpose of research. We have used those sums that have been provided us very effectively to date. I have several things I would like to point out to you that we have been able to do in that regard.

To improve mail service in the instances where the distances involved are not great—particularly in the large metropolitan areas—necessitates more efficient handling of the mail within the post offices. We haven't even the simplest fixed conveyors, so familiar to everyone who has been connected with industry, that have been available to private industry for many, many years. We have very, very few post offices in the country that have such equipment at all. We are still forced to use old hand-truck methods to push mail around the floor from one operation to another—all of which takes up floor space, wastes time and is inefficient and costly.

In the meantime, mail volume, as you know, has doubled over the last 20 years. So mechanization of the post offices is absolutely essential to an improvement in the mail service.

Question. Well, isn't there something that is lacking in the transportation? As an example: A special delivery letter of importance to us was put in the post box at 12:30 noon on Saturday and postmarked Princeton, N. J., at 5 p. m., left there in time to get to Trenton promptly by truck, but arrived in Washington at 4 a. m. on Monday and was delivered to us at 7:55 a. m.—36 hours to go 150 miles. We needed that letter on Sunday. That isn't usual, is it?

Answer. That was over the weekend?

Question. Yes. Is it because of Sunday and you don't have transportation?

Answer. Oh, we have transportation over weekends. Of course, we use a minimum force on Sunday within the post offices. We do take care of the incoming and outgoing mail. But, again, that probably is a result of some of the restrictions and some of the curtailment necessitated by this $6 million that the Congress did not appropriate to us out of the $47 million that we requested.

Question. It is much more costly to use the telephone or telegraph than a 3-cent stamp—

Answer. Too many people just fail to realize that the mail service in the United States is the most important system of communications that we have. I think that is one thing, maybe, that will come out of this recent difficulty we had with the Appropriations Committee of the Congress: The public has had its attention focused upon the Post Office and the importance of the service it renders.

TWENTY-FIVE YEARS OF 3-CENT LETTERS

Question. How long ago did you put the 3-cent stamp into effect?

Answer. In 1932. There has been no increase since that time.

Question. How many times since then has the Post Office Department—in this and preceding administrations—recommended a rate higher than 3 cents and not gotten it?

Answer. We have recommended an increased first-class rate to the 83d, 84th, and 85th Congresses.

Question. What is the highest that was recommended—5 cents?

Answer. Yes, 5 cents is the most. We considered recommending or requesting 5 cents this time, and it was quite apparent after a survey was made of the Congress that they would not give serious consideration to 5 cents at this time.

Question. Do you need a 5-cent rate?

Answer. Yes, we should have 5 cents.

Question. So you had to come back to 4 cents. You haven't got that yet, have you?

Answer. No. The hearings have been concluded in the House Civil Service and Post Office Committee and they have reported a bill out.

Question. Are there any pressure groups fighting increased rates on first-class postage?

Answer. Yes, but the pressure groups are confined, principally, to a few of the larger magazine publishers and some third-class mailers of advertising matter. Some of these large users of second and third-class mail also resist an increase in the first-class.

I think the reasoning behind their actions is that, if the first-class rate increase is granted, the public would insist that second-class and third-class rate increases be also made. As far as the general public is concerned, the polls—and there have been many of them taken in the last 2 years—indicate very clearly that the general public wants the Post Office Department to pay its own way. The last poll that I saw, taken by one of the Congressmen, showed that 91 percent of the people would favor an increase in postage rates in order to put the Post Office Department on a pay-as-you-go basis.

Question. What is the principal argument made by the publishing industry against increasing mail rates, and what is your answer to it?

Answer. Oh, some large publishers say they just can't afford to pay any more postage than they are paying. On the other hand, some are very frank and completel candid about it, and say that they not only can but should.

Question. You're talking mainly about periodicals now?

Answer. Yes, I am speaking about some of the leading magazines in this country, who believe the rates should not be higher. Strangely enough, it's usually the smaller magazines who can least afford to pay an increase that recognize that statesmanship is a responsibility of people in business as well as of people in Government, and they are perfectly willing to pay for an increase. Their testimony before the various committees in Congress will clearly prove that.

COST IF MAIL GOES FREE

Question. What is your answer to the argument that the Post Office Department should be a service department and, therefore, should in large part be paid out of the

general taxes collected from industry and the public?

Answer. I'm very frank in my reply. If it is really true that the Post Office Department is strictly a service organization, then we shouldn't charge anything for mail service—let everybody use it at no cost at all, and pay for all the expenses out of the general fund. Mind you, I don't want to see that.

Question. What would it cost the public if you did that?

Answer. Three and a quarter billion dollars a year.

Question. Is it the general feeling in Congress that the Post Office Department should operate at a deficit—that is, as a service organization?

Answer. There is a feeling in the Congress that there probably are some items that should be considered public service and paid for by all taxpayers. For instance, free mail to the blind, certain below-cost rates to fraternal organizations and religious organizations. Again, in order to follow our policy of having a clean budget, we have requested the Congress to pass legislation which would provide for reimbursement to the Post Office Department for a sum of approximately $27 million a year, which covers the postal-rate discounts on these various public-service items.

You see, those who oppose postage-rate increases use those figures in a very exaggerated degree. They blow the figures up from $27 million to several hundred million.

Question. Does that also cover congressional-franking privileges?

Answer. No, that's already being taken care of. The Post Office Department is paid for carrying congressional and Government mail.

Question. Do you expect to get a 4-cent rate this year?

Answer. Yes; I'm very confident we'll get it.

Question. What about the airmail rate? Will that go up, too?

Answer. Yes; that will go up to 7 cents.

Question. When you break down that deficit—what's the deficit in each postage class?

Answer. It is approximately $270 million a year in second-class mail. It's approximately $230 million for third-class mail, and about $30 million for first-class mail. This is without providing a proper charge at all for the preferential service which first-class mail does receive over and above the other classes of mail. If service values are considered, we calculate that first-class mail loses $346 million a year.

Question. Would the 4-cent rate still leave a deficit in the first class?

Answer. We would just about break even on first-class. It now costs more than 4 cents for a 1-ounce, first-class letter.

HIGHER RATES, LESS MAIL

Question. Do you think if you raised the rates for mail you would have less of it?

Answer. Yes; I think one of the major factors that have resulted, for example, in the great increase in third-class mail the past several years has been a ridiculously low rate. It is just so cheap that people use it very carelessly. That's why some people call it "junk" mail. There was a time when people used third-class mail rather selectively. When third-class mail first came into being, it was charged 97 percent of its cost. Of course, it went down a great deal since 1932 in relation to the revenue received from it and what it costs to handle it.

I think a substantial increase in third-class mail is not only in order, but it is long past due, and I think it will have the effect of probably improving the caliber of third-class mail. The quality of it, I think, will be higher; I think it will be more readable to the public and more acceptable to them.

Question. Would there be as much?

Answer. I would think, naturally, it would reduce the quantity of it somewhat.

Question. We haven't talked about parcel post. Why should the Government carry parcel post? Why not leave that to the express companies to carry?

Answer. The express companies do not have the facilities to handle small packages. For instance, there are 70 percent of our post offices that cannot be reached directly by train connections. You see, there are a great many fewer passenger-carrying and mail-carrying trains in this country today than there were 20 years ago.

Question. If they receive enough volume, couldn't they use automobiles to deliver just as you do?

Answer. It seems that the more business the express companies have, the greater their losses seem to be.

Question. The Parcel Post Association recently issued a statement contending that you are paying a $100-million subsidy to the railroads and paying them more for carrying your parcel post than the railroads are charging the express company for handling express packages in the same cars. What is your answer to that?

Answer. Well, in the first instance, the railroads, of course, own the express company. If they care to give them a below-cost charge, I guess maybe that is their prerogative. At least, that's the policy they follow. So far as our paying the railroad as a subsidy, that is not true. The rates we pay are fixed by the Interstate Commerce Commission.

Question. If you could do your own negotiating with the railroads, do you think you could do a better job than, say, the Interstate Commerce Commission does?

Answer. In 1953, the railroads had requested from the Interstate Commerce Commission an increase of about 45 percent. We have the right, under the statute, to negotiate with the railroads—we exchange our figures and costs. We finally adjusted that with the consent of the Interstate Commerce Commission to a 10-percent increase.

Question. Have you encouraged the use of vending machines for the sale of stamps?

Answer. Yes; we have.

Question. What effect has the use of vending machines had on the increase in mail?

Answer. I dont know as to the increase in mail, but it reduces the clerk hire in post offices and is a great convenience to the public. We don't have to keep the stamp windows open as long hours today with the vending machines that we have.

Question. You have vending machines in the post office buildings too, haven't you?

Answer. Yes. Those are machines that we developed through our research. We only have a few hundred of them so far. We've had several models built and we've installed them in the post offices, and we are trying to perfect them.

Question. Are those in the drugstores yours, too?

Answer. No, those are privately owned.

PROFIT FROM MACHINES

Question. Do you encourage private companies to put out vending machines?

Answer. Surley.

Question. To save you the time for your clerks?

Answer. Yes, and it is more convenient for the patrons to buy stamps at more places.

Question. They make a profit on them?

Answer. Sure.

Question. Why can't you make that profit?

Answer. By law, the Post Office Department cannot charge more than face value for stamps.

Question. Do you have any control over how much they charge in those machines—such as 10 cents for three 3-cent stamps?

Answer. No.

Question. On that question of the operation of the profitmaking business versus the public service, is it your point that the Department should pay for itself in entirety—that there should be no public-service operations whatever? Where do you draw the line?

Answer. No, not necessarily. I think a reasonable amount should be set aside for public-service items that are actually identifiable as such. Aside from that we should operate on an approximate break-even basis. In fact, the statutes now require Government agencies to charge whatever it costs to provide a direct service for any identifiable person—in fact, all departments in the Government are supposed to operate on that basis, but we can't go beyond because of the action of the Congress itself.

Question. What is the lag between postage increases and pay increases for your employees?

Answer. There has been no rate increase in first-class mail since 1932. Since that time, there has been $1.3 billion of annual increases in salaries, wages, and fringe benefits to employees.

Question. Have you any scientific method of figuring out what the increases in the other classes of mail should be, other than the first class? First class is easy—you add a cent to the postage and make it 4 cents, but you have all kinds of percentages for the others. How do you arrive at your conclusions as to the equitability of those different percentages?

Answer. Let's take first class: Traditionally, the Post Office Department charged much more than the bare cost of handling first-class mail. In 1932, first-class mail paid about 30 percent more than the allocated costs. In so doing, the Congress recognized the principle that users should pay for the preferential service that first class receives over other classes of mail. However, that situation has changed because of the long delay in the increase in first-class mail rates, so now we are actually running in the red on first-class mail.

Question. First-class mail is costing you more, in other words?

Answer. That's right, the revenue has not kept pace with expenses, which have more than doubled since 1932. About 3 years ago we set up a committee of long-time skillful career people in the Post Office Department who know rate problems, and asked them to study and prepare a recommendation for a system which would provide some recognition in our costs for differences in service between the classes of mail.

In our cost-ascertainment report, we follow the formula which they developed. Under this formula, for example, instead of asking second-class mail to pay the loss of about $270 million that I previously mentioned, we calculate it should pay something around 100 million, after we had allowed for the difference in service factors.

Let me point out that what we are actually asking for in rate increases of 60 percent in second class will produce only around $33 million by the end of the fourth year.

The reason that we did not ask for a larger increase than 60 percent on second-class mail is very simple: The Congress, by its failure to increase the rates from time to time as costs have increased, has permitted publishers to set up their mail-distribution systems on a below-cost mail-service charge. You can't correct that—or you should not correct it, in my opinion—by one stroke of the pen, because you would create a hardship that would fall heavily upon the smaller publishers of the country.

I think Congress can correct this over a period of years in gradual steps rather than to do it at one time, because the effect would be too serious if done otherwise. That's why

we proposed four annual increases of 15 percent each.

We're very conscious of the fact that the power of Government should never be used to destroy any important segment of the economy of this Nation.

Question. You spoke of the improvements in service that have been made. What are the principal improvements that you feel have been made during your 4 years?

Answer. We are moving more than a billion 3-cent letters a year by air between important cities of this country. We're doing it for less money than we were previously paying the railroads, insofar as the net cost of the Department is concerned, and we are delivering them up to 48 hours faster.

We have introduced certified mail, which is a cheaper service than registered mail.

Mailers can now put a first-class letter in a package by paying the additional postage for the letter.

We have installed modern mobile equipment—you may have noticed some of the new mail trucks that we are using today which are lightweight, three-quarter-ton trucks as against two-and-a-half-ton trucks that were used by our predecessors through the years—at a great reduction in the cost. They move more rapidly and cost far less originally and are cheaper to operate.

We have mobilized letter carriers in a number of areas in the country with equipment which we ourselves have designed, and, incidentally, we are very proud of some of these new mail trucks that we have developed because they have now become standard production in the automobile plants of this country.

And there are many more things in mechanization of post offices that will move mail faster.

Question. What is the story of the trouble you had recently in getting a supplemental appropriation to continue accustomed mail service the balance of this fiscal year?

Answer. The facts speak for themselves. I first advised the Appropriations Committees in July of 1956 of the need for a supplemental appropriation for 1957—it was quite apparent at that time that we would need more money to handle the increased volume of mail.

We informed the chairman of the Senate subcommittee—the Deputy Postmaster General informed him and the ranking member of that committee in July 1956—of the need of a supplemental in 1957 of approximately $53 million. They said it was too late—it was too close to the time the Congress adjourned. So we next notified the Appropriations Committee of the House on January 15, 1957, and I will quote from the record:

"Mr. J. VAUGHAN GARY (chairman of the subcommittee of the House Committee on Appropriations): What additional supplemental appropriation will you request for 1957?

"Mr. Maurice H. Stans (the Deputy Postmaster General, who was then testifying): We're asking the Bureau of the Budget to clear, so that we can present it to this committee, a request for $53 million."

That included the $47 million that we finally requested officially. That was last January.

Now it is true that the official notification did not come from the Bureau of the Budget until, I believe, March 12, which still gave ample time for the full Appropriations Committee to meet and to report out a bill in order to give the Congress a chance to act.

I approached the subcommittee of the House Appropriations Committee with a very realistic appraisal of the whole situation, emphasizing its seriousness. I said to them, "Gentlemen, if you insist on denying us this supplemental, for reasons which I cannot imagine, do you realize what curtailment of the service that means, because that is approximately a 40-percent cut in the expenses over which we have any control? It means that curtailment of service will be very serious; it will seriously affect the economy and the welfare of the people of this country."

I have here with me the communications that I had with Mr. J. VAUGHAN GARY on April 3, and on April 4 to Congressman CLARENCE CANNON, the chairman of the full committee.

Question. Have these been published?

Answer. They have not. I also have another letter to Congressman CANNON on April 9.

BEHIND THE WEEKEND CUT

Question. What do they show?

Answer. I will read one to you. This went to the Honorable CLARENCE CANNON, chairman of the Committee on Appropriations, under date of April 4:

"With total reluctance, we are laying plans for curtailment of postal services to meet the cut imposed yesterday by the Appropriations Subcommittee on a requested supplemental appropriation for fiscal 1957.

"We believe the seriousness of these required curtailments warrants consideration by the entire Congress at the earliest possible date as to the advisability of this course.

"To that end I would appreciate it if you would expedite urgently the action and report of the Appropriations Committee to the House, so that, if further funds are voted, they will be available before too much damage is done to the service."

If you have heard some comments about the Postmaster General being arrogant, demanding, and all that sort of thing, I submit to you that this language is far from demanding.

I had asked Chairman J. VAUGHAN GARY, of the subcommittee, on April 3 if he would not call an urgent meeting of the subcommittee to consider action on this important matter, and on April 9 I sent this letter to Mr. CANNON:

"DEAR MR. CHAIRMAN: Through the medium of a special issue of the Postal Bulletin, copy of which is enclosed, orders have gone to all our post offices to curtail services in order to meet the situation caused by lack of funds during the current fourth quarter of this fiscal year. These orders are effective at specified dates, beginning Saturday, April 13.

"I am most sincere in saying to you that I hope the Congress can take action on our supplemental appropriation before these service curtailments become effective.

"If the full money we actually need is voted to us, it would prevent a great disservice to the people of the United States. Anything you can do to move up action by the House Appropriations Committee would be very helpful in ending present confusion and avoiding unnecessary damage to the postal service and the morale of its employees, and would have my sincere appreciation.

"Would you not be willing to hold a meeting of your committee early in the week so that Congress can act promptly and definitely, and we can advise postmasters as to the extent to which these orders may be withdrawn?"

Question. Did he act on that?

Answer. No. The only information I received from him was this letter on April 5:

"The Committee on Appropriations today adopted the following resolution: *Resolved*, That the chairman be directed to announce to the Postmaster General and the press that an additional appropriation of $17 million be approved for postal operations, and that on April 12 of this committee will consider the matter of any further appropriations up to the total of $47 million."

That prompted my other letters I have just read to you.

Question. Is there any explanation of why they postponed action?

Answer. You have heard the comments made on the floor of the House.

WHO WAS RESPONSIBLE?

Question. But it still doesn't explain why the public lost this weekend of mail service. The responsibility for that isn't clear——

Answer. Oh, yes; it it is very clear. The responsibility was solely upon the chairman of the Appropriations Committee of the House of Representatives, who failed to call his full committee into session to vote out a bill which could have immediately gone to the floor and had action on the part of the whole Congress.

Question. On the flexibility in cutting your budget, you have said that 96 percent of your expenditures go for the pay of employees, transportation of mail, occupancy of postal buildings, and that only 4 percent, or $140 million leaves you with any discretionary control. What sort of discretionary control do you have over the $140 million? What do you use that for?

Answer. You are correct. Approximately 4 percent, about $140 million of the total budget of $3.25 billion, is for items over which the Department can exercise any real discretionary control, and even that is limited.

Question. Is that for stamps and trucks, etc.?

Answer. This is the money we use to print stamps, buy trucks and pens and the hundreds of other items needed in the operation of 38,000 post offices, and to provide research in better ways to handle mail. Certainly none of these items can or should be cut to any sizable degree. Some equipment purchases can be postponed, but that doesn't save money in the long run.

Well, we are now curtailing the purchase of supplies and materials and living out of inventory—that is one item, though it is nothing more than a deferment of costs. We have done that in lieu of curtailing the service. We delayed the payments for new uniforms to employees—excepting those that were contracted for and were to be paid for during the month of April, until the first of July. Again, it's a further deferment.

To save $6 million in the weeks that we have left in this fiscal year, it just isn't in the cards.

Question. In your budget of $3.25 billion, if you are spending 96 percent for pay and transportation and the occupancy of postal buildings; if you are paying that much, that leaves you with only 4 percent for your stamps and trucks and other operations of the post offices. Where can you make any cuts in your operation?

Answer. Just by curtailing services, or the delay of purchases of necessary equipment and supplies.

Question. You have said that the Post Office is handling 20 percent more mail than 6 years ago with fewer employees.

Answer. That's right, and less than a 2 percent comparable increase in cost.

Question. Do you have some pretty clear indications of what the Post Office Department could do in the way of mechanized equipment and new developments if you had the money?

Answer. Yes. We just dedicated the first mechanical letter-sorting machine in the postal service in Silver Spring, Md. I'd just like to outline some of the other items:

We have been working hard to correct the deplorable old-fashioned mail-handling methods of the Post Office. With limited funds we have been working to develop mechanical and electronic machines and equipment, better use of floor space and more efficient buildings. We have made real progress, and we are on the threshold of a number of major developments.

FOUR MILLIONS TO RESEARCH

This year we will spend $4 million for research. While this is small for an operation

of our size, it is 10 times the research program of 1952.

Now, right at that point, I want you to know that, when we came in in 1953, we had to set up a research department. We had to seek out skilled engineers and scientists around the country and bring them into Washington. You know the competition there is for men in that particular category in the country.

We are working with the Bureau of Standards and 11 outstanding engineering firms and research firms in developing mechanical and electronic equipment to move mail in and out of big-city post offices more rapidly. This, in the simplest terms, is our bottleneck, and we can lick it within the foreseeable future if the Congress will appropriate the money to buy the equipment and to modernize our buildings so that mail can be speeded through the offices in 30 to 50 percent less time than is now possible.

Now, here are some of the developments: In Baltimore we are operating the first mechanical parcel-post sorting machine with electronic memory system—the first one. We are soon going to test two competing systems in other offices.

In Detroit—this is an installation I personally inspected 2 weeks ago—we have installed a conveyor system to move letter mail through its handling and distributing operations. It is a beautiful piece of equipment, and it is a pleasure to look at. The employees are happy, it is speedy, and it will pay for itself within 24 months.

Question. Is it a sort of conveyor-line process?

Answer. Yes.

Other installations are underway: In the new Silver Spring, Md., mechanical letter-sorting machine—without touching the letters, but by pressing buttons—a clerk distributes more than 300 different sortations.

Question. Does that sort them to different destinations?

Answer. Yes; 300 combinations. In Chicago we have under installation our first power-and-free overhead conveyor system to move mail from receiving platforms to temporary storage, to work areas and out to shipping platforms.

You see, the question of space in these big metropolitan centers is terribly serious. Chicago and New York are badly congested, and Detroit and Los Angeles as well.

We will bring in the mail in this Chicago installation and put it on an overhead conveyor system, by turning the bags upside down and hooking them on, and they will go to the areas where they are wanted as they are called for. Then they go over the tables—merely open the bag and the mail falls out. But the floor space you save.

I would dare say in the New York post office that 20 percent of the usable floor space is used up by nothing but trucks that people have to push around from one place to another. There just isn't any rhyme or reason to it.

NEED FOR MECHANIZATION

Even the simplest forms of mechanization that I am familiar with personally from my experience in industry for the past 30 years, which are so obviously needed and so inexpensive to buy, have not been available to the Post Office Department.

Question. Why is that? Wouldn't Congress give you the money?

Answer. Congress did not provide the money, although in one year in the previous administration the Appropriations Committee did insist that a certain amount of money be used for research—they did it themselves—which indicates to me that there wasn't a realization of the necessity of that sort of work being done by some of my predecessors. But to me it's kind of an old story, and I've seen so much of it all my life and I am interested in this kind of program.

Question. You've started a number of ambitious programs: this mechanization thing you're referring to, the lease-purchase program which apparently had to be shelved, the rural consolidation program which you haven't been able to push through because of opposition—aren't all of those things dependent in the last analysis on your ability to live with Congress and sell them these ideas?

Answer. To a considerable degree, yes. That's true. Let's take these point by point.

Let's take the lease-purchase program. We had two leasing methods that we requested the Congress to provide. They so hamstrung the lease-purchase program by regulations and referrals back to committees for approval and whatnot that, together with higher interest rates, it became inoperative.

However, we also received from Congress the authority to enter into a direct-leasing program, where we would go out and option a piece of property for the Post Office Department by an assignable option. We would then design a building for that property, and then we would ask for public bids on the acquisition of the property and the erection of the building to our specifications. That is the device that we have used so effectively. We have built approximately 1,600 new post offices—true, most of them have been small ones—throughout the country under the direct-leasing program. It has been wonderfully effective.

Question. But how many under the lease-purchase program?

Answer. One has been awarded and is under construction at Saint Marys, Ohio, and two others have been awarded.

Question. Under the direct-leasing program, the Government never actually becomes the owner of that building as it would under the lease-purchase?

Answer. No, it doesn't, but we've been able to get very attractive rentals because we've been able to convince prospective landlords of the desirability of having Uncle Sam as a tenant, and consequently we have been able to make very attractive term leases, which in some cases are as long as 30 years for properties built to our own design and specifications.

Question. But that direct-leasing program is an ancient program, going way back——

Answer. Not on the basis we have it today, no. It was a very restricted procedure before. We've eliminated a lot of the things that were undesirable in the previous leasing arrangements.

For instance, now we study an area, we determine the need for a building, the type of the building, the size and location, and quietly option the most desirable piece without any publicity, so we don't run into competition and inflated prices. The rentals we're paying, incidentally, per square foot compare very favorably to the rentals we were paying for the outmoded, old-fashioned buildings that we were occupying. It has been an amazing experience, really.

Question. What has been the impact of the change in American life from cities to suburbs on the mail service?

Answer. Oh, yes. That's one of the reasons for our increase in costs; that's one of the reasons we had to install 4,000 new carrier delivery routes every year. We have thousands of extensions of city and rural routes to take care of these changes in the character of neighborhoods. As you know, there's any number of building projects even around Washington where there are 100, 200, or 300 new homes built in a group. Those people all want their mail and we have provided them with mail service—all across the country.

Question. Are there collecting centers as well as distributing?

Answer. That's right.

PLANNING AHEAD

Question. It makes your rural operations much more expensive, doesn't it—much less rewarding?

Answer. Well, you see, there's not a single activity of the Post Office that stayed dormant during this 4 years. We've anticipated these changes and recognized what we should do about them, and the proof of how effective we have been is those figures I showed you there—the decrease in the amount of the deficit, the operating deficit of the Post Office Department over the last 4 years. We're giving better service at less cost.

Question. What about your efforts to close a lot of the small post offices for the sake of economy? Are you being hamstrung in that by local communities and by Members of Congress?

Answer. There were 41,000 post offices when we came in, and now there are something less than 38,000. We have been successful to that degree.

In no instance do we close a small post office without providing the patrons of that post office with equal or better service than before, by the substitution of rural routes. Mail now comes to their box in front of their home rather than to a small post office miles away where they have to go to get it.

What happens is that, when these people in the neighborhood find that their little post office is going to be closed, they do not want to lose the identification of their particular community, and they sometimes become rather emotional about it. Even though it costs the Government several thousands of dollars a year to maintain it with poor service, they get up petitions, and quite often those petitions are initiated by someone in the post office who doesn't want to lose a job, and they converge on their Congressman. It is difficult, but we have been successful in this gradual process.

Question. Does the Congressman put pressure on the Post Office Department not to close the office?

Answer. Well, he asks us to resurvey the matter and see if we can really justify it, and, if we can, we usually are able to convince the Congressman, but it takes time to do those things.

Question. Don't many of your employees work short hours, comparatively, at fairly good pay, and, over all, don't they have probably some of the best jobs in Government?

Answer. We think they are. We think that the Post Office Department not only provides an opportunity for a career, but it also provides an opportunity for substantial income and security.

MILLIONS SAVE STAMPS

Question. Is the sale of commemorative stamps increasing?

Answer. Oh, yes. The last estimate I saw indicated there were about 12 million stamp collectors in this country. Philately is becoming more and more popular, and I think it is a splendid cultural hobby. The Department makes money on a commemorative stamp because many of them are not actually used for mail service.

Question. Are you planning to leave the Cabinet?

Answer. I have no plans to do so, and I am quite confident the President has no plans for me to leave in the foreseeable future. I can only point out to you that the objectives of the Eisenhower administration for better mail service at less cost to the taxpayers have not yet been fully realized. My job is not finished.

Question. As the Nation grows, the mail grows; is that it?

Answer. It's bound to—as long as boys and girls are falling in love, getting married and having babies, you are going to have more mail.

Question. In the March 3, 1950, issue of U. S. News & World Report we had an inter-

view with Postmaster General Donaldson of the Truman administration, and we asked him if "the problem of the postal deficit can be licked in due time in this country." He replied:

"Yes, I think it can. The Post Office Department is probably facing its worst financial problem in the history of the postal service. But that's not due to the fault of any of the people in the postal service. It's like any other business—the costs have mounted over which we have little or no control, and nothing has been done to increase the revenues in the Department while much has been done to increase the costs, in the way of legislation and orders of regulatory bodies that fix the charges for transportation of the mails."

What do you think of this answer?

Answer. Well, history repeats itself. That's exactly my view today.

Trinity

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SCUDDER. Mr. Speaker, earlier in the month, the Santa Rosa Press-Democrats, of Santa Rosa, Calif., ran a series of editorials on budget cutting, high taxes, and socialism. The newspaper invited its readers to write to me and to both of California's distinguished Senators protesting "the unnecessary high cost of being governed by your own public servants."

I have received many suggestions from my constituents for ways to economize in Federal spending. Many of the good people of my district singled out the Trinity project as a good example of were to begin. There seemed to be considerable agreement that, as one letter said, "If you favor budget reduction, then you favor Trinity partnership."

The Trinity partnership offer by the Pacific Gas & Electric Co. is to build and operate the power facilities of the Trinity River project while the Federal Government is developing the irrigation and reclamation features. The Secretary of the Interior has approved partnership participation because it will result in an ultimate saving of over a third of a billion dollars to the American taxpayers.

The immediate saving will be $56 million in construction costs if this Congress approves the Trinity Joint Development Act of 1957—my bill, H. R. 6997. In addition, over a quarter of a billion dollars in savings will come from future net profits to the Government for lease of its falling water to P. G. & E. and from tax payments.

Mr. Speaker, under leave to extend my remarks, I would like to include at this point the May 6, 1957, editorial from the Santa Rosa Press-Democrat entitled "The National Budget Can, Must, Be Reduced":

THE NATIONAL BUDGET CAN, MUST, BE REDUCED

You've been seeing a lot in the newspapers lately about the budget for running the Federal Government; and about when taxes will be reduced, if ever.

Reading what the various experts have to say is a fine way to get confused. One expert says Uncle Sam could reduce expenses by $5 billion a year without feeling any pain. Another says Congress can and will cut $3 billion. Still another puts the figure at $1 billion.

President Eisenhower says it should not be cut at all.

It can be cut, it should be cut—and if you write to Congressman HUBERT B. SCUDDER and Senators WILLIAM KNOWLAND and THOMAS KUCHEL—just their titles in front of their names on the envelope and Washington, D. C., as an address will get your letter delivered—the men you elected to represent you will know you're sick and tired of the unnecessary high cost of being governed by your own public servants.

You can read what the experts have to say from now until Christmas, but you already know that you are being overtaxed, and your own commonsense tells you that Government spending can be sharply reduced.

If you work an 8-hour day, your earnings for 2½ of those hours go just to pay taxes.

In Santa Rosa there are 1,300 people who work in factories—and 1,700 who are on the payrolls of 1 unit of government or another at local, county, State, or Federal levels.

How do you like that? There are 400 more people whose salaries are paid by your taxes than there are people working at producing new wealth by manufacturing processes. And Santa Rosa is a very minor place when it comes to having public payrolls.

Not only does this country have too many taxeaters performing nonessential services at too high a cost to you but the process is hustling us down the road toward state socialism much faster than you may suspect.

This socialism business probably sounds like a false alarm. It is no such thing. You can figure it out for yourself. Tomorrow we'll devote this space to how high taxes breed socialist governments.

Do We Have an Immigration Policy in Concert With the Demands of Our Time?

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. FEIGHAN. Mr. Speaker, earlier today I spoke before the Westmoreland County Bar Association, at Greensburg, Pa., on the subject Do We Have an Immigration Policy in Concert With the Demands of Our Time?

Members of Congress are aware that President Eisenhower as well as Members of Congress have made a number of proposals relating to our immigration laws. I have made a careful study of all these proposals and have talked with a considerable number of our colleagues about them. This led me to make a proposal which I outlined for the first time in my talk before the Westmoreland County Bar Association. Because of the importance of this issue, I urge Members of this House to read my remarks and study the proposal which I have made. Under leave granted, I insert my address delivered to the Westmoreland County Bar Association:

DO WE HAVE AN IMMIGRATION POLICY IN CONCERT WITH THE DEMANDS OF OUR TIME?

(Address of Hon. MICHAEL A. FEIGHAN, United States Representative, 20th Ohio District, before the Westmoreland County (Pa.) Bar Association luncheon at Greensburg, Pa., on Friday, May 24, 1957)

For the greater part of our history we have encouraged immigration into our country. During colonial days the attractive opportunities offered by the new world caused many European rulers to impose regulations in order to prevent people from emigrating to our shores. The American colonists resented the restrictions imposed on emigration to the New World by the European monarchs because our Declaration of Independence, in the list of indictments against the King of Great Britain, lists among the injuries and usurpations that "he has endeavored to prevent the population of these States; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither * * *."

Despite efforts made by the European monarchs to prevent the population of the original colonies and later the United States, the opportunities of the free world were so appealing that immigrants flowed into the United States at such a rate that by 1820 the population had jumped to about 10 million people from a population of 4 million in 1790. Congress then concerned itself with the conditions of travel confronting prospective immigrants as they faced the long journey to the promised land. There were many disturbing reports in Europe and here at home of the appalling conditions in which immigrants were carried across the Atlantic Ocean. Descriptions of the horrors of steerage space prompted Congress to enact a series of laws limiting the number of passengers on each vessel, forcing the shipping lines to provide sufficient water and food for the journey and to keep complete lists of all passengers on board including such data as age, sex, occupation, country of which they were citizens, and the place of their destination. From this it should be clear that Congress in the year 1820 took steps to encourage full-scale immigration to the United States.

In 1863 Congress enacted the Homestead Act which permitted aliens who had filed their declaration of intention to become citizens to then acquire homesteads. This was another specific measure enacted by Congress to encourage immigration from Europe to our shores.

Congress also passed the Chinese Exclusion Act known as the Coolie Act. Discovery of Gold in California brought large numbers of Chinese to that State, which apparently caused great concern that our West Coast would soon be overrun by unlimited numbers of Chinese. This Chinese Exclusion Act was repealed in 1943.

These developments in large measure account for our growth as a sparsely settled country of 4 million people in 1790 to a great world power of more than 170 million people today.

There have also been sporadic efforts in Congress since 1798 to restrict and otherwise regulate immigration into the United States. The alien and sedition laws of 1798 were the first. Those laws required 14 years of residence as a requisite to citizenship rather than the 5 years residence required today. The President was authorized by these laws to expel forthwith "dangerous aliens" and to imprison those who resisted expulsion. Since the alien and sedition laws were first enacted for a 2-year period, they lapsed by default because Congress would not re-enact them.

Other exclusion laws were then enacted refusing admission to prostitutes and procurers. Shortly thereafter laws excluding men-

tally deficient persons, stowaways, chronic alcoholics, and vagrants were enacted.

It was not until 1921 that we began to limit the number of immigrants to be admitted each year. The first quota statute was signed into law by President Warren G. Harding on May 19, 1921. Under that law the number of immigrants permited to enter the United States was fixed at 357,803 annually, that figure being based on the number of foreign-born persons who lived in the United States, according to the census of 1910.

The second quota law was enacted in 1924 and contained a feature which has become known as the national origins formula. Under the law of 1924, 154,657 immigrants are admitted each year. This formula provides that the annual quota for each country is one-sixth of 1 percent of the number of inhabitants in the continental United States as determined by the census of 1920, whose ancestry has been traced to the country for which a quota was determined. Some countries were assigned no quota whatever. All orientals were excluded.

That same quota system arrived at in 1924 remains as the cornerstone or control factor governing our entire immigration system today. Some minor alterations have been made in it, such as assigning a minimum of 100 quota to countries of the world which hitherto had no quota whatever. No basic changes have been made which would reflect an alteration in the 1924 policy.

Our nonquota intake of immigrants is not based solely on geographical factors.

In addition to nations of independent countries of the Western Hemisphere, we admit under the present law, outside of the quota, all wives, husbands, and minor unmarried children of United States citizens, regardless of their place of birth. Here the numbers are by no means alarming, but it may be worth mentioning that the number of nonquota immigrants admitted from such countries as Greece, Italy, Spain, Holland, and a few others, runs about equal to the number of quota immigrants admitted from those countries. All these countries have relatively small quotas.

It is also interesting to note that the first law excluding subversives from admission into the United States was passed by Congress in 1903. A subversive was then defined as an "anarchist," but this same statute excluded "persons who believe in or advocate the overthrow by force or violence of the United States Government." A review of the background of that particular piece of legislation indicates the clear intent of Congress to protect our country from the influx of ideologies and political tactics originating in the atmosphere of historic Russian despotism. It is against this background that I would like to discuss briefly with you our present immigration policy and its relation to the realities of the world in which we live.

The national origins formula creates a situation in which a large number of quota numbers are authorized for countries which do not need them because the record shows they do not utilize them. Specifically, I refer to Great Britain and Ireland. On the other hand, the national origins formula provides very small quotas for countries which today are seeking settlement opportunities for a portion of their population as a necessary step to attaining economic stability, and maintaining an equilibrium in Government. I refer specifically to such countries as Italy, Greece, and the Netherlands. There is a third category of countries whose tragic situation warrants special mention. I refer to those countries under Communist occupation such as Hungary, Poland, Lithuania, Estonia, Latvia, Rumania, Czechoslovakia, among others. Natives of those countries who have been forced to find religious or political asylum in the free world look to us as the traditional haven for the oppressed and the unwanted. There is little we can do under our regular immigration laws to help these victims of totalitarianism because the already small quotas assigned to them under the national origins system has been mortgaged by 50 percent for as many as 100 years in some instances.

The most glaring inadequacy of our national origins formula is that it requires the application of a hard, fixed, and unrealistic mathematical formula to a world situation in which our concern for the human factors must be foremost.

As a consequence, we wind up each year in the position of having on the one hand a very large number of quota numbers left over from countries that neither need nor want them and on the other hand a very long line of applicants for admission who are natives of countries whose sons and daughters played an important role in shaping the destiny of our great country in past generations.

The best examples I can cite to demonstrate just how impractical the national-origins formula is in terms of our political responsibilities in this upset world are the following:

In 1947 President Truman appealed to Congress for emergency legislation to admit a reasonable number of displaced persons into the United States. In his message to Congress urging action he noted our regular immigration laws made it impossible for us to cooperate with other free nations in bringing about a solution to a grave postwar problem. There were 1½ million persons from Central and Eastern Europe residing in Germany, Austria, and Italy who refused to return to their homelands for fear of loss of their lives or liberties at the hands of the Communist regimes then in control of their homelands. After extensive public hearings, controversy and prolonged debate, Congress enacted emergency legislation in 1948 to admit 205,000 displaced persons. That law was amended in 1950 because the original number of admissions authorized was insufficient to cover our fair share toward resolving the displaced persons problem. The authority for admission was raised to 401,000 persons.

In 1953, President Eisenhower, during his first year in office, sent Congress a message asking for emergency legislation to help resolve the problems of overpopulation in Europe and to provide haven for a reasonable number of the many new victims of Communist tyranny who were daily escaping into free Europe and Asia. Among the arguments advanced by President Eisenhower in support of this proposal was that unless Western Europe found some solution for its problem of overpopulation, there could be little hope for the economic stability envisioned by our foreign-aid program which, by that time, had cost the American taxpayer more than $26 billion.

Congress again passed another emergency immigration bill authorizing the admission of some 207,000 special immigrants over a 3-year period.

Even before the expiration of President Eisenhower's emergency immigration program, our country was faced with still another major immigration crisis. The Hungarian freedom revolution of last October and the ruthless Russian suppression of that gallant try for freedom produced a new category of refugees. In the month of November and December 1956, well over 100,000 Hungarians had found it necessary to flee from their homeland after the Russians reinvaded, killing some 60,000 Hungarians and then putting another alien regime in charge of their affairs. That freedom revolution caught the free world by surprise, because so many of the leaders had been misled into believing that total revolution against the Russian tyrants was impossible.
